The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage.

For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy . . .	$ .05	$ .06	$ .07
Twenty-five copies .	1.00	1.15	1.30
Fifty copies	1.80	2.05	2.40
One hundred copies .	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XII indicate the year 1912; XIII, 1913. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

The Bourne-Lewis parcels post plan goes into effect Jan. 1, 1913, so far as the establishment of the parcels post rates and zones are concerned, and Postmaster-General Hitchcock will endeavor to have the details worked out by that time. Under this legislation it is provided that hereafter fourth class mail matter shall embrace all other matter, including farm and factory products, not now embraced by law in either the first, second, or third class, not exceeding eleven pounds in weight, not greater in size than seventy-two inches in length and girth combined, nor in form likely to injure the person of any postal employee or damage the mail equipment or other mail matter, and not of a character perishable within a period reasonably required for transportation and delivery.

Recent legislation by the people of Oklahoma has created the position of public defender, whose duty it will be to right wrongs, to protect the helpless, to prosecute in the courts those who are trying to take advantage of the weak and the ignorant. Through the public defender the wronged or threatened man can enter the courts, and at small expense he can see that justice is done. The publicity thus given to attempted rascality will defer men from schemes into which they might enter were they not afraid of exposure and prosecution.

There was filed recently with the register of deeds at Jersey City a deed whereby the Jersey City Water Supply Company transferred to the mayor and aldermen of Jersey City the water-works and eleven hundred and forty-six acres of land in the townships of Hanover and Boonton and the town of Boonton, Morris county, N. J., together with all rights of way for tunnels, pipes, telephone lines, and conduits for conveying water from the water-works to the reservoir on Bergen hill, in Jersey City. The price paid was $6,992,000.

President Taft has signed the radio-communication bill, carrying out America's part of the international agreements adopted at the Berlin wireless conference in 1906. It also embodies lessons taught by the Titanic disaster. The measure compels all wireless stations to give priority to distress signals, regulates the wireless system on ships, the instruments of which must have a radius of one hundred miles, and requires amateurs to have licenses in addition to controlling their wave-lengths.

No further issue of Panama canal bonds will be made during the present administration, it has been announced at the treasury department. There is now one hundred million dollars in cash on hand and this is believed to be sufficient to meet all expenditures. The total cost of the canal is expected to be about four hundred and fifty million dollars and the total amount expended to date has been two hundred and eighty million dollars.

The federal government has attacked the so-called moving picture trust in a civil suit filed at Philadelphia for the dissolution of the Motion Picture Patents Company and the General Film Company. Ten prominent moving picture film concerns are accused of combining to monopolize the business, even to the extent of increasing or decreasing the number of motion picture theaters in which they have no proprietary interest.

The appropriations in the House for the fiscal year of 1913 amount to the total of $1,019,636,143.66, which is approximately seven million dollars less than the amount appropriated by the last session of the Sixty-first Congress for the fiscal year of 1912.

President Taft signed the Hughes bill providing for an industrial commission to investigate labor conditions and recommend legislation which will bring about more amicable relations between capital and labor.

International.

Dr. Sun Yat Sen last week presided at the formal amalgamation of the Tung Men-hui with four other political parties into a new party named the Kno Ming-tang, or Nationalists. The new organization will comprise two thirds of the advisory council and the same proportion of the Parliament which will assemble in December, and will govern on party lines, thus destroying Yuan Shi Kai's virtual dictatorship. The American experts accompanying Sun Yat Sen have mapped out a program to cover China with a network of railways.

In speeches to two of the leading Chinese political societies at Peking, Dr. Sun Yat Sen emphasized the need of abating party strife and of devoting their energies to the construction of new administrative machinery in the form of a strong central government. Dr. Sun said he believed that Yuan Shi Kai was the ablest head available for the executive office, and he strongly urged Yuan's reappointment as President. Dr. Sun Yat Sen also proposed that China borrow nothing from the six powers group of bankers. He declared it possible for China to obtain funds from other sources without vexatious conditions.

A notable feature of the new sanitation plans for Buenos Aires is the fact that they are calculated for a city of no less than six million inhabitants, which number the city is expected to have inside of fifty years. The area of the works under consideration is something like forty thousand acres. At the present time there are no less than four hundred thousand people in the capital who have neither drainage nor water supply, while fifty thousand have running water but no drainage, and some seven hundred and fifty thousand have both. According to official declarations, the new water supply for the entire city will be completed in 1914 and the drainage system two years later. The works of both water supply and drainage are estimated to cost in the neighborhood of one hundred and sixty million dollars, Argentine currency.

The South Australian statute book includes a number of measures designed for the benefit of the worker. One of these is the advances for homes act, under which loans are granted to persons in receipt of not more than three hundred pounds per annum at a low rate of interest to enable them to erect, purchase, or enlarge a dwelling-house for themselves, or to discharge an existing mortgage on their property. Advances are made through the state bank to the extent of four fifths of the valuation and are repayable by instalments extending up to forty-two years. Since the act came into operation in January, 1911, it has been largely availed of, the advances totaling £417,549.

With reference to the proposal of Count von Berchthold, the Austro-Hungarian foreign minister, to secure gradual autonomy for the European provinces of Turkey, the Ottoman government has notified its representatives abroad, in the event of their being approached concerning the project, that the Porte will not listen to proposals affecting Turkey's internal policy.

Industrial and Commercial.

A newly formed syndicate of Spaniards and Mexicans has purchased for ninety-two hundred and fifty thousand dollars gold one million acres of land along the Rio Grande and San Juan rivers, Mexico. It will prepare about two hundred thousand acres for cultivation, seventy thousand of which will be planted mostly in cotton. A large canal will be constructed, and a two hundred-horse-power pumping plant provided for irrigating the two hundred thousand acres. The Mexican government has loaned this new company twenty-five hundred thousand dollars gold, on long time, with the understanding that when this money is due the principal and interest may be liquidated by transferring a sufficient number of acres (developed) to the government at forty dollars per acre.

Fuller's earth, the clay-like material that is used principally as a filtering medium for oils, fats, and greases, is found in fifteen states, as shown by a report of the United States geological survey. Florida continues to be the leading state. In 1911 it reported 27,658 tons, valued at $265,571, or $9.60 a ton. This was sixty-eight per cent of the quantity and sixty-nine per cent of the value of the entire output and value. The other states in the order of their rank in output and value in 1911 were Georgia, Arkansas, Texas, Massachusetts, California, and South Carolina.

The Colorado-Utah 1912 fruit crop will be at least twice as large as that of any previous year. It is estimated that on the line of the Denver & Rio Grande railroad in western Colorado there will be between nine and ten thousand cars of fruit, consisting of peaches, pears, apricots, plums, cantaloups, and apples, to be moved between Sept. 1 and the end of the season. In Utah the crop will approximate three thousand cars.

Acting Governor Gilbert of the Philippines and party has been at Mindanao to inspect in the rich Gettabata valley a site for proposed huge rice plantations to be owned by the government. The object of the government-owned plantation is to obviate any future rice famine and to stop importations, which reach a yearly average of sixty million dollars gold.

The Chamber of Commerce of the United States of America was organized in Washington recently, with representatives of practically all the states and territories present. Already more than a hundred separate organizations have been effected to work under the one standard.

Kansas will have an estimated oat crop this season of sixty million bushels, twice as much as last year. Missouri expects to harvest two hundred and forty million bushels of corn from its eight million acres. The fruit crop of Idaho will be a record crop.

Statistics show that 12,165,813 bushels of potatoes were shipped out of Aroostook county, Maine, up to May 1, all from the crop of 1911. It is estimated that the last crop will bring between twelve and thirteen million dollars into Aroostook county.

The imports during the fiscal year ended June 30 of cut precious stones and pearls totaled $29,261,794, and uncut gems, principally diamonds, reached the value of $10,183,491

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE PERMANENCE OF TRUTH.

IRVING C. TOMLINSON, M.A.

We should be unceasingly grateful that Christian Science fixes our thought upon the permanence of all that is good and real. In its insistence upon the abiding presence of the good, this vital religion differs radically from all other systems. Constantly affirming that evil is not power, it quietly holds fast to the things which cannot fail. Viewed from the standpoint of material sense, there seems to be much that is fleeting in the world. There is constantly before our eyes changing seasons, seedtime and harvest, day and night, birth, growth, and decay. The philosophers and theologians of the past have regarded the shifting things of sense as a part of God's creation, but Christian Science shows us that the changeable is not ordained of God, and not in harmony with His law. The Bible says of God, "From everlasting to everlasting thou art God," "with whom is no variableness, neither shadow of turning;" and the prophet Isaiah sang, "The grass withereth, the flower fadeth: but the word of our God shall stand forever."

Our great Master gave scant heed to ephemeral conditions, but dwelt entirely upon the unchanging love of God and the abiding presence of Truth. He said, "Heaven and earth shall pass away, but my words shall not pass away." He placed before us the necessity of fixing our thought upon that which is permanent and abiding, if we would enjoy health and peace, saying, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you." We are helped to see that all which is of God is eternal, by remembering the facts about the science of numbers. The multiplication table is the same now as it always has been and always will be; two times two never make five. So Truth understood erases wrong beliefs and methods. In the science of mathematics all is permanent, and this is also true in the science of music, for the harmonies which there prevail are abiding. In Science and Health we read: "Erase the figures which express number, silence the tones of music, . . . and yet the producing, governing, divine Principle lives on" (p. 81). In nature the permanence of beauty, which is but another expression of Truth, is ever manifested. The rainbow is unchanging in its beautiful curve and radiant color. The song of birds is perpetually joy-begetting and heart-inspiring.

Thus Christian Science enables us to understand that in the Science of man's being God is the eternal Principle. It declares that Life, Truth, and Love have no beginning, no ending, and are more permanent than the hills or the stars of heaven. This revelation, given to us through Mrs. Eddy, affirms that health is not a changing condition, but a permanent fact of being, sustained by the law of God. So, too, peace and joy are not to be thought of as fleeting, but as something that endureth, and as a part of the very constitution of things. Because Truth is permanent, our text-book teaches the way to acquire and utilize this fact. It is to know that Life is not fleeting, but is God, without beginning and without end, and this Life is our heritage, our possession, the only source of our being. It is to understand that peace belongs to us every day and every hour, and that we cannot be separated from this peace of which Christ Jesus said: "Peace I leave with you, my peace I give unto you: not as the world giveth, give I unto you. Let not your heart be troubled, neither let it be afraid."

The way to a realization of the ever-presence of Truth is simple. It is to "hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts" (Science and Health, p. 261). It is to know that all which is changing, and therefore unlike Truth, can be nothing but fiction. It is to be loyal to the best one knows, and in honestly doing that one is loyal to Truth and to nothing but Truth. It is to live the thought of permanence at all times; to begin with God; to help others by our right thinking and true living; to love the spiritual, which alone is permanent, and to grow into that understanding which makes health an eternal part of our heritage and joy a fact of being.

OPPORTUNITIES, NOT TESTS.

CORA A. HARRINGTON.

It is often said of one who is passing through some seemingly hard experience, that it will be a test of his character; that he will stand or fall as he manifests strength or weakness. While this may seem to be true of our purely human concept of man, when we leave that behind and gain the knowledge of the true man,—the image and likeness of God, who is Life, Truth, and Love,—we come into the knowledge that man cannot fall, for "underneath are the everlasting arms."

Mrs. Eddy tells us that "trials are proofs of God's care" (Science and Health, p. 66). Surely, then, we may not feel that any experience, however seemingly hard, is a test of our poor human strength, but simply an opportunity of proving more of God, an opportunity to grow into a larger wisdom and knowledge of His love. Sometimes our lives flow on in such pleasant, easy channels that we seem sufficient unto ourselves, and for the time we may forget that we are God's children, until some trial makes us again feel our need of the guidance of divine Love; thus does the seeming trial become an opportunity and a blessing.

We need God every day of our lives and every hour and moment of each day, that erring human thoughts may be corrected or replaced by divine thoughts until they become transformed into the likeness of the one Mind. We need to turn continually to our Father-Mother God, just as little children turn to the mother love in their every need, joyfully knowing that all will be well when that love is found. Then will the consciousness of God's dear presence become to us like a beautiful harmony, to which we may attune our daily living. Filled with this consciousness, inharmony cannot enter in, for every seeming trial will only cause us to turn more fully to divine Love, and the greater our need the greater will be the love which flows forth to meet it, since it comes from an inexhaustible source.

With this thought in mind, as we study the life of Christ Jesus the Wayshower, we see how each vicissitude of his experience, each trial, even to his crucifixion, was made, not a test of his human strength and endurance, but an opportunity to show forth more and more of the Father. Jesus said: "I can of mine own self do nothing: . . . I seek not mine own will, but the will of the Father which hath sent me." With his example to follow, and the great light which has been revealed through Mrs. Eddy to aid us in our apprehension of Truth, it is ours to strive earnestly to find in every day and every event an opportunity to prove our heritage as the "sons and daughters of God."

PROPHETS AND PROPHECY.

WILLIS D. MC KINSTRY.

BIBLICAL history informs us that Samuel established a school of the prophets; we are also told that these learned men instructed the people in a higher knowledge of spiritual things, and that often the message given them was in direct opposition to their own wish or desire.

Regarding the prophecies of the Old and New Testaments, a Bible encyclopedia says: "It is true the mission of God's messengers is not limited to the foretelling of events. The broad, original meaning of the word makes the prophet a man of the times, whose primary object was religious instruction,—the moral and spiritual culture of his fellow men; he was a reformer, a preacher of righteousness, and the stern reprover of sin. He was also an interpreter of history." In his second epistle Peter says, "Prophecy came not in old time by the will of man: but holy men of God spake as they were moved by the Holy Ghost." In both the Old and New Testaments the prophet is the divine messenger who communicates to men the revelation which he has received from God. Peter and Paul and John are among the prophets, as well as Isaiah, Jeremiah, and Ezekiel. Amos says: "I was no prophet, neither was I a prophet's son; but I was an herdman, and a gatherer of sycamore fruit: and the Lord took me as I followed the flock, and the Lord said unto me, Go, prophesy unto my people Israel."

Modern history will give Mrs. Eddy her rightful place among the prophets. She established that school of Christian Science which is instructing the world today. The activities of this institution are substantial and constructive in their nature, and each and all are fulfilling their sacred mission. In the bringing forth and inaugurating of this movement, nothing seems to have been left undone, and Mrs. Eddy has been the channel of divine Love, through whom these utilities of good have come to humanity. The nature of Christian Science is distinctly educational, reaching into every human experience and teaching mortals the way of salvation. It gives to mankind the Principle and rule with which to work out life's problems; and the propagation of the Christian Science movement is effectually helped through the distribution of its literature. The prophet Isaiah wrote, "How beautiful upon the mountains are the feet of him that bringeth good tidings, that publisheth peace; that bringeth good tidings of good, that publisheth salvation; that saith unto Zion, Thy God reigneth!" To publish is to make public,—to make known to all people in general.

We are now in a cycle of human unrest; mankind is not satisfied; better conditions are demanded. A large majority of the people are demanding a higher standard of right; they are reaching out with a desire that the brotherhood of man be established, whereby the deserving may receive a fairer share of the world's prosperity, that more joy and happiness may be theirs. Every phase of human activity, be it social, industrial, commercial, or political, is being weighed in the balance, and so far as these activities are based upon the belief of life in matter, they are found wanting. Underlying all, moreover, is a world-wide hungering and thirsting for righteousness, a demand for a practical Christianity, a present-day salvation which will meet the needs of men. This seeking for better conditions, namely, substance, health, happiness, and spirituality from a material basis, is but human sense trying to escape from limitation, from its unworthy self, and "man's extremity is God's opportunity."

The present era of industrial distress and social upheaval offers an ideal opportunity to publish salvation, to bring "good tidings of good," from God, that spiritual joy, bringing health and prosperity, may enter into the hearts of men and deliver them from the bondage of Egyptian darkness. This universal desire for good, for better conditions politically, industrially, socially, commercially, judicially, this demand that honesty and justice be carried into the every-day affairs of men, speaks for a great awakening of humanity. Through one person's discernment of the truth of spiritual being, some forty years ago, the ever-operative law of Christ was made manifest to mortals, breaking the mesmerism of human ignorance and fear and putting into activity the divine law of righteousness in every human consciousness prepared to receive it.

Christian Science, based upon Life as Spirit, is a practical truth, offering the only panacea for all the ills of human experience. It is the "pearl of great price." Through its teachings and demonstrations the human concept gives place to the divine idea, in evidence of a Principle that can be understood and demonstrated. When conscious of the ever-presence of divine Love, Christian Scientists are prepared to give a cup of cold water in Christ's name. The thousands of Christian Science treatments which are given daily certainly purify the human consciousness and elevate it to the recognition of spiritual things.

The Christian Science Publishing Society, though small in its beginning, has broadened into a mighty institution for good. Its publications, reaching out to all nations and peoples, are impersonal missionaries, publishing good tidings of the healing efficacy of Christian Science and its power to "set at liberty them that are bruised." *The Christian Science Monitor* is our daily awakener. Into all parts of the English-speaking world it bears pure and wholesome news, giving the constructive happenings which bring out the good that seemed to be hidden away. This daily instructor always carries a message of practical Christianity, a "still small voice," gently leading onward and upward the steps of human progress.

Appreciation of the good work this publication is doing may and should be shown by giving it an ever-increasing circulation. Those who have experienced the benefits of Christian Science may thus bring to other needy sufferers the blessings they have received, and thus further increase their own joy. We may well be glad to place such literature in the hands of those who are needy, spiritually, morally, physically, and financially. It will awaken them from a limited, finite sense of existence to a knowledge of God and His unchanging law, to a desire and willingness to know the way of salvation as taught and demonstrated by the humble Nazarene.

Mrs. Eddy says, "God gives the lesser idea of Himself for a link to the greater" (Science and Health, p. 518). Thus, as we wisely distribute or place in the hands of those who are willing to receive them, the *Sentinel*, the *Journal*, and the *Monitor*, they naturally come to desire the text-book of Christian Science, that greater idea which brings a knowledge of spiritual healing as taught and demonstrated by Christ Jesus. It emphasizes the allness and oneness of divine Mind. It gives a demonstrable understanding of God, His attributes and His laws. Mrs. Eddy says: "One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scriptures, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed" (p. 340).

The boundaries of the Publishing Society extend over all the earth, and each individual Scientist, through his wakefulness and work, may become an integral part of this great institution for good. We help the Publishing Society by right thinking, and in subscribing for its publications we not only help the cause universally, but we add to our local storehouse for home distribution. While carrying on the work of distributing literature, thus helping ourselves and others to take the preparatory footsteps leading to eternal harmony, we must watch lest we forget that our highest and grandest work is metaphysical, is in the mental realm. As Mrs. Eddy expresses it, "Entirely separate from the belief and dream of material living, is the Life divine" (Science and Health, p. 14), and it should be realized that because we are working from the standpoint of divine Principle our work is protected, and that by reason of an enlarged understanding of God we possess the ability to demonstrate the truth made known to us through Christian Science.

"HE SHALL TESTIFY OF ME."

AVE GALBRAITH.

DURING the Master's last long talk with his disciples on the memorable occasion before the final scene in the garden of Gethsemane, he uttered these words: "But when the Comforter is come, whom I will send unto you from the Father, even the Spirit of truth, which proceedeth from the Father, he shall testify of me." Brought up religiously, the writer used to puzzle over the meaning and significance of this promised gift of the Holy Spirit or Comforter. There seemed to be an undefined feeling that to experience the coming of the Holy Spirit a definite emotion or exaltation must be felt, which would entirely change thought and experience. In order to produce this radical change, means were frequently taken, especially during revival seasons, whereby the feelings were worked upon, sometimes by narrations of the sufferings and death of Jesus; many times by the threats of penalty for sin and fear of the judgment-day, until an almost hysterical state of mind was produced, and the upheaval consequent thereupon was pronounced the entrance of the Holy Spirit.

Too frequently, however, these emotional feelings were followed by a reaction which left the mind so dull and dead that the poor longing mortal felt that the joys of the Comforter were not for him, but only for a few kingly souls who might be able to retain the hardly earned knowledge and experience of God. What joy, then, for the seeking heart, when through the study of Christian Science one finds what the Comforter or Holy Spirit really means, namely, the Science of Christianity, the spiritual understanding of Jesus' words, as found in the Bible, and interpreted in Christian Science. Through this understanding the Scriptures are made plain to us, and the prophecies and promises in the Bible become guiding lights in our daily lives; not merely hopes for a far-off future, but realities to be utilized here and now.

Thus the Comforter comes to us in many different ways, often in the "still small voice," "soft as the breath of even," to whisper to us of the never-failing love of God, sometimes in time of seeming lack, to tell us of the ever-present abundance of good. When in pain or trouble of any kind, we hear Love speak to our thought, that we may realize the unreality of material sense. And if we go astray in the wilderness of human hopes and pleasures, the Comforter appears, armed with the sword of Truth, to drive us back to the narrow way that leadeth ever to the peaceful pastures of Soul.

The presence and power of the Holy Spirit in divine Science can be understood and demonstrated by all who are willing to deny the power and reality of mortal sense. No emotional exaltation is here required to force an entrance into the life; only a contrite heart, a childlike teachableness of thought, which opens the mind to receive the unutterable blessings that are always waiting for us. If we are constantly receptive to the gentle utterances of the Comforter, we shall prove that what Jesus said to his disciples may be realized by each one of us, for we shall be indeed guided into all truth—truth about God: that He is the "altogether lovely;" truth about man: that he is the image of God, of Love; truth about the universe: that it is spiritual and an eternal now; truth about error, material sense: that it is only a lie, an illusion which will vanish like the "baseless fabric of a vision" before the eternal verity of the Christ.

So does the Christ-mind testify of Truth; not of the man Jesus, but of the spiritual truth apprehended by Abraham, demonstrated by Moses, and lived by Elijah; the truth perceived by the prophets of the Old Testament, at first faintly, then more and more clearly, until in the fulness of time Jesus appeared on earth to reveal to men the perfect way of the Father. If we follow the example of our great Wayshower, and daily take up the cross of denial of self and sin in thought and action through the power of the Comforter, the Spirit of truth, in us and to us will be fulfilled the promise of the Master: "Verily, verily, I say unto you, Whatsoever ye shall ask the Father in my name, he will give it you. Hitherto have ye asked nothing in my name: ask, and ye shall receive, that your joy may be full."

"THERE REMAINETH THEREFORE A REST."

VIRGINIA C. CHINN.

WHAT is it to remain? In Webster we find the following definitions: "To be left after others have been removed or destroyed; to continue unchanged in place, form, or condition, or undiminished in quantity; to abide, etc." Some one has said that meditation is silence "healing the blows of sound." The Christian Science prayer of realization which heals is really that keeping silence before God in which we become conscious of rest, peace, joy, and light; in His presence there is no noise, no conflict, no pain.

How often is the "gentle presence, peace and joy and power" of which our Leader has written (Poems, p. 4), manifest in the silencing of mortal errors. These may seem so frequent and noisy as for a time almost to deafen us, yet error is finite and unreal and the "rest" remains. Emerson has said, "It is only the finite which has wrought and suffered, the infinite lies stretched in smiling repose;" and with a clear vision of the allness of God, Mrs. Eddy has triumphantly declared that "there is no finite soul nor spirit" (Science and Health, p. 466). The infinite idea which expresses God, rests in "the beauty of holiness," secure in the truth of being. The dictionary gives this definition of infinite, among others: "Unlimited in time or space." There can be no finite sense in the Science of being. What if discords do arise, again and again? We know that they will be silenced by the presence of God. Have we not the assurance, "My presence shall go with thee, and I will give thee rest"?

This truth that man is the image and likeness of God, infinite Spirit, and therefore reflects that "peace of God, which passeth all understanding," that he reflects health, wholeness, harmony, perfection, that the kingdom of heaven is within man,—this truth remains and is the rest into which no error can ever enter. After all the pains and troubles of mortal consciousness have passed away, this rest remains as man's everlasting possession. This consciousness gives us courage to stand and face every phase of error which may present itself. We can say to it in the words of our Master, "I never knew you: depart from me, ye that work iniquity." The real man was never conscious of the errors, the discords, since man's consciousness is the reflection of God. We may therefore turn to Truth, and to the angel messengers ever near with healing in their wings, and open the door, saying, "Come, ye blessed of my Father, inherit the kingdom pre-

Digitized by Google

pared for you from the foundation of the world." And lo, in the quiet we will hear the "multitude of the heavenly host praising God, and saying, Glory to God in the highest, and on earth peace, good will toward men."

To hear the angels sing and to rejoice in the silence filled with the music of heaven,—this heals the blows of earthly tumult. This is demonstration; but it is only one of many that we shall be called upon to make, until we learn how to abide in His presence. "Abide in me." Thus we learn what it means to remain, "to continue unchanged in place, form, or condition, or undiminished in quantity; to abide." "There remaineth therefore a rest to the people of God." We know that this rest is in the presence of God, and we know that God is omnipresent; then His presence is the only place, it is "the secret place of the most High." It is the kingdom of heaven within men. It remains "the same yesterday, and today, and forever." There is no time when we may not turn to this presence and be healed, and there is no place where we may not seek and find this rest. It remains an undiminished quantity because, although to mortal sense the noise arises, yet this rest remains unchanged. Let us labor, therefore, to enter into this rest.

USEFUL LESSONS.

META V. VIRTUE.

THAT childhood and youth are periods of mental as well as physical growth, is a commonly conceded fact. It is therefore the sacred duty of parents and teachers so to use and foster the opportunities of circumstance and environment that this growth may go forward in the right direction. We read of the youth of Jesus that "the child grew, and waxed strong in spirit, filled with wisdom: and the grace of God was upon him." Then the incident of Jesus' presence in the temple is recorded, when "all that heard him were astonished at his understanding and answers." Still farther on we read: "Jesus increased in wisdom and stature, and in favor with God and man."

With the Hebrew people all learning centered in the study of the Scriptures. In the writings of the prophets was contained the hope of Israel, the promise of the Messiah who was to liberate the people of God. That Jesus had studied the Scriptures in the light of Truth is shown by the incident in the temple recorded by Luke. Here Jesus recognized God as his Father, and the impelling motive of his life is even then expressed in the question to Mary: "Wist ye not that I must be about my Father's business?" This holy purpose of his life was manifested ever after in his healing ministry, in words and deeds of love, of meekness, of humility, of compassion, of trust in the Father. It was never shaken by circumstances or human hatred, and it triumphed over death and the grave, even unto the glory which he had "from the beginning."

No one will doubt that the record of such a childhood is worthy of our highest reverence, and that early to give our children right concepts becomes our sacred duty. On these right concepts of God, of man, of the divine law of Love, will depend in later years their health, their happiness, their moral status. It is therefore a wise rule to use in our Sunday school work the three great fundamental subjects of study provided by our divinely guided Leader, namely, the ten commandments, the Lord's Prayer with its spiritual interpretation, and the beatitudes. Each one of the three topics treats of man's relation to God and of his relation to his fellow man. With the teacher rests the presentation of these subjects, and while it is comparatively easy to have little children learn things, the wise teacher will take a larger view of her task and bring her subject to bear directly on the character of her pupils. To let a child declare his views sometimes is helpful in aiding the teacher to correct false notions or to detect the special way in which a certain child needs help. To make a child feel that he must say what he truly thinks, not simply repeat what he has learned, is teaching of the right sort.

It is not only the child's character but his daily conduct that is influenced by these loving lessons in the Sunday school. What does it mean to you to "love the Lord thy God"? What does it mean to have "no other gods"? What do you think is God's will done "on earth"? What is our "daily bread"? How can little children be meek? When can they be merciful, and what must they do to be peacemakers? My little girl came home from play one day and said that a little boy had told her that God was a man who lived in the sky, "but," she said, "that is not right, is it?" This little girl has never been taught that heaven is a locality, and it is sweet to hear her say, "Heaven is when you think right." We see then that it is not simply the learning of Scriptural quotations which helps a child to gain the great lessons not so readily learned by many of us older pupils, but rather the use he is taught to make of them in his daily intercourse at home, at school, or on the playground.

It has been said that Christian Science is a religion for every-day use. One might say it is for every moment's use. It is therefore important to make the Sunday school lessons an influence for good on the child's thought and daily conduct. A child's life in the home affords many opportunities for putting into practise the truth he has learned in his Sunday lesson, and sometimes it is profitable to have a child tell at Sunday school of some little incident in which he had used the truth previously learned. To us older pupils the practise of forgiveness, meekness, patience, and unselfishness is sometimes not such an easy matter. It is wise, then, to bring home to the child the idea that what he learns in the Sunday school is to be brought into play in his every-day life. He must be willing to obey gladly, to give up cheerfully, to speak gently, to wait patiently; in other words, his understanding of Christian Science must be made use of at all times. It is wonderful how grand an opportunity for good a loving teacher has, and how lessons of love are "reflected in love" (Science and Health, p. 17). Children are so sincere, so sweetly unprejudiced, that it is a glorious thing to face a class of them in the Sunday school, and the wise and faithful laborer is sure to be repaid an hundredfold.

ONE YEAR.

ALICE GALE WORTHEN.

ONE year in Christian Science, one year in the household of God. A year? No, a thousand years; for, as Mrs. Eddy says, "the rays of infinite Truth, when gathered into the focus of ideas, bring light instantaneously, whereas a thousand years of human doctrines, hypotheses, and vague conjectures emit no such effulgence" (Science and Health, p. 504). What has this Truth taught me? It has taught me of my priceless birthright, of the knowledge that I am a child of God, an idea of His infinite intelligence, reflecting harmony, purity, and love. And as "the divinity of the Christ was made manifest in the humanity of Jesus" (Science and Health, p. 25), so somehow, somewhere, soon, the divinity of the Christ will be made manifest through me.

What has this meant to me? It has meant earnest striving toward the actual living of the first commandment, "Thou shalt have no other gods before me;" and a constant endeavor to make an absolute surrender of my false gods of pleasure, limitation, and worldly success. I can as yet only say with St. Paul, "I count not myself to have apprehended: but this one thing I do, forgetting those things which are behind, . . . I press toward the mark for the prize of the high calling of God in Christ Jesus,"—the goal revealed to this age in Christian Science.

SELECTED ARTICLES.

[J. H. B. in *Sunday Post*, Johannesburg, South Africa.]

In Old Doornfontein, at the corner of Smit and Banket streets, to the west of the upper part of the little municipal park that is intersected by the tram-line, is a miniature stone-built, red-roofed church. It is chiefly noticeable for its aspect of solidity, and it is so small in comparison with most such edifices as rather to give the appearance of only a portion of a church. It is surrounded by a light iron fence that encloses tastefully laid-out beds of flowers, grass-plots, and trim little walks that look as if it would be a disturbance of their order and neatness to walk upon them. Inside, the building is simply but substantially furnished. The foundation-stone was laid March 6, 1910. This, like the greater part of the building, is of what is known as kopje-stone, which has the peculiar quality of permanently retaining and reflecting certain tints of the surroundings from which it was taken. The characteristic has its advantages and its charms, for it softens and diffuses the otherwise monotonous yellow color of the rock, and gives the impression of the mellowing hand of time.

I attended the morning service at this church on a recent Sunday. It was not without some curiosity that I did so, for as yet Christian Science is comparatively little known, and less understood, in South Africa. It is different in America, where among the white population it is a vast and ever-increasing power. In the thirty-six years that it has publicly been practised it has attracted the serious attention of about two millions of the American people. In other parts of the world it is possible that it has another million followers, who are not to be found in Europe alone,—there is a little community in any city of any size in the chief countries of the world. They are even to be found in the lonely and picturesque islands of the South Pacific. My curiosity received a pleasant shock. In my time I have had an impersonal association with various brands of religion and their practitioners. So I went to First Church of Christ, Scientist, in Doornfontein, rather prepared to meet a congregation of cranks—those weird-looking people upon a bunch of whom one sometimes stumbles, who appear to have lost something and are engaged in what they know, but will not admit, is a hopeless quest for its recovery.

I was never more surprised than when I had had ten minutes in which to study the congregation, in whose midst I was shown to a seat by a gentleman whose quiet politeness was a rebuke to the frame of mind in which I have ever attended a Christian service. For I am (or rather was) one of that vast community that, when it attends church, does so for the appearance of the thing. It is a duty. It is the correct thing. And you must go in your best clothes. And, beginning with Monday morning and ending with Saturday night, you never again think of the church. Of course there will be hundreds who will say, "Oh, but that is not my attitude." Well, I know that the hundreds who truly can say it, and of whom it is true that they are not practising a little self-deception, are in the minority. For church-going is not popular. I am not the only one who says it. You will hear it proclaimed from dozens of pulpits; you will read of it in the magazines. "How are we to reach the masses? How are we to popularize religion?" are questions that are making the parsons scratch their heads and blame the Rationalists and the Socialists, and a cheap press and the cheap education that have led the people to think for themselves. But I must get on with the congregation. Here were no cranks. Had I not known that I was among the followers of First Church of Christ, Scientist, I should have imagined that my neighbors were well-to-do Anglican church men and women. And there were pretty even numbers of men and women in the hundred or a hundred and twenty people who were at the morning service; people, too, apparently well placed as far as this world's goods go. Nothing in their attire, at any rate, to indicate austerity of manner or narrowness of spirit, in fact quite the reverse.

It is the contention of Christian Scientists—and a very sensible contention it appears to be—that it is impossible for God to represent anything but goodness; that Christ was the divine interpreter of the will of God (or good), and that man, being made after the image of God, must of necessity primarily be good. Any evil there is in man (which is attributed by most people to a personal devil), is merely a falling away from good—a something that does but represent the material side of man, which is to be corrected by a healthy and sane appreciation of the fact that it cannot be regarded as part of his spiritual nature, which is a reflection of God. Christian Science teaches people to think for themselves, to cast away the mystic dogmas that have served their purpose for centuries, and resulted in nothing but further mystification and interminable disputation.

There is not the least doubt that Christian Science is more than a mere transient fad. It is a personal religion. It requires no trained theologian to understand it or to transmit it to others. Its very simplicity is its strength, and in the expansion of thought that is one of the most remarkable features of the day, it appears to be found to take a foremost place. For men and women cannot do without some religious influence, and there are signs all around us that they are falling away from the old creeds that from the time of Christ have assisted but little to remove the clouds of doubt and uncertainty by which the human mind is encompassed.

You don't get two million Americans going in for a thing unless there is something in it. The principal church in Boston draws an average congregation of four thousand people, and in Chicago—that hard, worldly, materialistic place—there are eleven churches. The Christian Science movement began in Johannesburg in August, 1904, among five or six people in a private house in Princes street, Troyeville. It was organized in 1906, and it is curious to note that among some of its principal followers are persons bearing honored Dutch and colonial names. They are quiet, analytically-minded people. They don't shout their faith from the housetops. They realize the force they have behind them, and they are content to let the future rest upon the enlightenment of Truth and Mrs. Eddy's interpretation of the teaching and demonstrations of Christ, who manifested divine Principle and natural law.

[Frederick Dixon in *Newcastle Daily Chronicle*, Newcastle, England.]

It is a curious fact that a well-known clergyman, in preaching a sermon on the text, "What is truth?" delivered for the purpose of drawing together the bonds of Christian unity, should have gone out of his way to attack Christian Science. Exactly how the bonds of Christian unity are to be drawn closer together by denouncing as error the opinions of those from whom you differ, it would be difficult to say. The ordinary man would be justified in remarking that, if the various Christian sects devoted a little less time to criticizing their neighbors, and a little more to practising the truth they preach, Christian unity would be nearer than it appears to be today.

It is a rule of the Christian Science movement never to attack any other sect. This critic will not be able to give a single instance in which this has been departed from. Perhaps one of the causes which has led, and is leading, to the enormous growth of Christian Science is the fact that Christian Scientists do whole-heartedly devote their time to demonstrating the truth they preach, without any fear that the omnipotence of divine Principle will be affected by the teaching of anything that is not true. Their own religion they have founded unhesitatingly on the Bible, and they remember the words of Gamaliel: "If this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it."

Next, may I point out that Jesus of Nazareth, speaking of truth, summed up his teaching in the famous phrase, "Ye shall know the truth, and the truth shall make you free." There was no limitation to the freedom he spoke of, so that it is perfectly obvious the freedom brought by an understanding of truth must be freedom from everything which is unlike truth. It is precisely because of this that Christian Science teaches that one of the forms which the practise of the Christian religion must take is the destruction of disease, and it is a curious commentary on this that a clergyman should have attacked Christian Science as an error which was doing a lot of harm, when Christian Science merely asks people to accept the obvious, plain meaning of the Bible, and to recognize that Christ Jesus summed up the work of the Christian religion as preaching the gospel and healing the sick.

[Editorial in *New York* (N. Y.) *Commercial.*]

The committee of one hundred is working hard to secure the organization of a federal health bureau, against which some opposition has developed on account of the fear that it would pass into the hands of a certain school of medicine and would be abused by the doctors of that school. Its most active opponents are the Christian Scientists.

It would be well to protect people from the acts of others, but it is easy to overstep the mark and interfere with the liberty of the individual in things that affect only himself and his family. We must be protected from food and drug adulterators by strict enforcement of the law, and quarantine against contagious diseases is indispensable. This is generally conceded; but the trouble is that the doctors seek to obtain power to make physical examination and even perform operations without the consent of the patient, or of his parents when he is a child.

Pure food, pure milk, pure water, pure air, all come within the proper scope of a public health act; but the advisability of performing an operation for the extirpation of a cancer certainly does not. The public health should be safeguarded by prevention, but the matter of cure must be left to the individual until at least the time comes when the doctors can agree on some elementary facts and principles. The enforcement of pure food and quarantine laws and the gathering of vital statistics give health officers enough to do. Plenty of surgeons can be found who advocate that every one have his vermiform appendix cut out to prevent appendicitis. We must stop somewhere short of that sort of thing.

[Ida Hodnett in *Aliceville* (Ala.) *News.*]

The misconceptions of Christian Science recently given out in your city by a visiting revivalist should be corrected, for no intelligent community desires to be inaccurate in its concepts of what is going on in the world, but prefers that the actual facts be presented clearly and in order. No doubt the gentleman himself will be glad to have these misconceptions cleared up. In the first place, Christian Science does not dispute the Bible. On the contrary, its very first important point or tenet declares, "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497). Mrs. Eddy has many times stated in her writings that within the Bible she found all the spiritual facts which she taught and exemplified, and that in her study of its divine teaching she found that "whenever her thoughts had wandered into the by-paths of ancient philosophies or pagan literatures, her spiritual insight had been darkened thereby, till she was God-driven back to the inspired pages" (Miscellaneous Writings, p. 169). Again and again in all her writings she insists that the truths taught in the Scriptures must be spiritually discerned. She agrees with the most eminent divines of the world that there is both a literal and a spiritual meaning to Biblical passages, and with them she declares the highest to be the spiritual. Surely all believers in the Bible will agree that its spiritual meaning is needed by the human race in order that we may correctly apprehend God and man's relation to God. The literal or material rendering is not sufficient in itself to enable the human mind to lay aside the carnal opposition to God which externalizes itself in sin, disease, and death.

Regarding the critic's humorous reference to accidents and their results, it may be said positively that Christian Scientists call accidents and diseases by the names which other human beings employ. They do not neglect these deplorable conditions, but deal with them in the most effectual manner. That the Christian Science method of finding help through turning to the divine Mind is not understood and therefore ridiculed by some is regrettable, but this is not an eternal condition. God has declared, "They shall all know me, from the least of them unto the greatest of them." This happy condition will prevail when spiritual law is understood by the human mind. Spiritual law is assuredly the law of God, and no believer in the Bible will deny that such law is always powerful, always operative, and never changes. Christian Scientists are working for the attainment of accurate knowledge of God and His law, but they do not claim to have reached the heights of the desired knowledge. With the apostle Paul, they "press toward the mark for the prize of the high calling of God in Christ Jesus."

"The beloved physician" Luke is referred to by our critic as "a medical doctor who wrote two books of the Bible." These two books tell of the teachings of Jesus and the result of those teachings during his earthly career and the career of his immediate disciples. The internal evidence of his writings proves that Luke had ceased to practise *materia medica* and was a faithful follower of the metaphysical practise taught by Christ Jesus. It is quite natural that the name of his former calling should still designate him. Have we not many "colonels" and "generals" who are no longer in the army, and many "judges" who no longer preside in court?

The critic is entirely misinformed on the subject of the Christian Science belief regarding heaven and hell. The audible prayer in a Christian Science service begins, "Our Father which art in heaven"—the first clause of the all-inclusive, all-sufficient prayer given by the Master, Christ Jesus. The Father-mind that we call God is necessarily always in heaven, always in harmony, always cognizant of the reign of Spirit or Mind. Therefore to the Christian Scientist who is endeavoring to comprehend God and His law better and better, heaven is wherever the reign of spiritual law is established; hence, instead of a nonentity, heaven is one of the biggest actualities there is, and he is seeking it through the paths indicated by the light of divine Mind. He knows that he must find it—must find it established within his own consciousness when God's thoughts are perfectly reflected or manifested in his own thought and action. Jesus said, "The kingdom of God is within you." It is therefore within the possible range of each one's thought. No one else can find it for him, however clearly the way may be pointed out, but he finds it for himself through perfect obedience to God's law—to the law of Spirit.

And what shall be said of hell—the dreadful condition so vividly portrayed by the inspired writers in the metaphor "a lake of fire burning with brimstone"? When the human thought is submerged in hate, anger, jealousy, revenge, lust, in all the concomitants of the carnal mind, then indeed does it realize the actuality of hell and seek vigorously to find a way of escape. The way of escape has been and continues to be pointed out. From the earliest times the prophet or mouthpiece of God declared His words: "Look unto me [the divine Mind, not the carnal], and be ye saved, all the ends of the earth;" "He hath showed thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?" "Return unto me, and I will return unto you."

Digitized by Google

Later came one who "spake as never man spake," and said: "No man can serve two masters . . . Ye cannot serve God and mammon;" and, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." Eternal life includes health and perfection as well as immortality. Even were it possible, would any one wish his eternal life to include sin and disease? The psalmist said, "In thy presence is fulness of joy," and true joy cannot exist where anything contrary to the nature of God appears. The Christian Science view thus disposes of hell, declaring it an actuality to the carnal mind, but an impossibility to the divine Mind and the manifestations thereof. (See Galatians 5:22, 23, on "the fruit of the Spirit.") The fact should be well known that Christian Scientists in "poring over their literature" are studying both the Bible and the writings of Mrs. Eddy. The latter enables them to discern the spiritual meaning of the Bible. The psalmist wrote, "O how love I thy law! it is my meditation all the day." No lack of Scriptural authority exists for the "poring over literature" which enables one to know God better and to obey His law. Far from causing any one to neglect his duties, it enables Christian Scientists to perform their work more intelligently, efficiently, and lovingly in all the obligations that come within their range of action.

[Charles E. Jarvis in *Out West*, Los Angeles, Cal.]

In responding to your request for an expression as to what I think would hasten universal peace, I can possibly best preface my remarks by quoting the reply of Jesus to the lawyer who asked him this question: "Master, which in the great commandment in the law?" to which Jesus replied: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the first and great commandment. And the second is like unto it, Thou shalt love thy neighbor as thyself."

Peace is obviously an effect rather than a cause, hence the first step in our desire for peace is to seek that cause. The reign of peace means the reign of God, the establishment of the kingdom of God in the hearts of men. Christian Science teaches us that heaven is not a place afar off, but it is within us, a state of consciousness attainable here and now. In that beautiful eleventh chapter of Isaiah, this condition is foretold when "the earth shall be full of the knowledge of the Lord, as the waters cover the sea."

For centuries mankind has been seeking and longing for this peace, but has found it not, because it has been sought through the material rather than the spiritual. Of late years many gatherings have been held, having for their object the establishment of peace among the nations of this world, but, we ask, how can we reconcile these arguments for peace with the activity of these same nations in building mightier dreadnoughts, more destructive weapons, and maintaining and equipping greater armies? It is because of the greed, avarice, love of self, and, above all, the fear that exists in the hearts of men today; fear of the future, fear of each other, fear of lack, and fear of loss. It would appear then that the unhappy conditions with which we are confronted are the result of a lack of the knowledge of God and of obedience to His laws. Let us therefore turn away from our worship of the material and learn how to destroy this fear which is the root of all evil. Job tells us: "Acquaint now thyself with him, and be at peace," and as we begin our upward journey and become acquainted with God, we learn that He is Love, and John said that "perfect love casteth out fear."

As the individual awakens to the reality of his existence as a child of God, his heavenly Father, the unfoldment of the true brotherhood of man has begun in human consciousness, and it will follow as surely as the day follows night that "the kingdoms of this world are become the kingdoms of our Lord, and of his Christ; and he shall reign forever and ever." On page 340 of "Science and Health with Key to the Scriptures" by Mrs. Eddy, we find these impressive words: "One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself'; annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed."

[Howard C. Van Meter in *Portland* (Ore.) *Journal.*]

In a recent communication in your paper a writer presents his views upon the inability of Christian churches to hold the people's interest. Dividing the churches into two classes, he explains why both are in default. The writer classes the Christian Science church by itself and declares that its teachings as to the unreality of matter place its doctrines beyond the practical. On the contrary, Christian Science goes to the root of human misery and gives a demonstrable solution for every problem that is opposed to health and happiness. It declares that the belief of mortals in material life and substance and the consequent limitations is responsible for the fear, the strife, and hardships of the human race. But it lifts humanity out of these conditions by giving a better view-point of existence, in which Spirit is recognized to be the only creator, in accord with Scriptural teaching. It is logically evident that Spirit cannot create its opposite, matter. In turning from matter to Spirit, Christian Science begins to loosen the fear of mortals and to establish a greater degree of hope and security by the presentation and demonstration of the fact that man (not a mortal) is the spiritual image and likeness of God. This understanding brings dominion over former beliefs and pleasure and pain attendant upon matter. The fact that through the application of Christian Science lives have been regenerated and health restored, thus bringing a greater degree of usefulness and satisfaction into every-day experiences, proves the practical effects of the pure truths of Christian Science.

[W. G. Watkins in *Republican and Press*, Neillsville, Wis.]

Our critic's use of the familiar quotation "There is nothing new under the sun" suggests the need of a correct viewpoint in order to discern its meaning. St. Paul said, "If any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new." Mrs. Eddy experienced what the apostle meant and has beautifully expressed it in the following language: "The divine hand led me into a new world of light and Life, a fresh universe—old to God, but new to His 'little one'" (Restrospection and Introspection, p. 27).

By reason of her noble aspirations and consistent efforts the truth was revealed to Mrs. Eddy and rendered practical to the world in the form of a definite idea of salvation. The race is advancing beyond a theoretical stage of trying to be content with human opinions, and is asking that mere words be replaced by a measuring up to the Master's imperishable standard, "By their fruits ye shall know them." The statement that "good people may become physically ill who have (apparently, at least) no corresponding disease, just as readily and sometimes more so, than the more sinful and evilly disposed" may be answered by the paragraph from Science and Health (p. 143): "You admit that mind influences the body somewhat, but you conclude that the stomach, blood, nerves, bones, etc., hold the preponderance of power. Controlled by this belief, you continue in the old routine. You lean on the inert and unintelligent, never discerning how this deprives you of the available superiority of divine Mind." We have the Scriptural assurance, "As many as received him, to them gave he power to become the sons of God, even to them that believe on his name: which were born, not of blood, nor of the will of the flesh, nor of the will of man, but of God."

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

HEALING A CHRISTIAN DUTY.

ONE of our contemporaries—an organ of one of the oldest religious bodies—recently said, in a discussion of the works of spiritual healing which are being done outside the pale of such religious organizations as the one it represents: "None of these cults have any ecclesiastical sanction, and yet they are undertaking to do what the church in the earlier days carried forward as a part of the gospel mission, bringing healing to the body as well as peace to the mind, and salvation to the soul, and so promoting a 'wholeness without which no man shall see the Lord.'"

As to the success which attends this healing work, although it is carried on without "ecclesiastical sanction," our contemporary says: "With due allowance for enthusiasm and unscientific methods of reporting cures, many have received lasting benefit by resorting to purely mental and spiritual forces. Almost, if not all, of our parishes can tell their story of those who have not been aroused to enthusiastic support of the church with its blessed message of peace and joy for the soul, and who, seeking for some physical benefit, have drifted into these new forms of religious activity, have claimed benefits, and have become enthusiastic propagandists of their cults."

The implication of this argument seems to be that the healing work which Christ Jesus, the apostles, and the early Christians did, was not inseparably linked with Christianity, and for that reason may be done or left undone as the churches of today and their members may elect. This was not the way in which our Master regarded the healing work he accomplished, else why should he have answered John's inquiry as to the validity of his claim to the Messiahship by bidding his messengers report to him what things they had seen and heard as they awaited his answer to their inquiry; how he had ministered to the blind, the lame, the lepers, and the deaf, had raised the dead, the while he preached to the poor and needy the gospel of repentance and the coming of the kingdom of God in the hearts of men.

Neither is such a view consistent with the commission which Jesus delivered not only to his immediate disciples, but to his professed followers in all ages who should believe on him through the word of these disciples; nor is it consistent with his final declaration as to what should constitute the proof of discipleship—the "signs" which would follow them that believed; that they should repeat the works he had wrought through the power of Truth,—should cast out evil spirits from the afflicted, loose from their infirmities those who were bound, and minister of comfort and consolation to the suffering and sorrowing. Surely this was a practical religion which the Master taught, for it exemplified the great commandments on which, Jesus declared, "hang all the law and the prophets," and demonstrated that the healing of sickness and the casting out of sin were accomplished through the same power, omnipotent good.

Christian Scientists believe that the healing of the sick is a necessary part of the Christianity the Master preached and practised and bade his followers do likewise. His first act when he came down from the mount where he had preached that sermon which Mrs. Eddy designates as the "essence" of the "Science of Christianity" (Science and Health, p. 271), was to heal the sick,—the leper, the centurion's servant "sick of the palsy, grievously tormented," and one "sick of a fever" who immediately rose and ministered to his bodily needs. It is a matter of record that the "ecclesiastical sanction" of that day was withheld from the great Teacher and his disciples, but that mattered little to those who were privileged to receive their ministrations. The sick, the impotent, and the blind laid stress on what was to them the vital point, that whereas they had been bound, now they were free. Jesus even rebuked the too ardent disciple who would have hindered one ministering to the needy "because he followeth not with us;" he would not withhold sanction from one working in his name, nor can his followers do so today without stultification.

Whether he is acting with or without so-called "ecclesiastical sanction" is of no import to the Christian Scientist who in the degree of his understanding of the Science of Christianity is obeying the Master's command "to preach the kingdom of God, and to heal the sick," in its entirety, confident that in so doing he is fulfilling what Mrs. Eddy shows us the Master placed "first in the list of Christian duties, . . . the healing power of Truth and Love;" that "it is the living Christ, the practical Truth, which makes Jesus 'the resurrection and the life' to all who follow him in deed" (Science and Health, p. 31).

ARCHIBALD MCLELLAN.

ERROR UNREAL.

IT is now very well known that the fundamental proposition of Mrs. Eddy's teaching is the declaration of the allness of God, good, which by its very nature forces us to accept the conclusion that evil is unreal, whether manifested as sin or disease. Respecting this she says, "Truth is intelligent; error is non-intelligent. Moreover, Truth is real, and error is unreal. This last statement contains the point you will most reluctantly admit, although first and last it is the most important to understand" (Science and Health, p. 466).

The very fact that this teaching calls forth such bitter antagonism on the part of mortal mind shows that it is a vital truth which should never be lost sight of in our work whether for ourselves or others. The argument of the outsider is, that Christian Scientists declare error to be nothing and that then mortals feel themselves at liberty to pursue and possess nothing to their hearts' content. The absurdity of such a position is surely self-evident to the thinker, but there are many who do not pause to find out that from the standpoint of Christian Science nothing is real but that which is of God and which expresses the divine nature; and this is no mere theory, but is the vital truth which underlies the words and works of Christ Jesus, and which makes possible today the demonstrations of divine power that characterized his ministry.

The student of Christian Science begins his demonstrations, first in knowing and proving that disease is unreal because it has no relation to the being of God or of man as His likeness; that it is not a manifestation of Life or of Mind, and that, being a mere negation, it ever tends toward self-destruction. Here it may be said that if this were more clearly understood, and more constantly kept before thought, the allness of God, good, would be more quickly realized and demonstrated. The healing of disease by means of this truth, then leads to the overcoming of sin, which seems a more difficult problem, although the churches have for long centuries neglected the former, so far as spiritual means are concerned, and have attempted to deal with the problem of sin by admitting that it is real,—a concrete factor of existence,—and this quite oblivious of the fact that such an admission is a virtual denial of the allness of God, the absoluteness and all-inclusiveness of good.

On page 138 of Science and Health Mrs. Eddy says, "It is easier for Christianity to cast out sickness than sin, for the sick are more willing to part with pain than are sinners to give up the sinful, so-called pleasures of the senses;" yet she adds that "both cures require the same method and are inseparable in Truth" (p. 404). Experience proves that the true method is to know and declare at the first intimation of error that God never made it, hence it is unreal. Trouble

Digitized by Google

comes mainly from the mortal tendency, due to long years of training in the wrong direction, to admit the error, and later to proceed to deny it, when Jesus' command, "Seek ye first the kingdom of God, and his righteousness," should have been heeded and obeyed from the start.

In some cases a deep sense of remorse for past sin seems to shut out the sunshine of Truth, but the same remedy is called for in such cases as in all others. It should also be remembered that repentance, not remorse, is the demand of Truth, and we cannot too often ponder John's words respecting Christ Jesus, "Behold the Lamb of God, which taketh away the sin of the world," then think upon the spiritual significance of this term as given in the glossary of our text-book, which reads: "The spiritual idea of Love; self-immolation; innocence and purity; sacrifice" (p. 590). In Christian Science we often find that the surest way to help ourselves is to help others, and with the divine idea here outlined we can do this effectually, for we can recognize in the mortal tendencies of those who seek our help the same errors which would obstruct our own way if we were to admit their reality. When, however, we take our stand for the allness of Truth, the fruits of Spirit begin to appear,—the "love, joy, peace," also the "meekness" and "temperance;" and we soon learn that "against such there is no law," and "no condemnation" to those "who walk not after the flesh, but after the Spirit."

ANNIE M. KNOTT.

"HAVING DONE ALL, TO STAND."

LITERATURE presents no finer appeal to schooled manliness than that found in the sixth chapter of St. Paul's letter to the Ephesians, which not only reveals the apostle's sense of the seriousness of the struggle for which his fellow Christians had enlisted, but of the seeming subtlety and strength of the error arrayed against them, and the completeness of their divinely provided equipment for the fight. Elsewhere in his writings he enumerates many of the distinctive features of an effective "stand" for Truth, but here he lays his emphasis upon the imperative need of courageous faith. He also takes pains to make it clear that the effectiveness of the "stand" taken is determined by the completeness of the spiritual preparation which we have made for it. It is as though he had said that every impregnable defense is one which has been carefully and expertly entrenched, and that this is equally true of the staying qualities of those who defend it; which is no less scientific than sensible.

St. Paul's figure connotes the fact that "to stand" for Truth is to be active, it is a continuous doing; and since, as understood in Science, every real doing is a knowing, the apostle's teaching is immediately related to that of the Master when he declared that a knowledge of God, of Truth, constitutes life eternal. This thought that to know is to do is constantly illustrated in human achievements. In the last analysis the solution of every problem is found to result from the rule of a right idea, it is the conquest of ignorance by intelligence, so that every real triumph is but a higher truth-knowing.

"To stand," after "having done all," calls not only for the possession and expert use of spiritual equipment, but for the giving up of every thought and habit which handicaps proficiency, that alert watchfulness which perceives and utilizes favoring conditions, and which is always prepared for inspection and for assault. All this is epitomized for an army in the two great requirements placed upon the men, namely, discipline and obedience to orders, and this status and attitude of expert soldierliness has been commended by our Leader in her counsel on page 495 of Science and Health, where she says: "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea. Allow nothing but His likeness to abide in your thought."

Christian Science practised means the fulfilment and demonstration of the apostle's ideal. It inculcates and begets that preparedness and pluck, that watchfulness of thought and habit which the overcoming of "the world, the flesh, and the devil" so imperatively demands, and its effective doing is always a spiritual knowing, a Christlike apprehension of the allness and omnipotence of Truth, the nothingness of every claim of error. The call of the apostle further conveys the intimation that after every known duty has been well done, demonstration may be delayed, and in keeping with this thought the Christian Science practitioner is not infrequently called to stand, having done all, and wait upon his God. This always witnesses primarily to the limitation of our perception of Truth, and it may witness to a conscious or unconscious refusal of the patient to admit the healing word. The unchanging efficiency and availability of divine law cannot be questioned, and the delayed overcoming must therefore be traceable to some factor of sense, some asserted law or modus of error which has not been annulled. In such an event Mrs. Eddy has reminded us that "like the great Exemplar, the healer should speak to disease as one having authority over it, leaving Soul to master the false evidence of the corporeal senses" (Science and Health, p. 395). Truth's working out of the problem may be in ways which we cannot divine, much less outline, but "having done all" that we know, then "to stand" for the sovereignty of Christ, Truth, and for man's eternal freedom, is to give evidence of that courage which is the invariable attendant of true faith.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the new church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m.

POMONA, CAL.—The new Christian Science church will be occupied tomorrow [July 28] for the first time. The new building has a capacity of more than double that of the old church, it now being possible to seat about three hundred. The structure is built along artistic lines and has many features for the convenience of the members in carrying on the work of the organization in Pomona.

Pomona Progress.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 1, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 16, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to May 31, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Falmouth, Norway, and St. Paul Streets, Boston, Mass.

THE LECTURES.

SHERIDAN, WYO.

Virgil O. Strickler lectured on Christian Science at Moose hall to an audience of three hundred people. It was the first Christian Science lecture ever heard in this part of the country and some of those present came over two hundred miles to hear it. The Hon. W. S. Metz, state senator of Wyoming, introduced Mr. Strickler, and said:—

The pearl of great price for which humanity has been striving so earnestly during all the centuries of the past, is to know and to understand God aright. Jesus the Christ said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." Jesus knew and understood God correctly. He said, "God is a Spirit: and they that worship him must worship him in spirit and in truth." If God is Spirit, then His creation must be a spiritual creation and man must be a spiritual being and therefore perfect. Jesus talked with God as intimately as I talk with you. You will remember that, when he stood at the grave of Lazarus, who had been dead for several days, he said, "Father, I thank thee that thou hast heard me. And I knew that thou hearest me always." Then he spoke to Lazarus and said, "Lazarus, come forth," and Lazarus arose from the tomb with his grave-clothes wrapped about him. Then Jesus said to those who stood by, "Loose him, and let him go," and he went his way rejoicing. Jesus knew that life was not confined to the body, but that it was spiritual; and that man reflects the infinite and eternal Life. It was, therefore, through an understanding of the spiritual law of Life that he caused Lazarus to rise from the dead. He knew that Life is eternal.

In this day and age there are very few thoughtful men who do not admit that the innumerable stars and planets are controlled and guided in their intricate system of operations by some infinite intelligence, and that this intelligence is entirely independent of mankind. When I look away yonder through the largest telescope and see the farthest star, and see it traveling in its uniform course, in the midst of other stars and planets and in the midst of other systems of worlds, under perfect control and in perfect systematic operation and in safety and security, I know that an intelligence guides and controls and guards it away yonder in its place in infinite space, and I know that this same intelligence is here, with me and everywhere present, to guide, control, and protect. To me there are two striking truths in Christianity,—that God is Spirit, and that He is everywhere present; and eventually, I think, before these great truths "every knee shall bow, every tongue shall swear."

I shall not soon forget the night when I stood on the mountain-side and watched Halley's comet disappear from human sight, as it went away on its brilliant path through the immensity of space, traveling, as it does, with inconceivable rapidity an incalculable distance beyond the knowledge of men; crossing the paths of the worlds, known and unknown, yet without any collision and without any harm. I could not refrain from waving to it a good-by, yet in my understanding I said, "The hand that guides thee will protect thee from harm and will bring thee back again safely to prove to the generations of the future that God is everywhere present and that in His presence and guidance there is safety and security."

There is one thing that I have observed of the Christian Science church which has appealed to me very strongly, and that is, it does not criticize or find fault with other denominations. It says that there is good in all of them, and it is glad that all are aiding in the good work that is to be done in the world. It does not even criticize the medical profession. It recognizes that there are many splendidly trained and equipped men and women in the medical profession who are doing all in their power to relieve mankind from suffering, from distress and disease; and they know there is plenty of work for all to do without stopping to spend time in criticizing others. They bid "Godspeed" to all engaged in the work of relieving mankind from distress of every character.—*Correspondence.*

DES MOINES, IOWA.

At the lecture on Christian Science delivered by *Bicknell* Young at Berchel theater, the speaker was introduced by Attorney John Read, who spoke as follows:—

Permit me to acknowledge the pleasure which is mine in being accorded the privilege of introducing to you the distinguished gentleman who will address you this evening. To insure that neither he nor the society under whose auspices he speaks may feel any embarrassment because of anything which I may say or fail to say, it is proper I should state that while I am in accord with the purposes of Christian Science, I am not a follower of that faith. To fortify you against the possibilities which my position of advantage affords, I will say that it is my invariable rule on occasions of this kind never to talk longer than the principal speaker.

It is the business of religion and science and all education to help us to solve the problem of life on earth. It seems to me that the efforts of religion have been expended in an attempt to penetrate the hereafter and find a clearance for the next world, rather than to find a solution for the problems of this life. It stands to reason that if one can but know the laws of being and live in harmony with them, he will thereby get out of this life all that is possible and secure the future so far as that is possible. Since man acquired the faculty of imagination, happiness has been the great concern of his life.

What is happiness? There is a great difference of opinion about that. Some one has said that happiness is freedom from perturbation. Some say there can be no happiness on earth. Whatever happiness may be or whether happiness here is possible or not, we are all trying to find it. It is a good thing anyway to have the happy habit. Happiness is essential to health and health is essential to happiness. A mind free from perturbation is essential to both. Mind is the great mystery. Can the human mind solve its own mystery? Does it hold the key that will unlock its own secret? Can the mind look into itself, observe its own processes, and reason correctly about itself?

It is difficult for us to get rid of our superstitions. After all, what is science, and especially what is Christian Science —real, scientific Christian Science? Much is claimed for the teachings of Christian Science, in the attainment of health and happiness. This alone commends it to the serious attention of all.—*Register and Leader.*

BROOKLYN, N. Y.

Judge Clifford P. Smith delivered a lecture on Christian Science in Prospect hall, at which over eighteen hundred people were present. Llewellyn C. Morley, first reader of Second Church of Christ, Scientist, Brooklyn, under whose auspices the lecture was given, introduced the speaker, saying in part,—

For centuries countless thousands of people in every nation have sought for God, for the only true God, "who forgiveth all thine iniquities; who healeth all thy diseases." This search for truth still goes on the world over, and this audience assembled today gives emphatic assurance that we all are still seeking a better understanding of Him whom to know aright is life eternal. As over nineteen hundred years ago the gospel was preached by the wayside to the listening thousands, so in our day Christian Science is being preached, bringing to humanity a surcease from sorrow, restoring health, peace, hope, and joy, through the understanding of the Word of God, as revealed by its teachings.

GOLDFIELD, NEV.

Francis J. Fluno, M.D., in his lecture on the subject of Christian Science, was introduced by I. J. Woodworth, who said in part,—

I am not a member of the Christian Science church, but from what I know of its basic truths and its teachings I am firmly convinced that they will ultimately revolutionize the Christian doctrines of the universe; will bring mankind back to the fundamentals of Christian living, and will develop here upon earth a grander civilization, a broader humanity, and a more perfect brotherhood between man and man. Christian Science, as I understand it, does not deal so much with the rewards or happiness that may or may not be experienced in the life to come, as with the lives we should now live and the kindly influence and service we should render to wayward and suffering humanity right here upon this mundane sphere. Christian Science does not teach obedience either to a religious or a civil law simply for the purpose of avoiding future punishment, or for the securing of future reward, but it does teach obedience to those laws because it is right that they should be obeyed; because their observance means happiness and contentment to mankind; because it means better homes, better fathers, better mothers, better sisters, and better brothers, and a higher standard of religious and civic citizenship generally.

Christian Science regards all human beings as the children of God, and it seeks to bring them into a closer communion with Him and to uplift them to a higher plane of spirit and intellect and understanding; to bring them to a more perfect realization of the possibilities of their own spiritual and mental endowments; to help them more perfectly to comprehend the sum of human sympathy, and their duty to themselves, their kindred, their country, and their creator; to help them to keep their minds free from erroneous thought, their hearts pure, and their faces ever turned to the rising sun. Any religious organization, I care not by what name you call it, or from whence it emanates, which advocates those principles is certainly entitled to our most serious thought and consideration, and it is my understanding that Christian Science leads to these conclusions.

Correspondence.

OREGON CITY, ORE.

Clarence C. Eaton lectured to a large audience at Shiveley's theater. The building was crowded and many persons were unable to gain admittance. Prof. A. O. Freel, in introducing the lecturer, said:—

We are all familiar with the account of one who had been bedridden for many years, waiting for an opportunity to bathe in the waters of the pool of Bethesda that he might be healed, when a certain man approached him and said unto him, "Rise, take up thy bed, and walk;" and that he arose at once, perfectly whole. We are also familiar with the instance when the same "friend of all men" approached the grave of one who had been buried four days, and after uttering a short prayer called on the dead to come forth; and he came, wrapped in grave-clothes, and was restored to his loved ones. We have also read the many accounts of the blind receiving sight, the deaf hearing, the lame walking, and the hungry being fed. We do not doubt that Jesus did all these wonderful works, but we are prone to call them miracles. In the higher understanding of God, gained through the study of the Bible in the light that Christian Science throws on this book, we have learned that these things are not miraculous or supernatural, but are divinely natural,—the result of a higher understanding of the one infinite Principle, God.

Jesus bade all men do the works that he did: "Preach the gospel," "heal the sick," "cast out devils;" "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." Again he said, "I can of mine own self do nothing;" but, "the Father that dwelleth in me, he doeth the works." And we are taught that "God is no respecter of persons." As evidence of the truth of these statements thousands of the clearest thinking men and women all over the world are ready to testify to the efficacy of this healing truth. We have assembled here this afternoon for the purpose of listening to one who is able to speak with authority on this subject of Christian Science. We are here with open minds, free from the petty prejudices occasioned by false opinions or wrong desires, ready to assimilate the words of truth.

Enterprise.

MALDEN, MASS.

A lecture on Christian Science was delivered in the Malden auditorium before an audience of more than a thousand persons, by Bliss Knapp. The lecturer was introduced by Arthur M. Willis of Melrose, who said in part,—

I have somewhere read this tribute to a great personality: "The longer on this earth we live and weigh the various qualities of men, the more we feel the nigh, stern-featured beauty of plain devotedness to duty. Steadfast and still, not paid by mortal praise, but finding amplest recompense for life's ungarlanded expense, in work done squarely, and unwasted days."

If this tribute shall have been true of Washington, why may it not apply with equal force to Mrs. Eddy, who, so far as human agency was concerned, stood alone with God and the Bible as her guide, "steadfast and still," working out the problem of life, and who brought to a waiting world the glorious truth of man's right to freedom from discord, disease, and distress. Amid opposition, misrepresentation, and ridicule, she clung to truth, until today there are more than a thousand established churches and millions of confessed beneficiaries. If this shall be the present results of her devotions, what may not the future have in store for this movement?—*Melrose News.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship.

Ashland, Ore.—8 p.m., Sept. 20.
Chanute, Kan.—Hetrick theater, 8 p.m., Sept. 17.
Chicago, Ill. (Third Church).—Church edifice, Washington boulevard and Leavitt street, 8 p.m., Sept. 19 and 20.
Durango, Col.—The Christian church, 8 p.m., Sept. 12.
Fort Dodge, Iowa.—Armory, 8 p.m., Sept. 20.
Fort Wayne, Ind.—Minuet hall, 121 E. Washington street, 8.15 p.m., Sept. 16.
Great Falls, Mont.—Great Falls opera house, 3:30 p.m., Sept. 15.
Kalispell, Mont.—McIntosh opera house, 8 p.m., Sept. 17.
Longmont, Col.—Dickens opera house, 8:15 p.m., Sept. 10.
Marion, Ind.—Indiana opera house, 3 p.m., Sept. 15.
Marshalltown, Iowa.—Odeon theater, 8:15 p.m., Sept. 19.
Oakland, Cal. (Fourth Church).—Masonic temple, East 14th street and 8th avenue, 3 p.m., Sept. 15.
Pasadena, Cal.—Church edifice, Oakland ave., 8 p.m., Sept. 20.
Princeton, Ind.—Court house, 8 p.m., Sept. 13.
Rawlins, Wyo.—State penitentiary, 1 p.m., Sept. 15.
Santa Ana, Cal.—Grand opera house, 8 p.m., Sept. 19.
Seymour, Ind.—Opera house, 8 p.m., Sept. 17.
Topeka, Kan. (First Church).—Grand opera house, 3 p.m., Sept. 15.
Walla Walla, Wash.—Keelor grand theater, 8 p.m., Sept. 17.
Willmar, Minn.—Church edifice, 8 p.m., Sept. 12.
Winfield, Kan.—Opera house, 8 p.m., Sept. 16.

TESTIMONIES OF HEALING.

While living in Concord, N. H., some years ago, I often saw Mrs. Eddy out driving, and on Feb. 27, 1898, I heard her preach on the ninety-first Psalm at the Christian Science church in that city. Before this time I was inclined to be prejudiced against Christian Science, not knowing what the teaching really was (this was before my healing), but when I heard Mrs. Eddy explain that psalm so beautifully, and say that in gratitude to Jesus for all he had done for her she could wash his feet with her tears, and wipe them with the hairs of her head, my heart went out to her, and I felt I could never again say anything against Christian Science.

In the *Sentinel* of Dec. 20, 1900 (p. 253), is the testimony of my first healing through Christian Science, in 1898. That same year we came to California, and after twelve years here my husband and I find ourselves still very grateful for that healing, for it caused us to study Christian Science, and in 1902 we had the great privilege of class instruction. The first year of our study my husband was instantaneously healed of severe headaches, from which he had suffered periodically for years, and thought them hereditary. Our two youngest children, eleven and seven years old, have never taken any medicine, the truth, as taught in Christian Science, having been sufficient for their every need. We are very grateful that we have the "great Physician" always at hand, and we have found, as our dear Leader says in Science and Health (p. 410), that "every trial of our faith in God makes us stronger." We have had so many proofs of the omnipotence of God, with our three children and ourselves, that I long to tell all mothers to cast their burdens on the Lord, and He will sustain them.

One summer vacation, my elder son secured work in a box factory, and in getting up from the floor, one noon, he rested all his weight on a nail, running it into the palm of his hand. He told me about this in the evening, and asked for help. In the morning his hand was quite swollen, and as he went to work he seemed to have a good deal of fear, and said he did not want blood-poison to set in. I assured him that there was nothing to fear; that God is omnipotent, no matter what phase of error may present itself. I worked earnestly for him through the day, and whenever a thought of fear came to me, I remembered the first commandment, "Thou shalt have no other gods before me." When my son came home in the evening, not a word was said about his hand, though I noticed he used it freely and that it was normal. In the morning I remarked to him that his hand seemed all right, and he said he had worked all day with it and never thought of it. We both felt we had reason to be very thankful to the giver of every good and perfect gift. At two different times I ran a nail into my foot, but I knew each time that I had my remedy at hand; that by realizing the "scientific statement of being" (Science and Health, p. 468), matter could not do anything. I wore my shoe as usual, and there was no ill effect.

When my little daughter was about three years old she met with a severe injury, cutting her upper eyelid. I took her in my arms and washed off the blood, with a heart full of gratitude that it was my great privilege to know that there are no accidents in Truth. It was not more than five minutes before she ran off to play, saying she was all well, and in three or four days from this time the wound had healed perfectly and left no sign. At another time she had a high fever all through the night and wanted me to sing to her. How thankful I felt to know that divine Love did watch over us, so that there was nothing to fear; even though we seemingly battled with error for another day. Truth was the victor. We feel very thankful for the sweet assurance and restful thoughts that are ours, even through a busy day, in proportion to the consciousness we have of the truth that we do "abide under the shadow of the Almighty."

At Christmas time, 1911, my husband found that he was losing control of his limbs, which felt like heavy weights. He could hardly walk, and his arms also were affected, so that he could not even fasten his collar. We realized that this error must be overcome quickly, and our thought was permeated with the statements of truth from the Bible and our text-book. We knew that "the more difficult seems the material condition to be overcome by Spirit, the stronger should be our faith and the purer our love" (Science and Health, p. 410); so we both worked earnestly, declaring the truth quietly by ourselves, not mentioning his trouble to any one. We never named the error, for we knew that God never gave a name to any disease, that it is only mortal man who gives names to diseases and then bows in fear before the name. My husband managed to go to work every day, but as he left in the morning he would ask me to do my utmost to help him each day. For himself he held firmly to this thought from Isaiah: "Fear thou not; for I am with thee: be not dismayed: for I am thy God, I will strengthen thee; yea, I will help thee; yea, I will uphold thee with the right hand of my righteousness." He had to go down-stairs one foot at a time and holding on to the side; and said he was glad it was dark when he came home at night, as he walked so unsteadily. This went on for about a month, and the clouds seemed pretty dark at times, but my heart went out in this verse from our Hymnal, as I went about my daily work:—

O for a faith that will not shrink,
Though pressed by every foe;
That will not tremble on the brink
Of any earthly woe.

One morning, as my husband was at breakfast, I spoke about some business he had planned to take up in March, and he said, "I will have to see what my limbs are going to do first." I felt rebellious at such a thought, and firmly said, "You must tell your limbs what to do; they cannot control you; God gave man dominion." From that time his condition improved, the sunshine of Truth dispelling the clouds of mortal sense little by little, until we found again that "nothing can interfere with the harmony of being nor end the existence of man in Science" (Science and Health, p. 427). By the first of March he was perfectly free, and took up the new business as he had planned.

Our hearts go out in deepest gratitude to our dear Leader for giving us our text-book, through every page of which runs the golden thread of Truth, showing us that man is the image and likeness of God, spiritual and not material. The words of the psalmist express our thought: "Oh how great is thy goodness, which thou hast laid up for them that fear thee; which thou hast wrought for them that trust in thee before the sons of men!"

MRS. J. A. GRANT, Oakland, Cal.

I wish to express my sincere gratitude for the above healing, and also for having been healed of chronic headaches. The latter I have not had for the past twelve years. Christian Science helps me greatly in my daily business, in overcoming fear and worry.—J. A. GRANT, Oakland, Cal.

When I think of the many times that the truth has overcome error in my experience since I began to study Christian Science, I am filled with gratitude. These demonstrations have helped me to learn that the Christ-way is indeed the way of peace and harmony, and that it is only when we cease to discern the true way and follow wrong methods that we experience discord and suffering. I have learned that the alpha and omega of Truth's teachings is that God is Love, and knowing only a perfect God and His perfect creation, we manifest love and good will to all, thereby demonstrating the kingdom of heaven on earth in the way exemplified by Jesus.

I have witnessed the power of Love overcome discordant

Digitized by Google

conditions in the home, the church, and all relationships. The knowledge that we can really forgive those who have seemingly wronged us is a blessing to humanity. I have experienced quick physical and mental healing since I began to study Christian Science about seven years ago. I know that God never fails us, for He is always the same, and that which He creates is eternally the same, free from error. When we grasp this, and hold to it persistently, we are healed. I have met persons who did not understand that the healing must take place in their consciousness, that the truth was to rid them of erroneous beliefs. Rather they were watching their bodies to see the disease disappear, instead of turning wholly to Mind. Upon understanding that *healing* meant spiritual or mental regeneration, they began to improve. It matters not in what form error is manifested, it is a false belief, and Truth realized so fills the consciousness that false beliefs and all their manifestations are cast out.

I am thankful to God for Christian Science; also thankful to Mrs. Eddy and all of Truth's messengers.

MRS. MABEL SMITH, Blairstown, Mo.

Nearly two years ago a serious accident befell my son. By a slip of his motor-bicycle he was thrown in front of a two-wheeled cart, which went over his back; the horse also kicked him in the mouth, cutting his face severely. His tongue was terribly bitten between his teeth, and the loss of blood was excessive. The accident occurred close by the home of Christian Scientists who were intimate friends of ours, and into whose house, happily, the boy, quite unconscious, was immediately carried, thus avoiding the alternative of the local hospital. One of these friends, who fortunately was at home, immediately began his healing work for the injured boy before the outward appearances of most serious injuries had begun to subside. The police, however, arrived and insisted upon a doctor being called immediately; but beyond the stitching together of the torn lips, the case was left entirely in the hands of the Christian Scientist friend.

By the time I arrived at the house, probably forty minutes later, my son had been removed from the floor of the hall where he was first carried, washed, and bandaged round the disfigured parts of his face and head, and laid upon a couch. His first thought on regaining consciousness was a joy and thankfulness unspeakable that the face bending over him was that of a well-known Christian Science friend. He afterward expressed his feeling as one of great content, after the fearful turmoil of his confused thought, mingled with noise and expressions of horror. After an hour or two, with the work done in Christian Science and ordinary manual assistance, he was able to walk up-stairs and was put into bed. For some days he lay there with what were pronounced double fractures in the shoulder, besides cuts and bruises, totally unable to speak on account of the condition of the tongue, but from the first hour able to write on paper or use the finger alphabet to convey his wants or his thoughts.

All this time there was no pain, only the discomfort from continually lying on his back, and a tight feeling across his chest and back which caused him to write one day: "I think a cart must have gone over my chest, I can feel the tracks." Until then he had not known the seriousness of the accident. After four days' silence, friends and relatives began to talk about his recovery; but remarks were made about Christian Scientists having no doctors, and the probability that, as they did nothing, the injury to his tongue would prove so serious he would never speak again. This fear came to my ears, through a sympathetic but skeptical relative. That same evening I told the practitioner of the fear which was going round, and worked to destroy in myself the fear that had so suddenly been aroused by these remarks.

During the early hours of the following morning the boy spoke in his sleep. The words were almost clearly articulated, sufficiently so to be heard by me on the other side of a large room. Those few words, the broken fragments of a dream, brought a comfort quite indescribable, and the fear of the preceding day was entirely destroyed. The words were written down on paper for fear of their being forgotten, but they had already made a greater impression than many a wiser saying has failed to do. Until that blessed moment the boy had not been able to utter a single word, and nourishment had to be inserted between the teeth at the side of the mouth. On the patient's waking, he was told that he could speak if he made the effort. He smiled incredulously, and twice tried to articulate without any great success. Then he was told the words he had uttered so clearly in his dream, and he smiled again, as much as to say, "I wish I could." Then a persistent effort to prove to him it was only mortal fear that was restraining him, followed by the constant affirmation of the truth against the seeming error, loosened his tongue, and he spoke at intervals during that day and each succeeding day, until speech became normal.

The whole convalescence was one long song of gratitude. Such a serious accident has seldom, if ever, been accompanied by days of such painless rest. A relative (a nurse in the military hospital at Portsmouth) came to visit him on the fifth day, and said she had never seen such a rapid recovery in her experience; that such a stage as she then witnessed was generally reached at the second or third week in hospitals. On the ninth day he went to the seaside, a journey of sixty-five miles, traveling alone. There have been many occasions for gratitude in this same household, but this case was peculiarly interesting; and the healing, though by no means instantaneous, was perfectly beautiful in every detail.

It has been wonderfully said by Mrs. Eddy that gratitude for the blessings we have makes us "fitted to receive more" (Science and Health, p. 3), and during my son's quick restoration to health, this same quality played no unimportant part,—gratitude for the truth that heals, and for the loving unselfishness ceaselessly displayed by those who befriended him, also gratitude for the blessing of his happy environment. The boy silently realized this daily, perhaps constantly, from his first moment of consciousness; for his reply to an exclamation at his quick recovery was: "Well, I've been grateful all the time, and there's nothing so healing as gratitude."

These occasions for gratitude on the part of Christian Scientists are continual, but sometimes one instance, perhaps through peculiar circumstances, or through some special detail, may seem of greater significance than another. The boy in question was twenty-two years of age, and he rode his motor-bicycle again in four or five months without any fear. He was obliged to forego the rest of that football season, but renewed this sport and others the following winter.—LAURA GERAHTY, Twickenham, England.

As a last resort I gave Christian Science a trial, after four years of helplessness caused by an accident, resulting in serious injuries. For many months I was unable to step out of the house, any motion of the body causing me great suffering. I spent many weeks in a hospital, and while there some abnormal growths were removed. I returned home, but never regained strength, or even freedom from suffering. For two years I remained in a state of mental and physical misery, watching the activities of other young people and wondering if I would ever be able to join with them. Feeling that life held nothing more for me, I could not understand why God (as I then supposed He did) should send such suffering upon human beings.

At this time a friend induced me to try Christian Science, and took me to a practitioner for treatment. I left there joyful over the possibility of being well. In a short time I was entirely healed of extreme physical exhaustion and

Digitized by Google

severe bowel troubles. At the end of six months I could walk four and five miles without discomfort. At this time a business position was secured, which I have held over two years without missing a day. I am entirely healed of the ill turns which formerly confined me to bed for several days at a time, and have greatly improved sight and hearing. I had been deaf from childhood, but am now hearing better than ever before in my life. I have been able to overcome a sense of financial limitation, and to take a step that previously the fear of lack of means withheld from me. Christian Science has been a great help to me in meeting the problems of business life, making me more efficient and successful in my work, opening a new life of greater possibilities and higher motives, and giving me strength and confidence in place of inharmony and uncertainty, a mental and physical freedom which I had never known before.

I am deeply grateful for this abundant good which Christian Science has made possible for me, and for the loving, faithful work of Mrs. Eddy in giving this truth to the world.

MAUDE L. WARREN, Boston, Mass.

I can testify to having been healed over two years ago through Christian Science treatment. I had not walked for three years except by the use of a crutch and cane, then two crutches. I also had a wheel-chair in which I was taken out on the street. Previous to this time I had been lame, but did not use crutches. It was then proposed to me, through my daughter, who lived in Chicago, that I come there, and that perhaps Christian Science would do me some good. So I went, and at the first treatment I was helped so much that I walked without the crutches, and I have never used them since. I also disposed of the chair. I was treated for about nine weeks, then came home, and since that time have had no trouble in walking.

It seemed to me, and to those who saw me after I came home, that my healing was a most wonderful thing, as I was much straighter and more erect than before. I have a great deal to be thankful for, and am truly grateful that through God Christian Science has accomplished so much for mankind.—ELIZABETH B. BAIRD, Muscatine, Iowa.

In the fall of 1908, my mother (whose testimony is given herewith) was at my home, under Christian Science treatment. During this time I listened with much interest as the practitioner explained this great truth to her, and I thereby gained a little understanding of Christian Science. I read the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and it was not very long before I found that I was healed of an eye trouble for which I had worn glasses for about thirteen years. The following winter my husband was treated by the same practitioner, and was healed of a very severe throat trouble, of which there has been no return whatever. I am very grateful for these healings, and for the many blessings which Christian Science has brought and is bringing to me.

MRS. SARA BAIRD PLATT, Chicago, Ill.

It is with a sense of the deepest gratitude, which cannot be expressed, that I cast this "bread upon the waters" in acknowledgment of what the understanding of Truth, as taught by our beloved Leader, Mrs. Eddy, has done for me. When Christian Science came to me, I was bound by belief in the laws of *materia medica* more than most people, having graduated some years previous from a training-school for nurses; but, whereas I saw these laws to be unreliable, I found the law of God, as revealed in Christian Science, to be fixed and eternal, so I naturally clung to the law which proved the most to me. As the realization comes into consciousness that God is All-in-all, there is no obstacle, be it sin, disease, sorrow, or poverty, which does not disappear from the path of one who is overcoming the material sense of selfhood.—SUSAN C. HOUSE, Franklin, Ind.

I give this testimony in loving gratitude for all the good that has come to me through Christian Science, and in love to our revered Leader who stood firm for the truth. I suffered terribly from a stomach disorder, and my back seemed to be in a dreadful condition. For years I had what the doctors called a most serious affection on the cavity of the neck. I was operated upon by one of the best surgeons in Edinburgh, Scotland, and had the lump taken away, but never the pain.

Thirteen years afterward, I was ready to go through another operation. I was in extreme distress at this time, thinking the end was near, when a friend who is not a Christian Scientist advised me to try Christian Science. I did so, took treatment for three months, and was healed. I then studied "Science and Health with Key to the Scriptures" by Mrs. Eddy, and soon learned how to prove for myself the statement that "man has not two lives, one to be destroyed and the other to be made indestructible" (Science and Health, p. 369). I know now that my life is in God, and I gain more abundantly by walking "after the Spirit." I know of a truth that God is Love, and that He has sent us another prophet, Mrs. Eddy, to tell us that there is but one life, one Christ and one Saviour, divine Truth.

I may add that I had no faith in material remedies, even while under medical treatment, and was always looking for some one that could heal by prayer. I was raised in an orthodox church, and the minister often quoted the apostle's words, the "prayer of a righteous man availeth much." A short time before coming to Christian Science I had begun to doubt if there was a God, although I had been raised by Christian parents who kept family worship; but one thing I never forgot to do, and that was, to say the Lord's Prayer, although I had no proof that any prayer had been answered. Such darkness in a Christian age seems dreadful, and yet there are hundreds who are waiting for a way of escape such as I have found through Christian Science. I have had to forsake a great deal, for I had to give up greed, but I can truly say, as did Paul, that I count all things "but dung, that I may win Christ." May God enlighten some honest seeking heart through this testimony. I can truly say "I know that my redeemer liveth," and "eye hath not seen, nor ear heard, . . . the things which God hath prepared for them that love him."

MRS. CHRISTIAN PURVES, East Toledo, Ohio.

It is over six years since I began to read the Christian Science literature, and I have for some time felt a desire to express through one of our periodicals my gratitude for this healing truth. I did not take up the study for the healing of physical ills, as so many do, although I needed this help. It was through a desire to investigate and see what had attracted so many people to its teachings. Two friends here were meeting an afternoon each week to study the Lesson-Sermon, and I asked permission to attend one of their meetings. I was cordially invited to come as often as I wished, but was criticized by other friends for going, and literature condemning Christian Science was handed to me. I continued to go to the meetings, and one of the ladies loaned me a copy of "Miscellaneous Writings" and some other literature, which I was told to keep as long as I wished. This was in December, and all through the winter I read faithfully nearly every night, and during the day, while at my housework, I would keep in thought paragraphs which I had committed to memory.

Spring came, and my husband remarked one day, "It is strange that you have not had a cold all winter." It was the first time I had thought of it, and I then recalled how well I had been sleeping, and decided it must be from the reading of the Christian Science literature, and told him so. My husband was skeptical, but he did not oppose me, and I sent for a copy of Science and Health and a *Quarterly*. I had, however, much to meet from the antagonistic thought

Digitized by Google

around me, and an old ailment, an eruption which I had had on my hands for ten years, and which *materia medica* had failed to cure, now became very bad. I decided that here was the test, and that if Science could heal this it would prove the truth to me. The healing was slow, and at times I became much discouraged, once going back to a material remedy; but at last I learned that I must rid myself of all resentment and malice toward those who were reviling me, and thus destroy my fear of the disease. When I began to hold the thought of love for my seeming enemies, the healing came quickly, and it is permanent.

Over two years ago I had the privilege of class instruction, and since then I have been able to help others. I am very grateful to God for my improved health and understanding. I am also grateful to our dear Leader for her life of consecration to the cause of Truth which she discovered.—FANNIE L. ROSSMAN, Clifton, Kan.

It is over five years since I began the study of Christian Science, and it was through the reading of the *Journal* and *Sentinel* that I found the truth which makes us free. My husband is a commercial traveler, and I go with him, so that we may be together over Sundays. While in St. Joseph, Mo., in a hotel, among entire strangers, I became ill with a nervous trouble, and as I had had this same ailment twice before, I began to fear that something dreadful would happen to me. I was in such a condition that I could not sleep, so I tried to have something to read. As I had read all the books which I had with me, and night was coming on, I went to the office and asked the clerk for something to read. He said he did not know of anything except some literature which had been brought in by some church people and placed in a rack over one of the writing-desks. He said I could take them if I liked. I there found a *Christian Science Sentinel* and *Journal*, and these I took to my room and began reading. The very first thing I read was a poem entitled, "Fear Not," and I received such comfort from reading it that I read it over several times. I went on reading till about ten o'clock, when I became sleepy. I slept soundly all night, and from that time on to the present, I have not been disturbed by sleeplessness.

I am indeed grateful to Mrs. Eddy for these missionaries that are being sent to those in need. Since then I have found Christian Science sufficient for my every need. I am glad to know that God, who is perfect Love, casteth out "all fear." I am also grateful to the many kind friends who have helped me to understand this healing truth.

MRS. H. H. HORNER, Kansas City, Mo.

[Written for the *Sentinel*.]

HOME.

MARY BEECHER LONGYEAR.

I CLOSE my eyes,—
No objects can they spy:
I lift my feet from earth,
Its substance fades away.
I raise my thought
Above earth's mountains high,
And there a home I find
On Love-lit heights of day.

I hear a voice,—
Its message true and strong
Comes to my waiting heart
With words of heavenly cheer.
I feel the truth,—
Within this home no wrong;
'Tis yours, 'tis here and now
With all you hold most dear.

FROM OUR EXCHANGES.

[Reynold E. Blight in *Los Angeles* (Cal.) *Express*.]

The churches are being abolished, not by legislative enactment, but by reason of their own failure to break with the traditions of a dead past and by their apparent inability to adapt themselves to the spirit and needs of the new century. Nearly every great denomination in recent official utterances has complained of declining membership, vacant pulpits, and vanishing influence. The reason is not far to seek. The world of today, practical, optimistic, and progressive, will have none of dogmatism, formalism, or other-worldliness. Sectarianism, doctrinal hair-splitting, and bigotry have no place in the world of today. The spirit of the times that has given us the new science, the new education, that has achieved democracy and organized the world commercially, is at work revolutionizing religious institutions, and woe be to that church which is weighed in its balance and is found wanting.

We are socializing industry, politics, and society; now we must socialize religion. The world is about ready for the community church. The church of the new age will care little for theology and ceremonial. It will concern itself with the realization of social ideals and dreams. Instead of seeking heaven hereafter, it will strive to establish heaven here on the earth. It will combat sectarianism, class distinctions, race prejudices, exclusiveness, poverty, ignorance, and dirt. It will preach the gospel of neighborliness, mutual help, social sympathy, and fundamental morality as applied to trade, home, and government. It will include the best in art, science, literature, politics, and economics. It will unify the community, will vitalize and enrich individual life, will provide opportunity for the highest expression of the noblest impulses of personal and social life, and will bring every man, woman, and child in the community under its beneficent influence.

[Rev. George B. Hatch in *Hartford* (Conn.) *Seminary Record*.]

I can't help thinking that we are making too much fuss about "losing ground," and all that. To be sure, conditions and times have changed,—but that's to thank God for, not to whine about. To be sure, social life used to have a single center, which was the church, and whatever moved, moved in concentric circles about that center, and all that the church had to do was to sit tight and take what came to it—just as a man in Michigan used to sit in his front door and shoot deer. But social life no longer moves concentrically about the church. It has now no single center. It is not even an ellipse described from two foci. It doesn't focus anywhere. It has, in fact, broken all limits, conventions, circumferences. It is free fluid. And this is a good thing. It demonstrates the presence of life—that the Spirit of God is abroad, turning and overturning in the preparation of a better time. Personally I am rejoiced to the core of my being that the church, as a "just-so" institution, is losing ground, that it can't any longer sit smug and easy at the center of things and demand toll from all the circumferences.

[*Christian Intelligencer*.]

The social unrest of our time arises, to be sure, from dissatisfaction with existing economic conditions, but it betokens also the activity of the moral sense which chafes under the knowledge of wide-spread injustice and corruption. The conscience of society is still capable of being aroused. The fact that it is aroused is a wholesome sign of the times. It evidences the controlling power of the spirit and teachings of Christ. To note the prevailing worldliness may severely test Christian optimism, but when the exposure of alliance with evil on the part of public officials leads to insistent protests and loud cries for investigation and punishment of offenders, confidence is considerably restored in the basic Christian character of our country.

Digitized by Google

Were there none to raise a cry, the situation would indeed be appalling. But there is a wide-spread and growing perception that our body politic needs an effective purgative, and increasing numbers of sincere citizens are enlisting in the movement to transform our state and national life with the leaven of righteousness and true brotherliness. Party platforms and candidates appeal in terms of service. And business men in growing numbers are offering their services in proposed reformations in full view of inevitable sacrificial demands. These are encouraging omens, auguring a better day of social justice and righteousness. If we have had to console ourselves with the faith that right will ultimately prevail, we are cheered by the sight of a multitude who want right to prevail now and who are working for that end with fine prospects of success. We are in the midst of a bloodless revolution, waged by the unseen weapons of a spiritual warfare, in which Christ shall see of the travail of his soul and be satisfied.

[*Zion's Herald.*]

Laughing at a brimstone hell may be a pleasant summer diversion, a hot weather sport, but the certainty that sooner or later the free moral agent must receive according to the deeds of life, is a sobering fact. With sin staring us in the face, with the consciousness of having done wrong in the heart, hell itself burns within. That is hell for now; and who shall say it will not be hell for the future? And heaven? It is that certainty of perfect peace which exists between the obedient son and the Father, between the soul and its Maker. Between these two there is a great gulf fixed.

[*Christian Commonwealth.*]

Every man who teaches truth and lives the good life is so far forth a savior; and in the same sense. When you are working for the good you are a savior in the sense that Jesus was the Saviour; indeed, in the sense that God is. The difference is between littleness and greatness, between limited and almost unlimited power, but it is the same kind of work. That is the meaning of Paul's bold figure, when he dared to call himself and others "fellow workers" with God. Man must learn to take his own share in the work of salvation.

[*Standard.*]

Character is the sum total of moral qualities. It is not what a man claims to be, or even what he may lead others to believe he is, but what he is in the controlling purposes of his soul, that determines his character. There is no such thing as being born of God's spirit while we retain an unrighteous character. Under the touch of God the soul puts itself in accord with God; wills to do His will, and thus becomes right-righteous. A man thus centered may err, and will; but it will not be at all difficult to discover his real purposes or to make ourselves certain that he is a good man.

[*Christian Register.*]

Goodness, truth, and aspiration cannot be wasted, no matter how humble may seem their manifestations. Love works itself out in deeds, it grows with the giving, and it blesses the heart in which it lives. We need not trouble ourselves overmuch as to the influence it will have. Enough that it is a part of the love which is slowly but surely changing the world and society.

[*Watchman.*]

A life is made up of days. No one lives more than a day at a time. The nature of the life is determined by the way one lives every day. If the days are busy, idle, miserable, or happy, so the life will be useful or useless, unhappy or joyous. The secret of a good life is days filled with goodness; the secret of a happy life is every day a day of gladness.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued *in* pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The pamphlet "Seeking and Finding" has been translated into Dutch ("Zoeken en Vinden") and is now on sale; 36 pages and cover, at the prices of the regular pamphlets.

Catalogue No. 20, June, 1912, has recently been issued and will be supplied to reading-rooms upon request. This catalogue contains complete lists of all publications issued by the Society, and of the works of Mary Baker Eddy published by Allison V. Stewart.

A new pamphlet, "Christian Science Healing *versus* Mental Suggestion," by Frederick Dixon, reprinted from the *Weekly Budget,* London, England, is now on sale; 36 pages and cover, at the prices of the regular pamphlets.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass, should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID. Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: ITS RELIGIOUS PHILOSOPHY. By HON. CLARENCE A. BUSKIRK.

CAUSATION: VIEWED IN THE LIGHT OF CHRISTIAN SCIENCE. By FREDERICK DIXON. Also printed in Swedish.

CHRISTIAN SCIENCE VS. MENTAL SUGGESTION. By FREDERICK DIXON. Reprinted from the *Weekly Budget*, London, England.

CHRISTIAN SCIENCE: A RELIGION OF DOING. By JUDGE WILLIAM G. EWING.

PRAYER AND HEALING. Also printed in German.
SEEKING AND FINDING. Also printed in Dutch, German, and Swedish.
MARY BAKER EDDY: HER PURPOSE AND ACCOMPLISHMENT. By FREDERICK DIXON. Printed in German only.
THE DISCOVERER OF CHRISTIAN SCIENCE. By B. O. FLOWER. Printed in German only.
CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. By BLISS KNAPP. Printed in French only.
CHRISTIAN SCIENCE: THE COMFORTER OF PROMISE. By FRANK H. LEONARD. Printed in French only.

PRICE, POSTPAID: Single copy, 5 cents; twelve copies, ONE ADDRESS, 55 cents; fifty copies, $2; one hundred copies, $3.50. Orders for above pamphlets may be assorted as desired.

REPRINTS

(Not printed in English)

The following reprints are published in French, German, and Swedish:—

CHRISTIAN HEALING EXPLAINED.
CHRISTIANITY AND SCIENCE.
HELL AND HEAVEN.
MAN'S UNITY WITH GOD.
OUR WATCHMAN.
OVERCOMING OF EVIL.
REALITY.
SUPPLY.
THE GENIUS OF CHRISTIAN SCIENCE.
THE GOVERNMENT OF LAW.
THE MIRACLES.
THE NATURE OF EVIL.
"THERE IS A RIVER."
WHAT IS PRAYER?

The following are published in German only:—

CHURCH BUILDING IN CHRISTIAN SCIENCE.
LOVE IS LIFE.
PRACTICAL RELIGION.
THE IMPERSONAL NATURE OF EVIL.
"THE LAST ENEMY THAT SHALL BE DESTROYED."

PRICE, POSTPAID: Ten copies, 10 cents; one hundred copies, 75 cents; five hundred copies, $3; one thousand copies, $5.

MISCELLANEOUS

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

ITEMS OF INTEREST.

National.

For the simplification of pleading and practise and the correction of any unnecessary delay or unreasonable cost resulting from practises under the rules as they now exist, the Supreme Court of the United States will revise the equity rules of the minor federal courts during the next term, which begins in October. The work of revision is in the hands of a committee of Supreme Court justices, composed of Chief Justice Edward D. White and Associate Justices Horace J. Lurton and Willis Van Devanter. The movement for the revision of the equity rules of practise was started by the American Bar Association, a special committee of which had the subject under consideration for several years. Definite steps looking to revision were taken by the Supreme Court, however, in June, 1911, when the committee named above sent out a circular letter inviting recommendations and requesting the cooperation of the circuit court of appeal.

Increased freight rates proposed by transcontinental railroads for transportation of commodities from eastern points to Pacific coast terminals were suspended recently by the Interstate Commerce Commission from Sept. 2 until Dec. 31, pending an investigation. The tariffs suspended proposed general increases on practically all commodity freight from Atlantic seaboard and middle western points of origin to destinations on the Pacific coast, ranging from five to fifty per cent.

District Attorney Asa P. French may appeal to the Supreme Court in the United Shoe Machinery case on the action of the lower court in ruling against the government in refusing to allow the hearing on the alleged violation of the Sherman antitrust law to be public.

The first "lunch-counter car" ever put into the service by an American railroad is being tried now on trains running from San Francisco to Los Angeles. The counter, with stools in front of it, will stretch the length of the car. Meals will be served at all hours.

Announcement is made by Postmaster-General Hitchcock that the post-office department will be ready on Jan. 1, 1913, to put into general operation the recently authorized parcels post system. The postal express business, which must be organized within the next four months, will extend over more than a million miles of rural delivery and star routes, and will cover in its various ramifications all systems of transportation of parcels now utilized by private express companies.

By an expenditure of approximately twenty thousand dollars for the establishment and maintenance of observation towers at seventeen different points for the discovery of forest fires, the commonwealth of Massachusetts has this year reduced loss from such fires from more than five hundred thousand dollars to the comparatively insignificant amount of $50,091.

Men who are vitally interested in the development of deeper waterways in the states along the Atlantic seaboard, gathered at New London, Conn., last week for the fifth annual convention of the Deep Waterways Association. Most of the larger cities in the states of northern and middle tiers sent delegates from their boards of trade, maritime and commercial bodies.

Vast drainage projects in Arkansas and Mississippi, near Memphis, which will cost two and a half million dollars and reclaim nearly one million acres of rich and fertile lands, are being surveyed by Arthur E. Morgan, former government engineer of Memphis.

Secretary MacVeagh is reorganizing the customs services at the large and small ports of the country.

International.

A virtual deadlock has been reached in the unofficial peace "conversations" between Italian and Turkish delegations in Switzerland. Italy will not admit any discussion of her seizure of Libya in Tripolitana, and has refused all propositions to leave part of the interior or of the coast of Cyrenaica to Turkey. She asks as a condition of signing a treaty of peace that Turkey withdraw her forces from Libya. Italy agrees not to require recognition by Turkey of the Italian occupation of Tripolitana. She will also accept the religious authority of the Sultan of Turkey. She is prepared to pay a large indemnity to Turkey and is ready to evacuate the islands in the Ægean sea and make other concessions. Turkey declares that these proposals are insufficient.

The water supply of London with its largely increased population has necessitated the construction of a new reservoir at Chingford near Epping forest. This reservoir will be thirty feet deep, and will hold three billion gallons of water. It is estimated that this reservoir will have a greater capacity than the whole of the twelve reservoirs at Walthamstow. Its construction involved turning the river Lea for three miles out of its course, a piece of work which took two years to accomplish.

The Italian government also will withdraw from the Brussels sugar convention on Sept. 1, 1913. Notification of this intention has been handed into the Belgian government by the Italian minister. In this the Italians have followed the lead of Great Britain, which withdrew in consequence of the decision of the parties to the agreement to permit Russia to increase the amount of sugar exported every year.

The Swiss Alpine Club and many English, French, and German Alpinists, are protesting against the construction of a funicular line up to the summit of the Diablerets (10,650 feet), the "beauty" mountain of the Valais Alps. The Matterhorn line project was defeated by the same influence being brought to bear some years ago.

The British Association for the Advancement of Science began its sessions at Dundee, Scotland, last week. More than two thousand scientists were present. The delegates will discuss sociological and political issues. These include labor unrest, safety at sea, the peace movement, and agriculture.

France has accepted the project of Count Leopold Von Berchthold, the Austro-Hungarian foreign minister, to secure a gradual autonomy for all the European provinces of Turkey.

Industrial and Commercial.

The British government some months ago offered prizes for electric lamps which furnished the greatest guarantee of safety in the coal mines, and one hundred and ninety-five lamps were sent in for competition. While eight inventors received prizes, for various advantages, of fifty pounds, the first prize of six hundred pounds was awarded to a German engineer named Faeber, a native of Dortmund. Any ignition of gas either within or without the lamp is impossible; the construction is particularly simple and, therefore, the manufacture is cheaper than of most other kinds of safety lamps, while the cost of light is also proportionately inexpensive and considerably less than that of benzine or petroleum lamps. The lamp weighs a little over four pounds, and its power is equal to fifteen candle-power, more than double that of any other kind of lamp.

Bombay interests plan the erection of a ginnery in Sind, using the cotton grown there from American seed. The Sind Cotton Growing Syndicate (Ltd.) is being registered. A model gin will be erected at Jocabahad. For at least three years the syndicate is to enjoy government support. The government not only undertakes to supply seed, but cultivation will be directed by officers of the agricultural department. Ten tons of approved American seed are *en route* to Bombay and a further supply of thirty tons will be delivered early next year.

The state government of Victoria, Australia, is making arrangements for receiving thirty thousand immigrants in the next twelve months. In Victoria preparations have been made to spend ten million dollars in water conservation channels, ten million dollars for the repurchase of land, and five million dollars on roads and railways. A bill to provide for the compulsory purchase of large estates suitable for settlement has been drafted and laid before the cabinet.

Certain experiments made with a view to increasing the agricultural output of Australia were explained in the report for 1911 made by the acting administrator of the northern territory of that country. The chief items in connection with agriculture were the continued and successful experiments made in upland rice cultivation.

A dairy has been started at Biesk in Siberia for the manufacture of Cheshire cheeses under the supervision of an English expert. Such good results have been obtained that it is proposed to establish twenty large dairy farms with an annual output of some sixteen thousand tons.

All the lining, the laying of the rails, and other work in connection with the nine and a half miles of the Loetschberg tunnel, Switzerland, is now completed, and no fears are entertained that it will not be ready for traffic on the date appointed, May 1, 1913.

Railroad spikes are sold so far ahead that the leading Pittsburgh makers are out of the market for some two or three months, while the demand for spikes and track material generally is on a heavier scale than has been seen for five years.

An important discovery of oil has been made in New Zealand in the Mongahoe valley which lies between Eketahuna and Pahiatua.

Nearly six million dollars' worth of new equipment has been bought by the Boston & Albany R. R

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"THE BEAUTY OF HOLINESS."

WILLIAM D. MC CRACKAN, M.A.

HOLINESS is only another form of the word wholeness. Among the sources of origin of the word holy, Webster's dictionary mentions an Anglo-Saxon word meaning "sound, safe, whole." When the psalmist therefore sang of "the beauty of holiness," he had in mind the exquisite completeness, symmetry, and order which always characterize true being. To be conscious of God's allness means to manifest a well-rounded existence, to exercise full capacities and talents, to be sound and safe. There are no impossibilities for good in God's kingdom. No lack or limitation can mar the infinite, and no fear of want disturbs him who dwells in "the secret place of the most High." Poverty of any sort, meaning thereby the sense of incompleteness as to any good thing, cannot hamper the activities of him who is under the law of God. He cannot feel unsound or unsafe.

Divine activity is the only real activity, since there is also but one real law, and that is the law of God. To express beauty, therefore, is to express the divine nature, and to do this is supremely natural, absolutely normal. The divine nature is spiritual and mental, and beauty must therefore be intrinsically spiritual and mental also. Matter and Spirit cannot coalesce, neither can their manifestations. One or the other must prevail. Indeed, one or the other must be real and the other unreal. The material man cannot be whole or complete. This false concept or counterfeit of man, described in the Scripture as having partaken of the fruit of the knowledge of good and evil, cannot be symmetrical and orderly. He represents the mistaken notion that good and evil can live together in peace and prosperity, can cooperate in normal existence. But Jesus said, "If a house be divided against itself, that house cannot stand." Mortal man is nothing but an inconsistent, self-contradictory, self-destructive concept, at war within itself, disorderly and incomplete, neither one thing nor the other, lacking in all the essentials of beauty or wholeness, unsound and unsafe.

Mrs. Eddy has set forth the true concept of beauty in the following words: "Beauty is a thing of life, which dwells forever in the eternal Mind and reflects the charms of His goodness in expression, form, outline, and color" (Science and Health, p. 247). By these words she raises the quest for beauty, which has always been a secret spring of action in human consciousness, from a material to a metaphysical basis. She also reveals as groundless the fears entertained by certain types of pious people in all ages, that beauty is inconsistent with sanctity. History has recorded many movements, both in ancient and modern times, designed to suppress beauty, on the assumption that it is a temptation to abandon spirituality, but a physical and therefore a false sense of beauty is one thing, while the beauty of holiness is another.

The beauty of holiness points directly to its divine origin, and in order to be prized at its true value the nature of God must be understood, even if only in part. God is Life. Moreover, whatever He is, He is that infinitely. Thus God is infinite or eternal Life. Beauty as a thing of life, must express the one eternal Life. It can never fade or fail, can never present the characteristics of any supposed opposite of eternal Life, cannot be subject to decay or dissolution, can never be unsound or unsafe, but must always be whole, since it is and ever will remain a quality of divine Mind. No one need ever fear the loss of beauty or deplore the want of it. No one need ever feel jealous of another for the possession of it, since man, Mind's eternal expression, must ever manifest Mind's unfailing attributes. Mrs. Eddy's use of the words "form, outline, and color" in this connection, evidently implies that she refers to mental and not material qualities. The student of Christian Science must learn to translate objects of sense into qualities of thought, then to draw the line of demarcation between good and evil thoughts, and finally to reject the evil as unreal, leaving only right ideas to fulfil the needs of true activity. Thus regarded, the spontaneous desire for beauty which rises in the human breast is not necessarily due to vanity. Vanity is that mode of thought which believes that beauty is in matter, and this falsity springs from the basic error of belief in a material life; but the joyous realization of beauty as "a thing of life," as an eternal and indestructible quality of Mind, is the very opposite of vanity. It does not worship matter, but Mind, God, who is Spirit, Truth, Love. This is the true worship, and it is crowned with "the beauty of holiness," or wholeness.

The beginner in the study of Christian Science is sometimes induced to believe that he must sacrifice his love of beauty, must renounce his joy at the sight of exquisite scenery, must deny his spontaneous tribute to nature in her moods of grandeur. This mistaken view proceeds from a failure to make the distinction between the real and the unreal, between the testimony of sense and the spiritual fact. All right ideas are worthy of admiration, their company is to be cultivated. No appreciation of or enthusiasm for the beauties of nature can be misplaced when these beauties are recognized as qualities of Mind, transcending all materiality or mortality, established forever in the order of Spirit and Life eternal. Mrs. Eddy has written: "In one sense God is identical with nature, but this nature is spiritual and is not expressed in matter" (Science and Health, p. 119). If the right sense of nature is cultivated, there need be no fear on the part of the student that his appreciation can degenerate into a worship of matter or the falsities of mortal mind.

Instead, then, of a cramped and fearsome outlook as regards beauty, Christian Science inculcates a free and fearless appreciation of it as a divine attribute, accessible to all. To the sufferer from disease Christian Science does not say, "Stop eating," but rather, "Change your thought about eating." To the lover of beauty it does not say, "Abandon beauty," but rather, "Change your sense of beauty." Let beauty present itself to you as an integral quality of divinity, having no beginning and no end, incapable of diminution, not needing to be created because it is ever appearing spontaneously. Let beauty be recognized as a necessary mode of all real life and being, an indisputable fact in God's universe possessed by all of His children.

DISCORD UNREAL.

HELMUTH GRAF VON MOLTKE.

Is there anything that can in reality make us unhappy? No! Why not? Because man and the universe are either spiritual, eternal, and perfect, or they are material, finite, and imperfect. In the latter case it would not in the least matter what happens to one, for oblivion would await him after death. If, however, the former is true, as Christian Science teaches, then every man must sooner or later realize for himself that which is always the truth of being. The important thing, then, is to see this. Can we be unhappy about the blindness of any one when it is absolutely certain that some day he will be able to see? No! We should rejoice with each day, for each day brings us nearer to the realization of our hope. Whether it be a valley or a steep and rugged mountain which lies before us to be crossed, does not in the least matter; every day, every hour brings us closer to our goal. Therefore we cannot be otherwise than thankful and happy, and work on, meanwhile, with unabated courage.

Here it may be asked, What kind of repentance is most helpful? Is it not the repentance which prevents us from repeating our fault, and through which we may perceive what is right for us to do? And is it not a reason for rejoicing that we have attained an understanding of Truth which enables us to know when we have been acting wrongly? What is there to grieve about in that? Years of false education have made mortals bad and selfish; but when one is able to realize the nothingness of evil, this is cause for great happiness, and one should joyfully say, "Now I see wherein I have done wrong, and I can do better!" The light of divine Truth and Love opens our eyes and gives us at the same time the strength to do that which we see to be right.

There is, therefore, no need to be sad and despairing, for nothing can come between us and God, or between one man and another if they know the truth. St. Paul says that "godly sorrow worketh repentance unto salvation not to be repented of: but the sorrow of the world worketh death." We should not allow the sorrow of the world to depress us, but we should destroy the belief of sorrow by knowing the truth about God, man, and the universe. We must rise above personal unhappiness and worry, and only take into our consideration the real man, who is always happy and content. The sense of sorrow is often a snare which error puts in our path to hinder our progress.

We admit that to be real which is unreal, when we give way to sorrow, for sorrow is not of God and everything that does not come from Him is unreal; therefore the first question which we should ask ourselves, when we are suffering either bodily or mentally, is, "Does this discord come from God?" If our reply is in the negative, then we may know that it has no real existence. If the suffering is the result of wrong-doing on our part, then again it is not from God, and with His help we are able to destroy it, for by knowing the truth we correct our faults.

The sooner we overcome our faults, the better; hence we must not allow sorrow and vain regret to lodge with us, for they are not sent by God; on the contrary, they are destroyed by Him. Sin, sorrow, and all wrong-doing are unreal; they are no part of God's creation, and are therefore simply nothing. Can nothing separate man from God? St. Paul declares that "neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature" can do this. Can we ask for a better answer? If nothing stands between man and God, then clearly the connection is there. Sickness and sin are nothing. Sorrow is likewise nothing. We have only to realize scientifically their nothingness, and they then return to their original unreality. Is it worth while for us to be sad about nothing?

THE BEAM AND THE MOTE.

HATTIE P. WILLIAMS.

In the gospels we read that Christ Jesus said, "Cast out first the beam out of thine own eye, and then shalt thou see clearly to pull out the mote that is in thy brother's eye." Webster defines beam as "a large piece of timber," while mote is defined as "anything very small." Now let us consider the meaning of these two contrasted words as they were used in the above text. The Master taught his wonderful lessons chiefly by parables and similitudes, as this method of instruction was much in vogue at that period. The oriental thought delighted in imagery and symbols, and Jesus used the medium by which he could most easily reach his listeners in imparting to them his marvelous ethical teachings.

In considering the "beam" as a symbol of something very large, and "mote" of something very small, we may ask, What is the beam that obstructs our vision today? Is it not the sum total of error, even the belief that life, substance, and intelligence is material? Jesus' words were in the form of a command, and every command which he uttered was but the voicing of some demand of infinite Mind upon man. He could give no command that it was not possible for us to obey, for whatever God demands of man is possible, since He is the source of all action, and man meets the demand simply by reflection.

Mrs. Eddy, on page 586 of Science and Health, defines eyes as "spiritual discernment,—not material but mental." Then it follows that to be strictly accurate or true our vision should include only spiritual facts, the enduring realities of God's creation. Does it? Mortal man must unhesitatingly reply in the negative to this question; yet why is this, when from the time of the Decalogue the first command has been reverberating through all periods of human history, "Thou shalt have no other gods before me"? Mrs. Eddy says, "This *me* is Spirit" (Science and Health, p. 467). In other words, there is no other creator than Spirit, and no other creation than the spiritual, because the one God is infinite and there is no place for another power either within or without His infinitude.

Now, let us come back to the "beam," the belief or claim and its manifestation of life and intelligence through matter, and therefore the correlative and subsequent belief that cause is material, and see how we may begin to cast it out. God being Spirit and the sole creator, creation must be spiritual. God being perfect, creation must be perfect, the exact expression of God, good. There being but one God, it follows there can be only one creation, and that spiritual. Accepting this premise as an absolute fact, the visible manifestation of a material universe can only be accounted for as a state of self-mesmerism, or belief in the reality of something that has no existence outside of the belief itself. To understand this statement we must go back to "the beginning," and accept the account of creation given in the opening chapter of Genesis, where it says that "God saw every thing that he had made, and, behold, it was very good." Now, God is eternal Truth, therefore any statement of Truth is unchangeable, and man and the universe remain the same in character as they were created. Logically, then, any theory as to another creation, as taken from the second chapter of Genesis, must be only the false presentation of the claim that there is another and opposite power equal to God, called evil, devil, or matter.

When the premise of one God, Spirit, the only creator, has been honestly accepted, the theory of another creator of material evil things, including sin, disease, and death, becomes an impossibility, and must be rejected *in toto*. Since God is infinite, the only source or cause, then any such manifestation or externalization must be viewed as a delusion, and for mankind to be delivered from this false and harmful condition they must seek the truth of being, for only truth can destroy falsity. We cannot find the truth in

Digitized by Google

any teaching which has for its basis two powers, one Spirit and one matter, one good and one evil, as such teaching would only involve us deeper in darkness and confusion, since the one God could not be discerned where there was a belief of two gods.

All dual teachings, all material isms and theories, all human theology and philosophy, can be traced back to the Adam-dream in the second chapter of Genesis, where evil or error claims to create man in God's name and in His likeness; yet through successive generations of mortal history this kind of man has been but the expression of evil, manifested in all conceivable forms of sin, sorrow, disease, infirmity, limitation, finiteness, corruption, and mortality. Is not this the "beam" to be cast out as false, as a gross injustice and flagrant misrepresentation of God's man? And must not that teaching be sought which declares one God, and delivers mankind from all the harmful conditions of the dual belief by proving with unerring certainty the allness of this one God and the perfection of His creation?

Such a teaching is Christian Science, "uncontaminated and unfettered by human hypotheses" (*Christian Science Quarterly*), and which stands uncompromisingly for one infinite God, even the eternal good. Is it any wonder, then, that Christian Science should today be the marvel of the world because of the general good health of its adherents, their happiness and peace, their confident manner, which is begotten of their knowledge that they need no longer fear the old deceitful claim that evil has any power whatsoever over man's being? The immortal man, the divine idea or spiritual identity, as expressed in Genesis i: 26-27, antedated the Adam-dream of man, or the carnal man of whom we read in the following chapter. The first record tells of "the only begotten of the Father, full of grace and truth." He is God's image or likeness; he has no relationship to or consciousness of the material semblance of a man, which must decrease until it disappears, as the real man, or reflection of substance, increases in consciousness in proportion to our spiritual discernment of true being. The "first-born" inherits all that belongs to the Father,—life, love, immortality, the "beauty of holiness." He knows no want, for he is absolutely perfect, complete in all things that are godlike.

Now, when the "beam" of materiality, or the belief in a mortal and material man (the false presentation of man), is cast out of the eye or mental vision of a Christian Scientist, will not all the personal belief in trouble, sin, sickness, and burden, which his brother man brings to him to have destroyed, seem only as a "mote," or a very small thing which may be pulled out quickly and without toil? The earnest Christian Scientist, then, will persistently and patiently labor day by day to cast out the beam in its every form of material thought presented through the five physical senses, until consciousness is so filled with the allness of God that when so-called mortal mind presents its spurious externalization of suffering, he can instantly perceive its nothingness and thereby release the sufferer from his false sense; the patient, in turn, beginning to "cast out the beam," in order to be fitted to "pull out the mote" of another's eye. And thus, as our revered Leader says, "the whole earth will be transformed by Truth on its pinions of light, chasing away the darkness of error" (Science and Health, p. 191).

TRIAL AND TRIUMPH.

FRANK P. EBERMAN.

DISCORD, trial, and mishap drive investigation back through the course of error to its cause, and for the reason that true premise and correct process, as we well know, always beget both the assurance and the realization of harmony. In view of our instinctive dread of the false, and our intuitive recognition of the true as the only valid basis of living, it will readily appear how significant to human weal is the Christian Science teaching that in "material belief, in all its manifestations, reversed, will be found the type and representative of verities priceless, eternal, and just at hand" (Miscellaneous Writings, p. 61).

Righteous endeavor carries sure reward, bountiful and sweet. Pain, disappointment, and repeated trial may long seem to be the only requital for the best intention and sincerest effort, but each experience, however bitter, is precious, since through it ignorant concepts are sure to be dissolved, a true habitation prepared for consciousness, and proper direction given to activity.

Listening to a pair of devoted robins, the chasing notes of whose evening fugue have possessed the apple-trees with a very abandon of melody, to which three or four youngsters, lately instructed in the art and freedom of robin-hood, are contributing in the round, I, who know something of the family history, have no difficulty in interpreting the theme. It is telling of righteous triumph over some illusive belief "reversed" and of thanksgiving for verities "just at hand."

My first acquaintance with the robins began in early springtime, when I was led to inquire into the cause of sundry etchings in mud on my library window. I was puzzled in noting the strange action of a pair of the birds, as with beaks full of mud and dried grass, they devoted themselves to the timely task of home-building, and seemed determined to come through the window into the room. Time after time, with palpitating breast and anxious flight, would they beat their wings against that window-pane. I did not disturb them, for I knew that a robin never comes indoors to build, and that, therefore, my two little friends were the victims of some delusion, the nature of which I immediately undertook to discover. It was some time, however, ere I succeeded. One day, after the glass had become badly begrimed and the birds had abated their efforts to pass its barrier and reach a seeming, I found, on a convenient ledge in the leafy shades just outside that stubborn window, a little home nearly complete. I need not tell the rest: of four diminutive blue eggs; of conjugal and parental devotion, and of subsequent songs in the apple-tree hard by.

How often have we, too, beaten our heads and winged our ambitions against the hard panes of materiality, because of their false showing of life and of happiness! How many of us, like those poor mistaken robins, have expended the glorious years of youth and strength in the vain attempt to build our habitation on a ledge which did not exist, but which appeared as did this to the birds, in the confusing glamour of the window. How often has the mirage of material sense led men to seek, in its seductive depths, the fairest things of earth and heaven, only to find buffetings, barren surfaces, tired lives, and dearly-bought wisdom.

Thanks to Christian Science, we are learning, as did robin never comes indoors to build, and that, therefore, my two little friends were the victims of some delusion, the materiality has passed from our thought, while a clear realization is dawning on the true horizon, the crystal empyrean of Spirit, that "every good gift and every perfect gift" which we had thought to find within the glamourous bound of sense, is really before and apart from it; that the gifts of sunshine and health and home and freedom, all that "the Gentiles seek," are ours for the using, if we but face about; that material sense never had the power to present real treasures—earth, trees, air, sky, or nesting-place—to consciousness, for material sense deals falsely; that we—man and bird—"live, and move, and have our being" in Spirit, who is All-in-all; and that "we must reverse our feeble flutterings, our efforts to find life and truth in matter," as our Leader has said, "and rise above the testimony of the material senses, above the mortal to the immortal idea of God" (Science and Health, p. 262).

So shall aspiration end our travail in mercy, experience have its victory in compassion, and patient love come at

Digitized by Google

last to its own. So sickness and "sorrow and sighing shall flee away," and so all humanity shall come to mingle their songs of understanding and of life with the matins in the apple-trees, while all that is dear to us and to robin and to all mankind, rests safely in Truth; for is it not written, "My presence shall go with thee, and I will give thee rest"?

LIKE UNTO A CHILD.

OLIVE B. WILSON.

For many ages the purity, simplicity, and confidence of the child thought has been held before humanity as a pattern, the kingdom of heaven being likened unto it; yet very seldom do we find ourselves giving the matter serious attention. We do not seem to have been greatly impressed with the necessity of obeying the injunction; we go on our way, occupied, like Martha, with "much serving," forgetting that such a condition of thought is truly requisite for admission into the kingdom.

There is a lesson full of significance in the rebuke given by Jesus to his disciples when they endeavored to keep the little children from seeking him. He emphatically followed the reproof with the declaration, "Verily I say unto you, Whosoever shall not receive the kingdom of God as a little child, he shall not enter therein." And again we find that he made this declaration, as though he could not call attention to it often enough: "Whosoever shall receive this child in my name receiveth me,"—who seeth man with the gentle, loving, pure child thought, seeth the God-idea, God expressed.

How fully Mrs. Eddy appreciated the purity of the child thought, and humanity's need of it, is shown in the closing paragraph of her "First Address in The Mother Church." The sweet admonition reads: "Beloved children, the world has need of you,—and more as children than as men and women: it needs your innocence, unselfishness, faithful affection, uncontaminated lives" (Miscellaneous Writings, p. 110). There lies in this repeated reference to the condition of thought reflected by the little child, a meaning far deeper than is to be detected by a casual allusion to it. Without doubt it was the Christ thought referred to by Jesus when he likened the kingdom to little children. He knew full well the confusion of his adult listeners, and that in order for them to reflect the Christ likeness—manifest the consciousness of good—they would have to empty thought of all that was impure, all that was selfish, unloving, unjust, unkind, and the example best adapted for his use, to make clear his meaning, was the child thought. So he called them to him, blessed them, and said: "Suffer the little children to come unto me, and forbid them not: for of such is the kingdom of God."

The true meaning of heaven is harmony, and to experience harmony, enter into heaven, we must learn to let the child thought govern action. We must trust God, divine Principle, as fully and unquestioningly as the child trusts those about him; we must love as simply and as willingly; we must forgive a seeming wrong as quickly and easily. To love, as well as to be loved, is the full right of childhood: to enter, then, into the kingdom there must be a continuous reflection of Love. Pride of position, arrogance of learning, and self-seeking do not contaminate the sweetness and freshness of early years; it is only when youth beholds the illusions of false concepts that worldly ideas of happiness are formed. The adult example is alluring, and if the light of Truth is not shedding its rays for each advancing step, one's path soon becomes tangled with the weeds of worry and distress.

The goal so frequently found tempting early manhood and womanhood is that of place and position, to be known of men. Far better is it to lose the whole world than one's spiritual sense of life, for selfishness has no place in the kingdom, and sooner or later to gain admission there, the faltering steps must be retraced: in humility the way of childlikeness must be sought, if harmony, heaven, is to be attained. If we are thinking of man as a discordant human being, we lose complete sight of his likeness to the Father; our model is wrong, we have failed to fashion it after the similitude of the child.

Humanity appears to be weary and heavy laden, the fields are white unto the harvest, but only as each one gains the simplicity, honesty, unselfishness, love, and purity of the child thought will we be of much service as reapers. "Willingness to become as a little child and to leave the old for the new, renders thought receptive of the advanced idea" (Science and Health, p. 323).

LOSS COUNTED GAIN.

KENNETH B. ELLIMAN.

In its natural state gold is generally found mixed with impurities, or dross as it is called, of many kinds. After the ore is reduced to small particles by crushing, the whole mass is subjected to great heat, until the impurities pass away by evaporation. This process of melting practically destroys the dross, but it does not hurt the gold. The human consciousness in its "natural" state consists likewise of some pure thought and much dross of materiality, such as fear, hatred, pride, and self-righteousness. These elements are all so mingled that the dweller in this consciousness is unable without spiritual aid to separate the gold from the dross. Help comes to him when he begins to long for Truth and to get a glimpse of Principle, for then trials of different sorts arise,—temptation, sorrow, and suffering. These tend to crush mortal thought and throw it into what is sometimes called metaphorically "the furnace of affliction;" and, as in the case of the gold, this refining process liberates thought from earthly impurities.

When one is passing through this stage of experience, he often fears that he is going to lose something valuable,—life, substance, or happiness; but these are spiritual, and are therefore the pure gold of human possession, which cannot be lost. When in fear of loss or defeat, we can always remember Paul's assurance to the Corinthians, that "God is faithful, who will not suffer you to be tempted above that ye are able; but will with the temptation also make a way to escape." Christian Science, as taught by Mrs. Eddy, shows us that "man is not material; he is spiritual" (Science and Health, p. 468); so that whatever in our consciousness is not spiritual must be lost in order that the real man may appear. When trials come, we shall not, if we are wise, struggle to hold on to anything but the spiritual. Whatever is spiritual really belongs to us and can never be lost, and our real selves can be purified and strengthened only by the purifying process. Those who know this can never be discouraged, for when sorrow or trouble comes to them they realize that "trials are proofs of God's care" (Science and Health, p. 66), and having gained some understanding of God through Christian Science, they can work together with divine Truth and Love in freeing themselves from everything "that defileth . . . or maketh a lie," and be thankful for the help which these experiences furnish in separating the gold from the dross.

Be of good cheer!
Though skies be drear,
The clouds will lift
And through the rift
The sun appear;
God's love benign
On thee doth shine,
And omnipresent good is thine—
Be of good cheer!

Emma Goodman.

SELECTED ARTICLES.

[Frederick Dixon in *Croydon Times*, Croydon, England.]

The writer of the letter on Christian Science, signed "Enquirer," was, perhaps, wise in assuming a *nom de guerre*. First, because he is guilty, if I may be permitted to say so, of talking nonsense about Christian Science; and second, because he farther on applies that nonsense to natural science. To take the first point, then, "Children and weak-minded people" are protected by law. The Christian Scientist recognizes the genuineness of the intention of the law, as well as the great evils it is aimed at preventing. To the utmost of his ability, therefore, he endeavors to keep the law, and children and weak-minded people are far safer under his care than anywhere else. This does not mean that Christian Scientists regard medical treatment as of any avail, and it is very rarely that a moment comes when there can be any question of the children in their charge receiving medical treatment. The children are usually kept well, or if not, get well long before any reasonable demand for medical treatment could be made by non-believers in Christian Science.

As for weak-minded people, there is nothing to show that they wish for Christian Science help, and it is quite against the rules governing Christian Science treatment to give help in any promiscuous way where it is not wished for. Only people who have not the faintest idea what Christian Science treatment means would imagine that anything so absurd could take place. When this treatment is given to weak-minded people, it is because their guardians have found that all medical treatment has failed, and, with the consent of their medical advisers, have turned to Christian Science as a last resort. In a great number of such cases, Christian Science help has been sought and found efficacious.

Then, to come to the second point, Christian Scientists certainly do say that matter is unreal, but so, whether the writer of the letter knows it or not, do most natural scientists today. Ordinary natural science idealism teaches that matter is absolutely unreal, a subjective condition of mind, or the manifestation of energy. One of the greatest living natural scientists is Professor Ostwald of Berlin, and he has described matter as something we have constructed for ourselves. So completely is this recognized, that Mr. Balfour, speaking, not very long ago, at Cambridge, declared that modern natural science had not merely explained matter, it had explained it away. Because, however, the great natural science thinkers of today describe matter as unreal, they do not in the least mean that St. Paul's cathedral has not an appearance of reality to the human senses. When, however, it comes to dealing with a subjective condition of mind, obviously the way to approach the matter is, not to deal with an effect, but to deal with the cause. That is the teaching of Christian Science, which declares, quite logically, that matter, being an effect, being, as Professor Ostwald says, something we have constructed for ourselves, must be reached, to be really logical, through the force which has created it, that is, through mind. One of the greatest living natural scientists has recently described matter as "a suppositious vacuum in a hypothetical medium." I am afraid that "Enquirer" would regard that thinker with the contempt he manifestly is prepared to bestow on Christian Scientists. The world of science is not, however, so sure that the theory of the unreality of matter is the nonsense your contributor imagines.

Again, he talks of the folly of saying that pain is unreal and then starting to cure it. Pain, of course, to the human senses, is as real as Westminster Abbey. That, however, does not prevent its being, in the words of Huxley, a state of consciousness. Pain, as that great thinker pointed out, is not in the wound where we think it is, nor within two feet of it. Being a state of consciousness, the most direct way to meet it is through the consciousness, and that happens to be the contention of Christian Science.

Finally, it is delightful to see "Enquirer" describing Christian Science as a heresy. Does he not know that the orthodoxy of today has always been the heresy of yesterday? The Romans amused themselves by converting the early Christians into torches for their festivals; when the Christians got dominion in Rome, they followed a bad example by burning the heretics at the stake. Galileo was sent to prison for saying that the world moved, a heresy for which hundreds of people may have been imprisoned and burned. A generation or so ago, the leading medical paper in this country jeered at the inventor of the stethoscope for introducing a piece of wood into the sick-room. The heretics of the past are probably in the high seats of orthodoxy today.

[Alfred Farlow in *Toronto* (Ont.) *World*.]

An article in a late issue entitled "Mental Healing as a Science" gives a somewhat interesting, and we think authentic, description of the ancient use of magnetism as a curative agent, but it is altogether too sweeping when it includes Christian Science as one of the many systems of treating disease by "mental suggestion." It is not difficult to understand that whatever apparent results attend certain systems are produced wholly by means of suggestion, in view of the fact that the sole dependence of these systems is upon suggestion and that oftentimes a suggestion employed has *per se* no curative power; but Christian Science treatment is a very different thing. It depends upon the power of God, which is utilized by means of prayer in accordance with the method that was employed by the Master. It heals through a consciousness of the divine presence and power, even as the light dispels the darkness. It relies wholly upon the power of God, Truth, as distinctive from human sense. It eschews the power of blind human will, which is the sole dependence of mental suggestion.

Possibly the term "mental suggestion" has been ignorantly applied to Christian Science from the simple fact that a Christian Scientist does employ arguments of truth in his method, but it should be noted that although Jesus affirmed the truth and rebuked error in exactly the same manner employed by Mrs. Eddy, he did not advocate the power of suggestion. He said, "Ye shall know the truth, and the truth shall make you free." It would be impossible to coin a definition of the term "suggestion" broad enough to include Christian Science, from the simple fact that there is no kinship whatever between Christian Science and what is ordinarily called suggestion. But these points will not be understood until students of psychology learn to "compare spiritual things with spiritual," until they reason consistently from the spiritual premise of Christian Science. We have no quarrel with those who believe in suggestion, but it seems proper to insist that Christian Science shall have its distinct individuality and not be confounded with theories which are totally different from it.

The charge that Christian Science "smothers sense" in the insistence that "all is mind; there is no matter," will no longer be made when critics are ready to accept the Scriptural teaching that God, Spirit, the infinite good, is the only cause. Consistently with this premise is the generally accepted truism that "like begets like," which is corroborated by the Scriptural teaching that all of God's creation was "very good." Materiality, sin, sickness, and death are no part of the "very good" things which God created, and inasmuch as they have no deific origin and standing it must be admitted that they have only a seeming existence, and when we have gained a further understanding that the material concept is but the false concept of the spiritual universe, that where the material universe seems to exist is the spiritual universe of Spirit's creation, it will not be difficult to understand Christian Science, nor will it longer be thought that it "smothers" anything more than a false sense. Christian Science does not teach that the universe itself is an illusion, but insists that the immature human

Digitized by Google

sense must be corrected by spiritual understanding in order that mortals may see God's creation as it really is.

As opposed to the declaration that Christian Science affords "no rational explanation of its workings," it should be stated that thousands of persons have understood this Science sufficiently to heal the sick and destroy sin. He who is willing to accept its premises may readily understand it, while he who rejects the premises is debarred from taking the first step in the line of understanding.

The declaration that Christian Science does not heal "organic diseases" is simply an opinion, based upon a belief in the reality of matter as opposed to the understanding that Spirit is the only real substance. Those who believe in the reality of disease cannot, of course, admit that it can be healed mentally. Hence the conclusion that a mental method of treating the sick can cure only "functional" disorders. I have been a practitioner of Christian Science for more than twenty years, and in my experience I have succeeded quite as well in the curing of "organic diseases" as in the curing of what are called "nervous" disorders, and there are many well-authenticated cases of the healing of "organic disease" through Christian Science. To illustrate the situation, a man was examined by one of the most eminent physicians of this country, who said that he had "Bright's disease" and that he was incurable. He turned to Christian Science as a last resort and was healed. He then applied to the eminent physician for another examination in order to obtain a certificate to the effect that he had been cured of "Bright's disease." The physician, after two careful examinations, very gravely remarked that for the first time in his life he was mistaken in his diagnosis, that the man did not have "Bright's disease" at all.

I might also say that in my own experience I have known numerous instances where physicians arrived at similar conclusions, that is, that the patients which they had been treating for "organic diseases" were not really troubled with "organic diseases," and that the evidence of the fact was that they had been cured by Christian Science. It seems very difficult for a materialist to admit that an "organic disease" could be cured by mental treatment. If there is an apparent case of this kind of cure the only consistent conclusion of such a believer is that the patient did not have "organic disease" after all, and that the fact that he has been cured by Christian Science proves it. On the other hand, the demonstration proves to the Christian Scientist that "organic disease" is at bottom mental. The question may not yet be settled in the minds of the public, and perhaps only the logic of experience will convince all concerned as to the real situation. The fact still remains, however, that thousands of persons whose cases have been diagnosed as "organic" troubles by reputable physicians have been cured by Christian Science. If we cannot depend upon the M.D.'s for physical diagnoses, we must drop the question altogether.

I am, however, willing to agree with the doctor that one of two things must be true: either these persons did not have "organic disease," or else there is no such thing as "organic disease," but I prefer the latter explanation. The world is battling over the issue and in due course of time it will be demonstrated to all which version is true. Christian Scientists have the advantage of being supported by the Word of God, by the teaching of Christ Jesus, by his demonstration in healing the sick, and, lastly, by their own benefits and their own ability to heal others.

[E. M. Ramsay in *Scotsman*, Glasgow, Scotland.]

That there are many well-authenticated cases of cures through faith, apart from Christian Science, we think no one who has looked into the matter will deny, and that such cures point to the mental nature of illness would be conceded by most men. The Christian Scientist goes a step farther, and maintains that not only is all illness of mental procurement, but that all remedies—however material in appearance—in reality operate on the mental condition of the patient, consciously or unconsciously. Further, he maintains that while every form of treatment is mental, there can be but one scientific method of mental treatment—that inculcated in the gospel. In Science and Health (p. 373) we find this statement: "The fear of disease and the love of sin are the sources of man's enslavement," and Jesus said: "Ye shall know the truth, and the truth shall make you free."

Christian Science, therefore, is not an appeal to mystery, emotion, or faith as this word is commonly used, but is a profound, humble, and joyful recognition of the essential nature of God and man, which shows up as unreal, unlawful, and unsustained that which does not proceed from and cannot be contained in infinite Love and Life. Such a recognition of the presence and power of the divine Mind comes to man when his heart is open to receive it, in the office or the mill, on the hill or on the sea; now as of old. Truth knows nothing of place or time.

[Charles K. Skinner in *Michigan Christian Advocate*.]

The article on Christian Science by Mr. —— in a recent issue of the *Advocate* is before me. If the gentleman is serious in his reflections upon the duty of Christian Scientists to the sick and suffering, he should remember that the promise of Christ Jesus was to all who claimed to be his followers. His words were, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." "If ye love me, keep my commandments."

If the Christian of today believes that the Master spoke these words to the people of his time, there is no argument in saying that "Christian Science poses before the world as the last word concerning human suffering," or that the promise was given for that specific time and people; for in his wonderful prayer shortly before his crucifixion, Jesus used these words: "Neither pray I for these alone, but for them also which shall believe on me through their word." Christian Scientists do not claim to have a monopoly of doing good for humanity, they desire to share it with other Christians.

It cannot be gainsaid that the Christian Science method of relieving the ills (both moral and physical) of mankind has been successful in thousands of instances, but it in no wise prevents others who have faith in Jesus' words from doing likewise. To recognize the rightful position of any person who desires to follow the Christ-teaching as he understands it, our friend has but to recall the rebuke of the Master to John, when he complained to him because another who walked not with them had cast out devils in his name, "Forbid him not: for he that is not against us is for us." Therefore, instead of criticizing Christian Scientists for not reaching up to his own standard of perfection, the gentleman should be glad of even a little assistance to lessen the woes of humanity. Surely there is enough misery, discord, and criticism in the world without additional burdens.

The so-called "challenge to Christian Scientists" to go to the hospitals with their healing, is met with the answer that Christian Scientists have gone to hospitals many times at the call of those who desire their help, but they do not force their treatment or their religion upon any. In his reference to the works of the Master, our critic evidently overlooked one important occasion (and doubtless there were others) where Jesus did not do the wholesale healing which this gentleman asks Christian Scientists to do. The account will be found in the fifth chapter of St. John's gospel. Jesus had gone to the pool of the five porches and found there "a great multitude of impotent folk," but he healed only one. Why was that? It was surely not from lack of understanding, nor from lack of love for humanity. Was it not because he recognized their lack of receptivity to truth? Again, it is

Digitized by Google

related that in certain places Jesus did not many mighty works "because of their unbelief." And thus with "the beggar at the gate," doubtless the disciples recognized the right spirit and receptive mind. At any rate, it would seem that if it was proper to follow any example, we might at least accept that of the Master as the proper guide.

Christian Scientists do not claim to be able at this hour to do all the works of the Master, but as far as they understand, they do, knowing that in proportion to their growth spiritually they will do better work. It is related that at one time the disciples brought a boy to Jesus whom they could not heal, showing that although they were under his direct tutelage they had still to make great spiritual growth. The Master did not condemn them, but gently chided them for their unbelief, or lack of understanding, adding, "This kind goeth not out but by prayer and fasting;" in other words, by greater humility and spirituality.

[Editorial in *Los Angeles* (Cal.) *Express*.]

The *Express* acknowledges with profound appreciation the receipt of resolutions adopted by the Los Angeles County Eclectic Medical society, endorsing its attitude on the subject of sex hygiene instruction in the public schools. The society deprecates and condemns as pernicious "the perpetual efforts being made in certain circles of our profession for medical control of the public schools."

It rightly declares the proposed sex hygiene instruction to be but "another phase of this never-ending campaign," and adds its voice and influence "against this attempted usurpation of the rights, privileges, and responsibilities of parents." Holding such views, it is but natural that the society should feel moved to commend the *Express* for the part it has borne in the campaign.

We welcome the commendation as evidence of appreciation of the fact that this newspaper entertains no partizan convictions whatever in this nation-wide contest for medical freedom. It advocates and defends no school of medicine or of medical practise. It is for freedom for the people,—for the right of the individual to select the method of healing that commends itself to his judgment and conscience. It would stoutly resist any attempt on the part of any school to employ the power of government in behalf of an endeavor, through law, to establish a monopoly. It would have all practitioners, whether of the allopathic, homeopathic, osteopathic, hydropathic, or eclectic schools or any other, Christian Science practitioners and all others, placed on a plane of absolute equality before the law, not that it is concerned in them or their schools, but because it is deeply concerned that the people shall be free.

[H. Coulson Fairchild in *Plainfield* (N. J.) *Courier-News*.]

In a recent issue it is reported that at the services at the Adventists' camp in your city, a clergyman took occasion while delivering a "stirring address" on the "origin, nature, and tendencies of modern spiritualism," to criticize Christian Science.

Now, Christian Science and spiritualism are not associated in the least with each other, and to make this clear Mrs. Eddy has devoted in the Christian Science text-book, "Science and Health with Key to the Scriptures," an entire chapter entitled "Christian Science *versus* Spiritualism." In this chapter no unkind remarks about Spiritualists will be found; but Mrs. Eddy carefully indicates how and why Christian Science is not akin to spiritualism. It would seem that if your readers are desirous of knowing the truth about the matter, they would do much better to judge for themselves from the statements in our authorized text-book than to rely upon the statement of one who is evidently not a close student of Christian Science or a practitioner thereof.

Jesus said, "My doctrine is not mine, but his that sent me. If any man will do his will, he shall know of the doctrine, whether it be of God, or whether I speak of myself." Only those who understand and practise in some degree Christian Science are qualified to speak authoritatively of the doctrine. Even if one called himself a Christian Scientist, and was such only theoretically, he would not be qualified to speak with authority, for the reason that actual practise in healing the sick and destroying sin must precede that understanding of Christian Science which enables one to say, "I know that what I have proved of Christian Science is true." Christian Scientists having proved something of the doctrine are prepared to say, "I believe the whole because a part is proved," just as a student in mathematics would see that a problem in Euclid might be solved in that he had proved the rudimental rules of mathematics in his practise. Mrs. Eddy has said in Science and Health (p. 461): "Christian Science must be accepted at this period by induction. We admit the whole, because a part is proved and that part illustrates and proves the entire Principle."

The fact that Mrs. Eddy made legal provision for the disposal of her estate for the benefit of the cause of Christian Science does not in the least call into question the teaching of Christian Science to the effect that sin, disease, and death will be ultimately overcome. Mrs. Eddy indicated in various parts of her writings that the belief in sin, disease, and death might continue for an indefinite period, "but of that day and that hour knoweth no man." Mrs. Eddy did not claim as an individual that she would overcome the last enemy, but stated the fact as it exists in divine Science, that in infinite Life, Truth, and Love there is no sin, disease, or death. Mrs. Eddy and students of Christian Science have been and are reasonably careful to avoid accidents through the exercise of intelligent means for preventing the same, and our conclusion is that it is invariably a lack of intelligence which causes most of the accidents in the world. One right thought at the right time would have prevented the sinking of the Titanic. Man directed by divine Principle would not be subject to accident.

I trust that the clergyman will accept this reply to his criticism of Christian Science in the spirit in which it is written, and that the issue will be clear to the minds of the readers of the *Courier-News*.

[Florence M. H. in *Philadelphia* (Pa.) *American*.]

If you will kindly supply me with the local address of "Mrs. J. W." (Philadelphia), who wishes to know something of Christian Science, I will see that she is supplied with literature. I notice you have been misinformed as to the price of a copy of Science and Health. It is not five dollars, but three dollars, unless one wishes a *de luxe* binding. I will also inform you at the same time that every Christian Science church supports a free reading-room, where Christian Science literature may be read and purchased every week-day and evening, except Wednesday evening, and the public libraries are well supplied with copies of this book. There is no excuse for any one not being informed on this subject; also free literature has been distributed at every church I have ever attended, after services. I am not a member of this church. I am a Presbyterian, but I have seen enough of their healing and regenerating work to feel it a privilege to pass on their literature.

In the last week I have seen a case of "head noises" healed almost instantly [in Christian Science], after four years of treatment with specialists and osteopaths, etc., and the case pronounced incurable by them all. In fact, eighty per cent of their cases are so-called "incurables."

Political reform is not to be wrought by preaching by long-distance telephone from the places where things are done. A Christianity loaded with blank moral cartridges is impotent to subdue the mob of social passions.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"BE NOT AFRAID."

How often, when seemingly overwhelmed by threatening danger, the terror-stricken one has longed to hear spoken to him those words of glad assurance that came to the little group of disciples in the ship, as they watched in the dawning light one who was approaching them across the tossing waters. The disciples, though at first fearful, could no longer doubt when they heard the voice of their loved Master, saying, "It is I; be not afraid." He who had wrought the multitude of healing works they had themselves witnessed, had but given them yet another proof of the omnipotence of Truth.

The whole world, then, has reason to rejoice that through the understanding and application of the teachings of Christian Science those words of so many centuries ago have all their old-time potency today for "them that believe," for when our Master said, "Be not afraid," he not only banished the fears of the moment, but he also promulgated an assurance and a commandment to his followers for all time. He knew that the material conditions through which he had made his way to them were of no avail, and without power to prevent his passage. But the disciples had always believed in the reality of matter, and consequently thought that he who was coming to them over the water was an apparition, something supernatural. This belief in the supernatural produced fear, and until this fear was cast out they were not free to understand that "immortal Mind, governing all, must be acknowledged as supreme in the physical realm, so called, as well as in the spiritual" (Science and Health, p. 427).

Once before had this gracious assurance been spoken in their hearing. When those about him would have persuaded the ruler of the synagogue that he should not trouble the Master further, for the little daughter was dead, how comforting to that sorrowful father to hear him in whom he had put his hope say, "Be not afraid, only believe." And yet, notwithstanding the demonstration which followed this declaration of the Master, and which so wonderfully justified the father's faith, the belief has been extant for centuries that the healing of the sick which Christ Jesus accomplished, and which he taught his disciples, was something strange and supernatural, therefore to be feared.

Until this false estimate of Jesus' ministry is removed (and Christian Science is gradually removing it), we cannot expect that spiritual healing will reach supremacy in the thoughts of men. Every Christian Scientist can, however, do his share toward bringing in this state of freedom, by remembering and realizing that "the physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness and so disappear as naturally and as necessarily as darkness gives place to light and sin to reformation" (Science and Health, Pref., p. xi).

Christ Jesus came to do the will of the Father, and this will was and is divinely natural. To do this will is also the duty and the privilege of all his followers. To them the Master's gentle "Be not afraid" is their reassurance, and as daily and hourly they cast out fear from themselves and from those who come to them for help, they are gradually raising humanity to that degree of understanding of the all-power and ever-presence of good to which Jesus raised the disciples on the sea of Tiberias.

ARCHIBALD MCLELLAN.

SEEKING FOR ORIGIN.

EVERY-DAY experience has to do in large part with things as human sense finds them, and the great majority even of professed Christians accept the so-called common-sense, materialistic view of substance, and contentedly trudge along in this "broad" mortal way. In so far, however, as thought is awakened through spiritual quickening, a spirit of inquiry invariably asserts itself. Men insist upon going behind the scenes, upon asking for explanation, for cause and origin, and though these initial doubtings have always been looked upon by many as the signs of heresy and religious decay, they have in fact witnessed to progress. The questioner may be pronounced skeptical, but he has certainly begun to grow.

Having thus been committed to the effort to think things out for himself, one ere long perceives that to some so-called things he cannot assign origin, since in the nature of the case this can be considered only with respect to that which is substantial. He sees that darkness is not a thing, but simply a sense of the absence of something, namely, light; that, in fact, darkness is but a mark of our present inability to discern the reality of being, the manifestations of Truth. What was once thought of as objective actuality, is now recognized as a subjective incapacity, ignorance, and since nothing cannot become something to intelligence, he understands that to divine Mind there can be no darkness at all. Reasoning in the same way, Mrs. Eddy reached the same irresistible conclusion respecting sin. She says, "When we put off the false sense for the true, and see that sin and mortality have neither Principle nor permanency, we shall learn that sin and mortality are without actual origin or rightful existence" (Science and Health, p. 281).

This brings us at once to the healing philosophy of Christian Science, its declaration that evil, all error, may be shorn of power and reduced to nothingness by our awakening to the truth of being, the divine point of view in which falsity cannot even appear. The simplicity, naturalness, and reliability of this philosophy of spiritual healing, can but appeal to all who remember the ease and completeness with which a newly apprehended truth dispels the error which had formerly governed thought. The theological insistence that evil is real, legitimately precipitates the question of its origin, and that to the utter confusion of those who concede evil's reality and yet maintain that God is the only cause, since it is the inescapable conclusion to which the logical are led, that if evil is real, good has produced and must be responsible for its opposite; that light has begotten darkness! Every effort to explain evil as a reality ends in this colossal contradiction, this utterly discouraging dethronement of Deity.

As all the world knows, the search for life in matter has been vain for the reason that there is no life in matter, and the persistent search of mortal thought for the origin of evil is equally futile, for the kindred reason that it has no origin. Christ Jesus did not explain evil further than to define its nature and show how it may be destroyed, and in this also he is the true Wayshower. When he condemned and destroyed evil and its works, he witnessed that it is without origin because wholly apart from God. If one should say, "All the same, the false belief or illusion about evil remains to be accounted for," it may be answered that this false belief and the demand for its own explanation, is the evil itself. Christ Jesus showed us that the one thing to do with respect to falsity is to know only the truth. This, and this alone, brings escape from the conflict and confusion of the belief in error.

"To Truth, there is no error,—all is Truth" (Science and Health, p. 475), and the attempted explanation of that which has neither substance nor law, and which is therefore inexplicable, always leads not to Truth, but away from it. In knowing Truth we cease to know error, until it does not even come into mind.

TRUE CONSCIOUSNESS.

IT is sometimes asked whether Mind is ever unconscious in its operations, and there need be no difficulty in answering this question if the Mind which is God is understood to be the only Mind, as we learn in Christian Science. It is true that some philosophers have theorized about a mind which "sleeps in the mineral" and awakens to consciousness in man, but this is not the teaching of Christian Science. God, infinite Mind, must not only be ever conscious of His own existence, but also conscious of all His ideas and of the spiritual laws governing them, and this is most beautifully expressed by the psalmist, who says, "He that keepeth Israel shall neither slumber nor sleep. . . . The Lord shall preserve thee from all evil."

Here it is important to note that the word Mind first gained its true significance through Mrs. Eddy's teachings, as given in "Science and Health with Key to the Scriptures." In many modern languages there is no equivalent for the English word, and a profound scholar states that its origin is unknown, but that it was probably derived from the Sanscrit, coming to us by way of the Latin tongue. The etymology of the word is however of small consequence in the presence of the tremendous spiritual fact revealed in Mrs. Eddy's statement that God is infinite Mind. This fact, when spiritually apprehended, explains the whole earthly career of Christ Jesus, from his birth by a pure virgin mother up to his victory over death and the grave,—always manifesting the perfect activity of perfect Mind. More than this, the realization of the one Mind has brought healing to many who were under sentence of impending death, according to medical opinion, when like a flash of light they saw that God is Mind and also Life, and then they were glad to respond to the high demand of Science to "give to Mind the glory, honor, dominion, and power everlastingly due its holy name" (Science and Health, p. 143). This inevitably called for a separation in thought between the true idea of Mind and the false concept,—the belief that Mind can sin and suffer; that it is both conscious and unconscious; that it is a product of matter, lives in matter, and dies as matter or brain.

As we contrast these erroneous beliefs with the statements of Christian Science, namely, that Mind is deathless, limitless, self-existent, and eternal, we readily agree with St. Paul, who says that "the mind of the flesh is death; but the mind of the Spirit is life and peace" (Revised Version). It is, however, deeply interesting and most helpful to note the wisdom with which students of our text-book are gently led out of their erroneous beliefs concerning life and mind into the clear light of Truth. Our beloved Leader tells us that Christian Science "disentangles the interlaced ambiguities of being, and sets free the imprisoned thought," and that "the physical universe expresses the conscious and unconscious thoughts of mortals" (Science and Health, pp. 114, 484). Besides this, there are in Science and Health numerous references to the unconscious thought-processes of mortals (and these may be easily found by referring to the Concordance), which show us how to carry the light of Truth down to the depths of mortal error, that the operation of spiritual law may annul the asserted power of "the law of sin and death."

The writer once witnessed the instantaneous healing of a little girl who seemed to be dangerously ill, the condition being apparently aggravated whenever she went to sleep. Then, like a flash, there came to the mother the great truth that in reality there is but one Mind, and that this Mind is never unconscious. Within a few moments the little girl looked up with a smile and said she was well, the burning fever was gone and not a trace of the illness remained. Such demonstrations point to what may be attained when we consciously and constantly respond to Life and Love, or to express it in Paul's words, "Then shall I know even as also I am known."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

WALLA WALLA, WASH.—Through the courtesy of the state publication committee the letter which follows has been put at our disposal, and the report contains so much that is interesting and encouraging that we are glad to give it a place in our columns.—EDITOR.

At our work at the Washington state penitentiary, where we have permission to hold services on the second Sunday of each month, the chaplain acts as our guard and has been very kind to us, giving us one full hour. We open with a short Scriptural selection and the Lord's Prayer, followed by the Lesson-Sermon, which leaves us about ten minutes in which to talk with them or to answer their questions. Only those who have expressed an interest, or wish to come, are called to these services, and we have an average attendance of forty-five. We give them literature to read and hand on to others—*Monitors, Sentinels,* or whatever we have, and they always seem glad to receive them. There is an ever increasing interest shown, and they give good attention to the reading of the Lesson-Sermon. Several testimonials of healing have been given, and much gratitude is expressed for the spiritual comfort and uplift. With deepest gratitude we note the changed appearance of the men, now manifesting hope instead of condemnation and despair. One man was healed in a few treatments of tuberculosis of the glands of the neck, also of vicious habits. He asked for help, and our first reader went out to the penitentiary especially to see the man, who quickly interpreted what was told him about Christian Science to mean that he must think only pure thoughts and speak only pure words. He tried to do his part and be obedient, and soon knew his freedom.

One man told us he had been healed of an aggravated case of deafness by reading Science and Health and attending the services. Another man who was isolated in the incurable contagious ward, without the least encouragement of ever being healed or even helped, told the chaplain that if he could have Science and Health to read he would be healed. So the chaplain told the men to send him one of the copies that were too old to study the Lessons from, as it could not be brought back from that ward. The incurable man read this book about a month, and was permitted to work among the flowers. One man who had been reading the Lessons said that for some reason his tobacco did not taste good. They all express much gratitude for the uplifting truth which brings peace to troubled thought. Through the article "Words of Appreciation" published in the *Sentinel* of September 30, interest was awakened in this work and some money sent to the Publishing Society to be used for literature. They sent us for the men's use "Miscellaneous Writings," two subscriptions to the *Monitor*, one each to the *Sentinel* and *Journal*, and two to *Der Herold;* and for the women's room one subscription to the *Sentinel* and one to the *Quarterly*. We have read the Lesson a few times in the women's room, and they pay good attention. The assistant matron is quite interested and is reading Science and Health, and reads to the women from the *Monitor*. She has asked for the *Sentinel*, and said she would read from it. Many of the inmates cannot read, but are being taught this as well as other useful things.

In March, 1910, six copies of Science and Health were sent us from Fourth Church in Seattle to be used in this work. A friend has sent us six *Quarterly* subscriptions and this year three copies of Science and Health. We have received one copy of Science and Health from Spokane and two copies from Bellingham. First Church of Walla Walla this year gave eighteen *Quarterly* subscriptions, three copies

Digitized by Google

of Science and Health, also 319 *Monitors*, 194 *Sentinels*, and 32 *Journals*. We have in use one "Miscellaneous Writings," one "Unity of Good," one "Mother Church," one "Life of Mrs. Eddy" by Sibyl Wilbur, twenty-two copies of Science and Health. All these are late enough editions to use with the *Quarterly*, and we have five more that are too old for this purpose. Seven of the men have their own books; one man has a *Quarterly* subscription. We have in use twenty-six *Quarterly*, seven *Monitor*, two *Herald*, two *Sentinel* subscriptions, and one *Journal* subscription. They have all the works of Mrs. Eddy for study. The *Monitors* are passed along until they are worn out. There are over eight hundred men in this institution.—*Correspondence.*

STILLWATER, MINN.—In the issues of July 11 and 18 of the *Prison Mirror*, a paper issued by the inmates of the state prison here, appears the lecture of Virgil O. Strickler, which was delivered in this city on June 11 last. Through the permission of the warden, a copy of the lecture was sent to one of the prisoners who is studying Christian Science, and through him it found a place in the publication. As there are over eight hundred men at present in the prison, all of whom read this paper regularly, we feel that its message of truth may reach many a heart. We certainly feel grateful, not only for the privilege of having such a lecture delivered in this city, but also in having its message go out to these "weary wanderers, athirst in the desert . . . waiting and watching for rest and drink" (Science and Health, p. 570).

Correspondence.

GALVESTON, TEXAS.—Great interest was shown in our work and in the Christian Science booth at the cotton carnival, from Aug. 8 to 18, by numbers of people from all over the state. During the eleven days we gave away about 885 pamphlets, 750 *Monitors*, 250 *Sentinels*, 25 *Heralds*, and 25 *Journals*. Much use was made of the booth as a rest-room by people of all denominations, and we believe that it has broken down much of the antagonism which was seemingly held by so many people toward us.—*Correspondence.*

HUTCHINSON, KAN.—The Christian Scientists of Hutchinson will have a "rest tent" at the state fair. It will be a large tent and will be equipped with the comforts and conveniences that help the weary at a time of crowds and activity. The tent will be free not only to Scientists but to all. Comfortable chairs, ice water, kindly greetings, and helpful directions will be found there by any one.

Hutchinson News.

SALT LAKE CITY, UTAH.—Plans are being perfected to the end that we may have a Christian Science reading-room at the forthcoming Utah state fair, to be held in this city, Sept. 30 to Oct. 5, inclusive. Similar plans are going forward for the Beaver county fair, to be held at Beaver City, Utah, Sept. 25 to 27, inclusive.—*Correspondence.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 1, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 16, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to May 31, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul Streets, Boston, Mass.

THE LECTURES.

CHICAGO, ILL.

At the lectures given by Bicknell Young in Ninth Church edifice, and in Lincoln hall, South Chicago, Almon Burtch, first reader, made the introductory remarks, and again in Ninth Church, Mrs. Annie M. Van Hoesen, second reader, introduced the speaker. Mr. Burtch said in part,—

To the Christian Scientist, the subject of Christian Science is an all-absorbing one; he has found that in the degree he applies the rules of this Science correctly to his affairs, they become more orderly, more harmonious. Christian Science is something that touches every phase of his being, the spiritual, the moral, the social, the financial, the physical, and by its touch it transforms. We who are Christian Scientists sometimes wonder why it is that the whole world is not as eager as we are to know more about Christian Science, but we are frequently brought face to face with the fact that although Christian Science was presented to the thought of mankind almost fifty years ago, there are still many persons who know nothing whatever of it and many others whose knowledge is very much in need of correction.

At the second lecture Mr. Burtch said:—

This age in which we live is often called the scientific age. It is a time in which order and system and research seem to be in the very air; a time in which people are more and more wanting exact knowledge about a great many things, and exact knowledge or the truth about any thing is the science of that thing. There is a science of engineering, a science of mathematics, a science of electricity, a science of music, and there are many other sciences; but should there not be, and must there not be, a science of living, a science of life, the most important science of all?

It is not every one who wants to be an engineer or a musician, or an electrician, or a mathematician, but every one does want to live and he wants to get the most out of life. It needs only a little right thinking for one to know that he cannot get the most out of life unless he lives according to the science of life. We who are Christian Scientists know that Christian Science is the Science of life. We have not proved so very much of it, we have not gone so very far in it, but we have gone far enough and proved enough to know that it is true. As this Science has such an intimate relation to the welfare of every human being, it is highly important that what is said about it shall be correct.

Mrs. Van Hoesen said in her introduction:—

We are assembled here for the purpose of listening to a lecture on Christian Science,—a subject of great importance to humanity. Over nineteen hundred years ago Christ Jesus said, "I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life." Through the inspired writings of Mrs. Eddy men and women all over the world are being healed of sorrow and sickness and sin, and are beginning to learn something of what the "light of life" means. Like Paul, when he spoke to King Agrippa, they are glad to be permitted to speak for themselves and to give a reason for the hope that is in them.—*Correspondence.*

LEXINGTON, KY.

At the auditorium, Woodland Park, Virgil O. Strickler addressed one of the finest and most representative audiences ever seen in the building. The speaker was introduced by David C. Hunter, a prominent attorney of Fayette county, Kentucky, who said:—

I am not affiliated with the Christian Science church, and know little about it from a theoretical or theological standpoint. My knowledge of it is based more upon the

Digitized by Google

practical results it has attained,—on the great good that it has done for thousands. I would not speak disparagingly of the religious belief of any human being. I believe there is great good in them all. My heart beats in pity for those who have no God, no faith, no Christian religion, and I cannot help but admire those who have asserted themselves above sectarian prejudice and are using the mind that God endowed them with, and are thinking out their own salvation instead of being content to follow the well-beaten religious paths which their ancestors have made for them. I love the Christian religion in all its forms, and I have the greatest admiration for that form of Christian religion which accomplishes so much practical good in this world. I love the religion which teaches that God is omnipotent and omnipresent, that speaks no unkind word, that harbors no malice, that bears no hatred; the religion of health, of happiness, of eternal love; the religion taught by the golden rule; the religion we can live for life and happiness' sake and not for form's sake; the religion that is intended for the rich, the poor, the strong, the weak, the lame, the halt, and the blind. I admire the religion taught by the simple lessons of the Bible and promulgated by the late lamented and much beloved Mrs. Eddy and the thinking followers of Christian Science, and it is of this that the speaker will address you this evening.—*Correspondence.*

SNOHOMISH, WASH.

A lecture on Christian Science was delivered at Eagles hall by Clarence C. Eaton. The lecturer was introduced by the Rev. L. L. Woods, who said in part,—

We all believe in that old adage of the ancients, "A sound mind in a sound body," especially in the present generation, which is peculiarly insistent on carrying the primal law of good health into all the realms of physical, mental, and spiritual life; not alone of the individual, but into the social and moral life of the public as well. No candidate for life's great mission can afford to ignore this great prerequisite to success. Even the Christian ambassador is inexorably bound to this great primal law of health, for dyspepsia and spirituality are not now synonymous terms in God's service, if they ever were; nor stooped shoulders and a pallid countenance necessary indexes of profound thought or deep piety. Just as sure as love begets love and hate breeds hate, shall we influence the world of thought in which we live by the spirit which rules within us. If we go forth to our life-work with pulses throbbing with health, with lives pure, with spirits sweet, with dispositions kind, and with purposes noble, then by the immutable law of "like produces like" all these blessings will come back to us and to our posterity in golden harvests an hundredfold.

We have with us tonight a gentleman who is competent and accustomed to show the scientific value and relation of this great essential law of health to the physical, mental, and spiritual profit of both private and public life. I have been requested to introduce him to you, which I am pleased to do, and with you to listen to his address.

Correspondence.

BRIGHTON, COL.

William R. Rathvon lectured on Christian Science for the Christian Science Society of Brighton at the opera house. He was introduced by David Brimble, who said in part,—

We have invited you to attend a lecture on Christian Science this afternoon, because to us it is the most interesting and important subject now before the minds of the people. Our beloved Leader, Mrs. Eddy, has said, "The time for thinkers has come" (Science and Health, Pref., p. vii). The material world in which we live has so many contradictions and inconsistencies, and so much that seems unjust, that we are often perplexed to account for the things we see and hear and to harmonize them with the thought of an infinitely good God who is Love. Because the human mind is always trying to account for things and justify them with ideas of equity, this mind is often driven to conclude that there is no infinitely good God, and in consequence mortals wander in the mazes of doubt and uncertainty and are unhappy. Such was the case with some of us until we began the study of Christian Science, after which the light dawned and there unfolded to our vision such clear conceptions of God and the spiritual universe that we could join with the poet in saying, "It satisfies my longing as nothing else can do."—*Correspondence.*

HONOLULU, HAWAII.

The opera house was filled with an interested audience to hear the lecture by Bliss Knapp, a member of the board of lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. The lecturer was introduced by Mrs. Ranney Scott, who said:—

I am very happy to welcome you here this evening on behalf of First Church of Christ, Scientist, in Honolulu. The church is pleased to have this opportunity to offer you a lecture on Christian Science by one who is authorized to speak on the subject, as the lecturer this evening is. Christian Science is so widely discussed today, and one hears so many opinions expressed about it, that most people are interested to hear what some one has to say who knows from actual experience what Christian Science is and what it does. The aim of the lecture is not to proselyte or to take from any one here any really good or helpful thing he may have. Thousands of people the world over have been helped out of sickness and sin by the teaching of this new-old religion, and most of them are ready to give the reason for the faith that is in them. They are happy to share what has done them good with all who wish to possess it.

Hawaiian Star.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship.

Adrian, Mich.—Croswell opera house, 8 p.m., Sept. 19.
Akron, Ohio.—German American music hall, 8 p.m., Sept. 26.
Chicago, Ill. (First Church).—Church edifice, 4017 Drexel boulevard, 8 p.m., Sept. 24 and 26.
Decatur, Mich.—Town hall, 8 p.m., Sept. 27.
Hood River, Ore.—Heilbronner hall, 8 p.m., Sept. 24.
Huron, S. D.—Grand opera house, evening, Sept. 24.
Kansas City, Mo. (First Church).—Church edifice, Ninth street and Forest avenue, 3:30 p.m., Sept. 22; 8 p.m., Sept. 23.
Marshfield, Ore.—Masonic opera house, 8 p.m., Sept. 24.
Philadelphia, Pa. (Second Church).—Germantown theater, 5508 Germantown avenue, 3:30 and 8 p.m., Sept. 22.
Portland, Ore. (First, Second, and Third Churches).—Auditorium, Chapman and Salmon streets, 8 p.m., Sept. 19.
Redfield, S. D.—Redfield opera house, 8:30 p.m., Sept. 23.
Roseburg, Ore.—Palace theater, 3 p.m., Sept. 22.
Rome, N. Y.—Haselton hall, Y. M. C. A. building, 8 p.m., Sept. 27.
Sandusky, Ohio.—Carnegie hall, 8 p.m., Sept. 24.
Seattle, Wash. (Fourth Church).—Moore theater, 2:30 p.m., Sept. 22, and Arcade hall, 8 p.m., Sept. 23.
Sioux City, Iowa.—Auditorium, 3 p.m., Sept. 22.
Sioux Falls, S. D.—Opera house, 8 p.m., Sept. 26.
South Bend, Ind.—Oliver opera house, 3 p.m., Sept. 22.
St. Joseph, Mo. (First Church).—Church edifice, corner Twelfth and Felix streets, 8 p.m., Sept. 24.
Toledo, Ohio.—Valentine theater, evening, Sept. 23.
Vancouver, B. C. (First and Second Churches).—Dominion hall, 8 p.m., Sept. 26.
Weeping Water, Neb.—Philpot opera house, 8 p.m., Sept. 24.
Willits, Cal.—Whited's hall, 8 p.m., Sept. 27.

TESTIMONIES OF HEALING.

In Proverbs we find this counsel; "In all thy ways acknowledge him, and he shall direct thy paths." In reading this verse, I realized that I had not acknowledged God in all my ways, for I had not publicly given thanks for the blessings which have come to me through the study of Christian Science. Fifteen years ago I was living in New Mexico with my brother, and previous to my going there I had had two attacks of appendicitis, or at least that is what the doctors pronounced the trouble. In looking through my brother's books one day I came across an old copy of Mrs. Eddy's book "Science and Health with Key to the Scriptures," and out of pure curiosity I began to read it.

Ridicule was all I had ever heard respecting Christian Science, and I was glad of an opportunity to see what this curious book was like. To say that I was surprised at what I read is putting it mildly, for I at once recognized it as a work of science. My eyes had been in such a condition that I could not read without suffering from headache, but I noticed that my head never ached after reading this book. When about three quarters through the book another attack of appendicitis seized me. Having gone through two sieges of it, the pains were unmistakable. At that time we were eighteen miles from a doctor and six miles from any neighbor to whom we could look for help, and the Rio Grande river had to be forded before we could reach her. My fear was intense, as night was fast coming on and I knew I could not endure the agony any length of time. My thought turned to Science and Health, and believing every word of it to be true, I determined to put into practise what I had learned. I turned persistently from the sense of pain, looked out and up, and after a time very gradually the pain grew less, until by bedtime I was free and happy. The next morning there was no soreness whatever, and no indication of any sort that I had been so ill the night before.

Shortly after this experience I came East to live, and not knowing any Christian Scientists, and only in a vague way that there were such people as practitioners, and hearing all the untruthful things about Mrs. Eddy it was possible for any one to hear, like the Israelites of old I forgot the God who had saved me, and once more I resorted to material means for healing. The fear of climate kept me ill most of the time, and my eyes were a source of constant torture. I was fitted with glasses, but still I suffered. Ten years dragged along, and at the end of that time the doctor decided I could not live in the New England climate, as the almost constant attacks of colds and cough had affected my lungs, and I was confined to the house from October until the following March, with a trained nurse in attendance.

I do not care to describe the suffering of that winter. It was, however, severe enough to destroy all prejudice against Christian Science, and once more I borrowed an old copy of Science and Health and began to read. Once more the truth contained in those pages stood out in bold relief, and I experienced perfect healing. At the end of two weeks I dismissed my nurse, threw away all medicine, laid aside my glasses; and although this happened five years ago, I have never been tempted to use drugs since. Sometimes the way has seemed difficult, and in the overcoming of headaches the healing was slow and required the help of a practitioner; but now, thank God, my health is almost perfect.

My gratitude for healing through spiritual means is unbounded, for I know it is the only true healing. There is also great joy in knowing, as St. John says, that "now are we the sons of God." May I never forget what I owe to the pure, brave woman who opened the Scriptures to me and "blazed the trail" so plainly that all may follow.

JENNIE E. BROWN, Brookline, Mass.

I, too, would express my thankfulness to God for the many blessings it has been my privilege to enjoy since Christian Science has become my daily study. Truth has healed me of many ills, some seemingly serious; a heart trouble and a stomach disorder which were to be "mine" for life according to predictions; also lead-poisoning which was supposed never to leave my system. In addition to these ailments I indulged in a sense of criticism, hatred, and revenge.

In Christian Science I was separated from these beliefs, but not very quickly; it took what seemed to me a very long time, for I had to learn how to solve these problems by subtracting from my consciousness a little hatred each day, adding much love, deducting from it a goodly percentage of revenge, plus truth and minus criticism, multiplied by gratitude,—and so I am learning day by day the lesson of the golden rule. Christian Science has also done everything for me in a business and financial way.

I am grateful to our revered Leader, Mrs. Eddy, and to all who so lovingly and with so much patience have helped me to gain entrance to the straight and narrow way of Truth.—L. A. PEREIRA, Chicago, Ill.

I was in Brisbane, Queensland, when I first heard of Christian Science, which came to me in answer to an earnest longing to understand God. Words can never express the great joy it was to find that this teaching brought to light a God who is absolute good, knowing no evil. This absoluteness of God came as an overwhelming experience; I was a new creature indeed! and at first felt so lifted up in thought that the whole world was changed to me. I would ride on my bicycle miles away with copies of the *Sentinel* in my bag, singing aloud at times with joy, and letting fall these loving messengers anywhere that I thought people might find them.

Although I was laughed at by most of my friends to whom I spoke freely in the early days of my awakening, I never doubted for a moment that this was the truth and that it would be the savior of all. After reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, for a few weeks, it dawned upon me that my whole being could be transformed, and I ceased taking a certain medicine which I had used for fourteen years and which it seemed I could not live without, since after the birth of twins a doctor had said the internal organs were so deranged that I would always need this medicine. If ever I went without, I suffered great misery, both physical and mental. The time had come, however, to test this truth, and I determined to cease using the drug. One evening I held the bottle in my hand and went through a mental struggle, listening to the voice of Truth and then the plea of error, till finally I threw away the bottle and said aloud, "Let God be true, and every man a liar;" and I felt then that if God were not true I preferred to die.

After the third day I told my husband what I had done. He knew that I was studying "some new religion," as he called it, and he had seen and acknowledged the good it had done me, but he did not understand the effect this teaching had upon the body, so he insisted that I take the drug; that I had never been able to do without it, and that if I tampered with my health I should again be in the doctor's hands and there would be "a fine doctor's bill to pay." I, however, managed without irritating him to avoid going back to this medicine, although I must confess that after hearing his prognostications of evil a little fear did creep in, and I began to feel some of the old symptoms; but just then, quite unexpectedly, my husband had to leave home and was away six weeks. I had never before been glad to have him away, but now I was relieved, for I was left free to work out my salvation, and so it proved.

A dear good servant who was an earnest Christian Scientist, advised me to take treatment, and I did so. After three treatments all fear vanished and harmony was restored. I may say that after the first treatment all fear left me,—I felt free and glad as a bird, and although normal action was not restored until after the third treatment, every

Digitized by Google

moment of those days was a joy to me. I was on the mountain-top and was ever conscious of God, good! I remember with gratitude those who helped me so lovingly in those days. I never had many treatments, but those which I had helped to open the door of my understanding. I became conscious of a greater spiritual illumination, and was enabled to work out of all sorts of difficulties. Never from that day to this have I felt any discomfort or needed any material remedies, and my health has been sound in every way. It had been customary for me to spend hours during the day in a reclining position, the doctors having said this was necessary on account of internal troubles, and always my husband's first question when he returned from town was, "Have you rested today?" Well, never again did I need rest in that way. I was a new creature!

This is only one of many proofs which I have had of the absoluteness of God when relied on with loving trust and understanding. While working out of this drug-taking habit, I was much helped by a passage in Science and Health (p. 125): "What is now considered the best condition for organic and functional health in the human body may no longer be found indispensable to health. Moral conditions will be found always harmonious and health-giving." This sentence helped me greatly, and I literally and metaphysically snapped my fingers at the material laws laid down for me. I was so hungry for the truth at first, that I greedily took of its blessings without sufficiently thanking the one through whom they had been given, Mrs. Eddy, but as time went on I began to realize the debt I owed. When the news came of her passing, it brought no sadness, but a deeper love and gladness for her work, and I know that only in obedience to her teachings is it possible to show a practical gratitude.

LUCIE DOWNES, Penrith, Cumberland, England.

When the healing possibilities of Christian Science were realized, and I found that I was really to be restored to a life of usefulness, I promised our heavenly Father that my life should be spent in helping others to become conscious of this ever-present source of life, and whenever opportunity presented itself to give a cup of cold water in Christ's name as an expression of gratitude. It is a grand privilege which Christian Scientists have, that of giving their testimonies through the *Sentinel* and *Journal*, that others may see the fruits of Spirit and glorify God. Had it not been for the coming of Truth into my life, mine would have been an empty, wasted existence. I had never found anything satisfying to me in any religion, until I began to understand the teachings of Christian Science. I wanted to belong to a religious organization and lead a Christian life, but it was more from a sense of duty than from real desire. I then felt that to take such a step meant the giving up of many things which were very attractive to me.

While in college I had given considerable time to the study of the Bible in the prescribed course, and though this gave me a knowledge of its historical portions, no true understanding was gained for a practical application of the truths contained therein; yet I felt these promises must have been given for the purpose of meeting all of humanity's needs. After I became ill and felt so keenly the loss of strength and health, I at times turned in my helplessness to the Bible for comfort. I often prayed that I might be led to a way of relief, and Jesus' words, "Seek, and ye shall find; knock, and it shall be opened unto you," were indeed proved true in my case. Just at the critical time, I was led to Christian Science. My desire was answered, and I was indeed relieved of a sense of existence which made it seem hardly worth trying to live.

At this time I was a senior in college, but on account of ill health I had given up my work and was trying to resign myself to being a partial invalid. I felt that I could no longer go on with my work, and I did not see any relief ahead, even with the aid of rest, diet, and the best of medical attention. All of my vacation the preceding summer had been spent this way, and for three months in the school year I had been treated by an excellent physician. My duties were made as light as possible, but in spite of all this I felt my condition growing worse, and before the holiday season I bade my friends good-by, not expecting to return after the new year. On the way home I met a lady who told me of her recent healing in Christian Science, and she gave me some literature, telling me that if I read and studied it I would be helped so that I could return to college.

I knew nothing about this religion, but was resolved to try it, feeling that if it could help others so wonderfully it would surely help me. By studying the literature which had been given me, my health began to improve and my fears to vanish; a great hope came, as I realized that God is the all-knowing Mind, ever present and all powerful. I was able to return to my work, and I lost no time in seeking further help from a practitioner. In a very few treatments I was healed of an eye trouble which I had had since childhood; headaches disappeared, and sleeplessness, which had troubled me so much that for six months I had not rested well without opiates, was overcome. I was also greatly helped from extreme nervousness, female trouble, despondency, and fear. I began to study "Science and Health with Key to the Scriptures" by Mrs. Eddy, and through the understanding thus gained I was able to help myself easily out of every difficulty which presented itself, and in my school work this truth helped me in every way. I was indeed grateful for all this relief and happy to be able to graduate with my class in the spring. The following summer, while in the West for her health, my sister was healed through Christian Science of several diseases of which physicians had not been able to relieve her, and after her return home we began to study Christian Science in earnest. Daily we took the Lessons as found in the *Quarterly*, and a few of us gathered together on Sunday morning at the home of a practitioner (it was a small village and had no organization), and began the Sunday services which have been continued ever since.

My first few years in Christian Science were not very easy ones, as there seemed much opposition to be met and difficulty to be overcome, but as I now look back I can see that these were only "the wholesome chastisements of Love" (Science and Health, p. 323). Each difficulty mastered proved a stepping-stone to greater joy, and a readiness to be guided in all things by the wisdom which leads into "the glorious liberty of the children of God" brought a peace that the world can neither give nor take away. During these past five years, some of those dear to me have also reaped the benefits of Christian Science, and I am grateful beyond measure for the many blessings which prove that God is indeed a present help in time of need, whether it be physical, mental, financial, or moral. The right application of the teachings of Christian Science will solve any problem confronting humanity and change the entire aspect of life, as it has for me, when thought is illuminated by the knowledge of God as Life, Truth, Love, and of man as His image and likeness. Everything is gained and nothing good is lost.

More and more I am awakened to a greater appreciation of the work of our faithful Leader, who by her writings and example has given to the world, buried in years of materialism, this wonderful understanding of the Bible. For the periodicals which are such an inspiration, I am also very grateful. It is a pleasure to note the rapid growth of the Christian Science cause, and I am especially happy over the number of societies which are being formed in the colleges and universities. We cannot too early begin to learn that the bondage and limitation which years of wrong belief have imposed are as easily destroyed by Truth, when the right foundation is known, as is darkness at the coming of light.—MRS. LUCILE EDWARDS, St. Louis, Mo.

Digitized by Google

I wish to express my gratitude for Christian Science and what it has done for me. For ten years I was in poor health, and for more than five years almost a nervous wreck. I was very sensitive to a damp or chilly atmosphere, and contracted frequent colds, though I took every precaution against them. I had numerous attacks of headache, which often kept me awake till midnight and after. Besides all this, I was continually annoyed by a chronic bowel difficulty, for which I had tried every known remedy. I also suffered intensely at times from mental depression and from nervous spells which caused sleeplessness. The doctors said I was afflicted with anemia, and besides the other ailments I had heart trouble. They also assured me that the nervousness was inherited.

During these years I took medicines regularly, and tried various medical systems and nearly every new remedy which came to my notice, each seeming to help me, but only for a while. During this time I was seldom bedfast, but was always tired, and the least exhaustion caused me to seek my couch for rest. Any excitement was followed by great mental distress, and at times I became so confused that I was scarcely accountable for my actions. My hearing was impaired, and a specialist said it would never again be normal. From my earliest recollections I was harassed by a kidney and bladder trouble from which the physicians declared they could not relieve me. I also had catarrh from childhood; in fact, I could not remember ever being free from it, and each summer brought renewed attacks of hayfever. For this catarrhal trouble, too, the physicians could assure me only temporary relief.

Receiving no permanent help for these various ailments, I became very much discouraged. I was a member of a church, and when able was a worker in its Sunday school. I had been taught that God answered prayer, but when I prayed, sometimes for hours, and still was not relieved from the headaches and other ailments, I began to doubt that there was a God. I thought that if there was one, He was certainly very unjust to punish me thus, for I had lived an earnest Christian life, to the best of my understanding, though I was reminded by my kind pastor that "whom the Lord loveth he chasteneth;" but I concluded that year after year of such chastening was not what I should look for from a God of love. When I retired at night I often prayed that I might never awaken, and in my desperation I would have ended all but for fear of the consequences of such an act, and the disgrace it would bring upon my people.

Having exhausted doctors and medicines, I came to California to try climate. The change of scenery revived my spirits, and I seemed to improve, but on returning to my home in Iowa, the old troubles also returned. I was anxious to be in California again, but this time the climate failed to stimulate me, and I was still obliged to take various kinds of medicine to keep myself toned up. My eyes also gave me more trouble and I was forced to get stronger glasses. I had often heard of Christian Science, but thought of it as something very wicked as well as very foolish. However, on my way home I stopped to visit a cousin in Kansas City. I knew her to be a Scientist, and I thought to show her how absurd her religion was.

It was while visiting her that I was permitted to read, for the first time, Mrs. Eddy's words, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494). I said to myself, as I was alone when I noticed the framed motto upon the wall, that this certainly sounded good as well as very sane. Then, when my cousin talked to me in her sweet way, assuring me that God is "the same yesterday, and today, and forever," and that it was not He who had caused my years of sickness, a new hope was awakened within me. I felt happier than I had done for years. After reaching home the next day, I did some work in my mother's flower garden, since the fear that any little exertion would cause trouble with the heart was gone and I felt free indeed. My cousin had advised me to read Science and Health in connection with the Bible, but I had been warned against this book and was a little afraid of it, though I did not doubt my cousin's sincerity.

About three months after this I engaged a school, in a mining camp, and again returned to California. After leaving the railroad station, I rode seventy miles by stage, a ride which three months previous would have resulted in extreme nervousness and exhaustion; but I was not even very tired, and was able to begin my school work the next day. In my new surroundings I told with enthusiasm what Christian Science had done for me, but the people of the town, who were not religious, misunderstood me. Being very busy and also satisfied with my physical condition, I ceased to give the subject much thought, consequently the Christian Science literature remained in my trunk unread. But when the fall again brought its duties, I was compelled to seek Christian Science help, as my eyes troubled me so that I could scarcely read by lamplight. I was more than a hundred miles from any practitioner, but the one to whom I sent answered my request briefly, assuring me that as God "is no respecter of persons" my eyes would soon be better. Meantime I began to read Science and Health, and one evening I discovered that I was reading without my glasses. My first impulse was to get them, but as I was suffering no inconvenience without them, I continued to read till bedtime. I have not used glasses since, as I have felt no need of them. This occurred more than two years ago, and I had worn glasses for over fifteen years, the oculist who first fitted my eyes telling me that I would always be obliged to wear them.

Still I did not become a Christian Scientist, though my thought was now clear as to its efficacy to heal. I also knew that the healing was accomplished through divine power and that human will-power had nothing to do with it. Some well-meaning friends, however, had furnished me with tracts opposing what they thought Christian Science to be, and my church also being averse to Mrs. Eddy's interpretation of the Scriptures, I held aloof from Christian Science people. I maintained that since God had done the work, I could as easily keep my health through the study of the literature of my own church; but I failed to find anything in it which encouraged healing as Jesus and his disciples had healed. Again I drifted, and again I found my physical condition waning. I began to attend the Christian Science services and to read the literature, but as I seemed to grow no better, in January, 1910, I decided to see a practitioner.

This time I failed to get relief as quickly as I had hoped, and I now see that it was best I did not. The practitioner kindly told me that I must be honest with myself in the matter. With due diligence I studied Science and Health and the Bible, and with equal diligence I attended the Sunday and Wednesday evening services. I took treatment for some time, and my physical condition improved considerably; but my greatest improvement was spiritually, and for this I am most thankful. During those treatments I learned that in order to keep well I must have my mind filled with good thoughts; that so doing, there would be no room for thoughts of sin and sickness. During the time that has elapsed since then I have striven to "hold thought steadfastly to the enduring, the good, and the true" (Science and Health, p. 261), and today I am practically a well woman, besides being a better and a happier one.

The restoration of my health seems like a miracle, as I had once supposed I would never be well again. I am thankful indeed to all who have helped me and encouraged me, and especially so for the patience shown in pointing out to me the gospel of love as Jesus taught it. I am doubly thankful that through the understanding of Christ, Truth, as portrayed by Mrs. Eddy in Science and Health, I have learned that God is not cruel, but is Love, as the Bible teaches.—ELIZABETH BUSHYAGER, Riverside, Cal.

[Translated from the German.]

I feel it my duty to testify to the truth, and do so with a sense of deep gratitude to God. After all the means afforded by hygienic cure had failed, Christian Science healed me of an extremely nervous condition and severe physical troubles. I am happy to have found this way, and am daily experiencing the blessed influence of this teaching. Various difficulties of a serious nature compelled me to work earnestly in Science, and the gloomy outlook slowly brightened.

In former days I never thought that the healing power, of which the Bible tells us so much, was still potent in our day and available to us as a help in overcoming all evil; but through the daily study of the Lesson-Sermon, *Der Herold der Christian Science,* and especially of Science and Health, the Bible appeared to me in a new light—as the most practical and helpful book. I am deeply indebted for the great patience shown in explaining this wonderful teaching to me, and I shall strive to grow in the understanding of the truth which both saves and heals.

FRAU IDA SPÜHLER, Zurich, Switzerland.

Christian Science raised me from a bed of bondage after I had suffered two years and doctors had given me up. It also saved a daughter for us two years ago; and later, when a little son arrived, the birth took place very quickly and naturally. I was up doing my work the fourth day and was strong and well. We are a family of eight, and for more than four years we have depended on God, as taught in Christian Science, and have received help very quickly and effectually when it has been asked for.

I am truly thankful to God for sending to mankind such a blessed Comforter in time of trouble, sickness, and sorrow, for we find it is a present help at all times.

MRS. BELLE TAYLOR, Trevor, Wis.

[Written for the *Sentinel.*]

LOVE'S REFLECTION.

DOUGLAS ROSS.

O WONDROUS name, yet oft abused
By those who know not what thou art,
So often do we long for love
And think it cometh from the heart!
This name is freely on the lips
Of men and women, young and old.
To some it is a precious thing,
While some would barter it for gold.
'Tis said love fadeth like a dream,
'Tis also said, love is supreme.

Its name we heard in youthful days—
Who has not known a mother's love?
And yet some seek it in the mire,
While others bid us look above
A priceless jewel, can it be
That many irksome find its bond,
While others seeking never find?
O love! methinks thou art beyond
This dream of mortal sense that we
Call life, and yet it cannot be.

True love is always good and pure,
Though never seen 'tis always here.
Love saves from sorrow, death, disease,
From hatred, anger, pain, and fear.
It cometh not from human heart,
But Him whose image we must be,
The Mind in which no evil is,
Reflected both by you and me.
No need for us to gaze above,
For God is here and God is Love.

FROM OUR EXCHANGES.

[*Churchman.*]

Apart from the machinery of a national election, and leaving aside the opportunity it gives for promoting the career of the professionalized politician, the movement *en masse* of a people preparing to exercise their vote is an altruistic movement. At such a time, when the ideal foundations of society are laid bare, is the Christian church called upon to take its share in promoting social right thinking and right living, or is it bound to stand aside, fearful lest the objection to the intermixture of ecclesiastical and political life damage the cause for which it stands?

The easiest way out of this dilemma is to accept a self-denying ordinance; that is, to follow the line of least resistance, which may also be the line of least efficiency. If the political life of the country is to be divorced from the teaching of religion, things can go on smoothly very much in the way that was accepted in the eighteenth century in Georgian England, when people of virtuous character and strong convictions were perfectly content to lead what, from the individualistic point of view, were ideal Christian lives, even though the affairs of their country were administered by statesmen who violated almost every principle of social morality. A tremendous reawakening has come since that time. The meaning of the religious life has been extended far beyond the bounds of individual perfection. Yet there are still vigorously persistent many sophisms of the past. Men and women, whose loyalty to the church cannot be suspected, are apt to be offended at the mere suggestion that the formal profession of Christianity has anything to do with their present duties as citizens. They have divided their moral convictions into water-tight compartments, and at the slightest prospect of the breaking down of these partition walls they begin to speak of change as catastrophic and revolutionary. How often in history have the forces of unintelligent conservatism and reaction centered about organized Christianity to such a degree that the church has been identified with a definite policy of obstruction to all social advance.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

Every one of you is a son of God, a center of divine life and power, a mediator of creative divine ideas. Through you God is doing something that could be done in no other way; he is uttering something of Himself, and all the rest of His vast creation needs it and is waiting for it. When I say that He is doing something through you I do not mean that you are merely like a pipe through which water flows; He has to a great extent committed the work to you; He shows you what he wants done, and leaves you to do it by means of the life and power with which He has endowed you. . . . It is the Son of God in man, the Son of God become the son of man, to whom the Father shows generation by generation what He Himself is doing, and to whom He will yet show greater works still.

[Rev. William P. Merrill, D.D., in *Hartford* (Conn.) *Seminary Record.*]

One of the worst defects in the church has been, and is today, its tendency to take things easily for granted, to assume that facts are thus and so, and to base its conduct and activity on these assumptions. The minister preaches on what he believes, not on what the people need to know. The church worship is constructed on the basis of what the saints ought to like rather than what the sinners need. The churchmen are busy finding plausible explanations, based on their theories of what the church ought to be and what people ought to do. We need the facts as to what the church is, and what people do, which nothing but careful investigation will reveal. Wherein lies the real difference between the church that is packed to the doors and the church that has more pews than people? Dear good saints tell us, Preach

Digitized by Google

the old gospel and the people will come; while the sensationalist says, Be up to date, and advertise, if you want the crowd. What are the facts? Why is it that the Sunday school is losing ground so rapidly, its membership diminishing by many thousands each year?

The very gospel message our age needs was voiced in the words of Jane Addams in her impressive address at the Congress of the Men and Religion Movement: "The Christian church cannot conquer until it is willing to forget its ecclesiastical traditions, and go back to the method advocated by Jesus himself for dealing with all sinners. The method of Jesus was nothing more or less than sheer forgiveness, the overcoming of the basest evil by the august power of goodness, the overpowering of the sinner by the loving-kindness of his brother man, and the breaking up of long-entrenched evil by the concerted good-will of society."

[*Watchman.*]

Faith and fears have no real common ground. Perfect faith like perfect love removes all fears. Faith has in itself the capacity to banish fears. What is sometimes called religious faith is merely superstition, which is full of fear. Much of so-called religious faith is superstitious and simply looks into the unknown for its evils. Genuine faith is based upon a knowledge of divine things which clears away all fears. The dawning Christian experience has just this deliverance from darkness and doubt, and there is sweet, calm confidence in God and His character, His spirit, His love, His care. Growing confidence in God is the mark of increasing Christian knowledge.

[*Christian Intelligencer.*]

Weather conditions which on week days do not prevent men and women from going to business ought not to prevent them from going to church on Sundays. A religion that cannot stand the strain of storm is limp in a calm. A religion that is worth while at home is worth while away from home. If one's religion is not a good thing all the time—in storm and calm, in heat and cold, in private and public, in business and out of business, at home and abroad, on week days and Sundays—then it is of little use to himself or to others any time and anywhere. It is simply a negligible factor in his life and in the world.

[*Western Christian Advocate.*]

We talk so much about the man in the White House, the man on horseback, the man on the bridge of a flagship, and the man behind the gun, that we leave the impression that such as these constitute a nation's peculiar glory and make a people great. Rather it is the sweet-faced, womanly woman who makes the home and contrives to distil into it the aroma of heaven—she makes a nation great. She leavens the mass. She gives motive to the toiler, and strength to the wrestler, and faith to the doubter, and heroism to all.

[*Christian Register.*]

To devote one's self to God's service is no longer to separate one's self from the world, but it is to do whatever one finds to do with his hands or his heart or his tongue faithfully, and with an uplook. We look forward cheerfully to the time when the world shall be permeated with God's life, and religion shall be service—not services, but service, done to our neighbors and for the world, in sweet sympathy with our Father. This is working with God.

[*Pacific Christian Advocate.*]

The Christian life is to be lived before men. Our light is to shine where the darkness is, that men may see it and be led to be children of the light, and in turn walk in the light and throw their light upon others.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued *in* pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The pamphlet "Seeking and Finding" has been translated into Dutch ("Zoeken en Vinden") and is now on sale; 36 pages and cover, at the prices of the regular pamphlets.

Catalogue No. 20, June, 1912, has recently been issued and will be supplied to reading-rooms upon request. This catalogue contains complete lists of all publications issued by the Society, and of the works of Mary Baker Eddy published by Allison V. Stewart.

A new pamphlet, "Christian Science Healing *versus* Mental Suggestion," by Frederick Dixon, reprinted from the *Weekly Budget,* London, England, is now on sale; 36 pages and cover, at the prices of the regular pamphlets.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass, should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of *Divine* Science, *alias* Christian Science, in the form of *questions* and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 70 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

ITEMS OF INTEREST.

National.

First details of the four-million-dollar preliminary development of the Bronx river, which means a parkway *fifteen* and a half miles long, comprising an area of eleven hundred and thirty acres, extending from Bronx park in New York to the new reservation for the Kensico reservoir and connecting park lands with watershed properties that aggregate, exclusive of the Catskill project, nearly thirty thousand acres and represent an expenditure of over one hundred and thirty million dollars, have been given out by the Bronx Parkway Commission. The preliminary plans will accomplish by the most economical method the regulation and control of the large amount of water that flows down through the Bronx valley at intervals, and the sanitary improvement of the river at nominal cost, but the provision of a final link to connect the great city parks and the network of macadamized country roads now being constructed in the borough of the Bronx, with the whole system of more than forty lakes and many miles of rivers, besides bridges and permanent engineering works which extend throughout the three hundred and sixty square miles of the Croton and Byram watersheds, is of the greatest significance.

The construction of a subway at a cost of between seven and ten million dollars is contemplated by the Capital City Railway Company of Washington, D. C., plans for the incorporation of which are being pushed. The subway will be thirteen feet wide and four miles long, similar to the Hudson tube from New York to Newark, N. J.

The government arranged to begin at Portland, Ore., last week, the examination of witnesses in support of its contention that the retail lumber dealers are maintaining a trust. Suit has been brought by the government in Minnesota for the dissolution of the retail associations, on the ground that they are illegal combinations in restraint of trade.

The government, it is learned, is considering the plan of taking the case of the United Shoe Machinery Company out of the court of Federal Judge Putnam at Boston, who recently ruled that the hearing on the alleged charge of violation of the Sherman antimonopoly law should be heard behind closed doors.

Forty-six war vessels, now in the builders' hands in various stages of completion, intended for the United States navy, include six battleships (all dreadnaughts); eleven torpedo boat destroyers, seventeen submarines, one submarine tender, two seagoing naval tugs, four naval colliers, and one gunboat.

Eighteen Philadelphia families, under the will of their late landlord, are now owners of the homes in which they live. The houses bequeathed by him had been rented by the beneficiaries for years. The houses are worth between two and three thousand dollars each.

The proposed amendment to the Maine constitution, providing for a two-million-dollar bond issue for the purpose of building and maintaining state highways, was carried by a vote of four to one at the recent election.

The American Barbers Association was in session at Detroit, Mich., last week. More than four thousand delegates attended.

International.

It is generally believed in Peking financial circles that the independent loan to China of fifty million dollars recently negotiated in London by the representative of Lloyds bank and the Chinese minister there, like several of its predecessors, will not be concluded. The Chinese officials, it is pointed out, realize that they cannot deal outside the six-power group of financiers and the government is expected to resume negotiations with the group composed of bankers in the United States, Great Britain, France, Germany, Russia, and Japan, immediately. The Chinese, however, still refuse to entertain the idea of permitting foreign supervision over the expenditure of loans, and are hoping to discover a more acceptable substitute for such demand.

A by-law has been adopted by the Kent county council of England, prohibiting the erection of unsightly boardings and boards in the county. A penalty of five pounds has been fixed, and a further fine of one pound for every day during which the offense is continued after conviction. It is provided that no person shall exhibit an advertisement which shall be visible from any highway, carriage way, bridle way, or footway, or from any railway or open laid, or water open to the public, and so placed as to disfigure the natural beauty of the landscape.

The Chinese government has authorized Dr. Sun to establish a railway corporation to carry out a system of national railways covering territory seventy thousand miles in extent. His proposals are to open the whole of China proper to foreign residents' enterprise, but to make foreigners amenable to Chinese laws, for which special courts are to be established. President Yuan proposes to give Dr. Sun thirty thousand taels (twenty thousand dollars) monthly to promote his scheme of railways, and the provisional assembly is expected to agree to this.

Feeling is running high in Italy regarding the ultimate disposition of the Ægean islands, which have been occupied by Italian troops in the war with Turkey. The agitation was initiated by delegates from the islands and by Greek emissaries. It is demanded that the "islands shall not be returned to Turkish brutalities and revenge." The Italian government is urged to insure for the islands an autonomous government.

M. Fourny, the French aviator, last week, at Etampes, France, broke all records for both distance and duration of flight, while competing for the Criterium prize offered by the French Aero Club. M. Fourny started over the seven kilometres (4.3 miles) circuit at 5:53 a. m. At four o'clock the airman had covered eight hundred kilometres (496.8 miles).

The visit of Dr. Sun Yat Sen to Kalgan, one hundred and twenty-five miles northwest of Peking, is said to have been in the nature of a triumphal procession. Great enthusiasm was manifested by the populace all along the route. The reception accorded him was striking, as the northern populace supposedly were hostile to republican preachings.

The present isolated condition of the Falkland islands will soon be remedied, as the erection of a Marconi station has been decided upon, which will enable the islands to maintain communication with Buenos Aires, Montevideo, and other places.

At the funeral services last week of the late Mikado of Japan, the United States was represented by Secretary of State Knox, Germany by Prince Henry of Prussia, England by Prince Arthur of Connaught.

The twenty-fifth session of the Institute of International Law was held at the Nobel Institute in Christiania, Norway, last week.

The London *Times*, first published under that name in 1788, printed its forty-thousandth number Sept. 10.

Industrial and Commercial.

In the section of organic chemistry at the Congress of Applied Chemistry at New York recently, a new baking powder prepared from maple sugar "sand," a waste product in the production of maple syrup and hitherto thrown away as valueless, was described. This "sand" contains, it appears, about fifty per cent of malic acid in the form of calcium salt. Malic acid, according to the experimenters, is in some ways superior to tartaric acid for use in foodstuffs, and they therefore suggest that it be substituted for cream of tartar in the ordinary baking powder. They succeeded in making from maple sugar "sand" a baking powder "equal to those of the highest grade now on the market." There was also described a process by which cotton cloth can be permanently rendered fireproof. The result is the outcome of a long series of experiments. The cotton material is run through a solution of sodium stannate, then squeezed and dried. It is then run through a solution of ammonium sulphate and again squeezed and dried. Stannic oxide is precipitated, and the sodium sulphate is removed by water. The cloth may then be finished by the usual processes.

Great progress has been made in recent years in the reclamation and cultivation of bogs and swamp tracts in various districts of the kingdom of Germany. A start was originally made a few years ago in the east of the country, but the work has since been carried out over the entire north of Prussia, and now the commission placed in charge of the work has started operations in the province of East Prussia, where the government has placed some fifty thousand acres at their disposal. No difficulty is experienced in obtaining settlers for the newly reclaimed land. The latter is for the most part suitable only for pasturage, but considerable tracts exist on which it has been possible to grow cereals.

In the field of industrial training and useful arts, the Filipinos, under American teachers, are making notable progress in certain lines, particularly lace-making and embroidery. The products of the Philippine schools compare favorably with the work of the famous French and Swiss experts. The whole system of education is based on the principle that the children should receive training that will prepare them directly for the life they are to live.

In consequence of the general clamor against the unprecedented high price of meat, the German government is considering the question of facilitating the importation of Argentine chilled meat. The importation is now theoretically permitted, but is hampered by vexatious regulations.

It is estimated that one hundred and seventy-five thousand people from the United States will cross the border into Canada this (fiscal) year to occupy agricultural lands.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"LET GOD BE TRUE."

SAMUEL GREENWOOD.

IT is the unexplained inconsistency of a professedly Christian people that they should continue to reckon as legitimate and true what God condemns, or what is logically out of keeping with His infinite nature. Laws which do not acknowledge the supremacy and sovereignty of divine Spirit; an asserted intelligence which can think good or evil at its will; a blind material force which dooms mankind, without respect to age or circumstance, to conditions that outrage even the human sense of justice and mercy,—these are believed by some to be as true as Deity Himself. What, then, shall we do with the Scriptural teaching from Genesis to Revelation, that God is the only power, intelligence, or creator? Or what shall we say of the verdict of history, that fidelity to the right, that is to divine Principle, has brought to nations and individuals the only enduring success and prosperity?

The appeal of Joshua to the Israelites is applicable today: "*If it seem evil unto you to serve the Lord, choose you this day whom ye will serve.*" An evil thing to serve the Lord! Although we are no longer tempted to bow down to material idols, do we not with unblushing abandon acknowledge "other gods" than the one "I AM"? Are not Christians virtually taught that it is unwise, an evil thing to trust in God with the whole heart? Are not the criticisms of Christian Science on this point equivalent to the declaration that it is wiser to serve God only in part, and that we should serve man-made laws the other part? Is it not a fact that while religions generally admit the claims of God as infinite and supreme, the general practise of religionists is not based upon that concept of Deity? Nevertheless, are we not led to believe in the Scriptures that it is practise alone which God cares for, and not human theories? Surely, if it is evil or unprofitable or unwise to take the teaching of God's allness into our lives, it must be equally so to acknowledge it in doctrine.

Mankind are not urged to serve God alone as though He were in competition with some other power or being, but because God alone is worthy of service. Whatever is not of God is not good and must be intrinsically bad; hence it is not entitled to one's respect or belief. The "other gods" against which mankind have been warned are the beliefs in other powers, other minds, other laws than God, and their acceptance has brought only evil into human experience. The freedom to choose between good and evil does not imply that both are true, for in that case there were no alternative but to accept both. To understand that God, infinite good, is true, and is all that is true, and to let evil be untrue, is as scientific as to assume that the correct relation of numbers is all that is true in mathematics. For example, the great majority of mankind let it be true that two and two are four, and untrue that they are anything else. Good has been proved over and over again to be the real and evil the unreal (practically every individual has proved this in some degree); hence the folly of choosing to serve evil is the folly of believing what has been proved to be a lie.

Joshua sought to show his people that from the standpoint of actual results, as attested by their experiences, to serve God alone was their wisest course; and St. Paul no doubt had in mind the many proofs of God's power and protection recorded in the history of the Jewish nation, when he wrote, "Let God be true." The apostle's injunction raises the question of our allegiance, and what we acknowledge and obey as supreme. The trouble with Christians generally is that while they acknowledge theoretically that God is All, they do not acknowledge it as an actual fact. They do not let the infinity of good be the whole truth to them. They accept the evidence of disease, sin, pain, passion, sorrow, and death, letting these be true, so that God has little or no opportunity to deliver them. Since evil has no power to invade the divine consciousness, it would have no power to invade the human if it were not believed. Thus Christian Science strips evil of all pretensions to be the truth, and shows the right of humanity to overcome it on the basis of God's omnipotence; and perhaps the most that need be said of Christian Scientists is that they are daily striving to let God be true.

It is in no contentious spirit, therefore, that Mrs. Eddy, on nearly every page of her writings on Christian Science, insists upon the literal interpretation of God's allness, but because no other interpretation is consistent with the truth, and because evil can disappear from human consciousness and experience only as this truth is understood and demonstrated. When Christians declare that God is All-in-all, as the Scriptures teach, what can they mean but that good is all that is true, and that aught supposed to exist beside is false? Evidently the full significance of the doctrine of God's infinity has not yet dawned, even upon Christendom, else the claim that there is any other power or intelligence would not be accepted by any Christian church; therefore the apostle's appeal comes most directly to those who, while admitting God's supremacy, do not wholly acknowledge its logical and practical demands.

Many consent to the statement that God is All, with little or no appreciation of its real import. The entire history of mortal existence, the whole panorama of sinning, suffering, dying humanity is and ever has been a huge deception, the illusion of false belief, if God is what the Scriptures and the Christian church declare Him to be. "The foundation of evil," Mrs. Eddy writes, "is laid on a belief in something besides God" (Science and Health, p. 92); but as there can be nothing in reality besides the infinite, evil must rest upon a lie; hence the folly of believing that we can honor God while ascribing power and intelligence to something which God is not. Such a course can hardly be said to fulfil Paul's injunction, nor is it the practise of Christianity as Jesus taught it. To "let God be true" can only mean to let nothing else be life or mind or power or substance to us; or, as our Leader expresses it, "to know no other reality . . . than good" (Science and Health, p. 242). The universal adoption of this position would, as we must all agree, usher in the kingdom of heaven on earth; therefore its wisdom and desirability are already established. The next step is to begin its demonstration in the way Christian Science points out and makes possible.

It can easily be seen that the wrong concepts of God which mankind hold must be set right, before God can have the opportunity to be their Saviour; that is, before He can be to them all that He is. Though we make our bed in hell, as the psalmist said; though we find ourselves in the deepest depths of misery and degradation, Truth is there waiting to destroy the whole evil illusion and to lift consciousness to the heaven of reality, if we will but let Truth enter our thought. The saving truth of the omnipotence of God does not avail to save unless we let it be the truth to us. Evil becomes another "god" if we give it the place in our thoughts which God alone should occupy. While we allow hate, jealousy, vice, or disease to be the truth to us, we are not in a position to realize health, purity, or righteousness. While we permit evil of any kind to be present in our thoughts, we cannot be fully conscious of the presence of good; nor can we fully experience God's healing power while we believe, fear, or obey other laws than His; that is, the law of good.

It is generally admitted that all mankind must eventually acknowledge and submit to the absolute sovereignty of God; then why not now? Why wait for tomorrow, or next year, or the next thousand years in which to think of God as supreme, infinite, since He is that today as actually as He will be then? It is therefore our privilege, at this present moment and every moment, to "know no other reality than good." It is possible to let divine Love be the truth to us now, and to let all unloving and unlovable conditions in ourselves or others be to us as lies, as that which is eternally false to God and His ideas. What besides the human acknowledgment of a power apart from God, and the giving place to the passions of the so-called carnal mind, opens human experience to suffering and disorder? And how can this disorder and suffering be removed, and experience be closed to all but good, unless we repudiate the claims of evil and let God be the whole truth to us? Hence the insistence of Christian Science for the recognition of God as the sole reality.

Whatever may have been the material testimony, it is evident that our Master regarded God and His reflection as the only fact there present; and on this basis he healed the sick and the sinning. He could not have done otherwise as the Wayshower for mankind into the true understanding of God. The working out of human salvation demands that we shall have no other God and love and serve no other God than good; and that, in consequence, we shall acknowledge no other man than His image and likeness. To do thus means everything to us, to our manner of thinking of ourselves and our neighbors, and to our conduct in the world, for no one can reach heaven in any other way.

"ETERNAL GENERATION."

REV. WILLIAM G. SCHOPPE.

SOME phrases live through centuries, because of the vital truth they suggest. Such was the term, "Eternal generation of the Son," used first by Origen. The argument of this great and unique thinker was, in brief, that God communicates Himself to the Son, His light goes forth eternally; His fatherhood has been forever, and is not an accession to His being, in course of time. If God existed alone in solitary unity, without manifesting His divine nature through reflection, then He was not, from all eternity, God, that once He was imperfect; Love did not go forth; the light did not shine, and the righteousness and power of Deity lay idle and ineffective. If this be not true, then the Son must have been eternally generated. In this relation was established the character of eternal Love.

This thought of Origen was afterward used to prop and explain the doctrines of a personal trinity, under which form it is often wrought into modern sermons. It contains the germ of a vital truth which Christian Science explains and sets free from the limitation in which theology has confined it. The logic of this expression insists that man and the universe—the entire spiritual, real creation—must be included in the eternal generation. Christ, the Son, is the head. Paul declares that "by him all things consist;" otherwise there would have been "accessions to the being of God," which cannot be.

The real man is the son of God, the idea of infinite *Mind*, not a passing mortal dream-shadow. God's idea *coexists* with the Mind that forms it, and can no more cease than God can cease; thus faith in immortality is established on a sure foundation, and the futile attempt of ages to prove immortality by reasoning from a basis of mortality, is superseded. Mrs. Eddy recalls thought from its long confusion when she says, "Existence, separate from divinity, Science explains as impossible" (Science and Health, p. 522).

"God is love." Eternal Love gives itself; creation is its expression; man is the offspring of Love, his existence is in the process and continuity of that divine self-giving which feeds, renews, vitalizes, enlightens, constructs the spiritual universe. Man, being spiritual consciousness, receives and assimilates divine truth. Creation never ceases, and this perpetual communication of the Life divine annuls the law of sin, disease, and death. The world must awaken to the fact that belief in the universal and perpetual activity of divine Love, and belief in the germ theory of disease,—that vicious animalities prey on mankind,—with all other elements of destruction, are contradictory. If one is true, the other is a falsity, a part of the illusion of material sense. In the spiritual awakening, love—self-giving—will be seen to be the only law of being, and love is constructive, not destructive. By the process of eternal generation, God "healeth all thy diseases," and, as Paul states, "the creature [creation] itself also shall be delivered from the bondage of corruption into the glorious liberty of the children of God."

The truth, revealed in Christian Science, requires that the forever creating Life, Truth, and Love be understood to include man and the entire universe. God gives, feeds, sustains, builds in the continuous expression of a divine harmony. His law of generation is spiritual, resistless, annulling all that is unlike good, and this is the basic truth which heals the sick.

OPPONENTS *ALIAS* COWORKERS.

LUCY HAYS EASTMAN.

THREE small boys were eagerly endeavoring to climb a cherry-tree in search of the first fruits of the season. The oldest child, having reached the higher branches, boastfully called to his playmates, "Just look at me and see how far up I am! You can never get so high." "I can, too; just you wait," the next in age retorted, while the youngest of the three, having vigorously but vainly attempted to follow his elders, abandoned the struggle and manfully brushed away the tears of defeat as he gazed wistfully up at his competitors. Those tears struck a tender chord in the heart of the victorious young climber, and as compassionate love replaced ambition and rivalry he said to the next in age, "Come on down and let's help little brother."

"All right," was the ready response; and then, what pushing and pulling followed, with exclamations of, "Look out!" "Never mind!" "Hang on tight now!" until three happy voices cried exultingly, "Here we are!" Then together three pairs of beaming eyes spied the red cherry balls and three pairs of grimy hands reached out for the fruit. Thus had unselfed love, as it banished the desires of personal attainment, produced the harmony of reciprocal interest and united endeavor, causing the children to rejoice in victory, not over each other, but over the physical limitations of fear and material law.

As it is with children, so in differing degree is it with

Digitized by Google

their elders. Removing from human consciousness the crust of conflicting characteristics and temperaments, hardened by self-love, self-will, and self-justification, and looking deep into the heart of humanity, we find one insatiable desire, one common hope actuating the life-impulse of every creature, namely, the salvation from discord and the attainment of harmony. The fulfilment of this desire will be postponed just so long as mortals believe in the reality of matter, for under this belief human beings, whether Jew or Gentile, are all bound alike by the same chains of fear and subject to the same cruel taskmaster of material law (so called).

Have we not too much in common to obstruct one another's way as enemies or rivals? Are we not all fellow workers in the same cause, schoolmates with the same lessons, and soldiers fighting, never against each other, but against the "principalities and powers" of the carnal mind from which, consciously or otherwise, we are all seeking freedom? In times of battle personal differences among the soldiers, and even long-time hatred, are forgotten in their mutual love and allegiance to the cause for which they have enlisted. Indeed, the fiercer the struggle, the stronger become their bonds of unity, until that unselfed love which gives one's own for another's life is abundantly manifested.

Such is the normal and natural relationship between men, and it is well defined by the obsolete use of the word "rival," together with its first meaning given in Webster's dictionary as: "A person having a common right or privilege with another; a partner or associate." We are indeed partners in the same glorious hope for the things that are not seen, fellow travelers in the same journey from material belief to spiritual understanding, being equally equipped with like opportunities for seeking and finding freedom through Truth. But, because of a false sense of existence, the second meaning of the word "rival," "One of two or more striving to reach or obtain that which one only can possess; a competitor," has been considered the more frequent attitude in man's relationship to man. Can salvation be obtained by only one? Can the idea two times two are four be learned and possessed by a select minority? Nay, all that exists is infinite, and is for all to the exclusion of limited and selfish possession.

As we learn the love and oneness of mind in which all the children of God forever dwell, we shall discover that the only opponent we have ever had or ever can have is the false belief in a power and presence other than God, good. Then with one impulse will all join hands in the effort to overcome, through an understanding of Truth and Love, the unjust penalties of the carnal mind, and to demonstrate together man's unity with God as a present fact. Then will they let fall their moth-eaten treasures of matter which they so laboriously and pugnaciously hoarded, and reach out for those spiritual blessings which enable man to love his neighbor as himself. Under such conditions mortals will cease to rejoice in victory over each other, and as mutual beneficiaries in the victory of Truth over error will realize that "whatever blesses one blesses all" (Science and Health, p. 206). As surely as things that are equal to the same thing are equal to each other, just so surely when men are governed by the divine Mind and have but the one motive to understand and glorify God, will they find themselves coworkers with each other, whether on opposing sides or not.

To illustrate: If two lawyers desire above everything else to know the truth about a case, though they be opponents on opposite sides they are yet coworkers for the same end, and the victory of one is the victory of all who desire to know the truth. Likewise in sports and games, opponents are coworkers as they strive, not to outdo each other, but to overcome the limitations of physical ability and human intelligence. Then will the success of the winner bring added encouragement to the defeated by proving the possibility of a better planned and better played game. From the same standpoint musicians, artists, and actors will cease to contend with each other for personal favoritism or public prominence and, rejoicing in the good of all, will welcome each proclaimed achievement of their fellow workers as if it were their own, realizing that each higher attainment is a torch-light illumining their own path of progress. Again, as human organizations, business systems, religious denominations, and healing agencies are conducted with the universal welfare first at heart, and with the motive to glorify God, the whole human family in unity of purpose will strive as coworkers to discover that which will demonstrate the greatest good to the greatest number, judging not from human teachings, preconceptions, or creeds, but even as the Master did, "by their fruits."

The oneness and spontaneity manifested in the cooperation of the Christian Scientists, is often remarked upon by even those who think they cannot accept this teaching. It is because these followers of Christ are learning how to let the one God, who they are taught is divine Principle, work in them to do of His good will and pleasure. Their gratitude for the fruitage of this Science is so great that whatever would make for enmity is lost in the desire to be and to do good. With brotherly love and unity of purpose they unite their forces to construct a firmament of good in the human consciousness, even as the workers of old labored together day and night to build them a wall of protection. At times the Christian Scientists may feel that their work is "great and large" and that they are separated in the work one from another, but if they labor individually to solve their problems, whether they are in "the lower places behind the wall" or "the higher places," whether they are carrying mortar or holding the spears in watch of the enemy, they are all coworkers in the constant endeavor to realize the unity and love of the one Mind. If there are times when the enemy seems to have torn down the work in places, bringing temporary confusion, division, and even conflict among the workers, the difficulty is soon righted by recognizing the impersonality and powerlessness of the opponent. And so the reconstruction is made complete and the work of the whole goes steadily on.

The teachings of Christian Science offer the solution for all antagonistic opposition by showing humanity how to reflect the Christ-mind, which produces such a love and understanding of God that it becomes possible for the children of men to fulfil the inspired statement of our Leader: "The rich in spirit help the poor in one grand brotherhood, all having the same Principle, or Father; and blessed is that man who seeth his brother's need and supplieth it, seeking his own in another's good" (Science and Health, p. 518).

"GREATER WORKS THAN THESE."

FLORENCE WHISKIN.

In Article VIII, Sect. 3, of the Church Manual we read: "He who dated the Christian era is the Ensample in Christian Science." In his first epistle St. Peter also speaks of Christ as "leaving us an example," or, as the Greek word means, a model, a writing, copy. These statements surely imply that Christ Jesus was the perfect pattern for all mankind for all time, perfect in the sense that a certain number is perfect and cannot be added to. This being true, what then did Jesus mean when he spoke the words so often quoted: "The works that I do shall he do also; and greater works than these shall he do"? A new light seemed to fall on the whole passage while studying it one day, which the writer ventures to give.

The Master's words were spoken, as we know, just after he and his disciples had celebrated the Jewish passover together for the last time. They followed the answer to Philip's request, "Lord, show us the Father." Jesus answered: "He that hath seen me hath seen the Father . . . the Father that dwelleth in me, he doeth the works." Then comes the great promise: "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do

Digitized by Google

also." It was as though he had said: "In expressing truth, love, power, life, goodness, I have manifested the Father and so have done the works which ye have seen me do; believe too that ye are of the Father, and ye shall do likewise." In connection with this we remember his answer to the father of the epileptic boy, who cried: "If thou canst do anything, have compassion on us, and help us." Jesus answered: "If thou canst believe, all things are possible to him that believeth."

But the Master's earthly life was not yet over, and he adds: "And greater works than these shall he do." Jesus had, in fact, his "last enemy" yet to overcome; he had yet to prove by demonstration his own words, "Destroy this temple, and in three days I will raise it up," and he had yet to "ascend," *i.e.*, to become so spiritualized as to be above all material conditions and finally to pass entirely beyond human ken. These then surely were the "greater works" to which Jesus referred and which he promised that his own followers should also do before they reached the goal of their high calling. Jesus, moreover, gives us the reason why all this should be possible to man: it was "because I go unto my Father." It was he who taught that God is Spirit, and this same Spirit he taught men to call "Our Father."

Mrs. Eddy says: "For man to know Life as it is, namely God, the eternal good, gives him not merely a sense of existence, but an accompanying consciousness of spiritual power that subordinates matter and destroys sin, disease, and death. This, Jesus demonstrated" (Miscellaneous Writings, p. 189); and by his "greater works" he surely rose "to the zenith of demonstration" (Science and Health, p. 565). Mrs. Eddy's explanation of the words "because I go unto my Father," given on page 194 of "Miscellaneous Writings," is the epitome of her teaching which has made it possible for men and women today to do "the works" after the pattern of their great Ensample.

RESTORING.

HELEN ANDREWS NIXON.

THE word "restoring" is derived from the Latin: *re*, again; *stare*, to stand. As applied to the activity seen to be at work in the consciousness of one who is passing out of the darkness of material thinking into the light of spiritual understanding, the word "restoring" describes the quality of this activity.

In the living which approaches the Christianly scientific sense there accumulate proofs of an all-wise, all-good Principle, restoring ever, through lessons learned aright, our confidence and peace. The need of restoration cannot be denied, but it is not for a restoration of confidence and peace in the material interpretation of life. This world's most ardent and faithful devotees have found its promises unfulfilled. Satisfaction must be found elsewhere. As we cease voluntarily or involuntarily from the expectation of satisfaction in false values, faith always comes into the seeming void, be it soon or late, and points the way to the true abiding-place of confidence and peace, the realm of the spiritually real. *Re*, again, *stare*, to stand; here again these are restored and increased an hundredfold.

With this changed view-point and working basis, the equilibrium of thought is also restored. Life becomes "worth the living." The outlook is energizing, ennobling. Keen interest and zest become habitual. Right adjusts the balance more speedily in daily thought processes, and gratitude and praise become more frequent guests. These blessings always follow in the wake of the perception and acknowledgment of the Science of good. Even the upheavals which sometimes seem to attend the transfer of faith from material sense testimony to spiritual evidence, gradually lose their power to alarm, because we are learning that divine Love is at the helm and that all is well.

The fulfilment of the Master's prophecy is plain: "Elias truly shall first come, and restore all things." Even the little child knows that "like begets like." He does not look for a pansy from an acorn, and it is equally clear that a material effect cannot spring from a spiritual cause. God being Spirit, His creation must be—is—spiritual. Man's greatest need is the restoration of spiritual sense, whereby to discern and understand God and His universe. On page 124 of Science and Health, Mrs. Eddy writes: "Spirit is the life, substance, and continuity of all things. We tread on forces. Withdraw them, and creation must collapse. Human knowledge calls them forces of matter; but divine Science declares that they belong wholly to divine Mind, are inherent in this Mind, and so restores them to their rightful home and classification." The study and practise of Christian Science is effecting the restoration of a spiritual sense, and bringing into view the new heaven and new earth referred to in Revelation.

The Scripture and human experience teach that God's law both takes away and restores. It takes away a false temporary sense of things and restores the ability to seek and to find in Mind the reality of all we love and should have. Before learning what Truth is, we believe we exist in a material and mental universe. This universe seems to be made up of loved, hated, or indifferent objects, and of various opinions and concepts about God, man, and the universe. Christian Science comes with the action of the Holy Ghost, "whose fan is in his hand," and establishes through reason, revelation, and demonstration the spirituality of the universe. As the Scriptures affirm, we "live, and move, and have our being" in Spirit, God.

Through the exchange of the material concept for the spiritual, faith and hope come into freer activity. The prophet Ezekiel realized the necessary revolution in human thinking. He was God's mouthpiece in a material age, and he wrote: "I will overturn, overturn, overturn it; . . . until he come whose right it is." If to human sense there sometimes seems to be a dread of the transforming process or a shrinking from it, this will be healed by the actuality of divine Love, for "Love supports the struggling heart until it ceases to sigh over the world and begins to unfold its wings for heaven" (Science and Health, p. 57).

Love always heals. It has healed us once. It will heal us again. It will heal us always, until error finally disappears. The Scripture statements: "They that wait upon the Lord shall renew their strength," "He restoreth my soul," "Every one that asketh receiveth,"—these are all demonstrable truths by every one who learns to meet the conditions implied. An understanding of the apostle's words to the Hebrews leads to the realization of the truth therein declared. Here we are told that they "took joyfully" the spoiling of their goods,—the destruction of their material beliefs. Should confidence in Truth and Love and its attendant peace seem eclipsed, and their normal action in human affairs seem absent, this transitional period should not be feared or misunderstood. In reality nothing disastrous is happening. Spiritual realities are not lost. Through purification of sense and self, they are simply being restored to their rightful place.

How tenderly the dewdrop finds a place
Upon the thirsty violet's drooping face!
No fury in its course, no haste, no noise
To mar the beauty of the flow'ret's poise.
The child with bleeding hands and tear-filled eyes
Lifts up its trembling voice, and softly cries
For one whose mother-love and swift caress
Of tender arms will surely soothe and bless.
The sinner yearns to lose sin's chastening rod,
And loathing sin creeps lowly back to God,
Sure above all that in His might to bless
Abides the healing touch of tenderness.

LAURA GERAHTY.

SELECTED ARTICLES.

[Frederick Dixon in *Essex County Telegraph*, Colchester, England.]

In a sermon on Christian Science, recently reported in your paper, the clergyman began with a sketch of Mrs. Eddy's career which bristled with inexactitudes. His opening date was wrong; his sketch of the evolution of the discovery of Christian Science was mixed; the numbers of editions of Science and Health mentioned hopelessly short of the truth; while the declaration that Mrs. Eddy claimed Science and Health to be one with the Bible was a culmination which could not be substantiated for a moment.

What Mrs. Eddy did say of Science and Health was that in writing it the Bible was her only guide and text-book, and what Science and Health represents to the Christian Science movement today is this: it is a commentary on the Bible to which Christian Scientists are indebted for that understanding of the Bible which is making possible their healing work. Serious, however, as these mistakes are, they fade into absolute insignificance in comparison with the statement that Mrs. Eddy claimed to be "the returning Messiah—in some points the Holy Spirit himself." Such a statement should never have been made from a pulpit without absolute proof, and the clergyman could not possibly give any. What Mrs. Eddy really does say in Science and Health is this: "Today, though rejoicing in some progress, she still finds herself a willing disciple at the heavenly gate, waiting for the Mind of Christ" (Pref., p. ix).

Then this clerical critic went on to explain exactly what Christian Science is. It taught, he explained, that disease might be healed without the use of drugs. This is just about as accurate a statement of the matter as it would be to insist that electricity is a method of lighting rooms without gas. Christian Science certainly heals the sick, but it does this in the process of making them better men. In the Bible, the words "whole" and "holy" mean very much the same thing, and Christian Science only makes men physically whole in proportion as it makes them mentally holier. "Now, as then," Mrs. Eddy writes on page 150 of Science and Health, "signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

The clergyman's hopeless misunderstanding of Christian Science healing is exposed in his confusion of it with mental suggestion. Mental suggestion is more and more becoming a recognized factor in ordinary medical practise. There is no secret whatever about it, but no matter for what purpose or by whom it is employed, it is thoroughly vicious in its inception and execution, and is simply what Jesus himself described it, as healing through Beelzebub. It is as old as the human mind; and though it has indulged in many *aliases*, necromancy, exorcism, mesmerism, or hypnotism, its essence is always the same, the attempted manipulation of one human mind by another. All this, of course, constitutes a belief in the power of good and evil, a duality described by the writer of the Jehovistic document of Genesis as the fruit of the tree of the knowledge of good and evil, culminating in death. Now death, Paul wrote, entered the world through sin, so it is clear that in the opinion of Paul a belief in the power of good and evil constituted sin.

Jesus himself, centuries later, put the Jehovistic contention a little differently in exposing the claim of the exorcists to heal. A house, he declared, divided against a house could not stand—in other words, a mind impregnated with a belief in good and evil was impregnated with the belief of death, and so of sin. Then he went on to explain that true healing came through the Spirit of God—in other words, by an understanding of omnipotent good. The human mind, impregnated with a belief in good and evil, is absolutely incapable of suggesting anything but its own belief in sin and mortality. Healing, it is clear, cannot therefore come by human suggestion. The claim of the human mind to suggest good is inseparable from the claim to suggest evil. This is the casting out of devils through Beelzebub. But the healing through the Spirit of God is attained in the attempt to give the patient something of the Mind that was in Christ Jesus. If this is done, the patient is made holier and whole.

The explanation which the gentleman then goes on to give of the method of treatment adopted by Christian Scientists is more calculated to produce astonishment developing into amusement than anything else. He imagines that a Christian Scientist goes to work to repeat over and over again to a patient that there is no such thing as pain or suffering, indeed that there is no "material object in this world apart from Spirit." First, then, it is curious that the critic who knows all this has not discovered that formulas are strictly forbidden in Christian Science practise; and next, that he has not realized that, if his description had been correct, Christian Science, instead of having grown into a huge world movement, would long ago have been dissolved in laughter, for the method he explains would be simply silly. Christian Science does not say that pain is an illusion to the human senses. "Sickness," Mrs. Eddy writes, on page 460 of Science and Health, "is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being." The Christian Science practitioner sets out, therefore, not to mutter ridiculous spells, but to give his patient this "right apprehension," which is nothing more nor less than the knowledge of the truth which is to set the world free.

Finally, the clergyman went on to speak of the intimate connection between medicine and religion. It is intimate, if by medicine you imply the spiritual medicine of Christ Jesus, who healed multitudes with a word; but if you mean the medicine of the apothecary, it is so intimate that, in the words of that great critic, Adolf Harnack, Luke, the beloved physician, gave up his drugs and came to Jesus because "his medical profession seems to have led him to Christianity, for he embraced that religion in the conviction that by its means, and by quite new methods, he would be enabled to heal disease, and drive out evil spirits."

The primitive church never dreamed of separating the healing of sickness from the healing of sin, and setting up the church on one side of the street and the hospital on the other. It knew that Jesus had said to preach the gospel and heal the sick; and it preached the gospel and healed the sick. The healing of the sick is only one of the proofs demanded by Jesus himself that the gospel preached is his gospel. It was he who said, "These signs shall follow them that believe," and "He that believeth on me, the works that I do shall he do also." When the disciples of John came to demand of him whether he was the Christ, it was to his works of physical healing he pointed essentially. In proportion, consequently, as men attain today the Mind that was in Christ Jesus, they will be able to repeat this healing. For it was the Mind of Christ that healed in the first century, and Jesus said, "Lo, I am with you alway, even unto the end of the world."

[Olcott Haskell in *Stockton* (Cal.) *Mail*.]

It has been popularly held for ages that there was an irreconcilable conflict between science and religion; yet true religion involves an understanding of God, and cannot conflict with the facts of His universe. Thus viewed, religion should interpret truth, and its practise cannot either ignore or suppress facts. God is eternal Principle, and to learn of God is to learn the law of Life.

Christian Scientists are only beginners in this infinite study, yet they recognize that there is more to man than what is seen materially—that the intellectual, the moral, and

Digitized by Google

the spiritual are potent and never to be neglected factors in his life, and must be taken into account before harmonious results can be attained. It is on this basis that the teachings of Jesus are of value, for he certainly understood the laws of health and right living.

Jesus healed multitudes, yet all these have passed through death, and Jesus himself had to combat the "last enemy." This is not an argument against his teachings, nor does it discredit in the least the genuineness of New Testament healing. Likewise the fact that Mrs. Eddy is not with us in the flesh today does not detract from the correctness of her teachings.

While respecting the honest efforts of physicians of the many prevailing schools of medicine, Christian Scientists as a rule prefer to employ such methods as they have found to be most effective. A perfect application of Christian Science would lead one to do the right thing at the right time in every instance, but no Christian Scientist has as yet fully attained to this. Christian Science treatment would not have gained wide-spread acceptance were it not, on the whole, successful. If a single instance of failure to secure results within a few days is to be taken as cause for condemning this method of treatment, what shall we think of the daily failures of *materia medica?* Or what shall be said of the not infrequent cases where children who were well have been given "preventive medicine" which resulted in suffering and death?

Even a perfect system would need to be perfectly applied to produce perfect results, and there is not today any school of practitioners so universally successful that it is in a position to condemn the failures of others. The best course would seem to be to let each person employ such methods as his observation and experience justify him in regarding as safest and best.

[Eugene R. Cox in *Binghamton* (N. Y.) *Republican Herald.*]

In a recent issue detailing the closing scenes of the Bible school conference, mention is made of an attack on Christian Science by one of the speakers. What the reverend gentleman said is sufficient to cause profound astonishment as coming from one versed in the Scriptures. The speaker disclaimed any intention of attacking Christian Science or Christian Scientists, but he did attack the practise of the religion, claiming that the healing was the work of Satan, and detailing how ingeniously Satan works to heal people and then diverts them from the church.

The astonishing thing shown by this statement is that the clerical critic apparently ignores the first four gospels of the New Testament, wherein the life and works of the great Wayshower are set forth. A reference to these would show that more space is devoted to the healing works of Jesus than any other one thing. In fact, his whole ministry was devoted to healing the sick and sinful, and he commanded his followers to do likewise. He not only healed the specific cases which are recorded, but he healed the multitudes, thus laying the foundation of the Christian religion; and this he did by spiritual means, and not by *materia medica.*

The sixth and last tenet subscribed to by Christian Scientists reads as follows: "And we solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us, and to be merciful, just, and pure" (Science and Health, p. 497).

It is only by manifesting that Mind "which was also in Christ Jesus" that Christian Scientists are enabled to heal the sick and restore that harmony which constitutes the kingdom of heaven within us. It must be apparent, therefore, that among Christian Scientists the statement that such healing is the work of Satan can only induce a feeling of pity for the one who promulgated it, and the only reason for this correction is that those of your readers who do not understand Christian Science may not be misled by what this clergyman is reported to have said.

[George Shaw Cook in *Quincy* (Ill.) *Whig.*]

The tenor of our critic's remarks would indicate that in his opinion Christian Science is espoused only by people of weak or unsound mind, or else that Christian Science reduces its adherents to this condition. He admits that thousands of people have gotten great good out of Mrs. Eddy's book, but speaks of the "credulity of people whose minds have not undergone the discipline which enables them to discriminate in matters religious." As Christian Science is a religion of works, the only discipline which would seem to be necessary to enable one to discern its truth is that which leads to an openness of mind, an unprejudiced attitude of thought, and this mental quality is one which we find in both the learned and the unlettered, the intellectual and the simple-minded. The adherents of Christian Science, although representing all sorts and conditions of men, are drawn very largely from the older religious bodies, and we must assume that had they found in these religions all that Christian Science has to offer, they would not have left them. So far from lacking the power to discriminate, they on the contrary represent a very discriminating class of thinkers, who demand a religion which shall fulfil the promises of Jesus here and now, which shall heal the sick as well as reform the sinner. Had the older churches practised the vital truths which Jesus taught, there would have been no demand for Christian Science. That there was a demand is attested by the vast number of earnest men and women whose lives have been redeemed through the ministry of Christian Science, who have been saved from hopeless disease, raised from weakness and helplessness, and rescued from enslaving sin. Could one of these be convinced that he had not been discriminating in "matters religious"?

It would seem from our critic's exposition of the methods of Christian Scientists that his knowledge must have been gained from rather unreliable sources, and that if he has read the text-book at all, he has done so to very little purpose. The teachings of Christian Science have been fully tested and not found wanting by those who have honestly applied them, and the lives of Christian Scientists in any community give sufficient proof of the utility and practicality of these teachings.

Our critic's unkind reference to Mrs. Eddy, the Discoverer and Founder of Christian Science, should not pass without notice. This noble woman, whose life-record is one of good deeds and unselfish devotion to the cause of humanity, was accorded during her lifetime the highest respect and esteem by the world's best thinkers, and her memory is honored by thousands upon thousands of people whose lives have been uplifted through her loving and consecrated labors for mankind.

[Jno. H. Wheeler in *Chillicothe* (Mo.) *Constitution.*]

The religious practise of Christian Science, healing its followers through the mental influence of a morally pure and spiritual reasoning, is fully in accord with Paul's preaching, "Let this mind be in you which was also in Christ Jesus," and it may be truthfully said to have been fully established and employed by our Saviour, Christ Jesus, nineteen centuries ago; who, in his daily and hourly ministration of divine Truth to the people, always accompanied his sermons by healing the suffering, needy, weary, and sin-laden multitude who sought him at every angle of his busy life, feeling instinctively that he was their savior from evil of every sort; and thus he drew all men unto himself.

When the accredited motives of the leading religionists in the Christian world are considered, it must be presumed that they are all agreed upon one essential, namely, to save mankind from sin. All must admit that this process of saving is not yet finished, consequently every advance step, every gain in the ability to use the power of God, should be a cause for universal rejoicing. Jesus' parable of the householder should relieve any particular body of religionists in these latter days from an extreme anxiety to do the whole saving.

Digitized by Google

Jesus likened the kingdom of heaven unto a householder who went out early in the morning to hire laborers for his vineyard. Again about the third hour, he went out and employed more of them, and at the sixth, and ninth, and even at the eleventh hour, he again hired all available laborers. The day ended, the steward was told to pay the laborers for their day's work. Those who had been employed at the first hour, together with those hired at different times during the day, even unto the eleventh hour, received the same amount for their day's labor. "Every man received a penny." Those who had worked all day objected to this unique treatment, protesting that they had borne the burden of the day, and why should those hired at the eleventh hour receive the same compensation? But the lord of the vineyard answered: "Didst not thou agree with me for a penny? Take that thine is, and go thy way: I will give unto this last, even as unto thee. . . . The last shall be first, and the first last." So it is not how long one has been a religionist, but how much of a Christian character he is, that will count at the final hour.

None should misunderstand Christian Science or its Founder, Mrs. Eddy. Her mission was comprised in preaching and proving her spiritual discovery, *i.e.*, the spiritual power of scientific right thought which teaches mortals how they may understandingly apply Jesus' healing ministry to themselves and others and enter into God's vineyard at the eleventh hour, or any other time for that matter, to work and live acceptably to the Master; to have the Mind of Christ.

At Jesus' ascension he promised that his followers' ministry also should be blessed with "signs following," *i.e.*, the healing of all manner of disease, which our Master defined as a positive evidence of spiritual activity in human consciousness. If Christian Scientists are helping thereby to swell the triumphant army of Christian believers, all religionists should sincerely rejoice in the increase of redeemed ones, and thank God devoutly for all such reformation.

We firmly believe that the reason for the criticism of Christian Science by any one is that they do not realize that the one prime object of this teaching is to enable mankind to qualify themselves, through genuine goodness and spiritual growth, to obey humbly from the heart the law of God, and we embrace this occasion to assure them of this fact, which will no doubt dispel all wrong impressions concerning the doctrine of Christian Science, and the necessity for public criticism of it.

[David Anderson in *Australian Farm and Home*, Melbourne, Aus.]

It is a platitude of many critics, who think they know all about Christian Science, that Christian Scientists profess indifference to pain, deny its existence, and seek freedom from its thrall by trying to delude themselves that there is no such thing as physical suffering. Christian Scientists do not ignore pain or seek to deny its existence as a mortal experience. Very many of them have had long and bitter evidence that to mortal sense suffering is very real indeed; but immortal sense includes in reality only that which is God-produced and eternal. The Christian Scientist does not regard suffering as good, and as he has ceased to look upon evil as the creation of an infinitely good God, he recognizes pain as unreal in the true sense of the word—an imposture which shrinks from the light of truth, a usurper claiming title to the power and authority of the omnipotent ruler of the universe; and the Christian Scientist's belief in pain disappears in the ratio of the understanding by which he perceives God, Spirit, as All-in-all, and man, in the image and likeness of God, as spiritual, not material.

The Christian Scientist learns that, as there is no life or intelligence in matter, matter can have no sensation of its own. Inert and powerless of itself, it can neither suffer nor cause suffering. He learns that brain does not think or nerves feel, for it is through Mind alone that one thinks, or feels, or acts; and when a mortal has got away from the belief that pain is material or physical and understands that it is purely mental, he has begun to perceive something of the reality of being, in which the spiritual man of God's creating is found to be immortal and incapable of suffering; he has taken a long step in the direction of overcoming in his consciousness the mortal sense of pain; he has opened the portals of his thought to the Mind "which was also in Christ Jesus," thereby subordinating the human to the divine, and to that extent he is enabled to cast out the devil of belief in any power apart from God.

"Impracticable idealism," sneers the cynic. "Demonstrable fact," says the Christian Scientist.

[Editorial in *Omaha* (Neb.) *Sunday Bee*.]

What is this.—China makes heavier demands for the English Bible than the American Bible Society is able to supply? This is the word given out by that publishing house. The demand has been quickened since the fall of the Manchu dynasty, with which prejudice against western civilization is said to have disappeared. To get down to something like a tangible basis, let it be stated that the statistics of the Bible Society show that a year or two ago, before the Chinese republic came into being, five hundred thousand copies of the Bible were reeled off Chinese presses. Now the demand cannot be met. Evidently there is full warrant in the assertion that the Chinese seriously desire to find out what Christianity really is and cannot wait for the comparatively small number of missionaries to teach them. They wish to read it for themselves in this book, the manual of the Christian religion.

Recently a distinguished Japanese orator told an Omaha assemblage that no man is considered well educated in Japan who does not have command of the English language, and he added that the best educated Japanese are thirsting for a knowledge of the Bible. The Bible is used in the schools of Japan, but used for its historic, literary, and philosophical import more than for its religious effect. With these facts as to the Bible's spread in ancient lands before him, the churchman surely has ground for encouragement, no matter what local obstacles may arrest the progress of the church at home.

[From an editorial in *Dallas* (Tex.) *News*.]

Some one has asked most significantly, "What do we live for if not to make the world less difficult for each other?" And another says, "To rejoice in the prosperity of another is to share it." Even a good deed that is done without sacrifice is robbed of much of its beauty, for where there is no spirit of self-sacrifice there is no love, and where there is no love God is absent. Every need is an opportunity for helpfulness and therefore an opportunity to make two happy—he who gives the help and he who receives it. If there were no need there would be no sacrifice, and without sacrifice there would be few opportunities for the manifestation of love. Browning admonishes us, "Desire joy, and thank God for it. Renounce it, if need be, for others' sake. That's joy beyond joy."

Await the issue. In all battles, if he await the issue, each fighter has prospered according to his right. He has fought with all his might, and in exact proportion to all his right he has prevailed. Fight on, thou brave, true heart; and falter not, through dark fortune and through bright. The cause thou fightest for, so far as it is true, no farther, yet precisely so far, is very sure of victory. The falsehood alone of it will be conquered, will be abolished, as it ought to be; but the truth of it is part of nature's own laws, cooperates with the world's eternal tendencies, and cannot be conquered.—CARLYLE, "Past and Present."

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"WHITE UNTO THE HARVEST."

EACH year, in the month of September, by common consent the activities of the board of lectureship of The Mother Church, in the exercise of its mission to mankind, are again set in motion, and the great good which the work of this board is accomplishing again becomes apparent to Christian Scientists. The mistake must not be made, however, of thinking that the addresses delivered by the lecturers are, in and of themselves, capable of building up and sustaining the branch churches, or that the members of these churches are thereby relieved from any further responsibility for the welfare of the community.

The mission of the lecturer is primarily to awaken thought to the vital importance of the message he has come to deliver, and incidentally to correct the prevalent misapprehensions of Christian Science,—to present to his hearers the fundamental truths of this wonderful teaching in such a manner as to make clear to those whose interest in this subject has, perhaps, gone no farther than a desire to be healed, that this Science is the same truth which was demonstrated by Christ Jesus during his earthly ministry, and which is today available for the redemption of mankind from both sin and disease. When this hope is aroused in the breasts of those who listen, the lecture has largely done all it can do, and it is then the province of the local Christian Scientists to take the next step, namely, to demonstrate the truth of what has been preached.

It has been truly said that "faith without works is dead," and the same law of attraction which brought the multitudes to Jesus as he went about Galilee in his mission to the wearied and burdened ones of earth, is still in force. The sick and the sinning desire to be freed from the burdens that weigh so heavily upon them, and it is because of the hope of surcease which Christian Science holds out, a hope substantiated by healings which they have heard of or perchance have witnessed, that the opportunity to listen to a lecture on this subject is eagerly embraced, on the chance that the way of salvation will be made so plain that whosoever will may enter therein. Others have been helped, and they too would profit by the blessing so freely offered.

The lecturer does his work faithfully. The truth discovered by Mrs. Eddy is presented in all its clearness and simplicity of statement, its recognition of God, good, as the only power, of infinite Mind as the only intelligence; the soil has been stirred, the weeds of error, of doubt and misconception, have been cleared away, and now the grain must be left to grow and ripen until the harvest. It is at this stage of development that the daily living of the professed Christian Scientist becomes an important factor. It must be his care that through no sin of omission or commission on his part shall frost or blight come near the budding grain.

The work of the lecturer, then, is largely in vain, so far as those for whom his message is primarily intended is concerned, unless the truths he promulgates are confirmed and sustained by those who, in doing the works which Jesus declared they that believed on him should do, are to become as living epistles, "known and read of all men." Mrs. Eddy says in Science and Health (p. 201): "The best sermon ever preached is Truth practised and demonstrated by the destruction of sin, sickness, and death," and the best way to advance the cause of Christian Science in any community is for the adherents of this faith to give daily diligent heed to the casting out of error of every kind, that men may see their good works, and the Father who doeth them be glorified.

We read in the gospel of Matthew that as "Jesus went about all the cities and villages, teaching in their synagogues, and preaching the gospel of the kingdom, and healing every sickness and every disease among the people," he was "moved with compassion" for the multitudes. Today, as in the time of the Master, the field is "white unto the harvest," and again multitudes are waiting and longing for the living bread once more made available through the tireless labors of our beloved Leader. "Pray ye therefore the Lord of the harvest, that he will send forth laborers into his harvest."

ARCHIBALD MCLELLAN.

OPINION *VS.* DEMONSTRATION.

IN Science and Health we find this clear-cut statement: "In Christian Science mere opinion is valueless," to which Mrs. Eddy adds, "The hour has struck when proof and demonstration, instead of opinion and dogma, are summoned to the support of Christianity" (pp. 341, 342). There are few students of religious history who would deny that the introduction of "mere opinion" was responsible for the divisions which came at an early date into the Christian church, and that as dogmas multiplied demonstrations of Truth's power decreased. We are told that at one time Peter and John urged upon the Master their personal opinion that a certain man who was doing some healing work should be forbidden this privilege, because, they said, "he followeth not with us," and that Jesus rejected their plea, evidently because he discerned sincerity on the part of the one whose work was challenged. We must by no means conclude, however, that this gave license to every aspirant to the healing work to claim discipleship. Thus we find that later, Peter with perfect propriety rebuked Simon the sorcerer, and required of him repentance as a preliminary to his escape from the bondage of mortal belief.

At this point it is highly important to see that each step must be taken under divine guidance, and that one rule, however good, is *not* necessarily applicable in every case. Spiritual discernment is needed more than aught else, and if we seek this with true diligence, divine guidance will never be denied us, and it is as far above personal opinion "as the heavens are higher than the earth." It is true that Jesus counseled his students not to give "that which is holy unto the dogs,"—which undoubtedly meant the unprepared thought. Thus we read in the tenth chapter of Acts of Peter's hesitation about responding to the call of Cornelius, who was reaching out for the truth. We are told, however, that divine Mind, Spirit, directed Peter unmistakably in going, even as Cornelius had been directed to send for him. Even the house where Peter lodged was made known to Cornelius, and how gladly this devout man must have listened when Peter told how Jesus "went about doing good, and healing all that were oppressed of the devil; for God was with him." It was "proof and demonstration," not "mere opinion," that Peter had to offer, and it is simply thrilling to read that, as he was speaking, "the Holy Ghost fell on all them which heard the word."

We must of course learn to discriminate wisely between right and wrong, truth and error, but this is seldom done by those who are ready to voice personal opinion or to listen to it. It should be noted that both Cornelius and Peter were fasting when this wonderful spiritual illumination came to them, which surely means more than abstinence from food. It undoubtedly means that their thought was emptied of material desires and opinions, and thus were they ready to be filled with the things of Spirit. In this case, as in every other, the demonstration consists in a willingness to get rid of error of every sort,—to be led,—and the proof follows in the healing which is inseparable from spiritual illumination. Much help is sure to be gained in studying carefully Mrs. Eddy's words on page 347 of "Miscellaneous Writings," where she shows the need of turning away from personal opinion and earnestly seeking divine

Digitized by Google

guidance. This does not mean that one should never speak to others on vital questions, or listen to what they have to say, but it does mean that we should never let finite sense come between us and divine wisdom. Peter sagely says, "If any man speak, let him speak as the oracles of God;" or, as we might express it in terms of Christian Science, let one gain for himself a clear sense of the demands of Principle in his every experience, and let him voice this when the right opportunity offers, whether in public or private. Then he must be willing to wait on God, and until others are ready to see the truth as he sees it, in case he is nearer right in his views than are the others concerned.

On this point our Leader says, "Even your sincere and courageous convictions regarding what is best for others may be mistaken" (Miscellaneous Writings p. 288); and so she counsels us that our thoughts should be "weighed by spiritual Love, . . . before being put into action." If we do this, we are taking our part in "the healing of the nations," and each day will bring us fresh proof of the sure and certain results attained by keeping close to Truth and Love.

ANNIE M. KNOTT.

DEATHLESS LIFE.

SPEAKING of the heresy of death-worship as having supplanted the doctrine of the resurrection with very many Christian believers, a prominent American clergyman is reported to have said recently: "The Scripture teaches that 'we that are in this tabernacle do groan, being burdened;' but it does not therefore thrust its writ of ejection into our hands as our greatest consolation. . . . 'Not for that we would be unclothed, but clothed upon, that mortality might be swallowed up of life,' is the inspired testimony of the highest hope of existence. The redemption of this body not its dissolution, resurrection not death, is set before us in the gospel as the goal of virtue."

This exceedingly interesting statement speaks for the prophetic significance of the drift of thought toward the teaching of Christian Science, that spiritual progress is gained not through death, but by the overcoming of death and all that leads thereto. Christ Jesus could not have raised the dead, and instructed his followers to continue his work, had he regarded it as divinely ordered and essential to the attainment of spiritual supremacy. He treated death as an enemy which is not to be consented to, but resisted. He honored life, and acquired his command over death even as we are to acquire ours, by knowing the spiritual truths which mean life, and unknowing the material beliefs which mean death. Christian Science adheres strictly to the Master's teaching that resurrection from the death-embrace of materiality is our present privilege and duty. It is generally maintained that physical dissolution is natural and inevitable, that it cannot be escaped from, however fully sin, its cause, may be forgiven. The average Christian believer looks upon death as the door through which he is to find freedom from materiality and enter into the glory of an angelic state. Christian Science declares that "perfection is gained only by perfection," that sin alone "kills the sinner and will continue to kill him so long as he sins" (Science and Health, pp. 290, 203).

Christian belief claims that man, being body and soul, comes to his appointed end as do all other material creatures. Christian Science avers that man is wholly spiritual, that death can come to that only which has no divine warrant or permission to live. Christian belief leads men to think of preparation for death as a stimulus to religious activity, but since people, especially the young, naturally associate it with an indefinite future, they are correspondingly tempted to defer the cultivation of the spiritual life. Christian Science leads men to think of immediate preparation for life, that deathless life upon which, in awakening to the truth of being, they have entered. They are to know no death save that death to sin which ultimates in the state described by the Master when he said, "Be ye therefore perfect, even as your Father which is in heaven is perfect." The only death to which Christian Science consents is the death to error, all false belief, and Emerson may have glimpsed this thought when he said that nothing divine can die. To the Christian Scientist there is nothing to be feared but submergence in materiality; this is the death from which we are to awaken. Our resurrection is not to await physical dissolution as though that were an antecedent necessity. We are to interdict this catastrophe by the attainment of a deathless consciousness. Death finds its place in a world of evil, since it is necessarily self-destructive; but it has no place in the world of good, the world of God and His creations, in which infinite Life is the life of all.

Whatever Christian beliefs may have accomplished in begetting hope for the future, and heroism in meeting a sense-imposed fate with resignation, death with its antecedent suffering has remained the burden alike of the meriting and unmeriting, and today, amid much discourse upon death's naturalness and utility, the laughter which filled the darkened air when Jesus said, "Father, forgive them; for they know not what they do," still echoes in the corridors of some Christian thought at the mention of death's possible defeat through Christ! Accepting the truth of the Master's words, "Whosoever liveth and believeth in me shall never die," the Christian Scientist is inspired with the thought that he is called to attain to deathless life. He realizes that he may come to his Calvary, and suffer seeming defeat upon this plane of consciousness, but, resting in the ever-living God, he is undisturbed, for he has come into the demonstrable possession of "the power of an endless life."

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

MELBOURNE, AUSTRALIA.—A correspondent who has recently returned to Melbourne, Australia, after a visit in Boston, writes us as follows: "We stopped off at Honolulu for a month and visited the Christian Science church, and were able to help them quite a good deal with our testimonies and experience in the work. We also visited the Christian Scientists in Auckland, New Zealand. They were very much pleased to hear of our visit to Boston and the great growth of the cause. Our own church in Melbourne is growing very rapidly; the attendance is increasing and we can see the growth of spiritual understanding. The hall is almost full on Wednesday nights, and since our return the proposal has been made that we take definite steps toward acquiring a church building. It was adopted unanimously, and it was decided to devote the collection on the first Sunday of the month to that purpose. The first Sunday there was a splendid response and members have taken quite a live interest in the matter. We had one donation of twenty-five hundred dollars."

HOT SPRINGS, ARK.—The Christian Scientists of this city, having outgrown their former quarters at 127 Central avenue, have leased through their board of directors the church building standing on the corner of Quapaw and Prospect avenue, formerly known as the First Baptist church, and expect to establish permanent headquarters there. The building has been leased for a period of three years, with the option of extending the lease at the end of that time. The owners are making every improvement necessary to the comfort and convenience of the congregation. The Christian Scientists say that since the establishment of the organization here, three years ago, the interest and numbers have grown rapidly, and this growth has necessitated the finding of more spacious quarters.

New Era.

Digitized by Google

EVANSTON, ILL.—With the opening of the reading-room of First Church of Christ, Scientist, in the Y. M. C. A. building, a new and distinct feature has been given to Evanston. The change that has been made in the room formerly occupied by the Public Service company is remarkable. The entire atmosphere of the reading-room is one of rest. It was with this idea the church started the remodeling of the room, and it has been carried out in every particular.

One feature of the reading-room that has taken an immense growth since the new home has been opened, is the loan library. In this department one may secure a book free of charge for two weeks. If at the end of that time they wish it longer, it can be had for another two weeks. At the end of four months the book must be turned over so that some other person may use it. The demand for books has been greatly increased since the new room has been thrown open to the public.—*Evanston News.*

LOS ANGELES, CAL.—Members of Fourth Church of Christ, Scientist, have decided to commence work at an early date on their new edifice, to be erected on the lot on the east side of Hill street, near the corner of First street, which was bought last February for approximately seventy-five thousand dollars. An architect has been commissioned to prepare plans for the structure, which, it is stated, will be one of the most attractive places of worship in the city. The lot has wide frontage on Hill street. The estimated cost of the improvement is in excess of two hundred thousand dollars.—*Los Angeles Tribune.*

JERSEY CITY, N. J.—The trustees of First Church of Christ, Scientist, of Jersey City, have just purchased a plot seventy by one hundred and nine feet on the north side of Harrison avenue, near Bergen, at a cost of eighty-five hundred dollars. The location is considered very choice, as it is accessible to several car lines, and many of Jersey City's leading citizens have their residences in the vicinity. The plot is clear of debt, and it is understood that a church edifice worthy of the location will be erected in the near future.—*Hudson Observer.*

MANKATO, MINN.—First Church of Christ, Scientist, has purchased the Swedish Methodist church and expects to hold its first services therein Aug. 18. The auditorium seats one hundred and fifty. The basement is being fitted up for a reading-room, and other extensive repairing is going on which will make the church inviting and comfortable. The Christian Scientists of Mankato are very happy over this purchase, as the new location is in a much quieter section of the city.—*Correspondence.*

GLENDALE, CAL.—The newly organized First Church of Christ, Scientist, of Glendale has inaugurated services in Masonic hall, Brand boulevard, near Fourth street. Heretofore Scientists residing in Glendale and Tropico have been compelled to go to Los Angeles to services, and the news of the establishment of a local church has been gladly received.

Los Angeles Tribune.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 1, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 16, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to May 31, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Falmouth, Norway, and St. Paul Streets, Boston, Mass.

THE LECTURES.

DENVER, COL.

Virgil O. Strickler lectured on Christian Science in Woodman hall, and also in First Church edifice. F. C. Putcamp, first reader of Fourth church, in introducing Mr. Strickler at the second lecture, spoke as follows:—

About nineteen centuries ago there was proclaimed to the world the birth of a Saviour; a Saviour who had been prophesied, looked for, and promised; one who would bring to mortals a new concept of God, a new gospel,—the gospel of love. He came teaching that God is Spirit, Life, Truth, Love; that God is All-in-all, and that man is created in God's image and likeness. And as Jesus went from place to place, teaching these truths about God and man, he proved by his works that his doctrine was of God. To the man blind from his birth he declared this gospel of love, and the man's eyes were opened. When the man sick of the palsy was brought before him, Jesus said unto him, "Arise, take up thy bed and go into thine house." As Jesus stood at the tomb of Lazarus he lifted up his eyes and said: "Father, I thank thee that thou hast heard me. And I knew that thou hearest me always;" and then with a loud voice he commanded him that was dead to come forth.

Jesus told his disciples that this healing power had not been given to him alone, but that they through the understanding of his teaching would be able to do the same works that he did, and for three hundred years after Jesus' earthly mission was ended, wherever this gospel of love was preached, it was accompanied with healing power. For the last quarter of a century this healing power of Truth and Love, as found in the Scriptures, has again been proclaimed to mortals, and to the Rev. Mary Baker Eddy we owe its rediscovery. Through the study of the Bible, as interpreted by the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, the sick are being healed, the sorrowing comforted, and the sinning reformed.—*Denver Times.*

LONDON, ENGLAND.

Bicknell Young, at his lecture on Christian Science in Queen's hall for Second Church of Christ, Scientist, was introduced by Major H. F. T. Fisher, who said:—

There is no doubt that the most potent factor in attracting such large audiences to these lectures on Christian Science is the report, and to many the ocular demonstration, of the healing which is accomplished by its means. In the practical age in which we live, when the worth of men and things is being measured by their utility to mankind, it would indeed be strange and unpractical if the same test could not be applied to one's religion. Now Christian Science may be described as religion made practical for use in daily life, applicable to every condition and situation; but in order to avail oneself of it, two things are absolutely necessary,—understanding and consistent living.

In order to understand Christian Science you must live it, in order to live it you must love it, in order to love it you must first lose your former misconceptions and thus see it for what it is. If there were no misconceptions as to the teachings of Christian Science, there would be no opposition. In the eight years during which I have studied this subject, I have read many attacks upon it, and nothing has been more apparent in all these attacks than the fact that the critics failed to grasp the fundamental truth on which Christian Science is based; consequently it is not surprising that they were unable to comprehend its teachings. Their premise being wrong, their deductions were bound to be erroneous. It is in order to correct such misconceptions that these lectures have been inaugurated, and in the lecturer of the evening we are fortunate in having one who is eminently qualified to speak with authority on this vast subject.—*Correspondence.*

HONGKONG, CHINA.

Bliss Knapp, member of the board of lectureship of The Mother Church of Christian Science at Boston, Mass., lectured on Christian Science in the City hall. Considering the state of the weather, there was a very gratifying attendance. Mrs. Barnard occupied the chair, and in introducing the lecturer, said most of those present, no doubt, had heard of Christian Science chiefly on account of the marvelous cases of healing of physical disease that had been accomplished. That this was so, there was no doubt, on account of the thousands upon thousands of well-authenticated cases that had taken place throughout the whole world. Not only did Christian Science heal mankind physically, but it raised them morally and spiritually, by bringing mankind nearer to God, by giving them a greater understanding of Him. That Christian Science was doing this work, and had met the need of a large body of people, was evidenced by the ever increasing number of those who became interested in it.

In the earlier nineties—take England for example, said the chairman—Christian Science was practically unknown in this country, whereas now there were no less than over sixty churches and societies. The object of the lecture, she said, was not in any way to endeavor to establish a doctrine, or to persuade those present to anything. The object was to explain the nature of the teachings that were doing this wonderful work, bringing health and happiness to thousands of people throughout the whole civilized world, and it was for this reason that questions were not invited after the lecture.—*South China Post.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship.

Alma, Mich.—Opera house, Oct. 1.
Berlin, Ont.—Church edifice, Water and Francis streets, 8 p.m., Oct. 1.
Delevan, Wis.—Opera house, 3 p.m., Sept. 29.
Devils Lake, N. D.—Sevilla hotel lecture room, 8 p.m., Oct. 1.
Everett, Wash.—Church edifice, corner Colby avenue and 33d street, 8 p.m., Sept. 24.
Fargo, N. D.—Stone's auditorium, Stone building, 8 p.m., Sept. 30.
Fond du Lac, Wis.—Henry Boyle theater, 8:15 p.m., Sept. 30.
Grand Forks, N. D.—Church edifice, Belmont and 4th avenues, S., 8 p.m., Sept. 29.
Hamilton, Ont.—Church edifice, 8:15 p.m., Oct. 3.
London, Ont.—Church edifice, corner Richmond street, Princess and Park avenues, 8:15 p.m., Oct. 4.
Los Angeles, Cal. (Churches and Societies).—Shrine auditorium, Jefferson street, near Main, 3 p.m., Sept. 29; Third Church edifice, 734 South Hope street, 8 p.m., Sept. 30; Jeffers hall, Gardena, Cal., 8 p.m., Oct. 1.
Michigan City, Ind.—First Congregational church, 8 p.m., Oct. 1.
Minneapolis, Minn. (Fifth Church).—Auditorium, 8 p.m., Oct. 4.
Minot, N. D.—Opera house, 8 p.m., Oct. 3.
Ottawa, Ont.—Russell theater, 3:30 p.m., Sept. 29.
Peterboro, Ont.—Conservatory of Music, 8 p.m., Sept. 30.
Rock Valley, Iowa.—Opera house, 8 p.m., Sept. 27.
Rome, N. Y.—Haselton hall, Y. M. C. A. building, 8:15 p.m., Sept. 27.
Saginaw, Mich.—Masonic temple, Washington avenue and Johnston street, 3:30 p.m., Sept. 29.
Toronto, Ont.—Massey hall, 8 p.m., Oct. 1.
Watertown, S. D.—Church edifice, corner Maple street and First avenue, S., 8 p.m., Oct. 4.
Winona, Minn.—Masonic temple, corner Main and Fifth streets, 8 p.m., Oct. 1.

TESTIMONIES OF HEALING.

It is with deep gratitude to God, the giver of all good, that I bear witness to the healing and regenerating power of Christian Science. It has been proven by my own experience that Christian Science is indeed the truth which the Master promised should make us free. Through the loving ministry of Christian Science I have been lifted from misery, chronic invalidism, and hopelessness, into a life of health and courage. I have been released from the bondage and slavery of intemperance in its worst and most degraded form, and have been raised from the very brink of a drunkard's grave into a life of freedom and peace.

From infancy I was considered puny and sickly, and as I was raised largely on sick beliefs and soothing-syrups, it is needless to say that I grew up a slave to drugs and medicines. Chief among my many ailments was a life-long stomach and bowel trouble, which grew worse as the years went by. After drugging and doctoring for thirty years and more, turning from one school of medicine to another, and after having tried all manner of health resorts and so-called cures, I became utterly discouraged and turned to drink, and it was but a few years until I was a confirmed and helpless drunkard, a wreck morally, physically, and mentally. Christian Science has not only given me health, hope, and freedom, but it has aided me in many other ways. It is a constant help in my business and in performing my daily tasks; it has helped me in my home; in fact our home is in itself a proof of our Father's loving care, for when I turned to Christian Science we had no home, and all was discord and desolation.

Neither tongue nor pen can tell the debt of love and gratitude which I owe to our Father-Mother God, also to her through whom this healing and saving truth has come to poor sin-sick humanity. I am not only grateful for my own redemption and for the many blessings that have come to me and mine, but I am more grateful to know that this fountain of health and peace is free to all mankind. I am also sincerely grateful for the Publishing Society, for the great moral and healing influence it is exerting in the world, and in this connection I wish to state that the sweet message of hope first came to me in that darkest hour through a copy of the *Sentinel*, which a dear friend (God bless her) had placed in my hands. What a privilege it is to feel that we can all have a part in spreading this gospel of peace by passing our literature along! A copy of the *Sentinel* or the *Monitor* may do as much for some needy brother as was done for me.

Something over a year ago everything seemed to go wrong, financial troubles overtook me, and the environment and all surrounding conditions seemed against me, so that for a time I lost my way, and for some months I frequently let my old enemy get the best of me. I, however, knew that Truth must prevail, so I asked for help, and in a reasonable time was enabled to adjust my business affairs and found myself again perfectly free. Through the study of Christian Science I am gaining a true understanding of God and of man's relation to Him. The Bible is a new book to me, its hidden treasures are being revealed, and I am learning that its rich promises are for us of today.

After having enjoyed the many blessings of this saving truth for over five years, it is surely a joy and a privilege to testify to its fruits and to bear to any and to all this glad message of hope. Because Christian Science has healed me and is healing me every day, I know that it can heal all who seek it with honest and humble heart.

W. L. BENNINGTON, San Diego, Cal.

Christian Science found me in 1910 in a miserable condition. My first attack came in the form of a fainting-spell. A few days later I had another, and my grandmother,

Digitized by Google

being alarmed at this, sent for a physician, who responded immediately. He said it was a nervous breakdown, and after being in bed for about a week, I got up. Then one night I had another fainting-spell, and we consulted another physician, who appeared to be frightened at my condition, and said it was "high time" that we sent for him. He pronounced it a case of St. Vitus' dance and nervous exhaustion combined with severe heart trouble which caused the fainting-spells. He also said I must never go to school any more, that too hard study had caused my sickness. This time I was in bed about five weeks, due to the fainting-spells, which occurred sometimes twice a day and always left me in a weak condition.

A few weeks later I was confined to my bed again for six weeks, and after using many different medicines, I got up again, but was no better. I then went to a very good doctor in Reading, who said about the same as the second physician; but after having treatment from these three doctors, I received only temporary relief. At this point, when life seemed only a burden to me, I went to a Christian Science practitioner for help. I took treatment for about two months, and was gradually improving. I went to see the practitioner once a week, and the last time I was there I was fully healed. There has been no return of any of the symptoms, and I am going to school again.

In I Kings is given an account of Elijah's prayer for a little child who had "no breath left in him." We are told that as a result of this prayer to God the child revived again, and that Elijah brought him to the mother, saying, "See, thy son liveth." And the woman said to Elijah, "Now by this I know that thou art a man of God, and that the word of the Lord in thy mouth is truth." This is what I felt like saying to the practitioner after I had been healed. When I try to express my gratitude for this great truth, words fail me. Since I have been studying "Science and Health with Key to the Scriptures" by Mrs. Eddy, the Bible has become a more precious book than ever.

EDNA M. KANTNER, Cressona, Pa.

Nearly five years ago I was engaged as organist by First Church of Christ, Scientist, in this city. I accepted the offer very reluctantly, for I was a zealous member of another denomination and had a great horror, or terror, of entering a Christian Science church. I would indeed have refused, had I not been in need of the salary offered me. At that time my sight, which had been defective since childhood, was giving me a great deal of trouble. Glasses, which had recently been prescribed for constant use by a reputable oculist, had given me but little relief, and the condition had become so bad that I kept my eyes closed whenever I could, and suffered considerably when I used them.

During the first nine or ten months of my service as organist for the Christian Science church, my sight continued very bad. I had by that time been awakened to the truth of Christian Science sufficiently to be freed from susceptibility to colds, and had been cured within a few hours of an attack of illness; also, instead of any superstitious dread of this religion, there was a joyous anticipation of the time when I should be admitted to fellowship in it. The defective sight, however, was a heavy burden. At this period I mentioned the difficulty to a kind practitioner, and he talked with me on the subject, from the Christian Science view-point, for about fifteen minutes. Two days later I was compelled to do some work of a kind which had always been a severe tax on my sight, but on this occasion, when I began the work I found my glasses quite troublesome, as if they did not fit, until finally I was forced to remove them. I finished the work with no greater difficulty than usual, and experienced no pain from it. I have not used the glasses since that day, and have had good sight ever since.

My spiritual vision, too, has been improved by Christian Science, and I can now catch faint gleams of that goal which, in spite of the declarations of Jesus and the revelations of John, we had been seeking as the astronomers seek unknown stars, until Mrs. Eddy made clear to us, through her writings, that in very truth "the kingdom of heaven is at hand," and not afar off. Surely, neither tongue nor pen can express the gratitude which one should feel toward God and His faithful messenger to this generation, for blessings such as I have received.

JOHN T. CURLETT, New Orleans, La.

[Translated from the German.]

It has long been my desire to express my gratitude for all that Christian Science has brought me. A few years ago, while I was staying in Wiesbaden, a dear friend caused me to become interested in Christian Science through its literature. I had gone through several years of severe illness and had spent many months in Davos, in order to be healed of lung trouble, but my nerves were still very weak. At the very beginning of my investigations God's omnipotence was confirmed to me through a demonstration of the power of divine Truth.

On getting up one morning, I felt very ill, and lay down again with the thought that this probably would mean another period of illness for me; but after being for some time in a state of discouragement, it occurred to me to put into practise the knowledge which had come to me in Christian Science, and to deny the thought of disease. I tried to realize that as man as God's image reflects God, I could only reflect harmony,—that is, no disease; and since there is but one Mind, and harmony alone could proceed from this Mind, I could not in reality be in any inharmonious or diseased state or condition; that it was not God's will His children should be sick. Busying myself with these thoughts, I began to feel better. I got up, dressed, and knelt to pray. Presently a feeling of oneness with God came over me, and I had not yet concluded my prayer when I felt a strong though entirely painless jerk in the left side, just as if something was being torn off. I was so surprised at this that I ceased praying and looked around in astonishment. I felt much better, but it was not until an hour later that I realized that the left lung, which was said to have adhered at the side, had been detached. I gave thanks to God for this proof of Truth's power.

I now began in earnest to read Science and Health, but there seemed to be much that I could not understand, doubts came, and in consequence my health failed perceptibly. A serious condition of the lungs, with severe attacks of coughing, occasioned great suffering. A practitioner in Wiesbaden gave me loving assistance, but scarcely had my condition improved and treatment been discontinued, when a relapse occurred as a result of my attitude of constant doubt. In the fall I went to Kaiserslautern, to my sister, who was distressed about me and urged me to seek medical advice. I withstood her entreaties, however, and went to Kusel, to a friend, upon whose advice I tried various domestic medicines; but instead of improving, my condition grew worse. Still I would not understand, and permitted my friend to talk my condition over with a doctor whom she knew. The effect of the remedy he prescribed was dreadful. At last I began to see that material remedies instead of relieving me aggravated the condition, and I resolved to stop relying upon them.

I again started with the study of Science and Health, and in so doing awakened my friend's interest in the subject. I read to her daily, and Christian Science was the main point of our conversation. Having to explain to her many things in connection with it, I myself came to see them more clearly, and behold, my condition improved as a result of the good thoughts we were entertaining. I now returned to my sister in Kaiserslautern, but after a few days there I became just as ill as I had been before. This so greatly disturbed me that I was assailed by doubts, and went to a

Digitized by Google

physician, who after an examination told me that I should at once seek a warmer climate. He prescribed two kinds of medicine, neither of which brought the relief I was longing for, and fever and other distressing symptoms set in. As I felt very ill, I did not leave Kaiserslautern, but went to a home in order to be relieved of the cares of the household. In this home I devoted nearly all my time to the reading of Science and Health, and wrote to the practitioner at Wiesbaden, begging her to take up absent treatment for me; and she did so gratuitously, as I was in need. I improved perceptibly, to the great surprise of the ladies and nurses of the home, who thought I would not live longer than spring at the outside; but in five weeks, that is in February, 1910, I was well, and am so today. Words fail to express the joy with which I informed the practitioner that through God's grace and love, and her instrumentality, my health had been restored. A sense of deep gratitude came over me that my eyes had been opened and I could not only hear but also understand the truth regarding the laws of God.

There is another experience of which I would like to tell. One day, shortly before Christmas, in leaving a store the door closed so quickly behind me as to catch my thumb between the heavy door and the door-frame. The pain almost caused me to faint, so that I had to take hold of the door till I had somewhat recovered. On my way home, which took me about twenty minutes, I tried to overcome the pain, and when I reached home there was only a feeling of numbness left. I then took off my glove with some difficulty, and after cleaning my hands I tried to do a piece of fancy-work. To my great surprise I succeeded; I was able to hold the needle, and in ten days had completed the work. In about three months' time a new nail had grown, and during all that time I used neither cot nor bandage.

Although I often fail in my endeavor to conform my acts to God's requirements, God, divine Mind, has manifestly helped me. The greatest and best thing, however, which Christian Science has given and is still giving me, is the spiritual uplift, the true recognition of God, the consciousness that the Holy Spirit is ever present, the sweet assurance of being secure under God's care, and the thought that with His help I may bring peace to many a dejected heart. It is but a question of time when the teachings of our revered Leader, Mrs. Eddy, will be better understood, for a deep yearning after truth and a better understanding of Christ's words is extending throughout the world.

EMMA CARRA, Naustadt a. d. Haardt, Germany.

It is with great joy and thanksgiving that I offer this testimony in behalf of the efficacy of Christian Science. After receiving medical treatment for nearly two years for an affection of the throat, which later culminated in a chronic bowel disorder, and finding only temporary relief, I decided to try Christian Science. At that time I was in a very weak condition and also very nervous and depressed, but after two treatments the bowel trouble was practically healed, and I began at once to gain strength and courage. I received my first treatment in January, 1910, and since then have had many proofs that Christian Science does heal the sick. During that time many ailments have been overcome for my children, including measles and throat trouble, and at the birth of a baby boy I had another convincing demonstration of the power of Truth.

For the spiritual uplifting, and for the joy and calm the study of Christian Science gives us in meeting all our daily problems, I am even more grateful than for the physical healing.—MRS. MABEL DAVIS, West Pullman, Ill.

I am grateful that Christian Science came into my life. The reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy has healed me of a bowel disorder and various discordant conditions. I took up the study of Christian Science in 1904, and since that time this blessed truth has been my only physician, and it has at all times met my needs. When I became interested in Christian Science, I had a rather limited knowledge of the English language, but I was healed through the reading of the text-book, although I read it with difficulty. This proved to me that it does not require an academic education to gain an understanding of God,—His unerring, eternal laws and His goodness. I wish to state that my healing and the overcoming of various difficulties was accomplished without the aid of a practitioner. I have found the study of the Christian Science literature is very helpful in business, because it is a constant source of good ideas.

I thank God, our Saviour Christ Jesus, also our dear Leader, Mrs. Eddy, who has so lovingly labored for the redemption of mankind.—MATTHEW VONEY, St. Louis, Mo.

Six years ago my mother passed away, leaving myself and two younger sisters orphans. At that time a great sense of fear came over me, as friends and relatives were constantly telling me that I would be responsible for the conduct of my sisters. I could not understand why all this had come to me, for I was only a young girl, but being the oldest of the three they seemed to think I should govern the others. We lived at that time on a farm in the middle West, an uncle lived with us, and as most girls on a farm do, we had to work very hard.

A few months later I was suddenly taken with a severe attack of fever. At times it was felt that there was no hope for me, but I finally rallied, and was up in a few weeks, only to be sent to California, as the doctor and nurse said I could not endure the severe winter where we then lived. My sisters were then sent by our guardian to a convent, much against our wishes. I gained slowly in California, but was so homesick that I returned, as after eight months' stay there I was convinced that climate could not heal me. I soon returned to California, however, and this time brought my two sisters with me, but the sense of responsibility was again evidenced in fear. Soon, however, Christian Science was presented to me, and now I thank God that I came back to California, as I was healed of all my troubles and am now a well and happy girl, finding it a pleasure to help my sisters. My youngest sister attends the Christian Science Sunday school, for which I am more than grateful.

I now know that we are not orphans, for God is our Father and our Mother. Only those who have been left in this same position can know what a burden it seemed, but Love has indeed lifted it from my shoulders and brought me protection and comfort. I owe all of this to Mrs. Eddy, for if she had not told us of God's protecting care, I might still be without the realization that God is our Father and Mother.—MISS GERTRUDE PITTMAN, Pasadena, Cal.

I wish to add mine to the long list of testimonies which have been helpful to so many, and if my experience should reach some troubled one who is suffering from the belief that sickness and suffering are allowed by God and must be cured by medical or surgical means, I would say that it is well to know that God made man in His image, but never made sickness. This truth came to me some time ago through the earnest solicitation of a Christian Scientist, and I delayed an operation which I had been told by two leading physicians, both authorities on kidney trouble, must be performed at once. I had suffered from this trouble for about two years, and it finally became so bad that I could not sleep. I was in this condition when I delayed the operation and stated my case to a Christian Scientist, and it gives me joy to say that I soon learned what it means to dwell "in the secret place of the most High." In less than two weeks I found that I was as well as I ever had been in my life.

I wish to add one more experience. For over thirty-five

Digitized by Google

years I had used tobacco, and might be termed a hard smoker, but when I was relieved from the physical suffering the appetite for tobacco vanished, and there has been no recurrence of it. I am very thankful to God for the teaching contained in "Science and Health with Key to the Scriptures" by Mrs. Eddy, and also grateful to the noble woman who gave this book to suffering humanity.

D. A. SCHUTT, Champaign, Ill.

I am glad to have the privilege of showing my gratitude to God for the benefits which myself and our two little boys have received through Christian Science. By request of my husband's sister, we accepted it for our youngest boy when the doctor said that nothing more could be done. The boy was then thought to be dying of spinal trouble and paralysis, caused by poisoning.

The Christian Science practitioner began absent treatment in the morning, and when she came to see him in the afternoon she gave him present treatment, and instructed the nurse who attended the child not to watch him so closely, but to take the Bible, and lift her heart to God by reading the 91st Psalm. By evening the boy was so much improved that it gave us hope, and each day it was joy to see some feature of his former self regained. The other boy was suffering from an ulcerated tooth, which broke on the outside and left a sore which the doctor was unable to heal. He said that he must put the boy under ether to extract the tooth and scrape the bone, but I chose the truth, and contrary to the doctor's verdict the sore was healed in a short time, and one day the tooth dropped out. I was the victim of a variety of female complaints and was not able to leave my bed, but through the help of the practitioner I was soon able to go to work, and have had better health since than I had known for many years.

This was over three years ago, and we have not used any medicine in our house since. We read and study the Lesson-Sermon faithfully, and try to realize that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

MRS. NELLIE RANDALL, Neillsville, Wis.

[Translated from the German.]

It is with a joyful heart that I express my gratitude for what I have received through Christian Science. It is more than two years ago that I first heard of this Science, and attended a meeting which proved such an attraction for me that I became desirous of joining this movement. For many years I had suffered with severe headaches, and no physician was able to help me permanently, but from the time I began to attend the meetings and to read *Der Herold der Christian Science*, I had no more headaches. I also felt very weak at times, it often being impossible for me to attend to my household duties; but this ailment has also been completely eliminated, and now I feel very strong.

I wore special glasses for about fifteen years, as the physician believed that I could not do without them, which seemed true, as my eyesight was very defective; but when I heard and read the testimonies of healing, it occurred to me that the condition of my eyes might improve, and after talking the matter over with a Christian Science practitioner, treatment was given for some time. I then laid aside my glasses, and was able to read without experiencing pain. The study of the text-book, "Science and Health with Key to the Scriptures," affords me great joy, and I am very happy, and deeply grateful to God.

FRAU MINNA KERWITZ, Berlin, Germany.

My aim and desire in writing my testimony is that it may aid some searchers for health, and give them the permanent peace that they desire, whether rich or poor. I was left in miserable health from the birth of our first child, and one of the best physicians in this country told me in 1877 I would be an invalid all my life. I was under medical treatment constantly for twenty-five years, all the time getting worse. Meanwhile complications had set in, such as a serious affection of the kidneys, and loss of sight, hearing, and memory, to such an extent that I could not write two sentences connectedly or even read.

At that time I asked for Christian Science treatment merely to help me for sleeplessness, and I was *healed in* one treatment. When, therefore, the doctor mentioned an operation for my other trouble, I turned to Christian Science again, and although I gave up material remedies at once, my healing was slow, for, having been raised in the Jewish faith and taught not to accept Jesus as the Christ, I could not even read the Christian Science literature. I floundered along for two years, without God or hope in the world, until the day dawned and I learned that "Christ is the true idea voicing good, the divine message from God to men speaking to the human consciousness" (Science and Health, p. 332). The old physical conditions have all been healed through the power of the Word as taught in the Scriptures and Science and Health. The physical is, however, the least of my healing. Three years ago I was called upon to prove practically that God is Life, and that there is no separation in Mind. One very near and dear to me had passed on after four months of illness, but there was no sense of loss, and no reaction, physically or mentally, for I had learned that all is of our Father, and there came a deep peace and a faith that all things are working together for good to them that love God.

I have had many tests since, but the faith that every obstacle can be overcome by the right application of Christian Science, is the rock on which I stand. I am grateful to God, also to our beloved Leader for this truth which is giving health and peace to humanity.

MRS. JENNIE DRACHMAN, Tucson, Ariz.

It is with a heart full of gratitude, and a hope of encouraging others, that I offer this testimony. I have had abundant proofs of God's healing power, as taught in Christian Science. My last experience was to me both beautiful and wonderful. On Christmas eve, 1910, I was delivering some little remembrances, when suddenly my ankle turned and I fell. The pain was very severe, but I declared the truth as best I could, and in a short time came on home, trying to know that there are no accidents in divine Mind. I finished my errands, read from Science and Health, at half past ten went to bed, and was soon asleep. In about an hour, I awoke, however, suffering intensely. I could get no ease in any position, and could not bear any weight on my foot. I again tried to read and to realize the allness of God, good, until morning.

My father, with whom I live, is eighty-eight years old and almost helpless, and as we had no practitioner here, and no telephone in our house, I had to wait till some one came in before I could send word to Kansas City for help, though I was getting around a little with the help of a cane. My brother came, and as my relatives do not believe in Christian Science, he wanted me to have material treatment; but I said I would depend on the "great Physician," who heals all our diseases. I, however, asked him to call a Christian Science practitioner, as I was sure that her understanding of God's law would bring me out all right. They did so about eleven o'clock, and by evening I was using the foot somewhat. I rested well, and the next morning when I was called I jumped out, forgetting I had a lame foot, though it was still swollen. I had to be careful for a few days, but am sure I would have been laid up for perhaps weeks without this blessed truth taught by Christ Jesus, and so helpfully explained by the Founder of Christian Science.

I have been helped a great many times by absent treatment. Our Leader says in Science and Health (p. 495),

Digitized by Google

"God will heal the sick through man, whenever man is governed by God." I am always thankful that there are so many living pure Christian lives, so that they can do the work for us when we fail; and that Mrs. Eddy was good enough to bring this truth to us in such a practical way.

MRS. MARY ALICE DALE, Liberty, Mo.

The following demonstration is forwarded to the *Sentinel*, with the hope that it may help some other young fellow when the test of Truth seems severe. For about six years Christian Science has been the only physician in my home, and it has always met every need. One of the greatest proofs I have had that Truth is an ever-present help in time of trouble, was in November, 1910, when I met with what seemed a serious accident.

I was working on a power-press, which was gaged to the width of an eighth of an inch for dishing dial tins, when my fore-finger was caught in the press. The finger from the first joint was flattened to the width mentioned, and part of the flesh remained in the press. On my reporting at the superintendent's office, he said that I must go to a physician immediately, but I told him that I was going to a Christian Science practitioner. I went home at once and my mother began to treat me. I was told by the superintendent that I must hold my hand in an upward position because of the pain and loss of blood, but I did not feel that this was necessary, so I carried my hand as was convenient, and can truthfully say that there was no severe pain.

That night I slept as if nothing had happened, and I never suffered any pain afterward. In exactly one week I went back to work on the same machine. No one else would run the press for fear of accidents, two having been hurt on this machine within three days. For several days after the accident my finger seemed to have no shape, and the end of the bone was visible all the time; but nothing was done in a material way except to put on a clean bandage each day. I, of course, had Christian Science treatment, and before the week was over the finger had begun to resume its natural shape. It healed rapidly, and today one could scarcely tell by looking at my hand which finger had been crushed.

I cannot tell how grateful I am for this healing, and that I knew of Christian Science at the time. The superintendent told my father that he never saw a person, especially one so young, keep so calm through such an accident. I am very thankful that I have the privilege of attending a Christian Science Sunday school, because it is there I have learned that God is all-power, and this freed me from all fear on the occasion referred to. Christian Science has helped me in many ways, and as I learn more and more of this truth I realize that I shall never need any other help than the power of divine Love.

MILLARD HENRY SHELDON, Winsted, Conn.

[Written for the *Sentinel*]

BEYOND THE MISTS.

CHARLES C. SANDELIN.

WITHIN the westward, as I gazed, mine eyes
A noble peak did many times behold,
That to my sense Truth's permanence foretold:
Mind's endless reign and error's sure demise;
Now, as I look, no mountain doth arise.
For see! a dismal fog hath o'er it rolled!
Yet know I well, beneath this covering cold
Unchanged in all its grandeur still it lies.

O fickle heart, that oft on Truth had gazed,
And Love's assuring voice so often knew!
Why fearest thou the mist before thee raised,
And knowing Truth, yet thinkest error true?
Stand thou! be firm! and not through fear amazed,
Till flees the false and comes the real to view.

FROM OUR EXCHANGES.

[*Watchman.*]

Men do not always appreciate or know what is going on in a heart or life, though it is under their constant observation. The Nazarenes had not known of the hours of prayer that Jesus had spent on the hills around their village, or of the hours in which he had pored over the Scriptures and fathomed their depths. They had not known of Mary's "ponderings" or his spiritual experiences. There had been no marked change, only steady growth while he was in Nazareth. When he entered the Jordan and received the Holy Spirit in power and went in the fulness of the Spirit into Galilee, he burst forth like a century plant in fulness of life. Nor could they appreciate the nature of the Messianic work he was to do, because they were looking for a kingdom that came with observation, with honor among men and with civil power. It is very difficult for men to discern the signs of the times and the character of a new era. Their ideas are set in an old mold and they have no vision. Prophetic men cannot be understood or appreciated in their own times or in their own home place, because they are deemed dreamers or revolutionaries.

[*Universalist Leader.*]

We insist that the difficulty of adjusting the church to the world of today, and the problem of the attitude of the church toward social evils, is really a problem of the fundamental philosophy of life and of religion itself. This is not saying that we may not hope for real help in solving social problems from those who stand in the traditional ways of theology. Noble men and women are magnificently inconsistent. Great things may be born in Bethlehem and come out of Nazareth. But there is a more vital question. The demand is for the church to make its venture of faith today. The call is for the church to consecrate itself to the solution of great social problems. The pleading is that of the victims of greed and of lust who cry to this mighty organization of good men and women to come and rescue them from hell. It is the world shouting in the ears of the man on his knees praying for the kingdom to come, that he may get up, stretch himself, and come forth to help renovate the world.

[Rev. W. E. Orchard in *Christian Commonwealth.*]

I hold that what God is, transcends His manifestation in man. The two terms, therefore, are so little contradictory, or even complementary, that I have said frequently that it is a transcendent God who is immanent in man. Immanence refers to the how of God's nearness; transcendence to what it is that is near. And surely this is no paradox. It is a fundamental characteristic of experience. We are conscious of thoughts beyond demonstration or analysis; we are aware that our achievements have not adequately expressed the impulse that gave rise to them; we realize that what we are falls short of what we ought to be. I need not insist on the possibility of such a consciousness. Though to us it appears negative by simply rendering us aware of what is not, it must be a positive reality to enable us to see where we come short.

[*Standard.*]

If the Christianity which we profess is not found in terms of every-day life, it does not exist. Christianity is not a symbol, or a form, or a ceremony, or a so-called sacrament, or anything else that stops short of life. Human life expresses itself through choices and activities. Jesus taught that a good tree does not bring forth evil fruit, and it is utterly useless for people to imagine that they can convince those about them of the religiousness of their purposes, their union with Jesus Christ, while they are dishonest in their relations with their fellow men. In view of the rampant commercial spirit which is characteristic of our time, when

Digitized by Google

the lure of material things is so strong and the lust for money-getting seems contagious, Christian people need to be constantly on their guard that in business affairs they hold themselves to high standards of integrity.

[Rev. Frank M. Thomas, D.D., in *Western Christian Advocate.*]

We are confronted with the rise of a vast social fermentation which Christianity has called into existence. Everywhere throughout the world men are longing for more justice and more kindliness than now exists. Part of this longing is due to the evils of civilization, and part of it is due to hope of a golden age which has ever haunted our sad humanity. Yet in the face of this deepening unrest, what is the duty of the church? There are those who think she cannot outride this mighty upheaval when all the fountains of the deep seem breaking up. But they forget the lone ark adrift on the turbulent waters of the deluge; they forget that sooner or later the church has been able to meet and master every critical situation in human history; they forget her risen Lord!

[Rev. Canon E. S. Hughes, reported in *Melbourne* (Aus.) *Herald.*]

When people grow ill and the doctor says that there is no hope, the clergyman is sent for to say a few prayers. What a travesty of the early days! "In the name of Jesus Christ of Nazareth, take up thy bed and walk" was the prayer of the early church for the sick. The church today seems to have given that over to Mrs. Eddy and her followers. They have taken hold of the truth—that the Holy Spirit is still the Life-giver. Why don't we see it? Did not he say, "In my name . . . they shall lay hands on the sick, and they shall recover"? Our church will be weak until we are a community of converted men and women. We are afraid to be men and women filled with the Holy Ghost. That is the weakness of our church.

[*Zion's Herald.*]

Emerson once said: "The trouble is that I am in a hurry, and God is not." God takes time, and because He works so slowly, we in our blindness of vision suppose that He is not working at all. The Lord fulfils Himself in many ways and in many days. Let us, then, be content to follow closely as He leads, neither running ahead nor lagging behind His programs, and not losing faith or hope when a nation is not converted in a day, or the goal of some high effort attained by a frontal attack and a charge; for by this slowness of approach our caliber as soldiers of the cross is tested, and, if it is a long march to the promised land, the more wonders of the Lord shall be seen on the way.

[W. H. Geistweit in *Pacific Baptist.*]

We need to cultivate a larger vision of God. This is not an easy thing. The intense secularism of the day has blurred, has eclipsed the vision of God. Our hearts are not pure enough; our hands are so soiled, we do not see Him who is our Father. The church of the future—aye, the church of the day in which we are living—rises or falls by this standard: its power to reveal God. Does this service visualize God? It is not a question of entertainment; not necessarily a question of human interest, or the solving of human problems. Important as these problems are, the primal question of every religious service is—does it reveal God?

[*Churchman.*]

The primary duty is to connect all that is good and savory and honorable in public life with the message of Christ. If it cannot be done through the parish and the pulpit, let it be done through some other Christian medium, for neither the parish nor the pulpit are ends in themselves; they are only the temporary and occasional means by which, under the laws of human life, man has found a method of drawing himself closer to the kingdom which Christ came to establish in this world.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" *is specially* bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy; 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The pamphlet "Seeking and Finding" has been translated into Dutch ("Zoeken en Vinden") and is now on sale; 36 pages and cover, at the prices of the regular pamphlets.

Catalogue No. 20, June, 1912, has recently been issued and will be supplied to reading-rooms upon request. This catalogue contains complete lists of all publications issued by the Society, and of the works of Mary Baker Eddy published by Allison V. Stewart.

A new pamphlet, "Christian Science Healing *versus* Mental Suggestion," by Frederick Dixon, reprinted from the *Weekly Budget,* London, England, is now on sale; 36 pages and cover, at the prices of the regular pamphlets.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass, should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement *of Divine Science, alias* Christian Science, in the form *of questions* and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 40 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 04 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 70 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage.

For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy . . .	$ .05	$ .06	$ .07
Twenty-five copies .	1.00	1.15	1.30
Fifty copies	1.80	2.05	2.30
One hundred copies .	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XII indicate the year 1912; XIII, 1913. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "I" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

ITEMS OF INTEREST.

National.

All thirty-three so-called Cunningham Alaska coal land claims, involving alleged fraudulent blanket patents which contributed to the Ballinger-Pinchot controversy, have been disposed of finally by the interior department. The appeals have been adversely decided and Secretary Fisher has directed the immediate execution of the decision of Commissioner Dennett of the general land office, who held the claims were improperly allowed and that the entries should be canceled. Secretary Fisher took this final action on his second review of the cases. No more of the real Cunningham claims are pending, though the interior department is regularly passing upon other Alaskan claims somewhat similar to those of the Cunningham group. Of a thousand or more of such three hundred already have been disallowed. The Cunningham claim had an aggregate area of fifty-two hundred acres and their value ran high into the millions. It had been alleged that a Morgan-Guggenheim syndicate owned the blanket claims of the Cunninghams and their associates. With the controversy over the claims came the dismissal from public service of former Chief Forester Gifford Pinchot, Louis R. Glavis, a chief of the field division of the land office, and several minor officials.

Admiral Andrews, acting secretary of the navy, has made public the revised list of the vessels which will comprise the great fleet to be reviewed by President Taft Oct. 15 in New York harbor. It will be by far the largest naval force ever gathered together in American waters. The one hundred and twenty-seven ships in the reviewing line will have a total tonnage of 741,590. There will be thirty-two battleships aggregating 491,508 tons; four armored cruisers, 58,000 tons; four protected cruisers, 15,663 tons; twenty-one special type ships, 61,993 tons; six naval militia vessels, 4,581 tons; eight fuel ships, 88,385 tons; twenty-six destroyers, 18,431 tons; sixteen torpedo boats, 3,029 tons, and ten submarines.

Promotion for thirteen thousand railway postal clerks on Oct. 1 will be provided in orders by Postmaster-General Hitchcock. In the railway mail service there are sixteen thousand seven hundred clerks, and a majority of those not promoted on Oct. 1 will receive more pay before the end of the current fiscal year. Although more than one million dollars a year will be involved in the increases, it will cost the government no more, as the postmaster-general has perfected a plan to save that amount by a rearrangement of railway mail-car space and the amount the government pays annually to the railroads.

All the residents of the village of Conowingo, on the Cecil shore of the Susquehanna river, have been notified to vacate their dwellings. This is the first step in the construction of a second dam across the Susquehanna river and a plant to generate electricity by the Susquehanna Power Company. The construction will cost about ten million dollars. One of the chief backers of the company, it is said, is the Pennsylvania Railroad Company, which, it is generally understood, has been seeking electrical power with which to operate its trains through Baltimore, including the two tunnels.

The work of building good roads in Mississippi continues unabated. Recent sales of bonds and bond issues for good roads purposes total nearly two hundred and fifty thousand dollars at various points in the state. Over three million dollars is now being spent in the state for good roads, with the prospect of more to come.

The Panama canal is to be open to traffic in the fall of 1913. The date for the opening originally was set for Jan. 1, 1915, and engineers for some time had doubted if the engineering difficulties could be overcome to permit completion of the work by that date, but the remaining work is said to offer few obstacles.

The Cincinnati Traction Company will carry out the plans made by an expert for the bettering of the street-car service. The estimated cost of the changes is fixed at between two and a half and three million dollars.

International.

The terms for peace between Italy and Turkey have been practically arranged with the exception of a proposed loan to Turkey of between one hundred and one hundred and twenty million dollars, concerning which Italy is now communicating with French, English, and Belgian financiers. Turkey's last terms, according to report, are as follows: First, Turkey accepts peace as an accomplished fact, on condition that Italy does not exact formal recognition of the annexation of Libya; second, Turkey withdraws her troops, but demands to retain a port near Tunis or Egypt in order to communicate with the Arab hinterland; third, the Sultan retains spiritual lordship in Tripoli and Cyrenaica by a representative; fourth, Italy pays tribute to the Arab chiefs; fifth, Turkey demands a port on the Red sea, Massowah being suggested; sixth, Italy pays Libya's annuity.

The National Assembly of China has passed a resolution pledging that body to support the government in the conclusion of any reasonable loan scheme. The minister of finance explained to the members of the Legislature that it was impossible to obtain the requisite loan outside of the six-power group of bankers. The ministers hoped that the foreign bankers would waive or modify their demands for foreign supervision of the salt tax, and declared that should the loan materialize the government was confident that remarkable progress and prosperity throughout the country would follow. Negotiations for a loan have again and again been carried nearly to completion, only to be broken off because of some demand which China could not grant.

It is expected that work will commence in the late spring or early summer of 1913 in carrying out improvements in the Welland ship canal. It is estimated that five years will be required to bring the new work to completion, and that the total cost will approximate fifty million dollars. The work is to be done at several sections at once, and seventy-five steam shovels and over a dozen dredges will work at various points along the route.

Captain Spelterini has made a balloon voyage over the central Alps, the Bavarian Alps, and the Hollenklang. He started from Interlaken with one passenger, and after a flight of sixteen hours landed near Unterammergau. On the way a height of about seventeen thousand five hundred and fifty feet was attained, while the lowest temperature encountered by the aeronauts was 21.2 degrees Fahrenheit.

The German imperial fleet, composed of twenty-two battleships, six large and eleven small cruisers, flotillas of torpedo boats and torpedo boat destroyers, and a number of auxiliary vessels, was reviewed off the island of Heligoland last week by the German Emperor. After the review his Majesty accompanied the fleet to sea, where manœuvers occupying four days were held.

Georges Legagneaux, a French aeronaut, established a new world's record for altitude at Villacourlay, France, last week, his machine attaining a height of 5,000 meters (18,716 feet). The previous holder of the world's altitude record was Roland G. Garros, who on Sept. 6 ascended in a monoplane at Houlgate, France, to a height of 16,240 feet.

The Sydney, one of the first vessels of the navy of the Australian commonwealth, was launched at Govan recently. In the last financial year of 1911-12 an expenditure of £2,731,000 was incurred on Australian military defenses and £2,044,000 on naval defenses, which made up a total of £4,775,000.

Industrial and Commercial.

A two-million-dollar contract has been let for building the foundations and masonry of the Hell Gate viaduct of the New York Connecting Railroad, which is to unite by rail the New Haven and the Pennsylvania railroads. It is expected that the road will be completed in two years at a cost estimated at twenty-five million dollars. The bridge will run from Port Morris across Randall's island and Little Hell Gate to Ward's island. On Ward's island it makes a sweep to the east and crosses Hell Gate to Sealy Book on the Astoria side. Then it runs through Long Island City and diverges. One branch, for passenger service, runs through the Sunnyside yards to the Pennsylvania tunnels, and the other, for freight, runs to Bay Ridge, where the traffic will be ferried across the lower bay to the Pennsylvania yards in Jersey City. Ultimately it is planned to connect Bay Ridge and Jersey City by a tunnel for freight.

It is estimated that the new railways now being constructed in South Australia will make three million acres of wheat-growing lands available for settlement, and as the result of the comprehensive railway extension policy of the government, as outlined at the opening of Parliament, a very large addition will be made to this area.

The making of tons of lead pencils in Europe has depended on the imports of American cedar. A firm in one German city has made three hundred million lead pencils a year from the American cedar. It is said that over six hundred tons of cedar are used daily.

The municipal council of Cologne, Germany, has appropriated twelve thousand five hundred dollars to carry out a plan for the importation and sale of meat. It also has decided to appeal to the government for relief in the matter of the high cost of living.

After years of negotiations the railways' heads of nine transportation systems have agreed to build a new union station in St. Paul, Minn., which will rival the passenger depot of the Northwestern line at Chicago in architectural beauty and convenience for passengers.

A million-dollar irrigation plant is being promoted at Ballinger, Texas, by some of the citizens. The plan is to build a large dam on the Colorado river eighteen miles from Ballinger and distribute water to the farmers on both sides of the river for several miles.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

TRUE HEALING.

CLARENCE W. CHADWICK.

It is indeed true that "the time for thinkers has come" (Science and Health, Preface, p. vii). Humanity is rapidly awakening to the fact that it is living in a thought world. The advancing scientific mentality of the twentieth century is willingly resolving things into thoughts, and thus a truly mental or metaphysical basis for thinking and living is coming more and more into prominence.

As cherished theories and beliefs are summoned to appear before the bar of Spirit, there to ascertain that there is no law of continuity for material thought, its ways and means, two marked phases of human activity are in evidence: first, a joyful acceptance of both the theory and practise of Christian or metaphysical healing on the part of countless thousands who had begun to think along advanced lines; and second, a zealous and persistent determination on the part of the advocates of material systems to hold their subjects in line and even to make light of the achievements of those who have found in Mind what they failed to find in matter. In describing this disposition of the human mind Jesus has well said: "Ye have taken away the key of knowledge [spiritual understanding]; ye entered not in yourselves, and them that were entering in ye hindered." Christian Scientists know the source of all such opposition to spiritual truth; they know it is not people who are arrayed against the teaching of Christ Jesus, but the universal mortal belief in a power opposed to God, and when they pray for the enlightenment of all mankind they simply know spiritually what constitutes the kingdom of heaven and man's connection with it. This is the opposite of hypnotic suggestion, of personal or human-will influence; it is Christian healing, and not mere experimentation.

Material methods of treatment, viewed from a strictly scientific or Christian standpoint, are but the exchange of one human belief for another. They are the substitution of a mistaken sense of health for a material belief of disease. In the truest sense of the word it may be said that doctoring or curing is a form of human idolatry, in that it acknowledges "other gods." It makes a graven image of the mortal body and bows down and worships it unceasingly. Primarily it is a deception, in that it promises something to humanity which it does not and cannot bestow upon it, viz., health and happiness. Taking drugs or indulging any other form of body worship is wholly an experience of mortal mind; neither God, divine Mind, nor the real man, have any part in such experiences. A lifeless, non-intelligent drug can make no appeal to mind or body, and no law of God governs its use. A drug's so-called influence upon the system is dependent solely upon the human thought and belief that are associated with the drug. There is no action, effect, or influence, without thought to impel and to govern it.

God's knowledge is a consciousness of His own perfect spiritual creation or reflection, which rules out all sense or consciousness of matter. Hence the conclusion that scientific right thought robs a drug of all its supposed power for good or for evil. Time and time again has it been proven in Christian Science that a so-called poison, taken intentionally or by mistake, has failed to produce the effects universally attributed to it, thus verifying the Scriptural promise, "If they drink any deadly thing, it shall not hurt them." In other words, the law of God, scientifically understood and applied, annuls a drug's so-called effect upon the human system. One Christian Science treatment has often completely destroyed the patient's faith in the supposed power of drugs, even where this faith had remained undisturbed for years. Thus it is that the demonstration of the power of divine Mind to heal and to save mankind discloses the fallacy of material means and reveals to the receptive heart the divine method as practised and taught by Christ Jesus.

All human systems fail to grapple with sin, hence their inability to heal. Dosing the body to free it from the effects of excessive or sinful indulgences does not lay the axe at the root of the trouble. It is little else than attempting to erase a shadow without first removing its cause. It is only a soothing or smoothing over process, which invariably leaves human consciousness in total ignorance of the Science of being, and the failure to receive help in this way is often the opening wedge that arouses human consciousness to a higher order of thinking, which inevitably leads "into the glorious liberty of the children of God."

Not until Christ, Truth, comes to individual consciousness, can one take his stand on the side of Spirit and contend intelligently for the employment of spiritual means only. He may discontinue taking drugs, but not until he learns to eliminate matter from the realm of cause and effect, and to grasp the idea of spiritual causation, can he enter the domain of right thinking, which constitutes the "more excellent way" in Christian Science. It is a fallacious belief that people have no need of Christian Science until they have failed to obtain help through adherence to the doctoring habit. The greater work of Christian Science is to heal mankind's idolatrous belief in material health and in material curing, to arouse human consciousness from its deep sleep in matter to an understanding of the practical import of the Scriptural declaration that "in him [God] we live, and move, and have our being," as Paul announced to the Athenians in the early days of Christianity.

What humanity needs is more of the true doctrine of health and less of the doctrine of disease, more of instruction in righteousness and less in things temporal and discordant. Human pathology is the fickle child of idolatry, based wholly upon human reason and sense testimony. Jesus was not versed in this so-called science, and yet he was enabled to accomplish the most wonderful works of healing ever recorded in the annals of history. More than this, he taught others how to do the same healing works, but at no time did he recommend the study of pathological subjects or methods. His was not a disease doctrine, but a doctrine of health and of "on earth peace, good will toward men." The gospel records do not accredit Jesus with a single physical diagnosis of disease. He certainly knew that the knowledge of disease could not heal disease, but that the knowledge of health as a normal condition of the divine Mind could and did make "every whit whole."

"LOOK ON THE FIELDS."

CARL HORTON PIERCE.

WHAT Bible-reading child has not expressed the longing, "If Jesus were only here now! If only I could do the works that he did!" Suppose that to such a child in days gone by the Master had appeared, saying, "Come, follow me. The works that I do shall ye do also," what child would not have followed gladly, on having the way pointed out? In this age many who come to Christian Science do not perhaps at first realize that this is indeed "the way," and with timid steps they cautiously investigate first one tenet and then another of its truth, finding it sound, practical, capable of demonstration, "with signs following," until suddenly the thought comes to the inquirer that this is the truth,—the "pearl of great price."

The truth has again appeared, and through the inspired pages of our textbook, "Science and Health with Key to the Scriptures," we are given insight into that which heals. Thousands of Scientists, many of them practitioners, are acknowledging that they have received through our Leader the same word as that spoken by the Master, and the cases of healing they have effected are unnumbered. But one sometimes meets good people, devoted to the cause, and is led to wonder why they are not also utilizing this healing word. On questioning such people it is sometimes answered, "Oh, I am *not* good enough to heal;" or, "I have a family, and my first demonstration is to support them;" or, "I have a big business which demands all my time." One such woman had put off healing the sick as a practitioner for years because of timidity born of a natural modesty, which was accentuated into seemingly great fear!

In all these excuses one recognizes that which points to one objective: the carnal mind which is "enmity against God." This mortal consciousness, with its lusts, its false appetites, its beliefs of pleasure in matter, puts up these specious arguments, and so long as the student believes them, mortal thought keeps him from the work that perhaps he would like to do most of anything in the world. Step by step, however, these erroneous arguments are being uncovered for what they are worth, and little by little men are rising above the lusts of the flesh into the dominion of the children of God, and as they do so, as the carnal thought is overcome and conquered, the dominion of the real sons and daughters of God appears, and the words of Christ Jesus come home with conviction: "Look on the fields; for they are white already to harvest."

Speaking of this condition in Science and Health (p. 570), Mrs. Eddy says: "Millions of unprejudiced minds—simple seekers for Truth, weary wanderers, athirst in the desert—are waiting and watching for rest and drink. Give them a cup of cold water in Christ's name, and never fear the consequences." Evidently, for every one who awakens to his dominion, the fleshly lusts having been subordinated to the desire to do God's work in this most momentous period of all ages, there are those who like sheep are waiting to be fed. Fear that there will not be enough to meet the need material; fear of what the family or the world will say; fear of the unknown, which is groundless, hesitation, doubt, uncertainty,—all these signify nothing. They are the myths of mortal sense which would defeat the divine plan for universal salvation—which plan cannot, of course, be defeated nor even retarded.

In reviewing the pros and cons of the step into the work in the harvest field, it is sometimes helpful not only to realize the emptiness of our fear but the positiveness of Truth. As an example: when the pilot in the ferryboat pulls the cord and the engineer receives the signal, the lever is thrown, the steam is applied, and the boat moves. There is nothing doubtful, hesitant, uncertain, discordant, or worthy of distrust in this; it is positive action. When the conductor pulls the train-cord and the engineer opens the throttle of the locomotive; or when the motorman turns the lever in the trolley car—if the power is on—the car moves. Here is an example of immediate action. In Science, the truth is always thus available and operative. It remains for us simply to do our part. When we live the truth and declare with conviction that it is God who heals, the healing follows. There is no other way. Positive effect follows positive cause. It is not a question as to whether one is "good enough" to heal, nor is it a personal matter; it is a question of the realization and application of divine Principle. Mrs. Eddy says: "God will heal the sick through man, whenever man is governed by God" (Science and Health, p. 405). If one has any doubt or hesitation about this, all he needs to do is to live and declare the truth, and forsake his old customs and habits.

There is nothing more positive than that God will fulfil His promises and effect the regeneration of the sick and sinful. To such a declarer of the truth Christ Jesus says, today as of old: "He that reapeth receiveth wages, and gathereth fruit unto life eternal." Surely if one is to receive wages in God's vineyard, he cannot expect that these wages are to be less than the living necessities of those who are, humanly speaking, dependent upon him for daily sustenance. No just material employer would expect such a condition, for such a condition is unjust. Manifestly, therefore, if one works for God he will receive a suitable wage. In Christian Science we are given the assurance that "divine Love always has met and always will meet every human need. It is not well to imagine that Jesus demonstrated the divine power to heal only for a select number or for a limited period of time, since to all mankind and in every hour, divine Love supplies all good" (Science and Health, p. 494). This being true, we need not fear that want or woe faces us as we appropriate the words of the Master: "My meat is to do the will of him that sent me, and to finish his work."

FELLOWSHIP.

EDITH C. CARTER.

WHEN, through the teachings of Christian Science, a first glimpse is had of the radical mental transformation necessary for the working out of our salvation, a sense of loneliness and isolation sometimes seems to spread like a mist, making the way obscure and progress slow and laborious. That this is a false sense is soon apparent, for with increased understanding of Truth we quickly see that in reality we are only at the threshold of a knowledge which reveals vistas of new and wider experiences regarding man's relation to God and to his brother man.

The experiences thus revealed will ultimately result in a realization of the riches of joy contained in the words: "The fellowship of the Holy Ghost." In Science and Health (p. 588) Mrs. Eddy defines the Holy Ghost as "divine Science; the development of eternal Life, Truth, and Love." This definition, supplemented by St. John's description of fellowship, "If we walk in the light, as he is in the light, we have fellowship one with another," gives us a practical standard of action. Only failure to comply with the condition set forth in the first words of this text can prevent us from appropriating the harmony which the development of Life, Truth, and Love in thought must bring into our lives. Again, Mrs. Eddy writes: "The rich in spirit help the poor in one grand brotherhood" (Science and Health, p. 518), and she points out the human footsteps which must be taken before we attain to the absolute realization of that perfect fellowship whose expression is the spontaneous, unconscious supplying of our brother's need.

This latter state of consciousness is exemplified in the freeing of the woman whom Satan had bound. She was set free by the selfless love and purity reflected by Jesus, without his having any direct knowledge of her particular

Digitized by Google

need. Further examples of the practical unity and fellowship brought about by this purified condition of thought are related in the Acts of the Apostles. On the day of Pentecost the disciples are described as "filled with the Holy Ghost," with the result that they spoke with other tongues. They were thus enabled to supply the need of all present by expressing themselves so that in the mixed multitude, speaking fourteen or fifteen different dialects, each person heard the truth in his own language. This occurred again after Peter's vision on the housetop. He learned from the vision that he must completely eliminate his Jewish prejudices and widen his sense of fellowship. The rebuke, "What God hath cleansed, that call not thou common," prepared him for his visit to Cornelius, and for the further step of admitting the centurion and his household to baptism.

The uplifted thought of these Gentiles was ready to receive the truth, and their receptivity was shown in the fact that they also were able to speak with tongues, and so make the truth clear to all, irrespective of a common language. Peter had learned what Mrs. Eddy makes so clear when she says in "Miscellaneous Writings" (p. 150), "Not more to one than to all, is God demonstrable as divine Life, Truth, and Love." As we assimilate even a small part of the breadth and grandeur of this conception of universal good, it will eventually wean thought from the habit of associating good with and limiting it to certain human personalities. Jesus taught the necessity of freeing ourselves from this mesmerism when he said, "Why callest thou me good? there is none good but one, that is, God."

This impersonal view of good reveals the fact that as God's image and likeness man is expressing good always, though it may appear to be hidden behind an unattractive exterior. We are learning, too, that indifference is very nearly as far removed from love or fellowship as actual hatred. Before Christian Science came to raise our standard of thought and conduct, we used to be satisfied if our feeling toward people was not one of actual dislike; but Christian Science teaches us that true thinking is never negative. True thoughts are the realization of good which is always positive, therefore our attitude toward each other must reflect the untiring activity of right doing which belongs to divine Mind. To do this may seem, to human sense, to need a constant effort at first, but right thinking is natural to God's ideas, and knowing this we learn that in God's kingdom there exists neither a sense of need, nor the conscious supply of a need, for Love expresses only perfection.

This thought urges us to more whole-hearted consecration, to stricter examination of motives, to a more practical expression of the truth we already understand. The wider sense of fellowship taught by Christian Science demands fundamental honesty in the seemingly unimportant details of our thought with regard to ourselves and others. A glaring fault, an obvious physical trouble, instantly prompts effort to rid ourselves of any belief in their reality, while we often continue to ignore some small discordant condition. We forget that the multiplication table must be thoroughly mastered before we can hope to work out correctly the more complex problems of mathematics.

We should remember, too, that no problem is wholly individual. This thought reminds us that it is our imperative duty, as Christian Scientists, to know the truth not only about ourselves but also about those around us. This will at the same time help us to know the truth about ourselves, and will help them to know the truth about themselves. A certain kind of difficulty may seem more real to one than to another, but it does not for that reason belong more particularly to that one. In striving honestly to overcome the belief in error we are claiming our part in the fellowship and efficiency of the Holy Ghost. This dawning realization of the universality of the good effects resulting from every effort to be "followers of that which is good," is a constant spur to more consistent mental work. Far removed from any conception of fellowship is the temptation to ascribe our own failure to live the truth revealed in Christian Science, to the words or acts of others. We are sometimes tempted to think that left to ourselves we would make rapid progress; the seeming opposition of some one near to us, or the apparent lethargy of others, often suggests to the self-justifying thought an excuse for slow advance.

The fact that we must know God in order to know man aright, gives the clue to true fellowship. It is to know God, —to realize the allness of divine Mind, the ever-presence of the qualities described by St. Paul as "the fruit of the Spirit," namely, "love, joy, peace, longsuffering, gentleness, goodness, faith." It is to give to all that warm-hearted sympathy, tempered by wisdom, which in seeming trouble or joy uplifts thought to the spiritual fact behind every counterfeit presentment of mortal mind, and gladly take and share with others all the good that comes to us. Humbly striving to live up to this ideal, we shall, in spite of apparent failures, succeed in manifesting that genuine spirit of fellowship defined by St. Paul when he says, "I am made all things to all men, that I might by all means save some."

PRAYER IN CHURCH.

W. STUART BOOTH.

THE directions contained in the Manual of The Mother Church are for the protection and upbuilding of the cause of Christian Science, and for the guidance and assistance of each individual Scientist as well. We find this to be true as we are obedient and recognize that these "Rules and By-laws in the Manual . . . were impelled by a power not one's own, . . . They sprang from necessity, the logic of events,—from the immediate demand for them as a help that must be supplied" (Miscellaneous Writings, p. 148). Again, on page 156, Mrs. Eddy tells us that "experience and, above all, *obedience,* are the aids and tests of growth and understanding."

One of the rules which has been of very great benefit to the writer, in individual as well as church work, is that relating to "Prayer in Church," Article VIII, Section 5, of the Manual, which reads, "The prayers in Christian Science churches shall be offered for the congregation collectively and exclusively." Before learning of Christian Science and striving to live in accordance with its teachings, this had not been the rule and practise of many people. The man worried with his business has often taken those cares to church with him, and has thought best to pray over them there; but upon leaving the church it is often found that the burden is at least as heavy as before. He has perhaps been told in the sermon or prayer that God, in His inscrutable wisdom, sends our troubles upon us; and this surely has not tended to make them any the less real to him. In the case of the mother who has gone to the service much depressed because of the illness of her child, she, too, would return home uncheered, if to her was given only the cold comfort that God will raise up those who are sick—if such be His will.

This questioning qualification regarding the will of our heavenly Father does not bring to any one that sense of Love which casteth out fear, but rather intensifies that fear. We who know of Christian Science have not as yet outgrown our business cares entirely. We may have attacks of sickness and periods of discouragement to meet; and ofttimes these may be uppermost in sense when we go to our church service. Then comes the test of our sincerity and obedience, since we are told that our "prayers . . . shall be offered for the congregation collectively and exclusively." And what will be the resultant effect on all concerned if we are obedient to this injunction? Will our business be harmed at all by having our thoughts turned

Digitized by Google

from it for a season? Will not the little child be relieved to have the mother's anxious thought removed? Many a faithful Christian Science practitioner who has gone to the church service with perhaps an unconscious sense of responsibility over a seemingly serious case, by obediently offering prayer for the congregation, has thus transferred the responsibility to God, and been enabled thereby to see Him and His harmonious creation so clearly that the patient was healed.

As we declare, and realize even a little, that the church is "the structure of Truth and Love" (Science and Health, p. 583), and that therefore no thought or suggestion of error, fear, hatred, or malice can find a place or channel in it, the sure effect is to minimize the sense of those things which would darken our sense of God, good, and which, if believed, would make a lie seem to be true. If each one endeavors to bring out in his own consciousness this "structure of Truth and Love," his thought will be prepared to receive and assimilate the truths in the Lesson-Sermon. We know from experience that these Sermons are universal in their adaptation, hence, if our minds are open, that is, looking outward and upward, our especial needs will be met by the word of God found in the Lesson.

The business man will see that worry is distrust in God, —the giver of every good and perfect gift; the mother will return to her child filled with the assurance that God's will is done, and that it is His will that harmony and peace should be supreme here and now. To pray for the congregation is to turn our thought away from self, and whatever does this is uplifting in its influence and draws us and others nearer to God.

TIME *VS.* OPPORTUNITY.

ELINOR F. EDWARDS.

How often we say and hear it said, "I have no time;" or, "I should like to read and study more, but I have no time," or, "If I had time I should like to write for our periodicals." Not long ago, as I climbed the hill on my daily morning walk, a breezy little thought joined me by the way and said: "Why not speak the truth, and say that there is no time to fear or to fret, to worry or to hurry, no time for discouragement, self-pity, doubt, criticism, or covetousness; no time for thoughts of limitation; in fact, no time to forget the truth of being and remember error; but that there is opportunity here and now, in every place and condition, to trust in infinite good, to be friendly and helpful, to cooperate in the welfare of others, to practise the golden rule?"

I was deeply grateful for this morning message, and later I read in Science and Health (p. 598), that "time is a mortal thought, . . . Eternity is God's measurement of Soul-filled years." Time is a mortal concept, eternity is here and now in which to think the thoughts of God. Time always brings a sense of limitation, and our beloved Leader assures us that it is "no part of eternity" (p. 468). Then we may challenge every negative "I have not" which comes to our thought, and replace it with the positive "I have all things, and can do all things through Christ, Truth." We all have opportunities, wherever we may be, to reflect God's thought, and no sense of limitation as to time can deprive us of this divine right.

Opportunity is perpetual, the eternal now! It is not only our privilege to eliminate the thought of time and replace it with opportunity, but it is vital to our salvation. Who would not gladly exchange the mortal sense of time for a sense of endless opportunity to grow in grace; to trust, to love, and to work? Who would not give up the limited for the unlimited, the evil for the good, and be forever grateful to the Discoverer of Christian Science for pointing out this way to life, prosperity, and peace?

Thus the thought of limitation, or time, which has so long held mortals in bondage, will give everlasting place to the truth of being, man's present opportunity to think and act rightly,—and every thought will eventually be brought into harmony with Christ, Truth, which means to each and all "the glorious liberty of the children of God."

OBJECT-LESSONS.

MARY E. HARDY.

MANY of us have had periods in our journey heavenward when spiritual perception has so illumined the way that we have been enabled to read an object-lesson in what seem to be the smallest events in daily experience. Thus to us things become but externalized thought, and we gain another step toward the goal where Mind alone will unfold the eternal verities which today are but dimly perceived. In the book of Acts we are told that the apostles "continued steadfastly in the . . . breaking of bread, and in prayers." As in our like experiences, this was followed by the natural expansion of thought into expression, for we read: "And all that believed were together, and had all things common; and sold their possessions and goods, and parted them to all men, as every man had need."

Still we find our object-lesson broadening, as the record says that "Peter and John went up together into the temple at the hour of prayer." As they approached the Beautiful gate a beggar obstructed the way. Just here we may learn something of the substance which alone is eternal, that on which the holy city is builded, "the city whose builder and maker is God." The two apostles had neither silver nor gold to bestow, but Peter said, "Such as I have give I thee." He gave the lame beggar the truth, and it healed him then and there. What a gift that was we know today in Christian Science! We talk of love, but if we have gained one gleam of its reality it has brought with it the perception that divine Mind alone unfolds all that really is.

Principle is ever expressed in action. We cannot escape the experience that is needed to purify even the best in human thought, that our feet be firmly planted, steadfast and immovable, in Truth. We must some time prove that silver and gold can give us nothing, and that their lack can rob us of "no good thing." Thus we may more clearly reflect the compassionate love which heals the beggar, and with uplifted thought walk through the Beautiful gate into the temple, where riches unfold in idea rather than as substance-matter. We shall then have learned that as we seek "first the kingdom of God, and his righteousness," all else is "added" unto us.

[Written for the *Sentinel.*]

THE PERFECT DAY.

LUMAN A. FIELD.

"IN the eternal Mind, no night is there,"*
No darkness, weariness, nor wasting care.
No deep'ning shadows gather there. Alway
Doth shine the fadeless light of perfect day.

In Mind's encircling glories, wondrous fair,
There is no sorrow drear, nor hidden snare.
No blinding mists of doubt hang low. Alway
There shines the joyous light of endless day.

In perfect Mind, there's naught can life impair,
The living touch of Love is ev'rywhere.
All dark'ning fear is swept away. For aye
Doth shine the blessed light of Life's full day.

* Science and Health, p. 511.

SELECTED ARTICLES.

[Frederick Dixon in *Newcastle Weekly Chronicle*, Newcastle, England.]

An anonymous correspondent, in a recent issue of your paper, recommends your readers to study the story of Mrs. Eddy's life. Will you, therefore, permit me, as one who knew Mrs. Eddy, and had the opportunity of knowing a little of her life, and of what it meant to the world, to tell them, very briefly, something of it?

Mrs. Eddy was one of the noblest women the world has known. Her entire time and energy was given to the service of God and man. Those who know best the story of her life, instinct as it was with marvelous courage and self-sacrifice, have never told it. That was her wish, her way. She knew the future was on her side. She knew that the finest vindication of her fame against the breath of slander, as well as the most splendid memorial to her work, would be found in the lives and labors of the Christian Scientists of the world, to which the archbishop of York bore such splendid testimony, not so very long ago.

It was Mrs. Eddy's fearlessness, with its accompanying certainty of divine protection, that struck every one with whom she was brought in contact. To dream of failure where she was concerned was an impossibility. Her followers learned that, with marvelous prescience, she never made demands beyond their strength. If the Tenth Legion never shook, no matter how fierce the press, if the Ironsides never wavered, no matter what the odds before them, and if the Old Guard never surrendered, and all this in the struggle to take life on the battle-fields of the world, the Christian Scientists were little likely to falter in the effort to bring health to the sick, to give peace to the weary, or to help the sinner to fling off his sin.

In spite of this, the task which confronted Mrs. Eddy was immense. Men do not take in an altogether kindly spirit to the idea of women as their leaders, least of all as their religious leaders, and when, as in her case, the battle to which she called her followers was one of conquest of self, the enthusiasm was not likely to be rapidly generated. Once, however, it was generated, it burned with the steady flame of conviction, and not with the flicker of emotion. All the same, this is no excuse for the bitterness with which Mrs. Eddy was attacked. Genius, Lord Lytton once wrote, does what it must, talent what it can. Mrs. Eddy's genius was the genius of holiness, and it did what it must. Had it been otherwise, a greater share of popularity would have been her immediate reward. Perhaps this could hardly have been better expressed than in the beautiful verses, written some years ago, as a tribute to her life-work:—

Across the sands, across the lands, across the waste of years,
A voice called low, a voice called sweet, a voice spoke to our fears;
Kept calling, calling, loud and clear,
Still calling sweet and low,
To follow where the Master trod, tho' none would hear or go.

Across the years, across the fears, above the time and tide;
In every age, in every clime, in lands both far and wide,
That still, small voice kept calling,
Still calling sweet and clear,
But fell upon unheeding ears and lives of woe and fear.

O fearful years! O needless fears, gone now despair and dread,
There was an ear to heed and hear, a life that would be led,
And longing, longing, heard the voice;
And trusting, found the way.
Then walking in it reached the heights, the heights where dawns the day.

To those who knew Mrs. Eddy at all, whether personally or through her writings, her genius as a leader is here expressed. She had caught the note of freedom which the understanding of Christian Science had brought to her, the world sense of freedom expressed in that marvelous sentence, "Ye shall know the truth, and the truth shall make you free." She desired that every one should share that freedom—a freedom not merely political, not merely social, but from sorrow, and sickness, and sin, the mental freedom which lifted man above the bonds of materiality and showed him that the kingdom of heaven was not afar off, for the kingdom of God was within him.

The *raison d'être* of the Christian Science movement is to bring this freedom to the world, and it can be brought only as men gain the Mind that was in Christ Jesus. It is thus that in Christian Science sin loses its geographical or mere temporal significance, and becomes the term for obedience to everything that is unlike God. Christian Science healing is the attempt to demonstrate this, as it was demonstrated by Jesus the Christ; and the patient can only gain freedom in proportion as he gains the Mind that was in Christ Jesus. The consequence is that in Christian Science a man cannot be made healthier without being made holier, with the result that, when he becomes "every whit whole," it is because his physical condition has responded to his vision of true being.

Mrs. Eddy did more than preach, she fulfilled the whole of the divine command, she preached the gospel and she healed the sick. She was intensely practical in her work for mankind, and never more practical than when she gave humanity the understanding of healing which was to make it "every whit whole." It was thus that she displayed that silent but true charity which, combined with the beauty of her life, made her so respected in the New England city which she had made her home. When, after seventeen years' residence in Concord, she left that place for her new home in Boston, the city council, men of all churches and all manner of views, expressed their deep regret at her departure, and unanimously voted her a farewell address, in which the words of the chairman found expression thus:—

"It is quite unnecessary for me to prompt your memory of the countless deeds of charity and her endless gifts. Neither is it necessary for me to call your attention to her innumerable donations to the more unfortunate ones in our midst."

This little house of Mrs. Eddy's at Concord, like the rather larger one on the outskirts of Boston, to which she removed, was the subject of the most ludicrous comments. It finally became, in the language of her critics, a palace, where she dwelt, surrounded by secretaries and servants, receiving the tributes of her followers. I remember it now, as I first saw it, in the snow of a winter's day, when the Merrimac was clothed with ice, and the New Hampshire hills rose in one long barrier of white along the sky-line, a simple little villa, standing a few yards from the road, with a meadow behind it. Here, Mrs. Eddy lived in absolute seclusion, directing the army of Christian Science workers, and the hardest worker of them all.

It would have been difficult, if one had not already realized from her books the power on which she relied, to understand how this gentle and venerable lady, who seemed physically so fragile, could keep in touch with, and direct, the vast organization her devotion to Truth had spread over the world. Her grip was extraordinary, and her knowledge of the whole organization remarkable. Not that she ever interfered with those whom she placed in positions of trust. She never dwarfed their initiative, nor lessened their sense of responsibility by unnecessary directions, though when they had done their work, she was at once their keenest, most helpful critic. Those who imagined that the Christian Science movement would fall to pieces when her hand was withdrawn from the helm, little understood Mrs. Eddy, or the rock in which she had sunk the foundations of the movement. The very foundations of that movement lie in the fact that it never has had, and never will have any other leader than Mrs. Eddy and her writings, and during all those years of seclusion at Concord and Boston, she was patiently training the executive of the movement in self-reliance, and its democracy in wisdom.

In Boston, she lived, if possible, in greater seclusion than at Concord, surrounded by a household whose love for her was unbounded, and to whose labors of love for her no one

Digitized by Google

could succeed in doing justice. Her little bedroom was almost as simple, in some ways even more simple, than that of the Duke of Wellington at Walmer. Her adjoining study, with its glorious view of the Massachusetts hills, was always flooded with light, and she sat there, in the great bow-window, surrounded by her work. It was there that she initiated and carried to success one of the greatest of her plans, the establishment of a wholesome daily newspaper, *The Christian Science Monitor*, which was to prove that such a paper could be made a success, in spite of the elimination of everything that was unworthy.

It was here she finished her work, as far as her bodily presence in the Christian Science field was concerned. She remains, as she ever will remain, the Leader of the movement. It is today as it was when she retired to the physical seclusion, yet greater activities, of her house at Concord. Then she wrote to the College Association the words printed on page 135 of "Miscellaneous Writings": "All our thoughts should be given to the absolute demonstration of Christian Science. You can well afford to give me up, since you have in my last revised edition of Science and Health, your teacher and guide."

[Col. W. E. Fell in *Bradford* (Eng.) *Telegraph.*]

In thanking your correspondent for his very interesting letter, I would like to say this in connection with the ancient Greek philosophies, that truth, the whole of truth, has been with us throughout eternity. The ancient worthies, Greek and Hebrew alike, caught glorious glimpses of truth. In so far as the clarity of vision of these people enabled them to see the truth, to that extent they approached to an apprehension of Christian Science.

Many people have a very confused notion of what is meant by the term "Christian Science." If Christianity be true, the truth about Christianity is its science. Science is variously defined by different lexicographers, but they will all agree in saying that it is exact knowledge arranged into a system, governed by a fixed principle and unalterable rules. Now Christian Science is an exact science because it is demonstrable to the full extent of one's understanding of it. Jesus of Nazareth, his personal disciples, and many of his followers in after years proved this incontestably, and the Christian Scientist of today is linking the past to the present through the understanding that God's law is an immutable law as the Bible declares, and that what was possible to Jesus is possible today when the same spiritual law is brought into operation. The master Metaphysician himself declared that "he that believeth on [understandeth] me, the works that I do shall he do also."

The gentleman has not correctly defined the Christianly scientific sense of God. If God is not a "ready-made" God, what is He? Our critic's philosophy sees "God in the making." If God is in the making, who is making God? You cannot have a phenomenon without a noumenon. God is defined in Christian Science as follows: "God is incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love." These terms are synonymous. "They refer to one absolute God. They are also intended to express the nature, essence, and wholeness of Deity. The attributes of God are justice, mercy, wisdom, goodness, and so on" (Science and Health, p. 465).

Our critic says when speaking of imperfections coming into the circle of the true at-one-ment: "Under the latter (the God idea proper) imperfect man is linked on to a perfect being, is a kind of excrescence, and human life remains an inexplicable accident." This is the very reverse of the fact. Christian Science declares for the definition of man as found in the first chapter of Genesis, that he is in the image and likeness of God. Now God is Spirit, therefore man, the real man, is spiritual, being in His image and likeness. "Man is more than a material body with a mind inside, . . . Man reflects infinity" (Science and Health, p. 258). We therefore know no more of man as God's image and likeness than we know of God. This, however, we do know, that the human concept of man is made perfect in proportion to the true conception of God and the real man. Man is not absorbed in Deity, nor can he lose his individuality. A realization of the perfection of God and His creation confers a power on man to resist and overcome evil of every kind that nothing else can. Again I say that it is physical sense which deceives, inverting and reversing God's perfect spiritual kingdom, which, as Jesus himself declared, is right here and now, "at hand." By the process of inversion the material concept is transformed into the spiritual idea. God's ideas are the only realities, the permanent and indestructible creations of a perfect being, the emanations of divine Mind. The material world will be destroyed, according to Scripture, but the divine spiritual reality back of every material phenomenon is permanent. By no means is space emptied of all its objects; it is peopled with God's spiritual creations, which will some day be clearer to us, to spiritual sense, than material objects are to physical sense.

[Alfred Farlow in *Merchantsville* (N. Y.) *Times.*]

You say "there has been no good argument so far to convince the world generally that God permitted man to discover wonderful remedies if He intended us to depend upon prayer alone." What if these "wonderful remedies" are misapplied? The inebriate might argue that it is entirely proper for him to drink all the whisky he desires because God permitted man to discover it. He might argue that it is proper to indulge in many forms of sin because human invention has sought them out and introduced them. You may be right in your assumption that the general public has not yet become convinced as to the value of Christian Science as a remedial agency, but on the other hand you might be justified in entertaining a doubt as to whether the drugs which are offered as curative means are truly "wonderful," in view of the fact that almost the entire human race becomes first mildly sick, then grows worse, and then dies while these "wonderful remedies" are being administered according to all the ingenuity of modern physicians.

Your statement, "If there were an absolutely certain cure for diphtheria and some physicians refused to use it, they would undoubtedly be jailed," is very well put. "If" there were an "absolutely certain cure," or even an approximation thereto, the situation would be different. In fact, the results of the various methods and means of treating the sick are so far from anything beyond experimentation that it would seem the wiser plan to allow everybody to choose his own method of experiment. We can all agree upon the importance of sanitation, purity, and cleanliness both as to mind and body, the importance of refraining from a discussion of disease and of allowing sick folks to mingle with others than those who have them in charge, but as to medicine it seems best to let each one make his own choice.

[George Shaw Cook in *Champaign* (Ill.) *Times.*]

Referring to an address before the graduates of the Burnham hospital training school, reported in a recent issue, permit me to say that the speaker is evidently misinformed as to the beliefs and practises of Christian Scientists. Christian Scientists are not opposed to sanitation, quarantine laws, or to such rules and regulations as may be necessary for the prevention or spread of so-called contagious disease. They believe in pure food, pure air and water, cleanliness, and everything that tends to normal healthful living. They understand the present necessity for laws regulating these matters and are not opposed to anything which makes for human betterment. They have no quarrel with the doctors or those who believe in material methods of healing, and they are advocates of medical freedom only to the extent of believing that every man has the right to choose his own physician.

Digitized by Google

Christian Scientists do not seek to impose their beliefs upon others. Their experience has taught them that Christian Science can do for them what medicine cannot, and while they believe that they have the right to employ that form of treatment which has proved the most efficacious in their own cases, they are willing to accord the utmost freedom to their neighbors. The fact that Christian Science heals the sick as well as reforms the sinner is now very generally acknowledged. It has to its credit the healing of all forms of acute and chronic as well as so-called incurable diseases, and its elevating influence is felt in all the walks of life.

[Algernon Hervey-Bathurst in *Chelsea* (Eng.) *Mail.*]

It would be quite impossible to attempt to deal with the strange array of statements contained in our critic's letter, for he has followed that fatal course of quoting, or misquoting, isolated sentences, separated from their context, which therefore prove nothing. With regard to Christian Science, will you permit me to point out that the movement has made enormous progress since it was founded by Mrs. Eddy a little more than forty years ago. Today it encircles the globe, and it has attained these vast proportions in so short a time because it is not based on theory but on practise, not on words alone but on deeds. If Christian Science could be affected by adverse criticism, it would have ceased to exist years ago. It is, however, in spite of criticism, that it continues to prove that the teaching of Jesus the Christ, which includes the healing of sickness as well as the destruction of sin, is to be practised by every true Christian as much today as it was some two thousand years ago.

Humanity is chiefly engaged in the effort to obtain the best of everything, certainly including health, and it is an amazing fact that those should be found who are capable of decrying that which is giving to their neighbors the very thing which they themselves are earnestly seeking. May I repeat what has so frequently been stated in the press already, namely, that in founding Christian Science Mrs. Eddy had no source to draw from other than the Bible, a source which was equally available to the rest of humanity. It took, however, a woman with her spiritual discernment to perceive the spiritual or scientific meaning of the statements of Christ Jesus. Having proved that a correct understanding of what he taught resulted today, as then, in the healing of sickness as well as in the destruction of sin, she was able to give to the world the text-book, "Science and Health with Key to the Scriptures," to the study of which so many men and women throughout the world today owe their all.

Facts cannot be disproved, and the steady growth of the movement is proved by the ever-increasing number of those who, having recovered from some physical trouble, or been freed from the bondage of sin through this teaching, are able to say, in the words of him whom Jesus had healed of blindness, "One thing I know, that, whereas I was blind, now I see;" and it is on irrefutable evidence such as this that the movement is based, and will continue to grow.

[Olcott Haskell in *Coast Review*, San Francisco, Cal.]

Christian Scientists by no means ignore disease, nor do they claim that it does not exist in human experience. They regard sickness as something to be intelligently met and overcome through an understanding and application of the laws of right living. They are optimistic, in that they believe there is a divine law which, if properly followed, will yield perfect results; and while they do not claim to have attained to complete success in their practise, yet their present progress amply justifies their position.

Christian Scientists take out life insurance, or neglect to do so, from very much the same motives that actuate other people; and evidence is daily increasing which tends to show that it is safe and profitable for insurance companies to write policies for them. Several years ago the *Burlington* (Iowa) *Hawkeye* published the following editorial comment: "A great life insurance company has instructed its agents by circular: 'Christian Scientists are as a class extra good risks, and should be solicited.' Now that must mean something. It is founded upon some vital principle. A peaceful mind, faith, hope, and contentment—these are regarded as conducive to health and longevity. When a great corporation, whose purpose is to make money, accepts that statement as a truth and adjusts its financial interests accordingly, the hard-headed, practical man cannot very well ignore the fact. The conclusion is, not that every one should become a Christian Scientist in his religious faith, but that the qualities and habits which produce such beneficent results ought to be fostered."

Some time ago it was reported upon good authority that there were more than thirty thousand persons in the state of New York who relied wholly upon Christian Science treatment; yet the average annual death rate among these people was only about one per thousand as against an average death rate among non-Scientists of more than eight per thousand. Christian Scientists are not fanatical; they do not needlessly expose themselves; and they are temperate and regular in their habits.

Your editorial closes with the statement that it is doubtful if those who hold to strictly "orthodox" medical opinions do not suffer from "too much medicine." However this may be, it should not seem strange that the man who understands in some degree the laws of the "great Physician," and who seeks to shape his daily life accordingly, should prove a better risk than one who fails to do so.

[Written for the *Sentinel.*]

SONG OF SUMMER.

MYRTLE B. S. JACKSON.

WIND in the waterways rippling to song,
Wind thro' the willow wands rushing along,
Wind in the clouds above, tossing the rain,
Wind in the world abroad, hark! the refrain—
Evil is impotent,
Sorrow a dream,
Good is omnipotent,
Love is supreme.

Sun on the meadow-lands lighting the grass,
Sun in the buttercups, mass upon mass,
Sun on the window-panes glitters and gleams,
Sun thro' the swaying elms, see how it streams.—
Evil is impotent,
Sorrow a dream,
Good is omnipotent,
Love is supreme.

Birds in the hedgerows low, twitter and trill,
Birds in the apple boughs caroling still,
Birds in the cedar tree, birds on the wing,
Birds round the old red house, listen! they sing—
Evil is impotent,
Sorrow a dream,
Good is omnipotent,
Love is supreme.

Joy with the butterflies, life in the flowers,
Riches in chestnut buds, light thro' the hours,
Hope in the hazy woods tender with youth,
Praise in the hearts of men waking to Truth.—
Evil is impotent,
Sorrow a dream,
Good is omnipotent,
Love is supreme.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

TRUTH'S SUPREMACY.

ONE of the most common and yet in a way most unexplainable misunderstandings of Christian Science, in view of its continued and multiplying demonstrations of the truth it teaches, is that it is but a system of mind-cure, in which the healing is supposedly effected by "concentrating" the thought of the practitioner, and correspondingly "distracting" the thought of the patient. This mistaken view is based upon a belief in suggestion, or the action of one mortal mind upon another, and utterly ignores God, the divine Mind and the Principle of man. To those, however, who have been awakened to the baneful effects attendant upon the practise of this so-called "art," the claim that Christian Science is allied with or akin to suggestion, has been sufficient to condemn it, and it has been evidenced that it is because of this erroneous belief about Christian Science that it has met with much of the opposition which has been leveled at it.

The necessity for making it clear to the inquirer that Christian Science, the new-old gospel whose message of healing and salvation is the greatest boon of this age, is not in any manner connected with the practise of hypnotism or suggestion, thus becomes the more imperative. In her Message for 1901 (p. 20), Mrs. Eddy defines the status of Christian Scientists with unmistakable clearness when she says: "Christian Scientists are not hypnotists, they are not mortal mind-curists, nor faith-curists; they have faith, but they have Science, understanding, and works as well. They are not the *addenda*, the *et cetera*, or new editions of old errors; but they are what they are, namely, students of a demonstrable Science leading the ages."

So little is this distinction understood, however, that it is not at all uncommon to hear persons say that they have always believed in the supremacy of "mind over matter," and they are under the impression that in making this admission they are paying tribute to Christian Science. In this wholly superficial judgment they have in no wise differentiated, as does Christian Science, between infinite Mind, God, and the false belief of a mind or intelligence apart from God and believed to be governed only by the human will, either its own or that of a stronger mentality than itself. Christian Science teaches, in contradistinction, that among the inalienable rights bestowed on man is that of self-government; that man is properly self-governed, not when he is asserting his own will, but "only when he is guided rightly and governed by his Maker, divine Truth and Love" (Science and Health, p. 106), a declaration of independence which clearly precludes interference with or infringement upon this self-government by another human mentality.

Throughout Science and Health and the other writings of Mrs. Eddy, it is made very clear that divine Mind, the Mind "which was also in Christ Jesus," is the only power, and that this Mind is the Principle and basis of Christian Science healing. Through the demonstration of this divine power, which is always right and always available for the needs of humanity, the sick are healed and the sinful are reformed today as in the time of Christ Jesus. Here, again, the line of demarcation stands out sharply. In all the works of healing wrought by the Master, he took no credit to himself for their accomplishment, but declared he was only the instrument for the Father's will. "I can of mine own self do nothing," he said; and no more can the Christian Scientist heal the sick or reform the sinning unless he is actuated by the divine Mind before whose omnipotence and ever-presence error of every kind and degree must be utterly destroyed. Human will-power, on the other hand, boasts itself of its personal domination over the will of another, forgetful or ignorant that in so doing it stamps itself as a usurper of that which mankind has ever held most dear, its heritage of freedom. Based on a false claim to place and power, the superstructure, however fair in its seeming, is doomed to destruction; like the apples of Sodom, it crumbles into dust, and its so-called cures are equally ephemeral.

Christian Science bases its demonstrations on the all-power of that infinite Mind in whose presence evil can find no abiding-place; it declares that man, the image and likeness of God, is perfect even as He is perfect. Holding firmly to the truth of being, that God is the only power; recognizing no other than the perfect man of His creating, the Christian Scientist speaks with authority, and sickness and sin, error of whatever kind, yields to the supremacy of immortal Mind. It is because he has made this demonstration again and again, with lasting good both for himself and for others, that he can wait patiently for the working of that leaven which will never cease its activity until every misconception and erroneous belief has been cleared away and mankind is able to discern between the true and the false.

ARCHIBALD MCLELLAN.

HEROISM AND SPIRITUAL PERCEPTION.

So much of history and of personal experience witnesses to the sordid commonplaceness of men, their apparently contented absorption in selfish satisfactions, that it is not difficult to account for the cynical skepticism which accepts the naturalness of the ignoble, and acts habitually on the assumption that "every man has his price." Every now and then, however, an event is recorded which, like a flash of light in the dark, unexpectedly discloses an element of greatness in some individual or group that cleaves to its center this low estimate and expectancy of men, and gives one an entirely different point of view respecting the subsoil possibilities of human nature.

How frequently of late years has this capacity for nobleness been revealed by miners as they have urged the hazard of their own lives in the effort to rescue their entombed fellow workers. How often do we witness the less spectacular but none the less quality-trying devotion of mothers to their unfortunate children, or learn of the unavailing struggles of vacation boys and girls to save their drowning playmates; and in the presence of these common-life heroisms how can one avoid recognizing that veiled nobleness of humanity which speaks for God's man. Heroic impulse is often misdirected, and for the reason that it is hampered by ignorance, prejudice, superstition, and personal mesmerism; nevertheless, how convincingly it always speaks for the genuine texture and fine quality of men at their best! Even though it lack the saving grace of a sufficient occasion, it never fails to thrill and stimulate. We need but put ourselves in touch with the educated sense of things entertained by those whose thought of self-giving cannot be approved by truly Christian ethics, to forget their deed in the inspiration we gain from the fine spirit of the doing. The heroism of the act appeals to all hearts, and leads one to wish that the lives of those who have a more enlightened thought of ministry were marked by more frequent exhibitions of this self-effacement. The supreme sacrifice of Socrates, St. Paul, Savonarola, and their kind, was fully justified, and fitting occasions for the manifestation of a kindred, unconscious greatness are sure to be found by every true Christian.

All real heroism is but the expression of the choice of a higher end and destiny, and the noble doing which may be explained in others as the fruitage of an instinctive impulse, must become for the spiritually enlightened a continuous habit, the natural product of their illumined sense of being. This explains why Christian Science can but multiply the

Digitized by Google

nobilities of all who truly assimilate its teaching. It so intensifies one's realization that spiritual achievement is the only thing of real value, that opportunities for self-sacrifice come to be related to one's thought of the gain of good rather than the giving up of good. Fine thinking and doing is then no longer confined to rare occasions, but becomes a matter of continuous attitude and activity. He who through Christian Science acquires and is loyal to the Master's scientific sense of spiritual values, finds it not only possible but natural to live for hours and days, if not all the while, upon that plane of fealty to the ideal which he once attained to in now and then, never to be forgotten *moments*.

The unheroic Christian is an unworthy Christian, and one of the surest evidences of our growth in the apprehension of Christ, Truth, may be found in the consciousness of a keener sense of this fact, a greater freedom and joy in doing the perchance little but self-forgetfully large deeds which yield such fragrance to human life, and it is to this daily distinction that every Christian Scientist is called.

JOHN B. WILLIS.

BUILDING.

As one goes through the streets of any of the older American cities at this period, he cannot help noticing the work which is being done in the removal of certain buildings to make way for other and presumably better structures. One may at times be tempted to regard this process as wasteful, if not needless, in view of the fact that many of the buildings which are being removed would doubtless last for years if undisturbed; but the spirit of the age calls not only for progress but for rapid progress. Not so long ago, we often heard such a remark as this: "Yes, that would be a good thing, but it will not be accomplished in your day or mine." There are, however, few who would venture such a statement today, as it is not in accord with the facts of present experience. Right here it may be remarked that the slow progress of the past was largely due to unwillingness to give up the old, on the ground that it had some good in it, and ought therefore to last a while longer.

Now one of the first lessons which we learn in Christian Science is to be willing to give up as fast as possible aught that is imperfect, even where this involves the tearing down of thought-structures which seem to be solid and enduring and whose foundations were laid far back in human history. Thus do we find the entire superstructure of the social fabric based upon the belief that man is both material and spiritual, the material element largely predominating so far as this world is concerned at least, with a rather uncertain hope that in an unknown future man will become a spiritual being. On this unreal foundation mortals proceed to build theories of religion and medicine, of education and governmental polity, in brief, of life itself, the inevitable result being, to use the words of Christ Jesus, "distress of nations, with perplexity; . . . men's hearts failing them for fear;" and these words describe the condition of individuals as well as of nations until the enlightening truth shows the only way of escape.

In Science and Health we read that "the supremacy of Spirit was the foundation on which Jesus built" (p. 138). This statement recalls the Master's own words respecting the temple at Jerusalem when his disciples pointed with pride to its rare and costly adornments. He said, "As for these things which ye behold, the days will come, in the which there shall not be left one stone upon another," a prophecy which dealt mainly with the religion symbolized by that temple—any religion, indeed, which would lead men to approach God by material means rather than "in spirit and in truth;" and how radical is the reformation which he indicates! Paul counsels us against attempting to build upon Truth's foundation the "wood, hay, stubble" of materiality. Even in such case he admits that the true foundation will stand the test by fire, and that the one who builds, "he himself,"—his true individuality,—will be saved; but at what cost to the human sense which must experience the loss of all that is not of God, hence not spiritual!

In reality no man can lay any other foundation than that laid by infinite Mind, which is the Christ-idea, and we may well take heed how we build thereon; but if in our ignorance we have built in consciousness the false belief of life in matter,—its pleasures and pains,—let us not hesitate to tear down the false that we may build anew under divine guidance, and receive the rich reward of which Paul writes, namely, a "house not made with hands, eternal in the heavens,"—a mental abode which never admits sin, disease, or death. The all-important consideration is to go deep enough in removing the accumulated rubbish of the centuries to reach the true foundation, for thus alone can we consecrate ourselves and our service, to quote the words of our revered Leader, "to the eternal builder, . . . to the Life which mortal sense cannot impair nor mortal belief destroy" (Science and Health, p. 428).

St. John's vision gives a wonderful picture of the city whose builder and maker is God, wherein is neither sin nor suffering nor anything which needs to be torn down, and Mrs. Eddy reminds us that here and now we may enter this state of consciousness, and dwell therein, since to God and His idea there is no other. It is most truly our abode, if only we are willing to give up the false for the true.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

LINCOLN, NEB.—The opening service in the new Christian Science church on the corner of Twelfth and L streets will be held this morning [Sept. 1] at eleven o'clock, the regular service of the church appointed for that day being used. This will not be a dedication of the church, as the Christian Scientists do not dedicate their churches until fully paid for. Nevertheless it will be an occasion of great rejoicing, not only among the Christian Scientists of Lincoln, but throughout the state. The church building is a two-story brick and stone structure, built fireproof up to the second floor, and cost, including site and furnishings, not far from one hundred thousand dollars. It is about ninety by one hundred and twenty feet on the ground, and fifty-four feet from the grade line to the peak of the roof. The Greek style of architecture predominates. The dimensions of the main auditorium are eighty-one by eighty-six feet, with incline floor on the sides, sloping to the center. The capacity of this room is about twelve hundred. There are no galleries.—*Sunday State Journal.*

SHERIDAN, WYO.—Twenty years old and one of the first churches built in Sheridan, the building which until recently housed the congregation of St. Peter's Episcopal church, has just been purchased by the Christian Scientists and moved to a lot on Gould street opposite the Foster house, where after being repaired and renovated it will serve as the home of the Christian Science society.

When altered and improved, in accordance with the plans of the new owners, the building will be occupied for general church purposes and as a semipublic reading-room. The reading-room, which is to occupy the wing formerly occupied as a vestry room, will be open to the public every afternoon. It was hoped to hold the first services in the building early in September.—*Sheridan Post.*

RICE LAKE, WIS.—The dedicatory exercises of the Christian Science church took place last Sunday [Aug. 25]. Col. P. H. Swift read the history of the church. The church was organized July 8, 1896, with a small membership.

Rice Lake Chronotype.

Digitized by Google

MELBOURNE, AUSTRALIA.—The reading-room and lending-library carried on in connection with the Melbourne church have been removed from Royal Bank chambers to more commodious premises on the first floor of the Equitable building, Collins street, where provision is also made for the offices of the church and of the distribution committee. The Equitable is one of the finest buildings in the city, and Collins street is the main promenade and business thoroughfare. The reading-room is excellently adapted for the purpose, and has a street outlook. The building is visited by hundreds of the public every day, on matters connected with the different financial and business offices located therein, and already numbers of these visitors are finding their way to the reading-room, some of whom have expressed their appreciation of the literature provided for public perusal.—*Correspondence.*

PHILADELPHIA, PA.—The new Second Church of Christ, Scientist, held its initial service yesterday morning [June 16] in the Masonic building, 5425 Germantown avenue, with a congregation of three hundred or more residents of Germantown and Tioga. The new church is an offspring of the Christian Science church at Fortieth and Walnut streets, where the membership has grown to more than fifteen hundred and the dimensions to accommodate had become inadequate. In order to care for the additional adherents of the faith, it was decided to establish another church in some other part of the city, and Germantown, where many Christian Scientists reside, was decided upon as the site for Second Church. Steps will soon be taken to select a location in Germantown for the erection of a church edifice.

Philadelphia Record.

RICHMOND, VA.—Plans are being perfected for a Christian Science reading and rest room at our state fair to be held in this city the week of Oct. 7. Much interest was shown in the work last year, the booth being in the interest of *The Christian Science Monitor* and clean journalism. During the six days of the fair we gave away three thousand *Monitors*, with other Christian Science literature. We had many visitors, and every one seemed pleased with the idea of a clean newspaper. We feel that a great deal of good is being accomplished by this special feature in the work.—*Correspondence.*

BRATTLEBORO, VT.—First Church of Christ, Scientist, of this place, has recently enlarged the hall where services are held by having partitions removed and taking in two rooms in the rear, the seating capacity now being about one hundred and fifty. The fact that this was a needed change is shown by larger audiences and increased interest.

Correspondence.

PROVIDENCE, R. I.—The contract to complete the edifice of First Church of Christ, Scientist, has been awarded.

Correspondence.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 1, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 16, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to May 31, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Falmouth, Norway, and St. Paul Streets, Boston, Mass.

THE LECTURES.

VENICE, CAL.

The new Christian Science church building was taxed to the limit of its capacity by an audience which evidenced great interest in the lecture on Christian Science delivered by Clarence C. Eaton. The lecturer was introduced by Robert Nimmo, Jr., who said in part,—

In reading the four gospels, we are impressed by the numerous accounts of the healing of the sick by Jesus. We read in the book of Acts that Jesus' followers continued this healing ministry after his ascension, and from historical records we learn that they practised and performed the works of divine healing for about three hundred years after that event; then for sixteen hundred years, except in some isolated instances, it seems this power was lost, the Saviour's command to heal the sick was ignored and finally forgotten. Preaching still continued, but it was not the kind that was pregnant with power. A good deal of conjecture has been indulged in as to why the ability to heal the sick seemed lost during all these years—it must have been that the gospel of Christ is what heals and transforms. Jesus said: "Ye shall know the truth, and the truth shall make you free." St. Paul writes, "My speech and my preaching was not with enticing words of man's wisdom, but in demonstration of the Spirit and of power." When Peter was accosted by the cripple, soliciting alms, he said, "Silver and gold have I none; but such as I have give I thee: In the name of Jesus Christ of Nazareth rise up and walk." This also was a demonstration of the power of Spirit, God, to heal through man, having that Mind in him "which was also in Christ Jesus;" but the time came when the things of the Spirit were lost sight of and material things were more highly prized. His self-styled followers could no longer say, "Silver and gold have I none;" neither could they say to the lame man, "Rise up and walk." The pursuit and acquisition of wealth became of first moment, whereas the Bible says, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

As foretold in Revelation, the healing truth, the true gospel of Christ in all its comprehensiveness and power, has again been restored to the world through the awakened spirituality and self-abnegation of a good woman, Mary Baker Eddy, who has given to the world in the Christian Science text-book, "Science and Health with Key to the Scriptures," a complete and demonstrable exposition of the Science of divine Mind, which brings to the receptive heart the peace of God; and this truth, as presented by our Leader, is fast proving to the world that it is the gospel as taught by Jesus. We who have experienced its blessings in relief from physical ills, in the destruction of sin with its subsequent discordant conditions, can testify to its truth because of the very works which it does.—*Venice Vanguard.*

HORNSEA, ENGLAND.

At the lecture on Christian Science by Bicknell Young, he was introduced by G. Warre Cornish, who said:—

It is no new subject that Mr. Young is to lecture on tonight. Here in Hornsea you have had a Christian Science organization in your midst since 1904, when services were first held here in a public hall. In 1905 the church was bought, and in 1909 it was dedicated as a Christian Science church free of debt. But there was another sense in which the subject was not new, for it was the old truths of the Bible that Christian Science stated anew.

There is a good story told of Lord Tennyson, the late poet-laureate, how he met an old dame in the village near Farringsford, who was of a pious and serious disposition. He said to her, in too jocular a tone to suit her, "Well, old lady, and what's the news?" She answered, "None that I

Digitized by Google

know of, except that Christ died for all men." "That's old news," said the poet, "and good news, and new news." Christian Science was old news, for it was the same truth as the writers of the Bible declared; it was certainly good news, for it healed the sick; and it was new news, for it met the need for a restatement of the old truths in a manner applicable to present-day experience.

Christian Science came to me some eight years ago; it answered all my doubts and questions, and satisfied all my aspirations and ideals. I was at the time a clergyman in the Church of England, and for a while I incorporated what I learned from Christian Science into my own sermons and teaching. Subsequently I found it the better and more helpful course to take my stand on a more exclusive Christian Science platform.—*Correspondence.*

COTUIT, MASS.

Virgil O. Strickler, at a lecture on Christian Science, delivered in Freedom hall, was introduced by Frederick D. Bates of Roxbury, who said:—

First Church of Christ, Scientist, of Cotuit, has extended to me the privilege of welcoming you here this evening in behalf of its members, and I am sure that they are very much gratified at this large attendance. The expression of your countenances indicates that you have come here prepared to hear something good, and I assure you that you are not going to be disappointed. You are not only going to hear "good," but you are going to derive a great deal of good from what you hear; in fact, every person in this hall tonight is going to hear something that henceforth will be of the greatest benefit to him as long as he lives. You are going to be assured that the word of God, the "still small voice," may be heard by you today, to direct you out of your troublesome problem and into the good that a loving Father has always had prepared for you.

The apostle Paul declared that "the word of God is quick, and powerful, and sharper than any two-edged sword." The realization of the truth of this Scriptural passage by a Christian Science practitioner healed one of my children almost instantaneously of a most dreaded illness. The realization of the power of the word of God to apply to our daily needs is stimulated and made operative by the reading of our text-book, which gives an understanding of the Bible that has been the means of healing all manner of hopeless cases of sickness and sin all over this wide world. The subject of Christian Science has, therefore, become one of world-wide discussion.—*Correspondence.*

LOS ANGELES, CAL.

Under the auspices of the Christian Science churches and society of Los Angeles, Francis J. Fluno, M. D., lectured in Third Church edifice of that city. The introductory remarks by G. M. Giffin were in part as follows:—

During the past fifty years the world has made greater progress along all lines of material development than probably during any similar period in history. Men's minds have grasped bigger truths and reached into higher accomplishments than ever before. Hitherto unknown fundamentals have been and are being brought to light and developed, breaking the fetters of past ignorance, enabling mankind to surround themselves with greater comforts, and bringing out a higher sense of life than formerly.

While the progress along material lines of development has been truly marvelous, yet side by side with this advancement has come a far greater, a far more important awakening in human consciousness to a spiritual truth brought to our understanding today through Mrs. Eddy's discovery of the Principle and rule which governed Jesus in his remarkable works,—healing the sick, raising the dead, walking the wave, and feeding the multitude in direct contradiction of the material laws and customs of the age in which these works were performed. Through her purity of life and spiritualization of thought, Mrs. Eddy was enabled to discern the Principle or fundamental truth which Jesus exemplified, and she has given it to the world, under the name of Christian Science, through the text-book, "Science and Health with Key to the Scriptures."—*Correspondence.*

SABULA, IOWA.

The Rev. W. T. Macleod, B.D., pastor of the Congregational church of Sabula, in introducing Frank H. Leonard, who delivered a lecture on Christian Science in that church, said in part,—

We are indebted to the Christian Science society of Sabula for this opportunity to hear the subject expounded by its friends and not distorted by its enemies. In my extensive travels, both in Canada and the United States, I attended scores of Christian Science meetings both on Wednesday and Sunday, and I observed the following commendable features: First, about nine tenths of the members attended both meetings regularly, and in every case the building was comfortably filled, and in many places filled to overflowing. The audience was composed of wealthy and cultured people, who gave earnest attention to the service. Christian Science advocates and succeeds in the salvation or safety of the bodies and souls of men. It is thus Christian and scientific, inasmuch as it teaches and successfully practises the truth given by Jesus to all the world.—*Correspondence.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship.

Anita, Iowa.—Christian church, 8 p.m., Oct. 11.
Aurora, Ill.—First Congregational church, corner East Park place and Main street, 3 p.m., Oct. 6.
Benton Harbor, Mich.—Bell opera house, 8 p.m., Oct. 10.
Brookins, S. Dak.—Church building, corner 6th street and Fifth avenue, 8 p.m., Oct. 3.
Burlington, Kan.—Newk's theater, 8 p.m., Oct. 11.
Canyon, Texas.—Gem theater, Oct. 8.
Chicago, Ill. (Second Church).—Church edifice, Wrightwood and Pine Grove avenues, 8 p.m., Oct. 10, 11.
Des Moines, Iowa.—Auditorium, 3 p.m., Oct. 6.
Detroit, Mich. (Second Church).—Church auditorium, East Grand boulevard, near Jefferson, 3 p.m. and 8 p.m., Oct. 6.
Dixon, Ill.—Peoples church, 8 p.m., Oct. 11.
Farmer City, Ill.—Columbian opera house, Sept. 29.
Flushing, Mich.—Maccabee hall, over post-office, 8:30 p.m. (local time), Oct. 5.
Fort Collins, Col.—Majestic theater, 3 p.m., Oct. 6.
Fort Edward, N. Y.—Bradley opera house, 8 p.m., Oct. 8.
Franklin, Pa.—Franklin armory, 8:15 p.m., Oct. 10.
Gary, Ind.—Commercial Club hall, 615 Broadway, 8 p.m., Oct. 7.
Grand Rapids, Mich.—Powers' theater, 8 p.m., Oct. 7.
Hutchinson, Kan.—Convention hall, 8 p.m., Oct. 11.
Jonesville, Mich.—"Theater," 8 p.m., Oct. 11.
Kalamazoo, Mich.—Academy of Music, 8 p.m., Oct. 8.
Long Beach, Cal.—Auditorium, 8 p.m., Oct. 8.
Madison, Wis.—Woman's building, 8 p.m., Oct. 10.
Muskegon, Mich.—Woman's Club building, Webster avenue and 2d street, 8 p.m., Oct. 8.
Oakland, Cal. (First Church).—Macdonough theater, 8 p.m., Oct. 4.
Pomona, Cal.—Fraternal Aid opera house, 8 p.m., Oct. 7.
Reading, Mass.—Odd Fellows hall, 3 p.m., Oct. 6.
San Francisco, Cal. (First Church).—Dreamland rink, Steiner street near Sutter, 3 p.m., Oct. 6.
San Mateo, Cal.—Masonic building, corner Ellsworth and Tilton avenues, 8 p.m., Oct. 3.
Sheboygan, Wis.—Opera house, 8 p.m., Oct. 8.
Webster City, Iowa.—Armory opera house, 8 p.m., Oct. 7.

TESTIMONIES OF HEALING.

Christian Science was presented to me in 1898, but although I read Science and Health I failed to understand its contents. I was homesick, and my surroundings made me feel extremely unhappy, and I believed that I must accept all this patiently, as coming from God. Thus I tried to compromise with my destiny, but as years went on I became misanthropic, and lost faith in God and men. Finally, however, I took courage and confided all my troubles to a lady with whom I was well acquainted and who was a teacher and practitioner of Christian Science. I shall never forget the impression it made when she told me that God is Love, and that Love destroys hate; that God is Truth, and that Truth casts out error, and that I need not suffer from other people's sins. Then for the first time a light appeared in my life which has remained ever since, and I have drawn my daily inspiration from the Bible and the text-book, Science and Health. In this book it is written that "desire is prayer" (p. 1). With the enfoldment of truth in my consciousness came the recognition that God is Love, therefore He is not the creator of evil in any form. Rising in the strength of this truth, I faced the darkness without fear, and proved its powerlessness by reducing the error to its common denominator, nothingness. Where unspeakable misery once reigned, there is now peace, and a calmness which cannot be disturbed.

In June, 1910, I discovered an abnormal growth, which took on a serious form and grew so fast that I was filled with fear and asked a Christian Science practitioner for help. The result was that inside of eleven days the growth had disappeared. Mind had performed the operation painlessly, without leaving a vestige of the complaint. A stomach trouble of many years' standing, as well as rheumatism in my foot, for which I had vainly sought cure in various watering-places in Germany, were thoroughly healed through the study of Science and Health. Later, I had a severe attack of acute lung trouble and spinal meningitis, which greatly alarmed my household and friends, but I had an abiding consciousness of God's omnipresence and omnipotence which lifted me above the physical manifestation, and I knew that there are not two powers,—good and evil. I was, indeed, confident in the assurance of deliverance, because I depended upon God. Through the study of the text-book, my husband was freed of sciatic pain which had troubled him for many years, and in January, 1911, he was completely healed through Christian Science treatment of an eruptive disease which manifested itself in a severe form. In a more recent experience he had a severe injury to the knee-joint. His entire leg was swollen to an enormous size and was discolored. Truth was the only surgeon, and the leg was healed without the usual consequences expected under *materia medica*, such as shortening of the leg, etc. This to me was a great proof of the power of divine Love.

I thank God daily for the experiences which have led me to the arms of divine Love and given me the assurance that all evil may be overcome. I shall never cease to love that noble woman who has left as a blessed inheritance to suffering humanity the text-book, "Science and Health with Key to the Scriptures," with her other valuable works. My prayer is that all men may seek the blessings of Truth, for God is an ever-present help in time of trouble. On page 323 of our text-book we read: "The true idea of God gives the true understanding of Life and Love, robs the grave of victory, takes away all sin and the delusion that there are other minds, and destroys mortality." God, the creator of the universe, is the only Mind, and man as the image of God is the reflection of Spirit and is immortal.

DOROTHEE M. DE COSTA BOLEN, Kansas City, Mo.

I am glad of the opportunity to verify the testimony of my wife, who was my practitioner. I must remark here, that after the injury to my knee I felt absolutely no pain after the first day, and I was not confined to my bed at all. My leg was healed and all signs of the injury gone within six weeks from the time of the accident. My wife is a graduate of medicine, also at one time practised dental surgery, until the voice of Truth caused her to consecrate her life to Christian Science, thus helping humanity to look to God alone for guidance and health.

GEORGE W. BOLEN, Kansas City, Mo.

[Translated from the German.]

I am indeed grateful for the many blessings which have come to me through Christian Science. Since childhood I had suffered from abscesses and cramps, and when grown up other distressing conditions appeared. At the age of twenty-five, after all material remedies and medical treatment had failed and my physician had given me up, I turned for help to Christian Science, and with a little over a week's treatment I was perfectly well, and have remained so. Half a year later, what is called septic poison penetrated into a deep cut which I had on one finger, causing it to become very much swollen and discolored, while I experienced intense pain in the arm up to the shoulder. I treated myself in the truth, and a Christian Scientist helped me during that night. In the morning I was free from pain, and the finger healed in a normal way. Soon after, a good-sized nail pierced my foot, so that the blood came through the shoe. The pain was severe, and those standing by said that poisoning was liable to set in; but I went to my room and declared the truth, and after a quarter of an hour I felt no more pain, the foot ceased to bleed, and was soon healed.

Christian Science has been a great help to me in every way, so that it is impossible for me to tell of all the instances. On a certain evening two men came to the house where I was alone as a housekeeper, to return some silver belonging to the household. They made a sign to each other, and one told the other to close the door so that no one might enter. For a moment I was terror-stricken, and thought I would run out by the back door, but I then realized that God was my shield and my protection, and that no error could have any power over me. When the man who had locked the door came back, I very quietly told him that it would have to stay open, that he had no right to lock it. The men exchanged glances, and when I looked at them they cast their eyes to the ground. Then they laughed, counted the silver, and went away quietly.

For these benefits, as well as for the growing understanding of God which Christian Science brings to me, I am exceedingly grateful. I am grateful also to our revered Leader, Mrs. Eddy, for having taught us how to turn to God for help in the right way.

JULIE SULIMA, Berlin, Germany.

I wish to add this testimony to those of the thousands who have been healed in Christian Science, and who have been made to see "a new heaven and a new earth" through the workings of a truth that is as eternal and omnipresent as the Father Himself. I was healed several years ago of a severe bowel trouble of six years' standing. Every material remedy of which we knew had been tried, also change of climate; but, like the woman who touched the hem of Christ's garment and who "had suffered many things of many physicians, and had spent all that she had," I was "nothing bettered, but rather grew worse." One of the best physicians in Chicago said that with special care my life might be prolonged a year or so, but that the case was incurable.

As a last resort I turned to Christian Science, which had been recommended to me by friends when my trouble first appeared, but which I had, in ignorance of its teachings, rejected. I went to see a practitioner, and his first words convinced me that he was telling me of the great truths of God, and in my hunger to learn more, I almost forgot the

Digitized by Google

physical healing for which I had come. In a short time I was healed, not only of the bowel trouble but of many other ills. Christian Science indeed reveals "the living, palpitating presence of Christ, Truth, which healed the sick" (Science and Health, p. 351), and in gratitude that I have felt the touch of Truth and am well, I am endeavoring so to think and live that God may be glorified on the earth through me, as He is in heaven.

EMMA SEMLER, Dorchester, Neb.

My heart is overflowing with gratitude for the understanding of Truth's power gained from the Lesson-Sermon. I awakened one night with a severe attack of illness and great pain in the head, eyes, and limbs, and I treated myself nearly all night in Christian Science, but in the morning nothing definite had been accomplished, though I was relieved in a way. I finally took the Bible and Science and Health and with the *Quarterly* read the Lesson on "Adam and Fallen Man." When I had finished the third section I was healed. I was able to dress, go out to dinner, and attend the Wednesday evening meeting. Many times I have been helped in a similar manner while studying the Lesson-Sermon. This proved to me that evil is an illusion of sense, which is destroyed by Christ, Truth, through the understanding gained in Christian Science.

I am very grateful for this new-old truth that our revered Leader was able to give us, her pure life having enabled her to hear the "still, small voice," and give us a fuller interpretation of the Scriptures.

S. FRANCES PARSONS, Chicago, Ill.

When I first came to Christian Science, about twelve years ago, I knew absolutely nothing about it, and cared very little what it was, if it only brought me relief from rheumatism, from which I had suffered many weary years. My first experience with Christian Science was entirely satisfactory, but through no fault of my own I had to give it up. In about a year I had another attack of the disease, worse than before, and again I turned to Christian Science and found almost immediate relief. This time I was cured of a most serious bowel trouble, which had been given up by two physicians, one of whom is still an eminent practitioner of his profession in Boise, Idaho. For the second time, through the most bitter opposition, I was forced to give up Christian Science and its cheerful environment, and go back to discord, doctors, and distress. I had tried material remedies of all sorts, including magnetic healing and electricity, but all without any permanent benefit.

A few years ago I found myself, like the prodigal son, far away from the Father's house, sick and discouraged, and I resolved to have freedom in choosing my religion and the method I would employ to regain my health. Now I am back again in the great family circle of Christian Scientists, partaking of the good things of our heavenly Father's kingdom, and am healthy and happy. Although I am still in an invalid's chair, I am by no means an invalid in the ordinary sense of the word, and I fain would be "a willing disciple at the heavenly gate, waiting for the Mind of Christ" (Science and Health, Preface, p. ix). I wish to express my gratitude to God, also to Mrs. Eddy, who has made these things possible.—W. G. C. BLESSINGER, Caldwell, Idaho.

I send with gratitude an honest acknowledgment of the many benefits received in Christian Science. I am glad to give out to others some of the experiences in which its teachings have been applied and proven true, knowing that if so much can be gained by even one, the same and even more may be gained by others. Some of the experiences in which we have proven the power of Truth were the so-called contagious diseases of children, accidents, coughs and throat trouble, besides a large scrofulous sore on my husband's back which had troubled him for eight years. This was overcome by Christian Science in three weeks. After the nature of the error was clearly seen, its nothingness was quickly proved.

More recently, one afternoon, while my husband and I and our two children were on a street-car, we had need to call upon Truth for help. My husband was sitting with one child directly under the cash-register, when all at once the register fell upon him with an awful blow. It almost stunned him, and there was need for instantaneous help. The first thought given me was from Science and Health (p. 201), where Mrs. Eddy says, "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thought." I voiced to him at once the first half of this assuring thought, till the conductor and motorman came and lifted the register, and I then continued to work along the line of truth thus given me. My husband was helped in a few minutes, after which we were transferred to another car-line. We were able to go on with our trip, and in about an hour he was perfectly free, and never has had the least bad effect from the accident.

This healing seemed wonderful to us, but the peace and quiet of mind in which we were all kept was even more significant, and we know that if the truth which Mrs. Eddy has brought anew to the whole world can do these things, it can and will do all things for those who receive and apply it. For these blessings we would express our thanks to God through the *Sentinel*, that others may receive the same help and be blessed thereby.

MRS. SEVILLA MAYER, Indianapolis, Ind.

When we know of a disease having been healed in Christian Science which physicians pronounce incurable, such as locomotor ataxia, or creeping paralysis, I feel the testimony should be given. My father, who was ninety-one years of age, had spent his long life in preaching the gospel as he understood it, but in the later years he had known of some wonderful cures by Christian Science, among his friends and church-members, and he said he knew that Christian Science healed the sick. He called to me one morning, saying that he was slowly becoming paralyzed, and I found he was very much excited and full of fear. I said that something must be done immediately, and asked if he would like me to call a doctor. He said that from his knowledge of the disease, and the ill success of medical treatment, he would prefer Christian Science treatment, and this he had. For three or four days all his left side was very much affected, and we had to assist him in walking. He then had scarcely any use of his hand, but after that time he began to improve, and in less than two weeks he was entirely free. This was several years ago, and the healing from this trouble was permanent, though he has recently passed on at a very advanced age.

Since that time we have had many good and permanent cases of healing in our family. Three individuals who were very near and dear to me, and who suffered from illusions which made them fit subjects for an insane asylum, were saved from such fate by being healed in Christian Science. There are persons now living here whose eyes may fall upon these lines, who can testify to the truth of the latter statement. For these, and other cases of healing, too numerous to mention, I am deeply grateful to divine Truth, and grateful also for the life of the noble woman who toiled so bravely to give this knowledge to the world.

MRS. CARRIE M. MACON, Denver, Col.

[Translated from the German.]

It is with a sense of deep gratitude that I wish to tell of the blessings which I have experienced through Christian Science. When I turned to Christian Science I was afflicted with inflammation of the eyes, and medical treatment for a year and a half had failed to bring the relief for which I was longing. The condition seemed to be beyond the reach

Digitized by Google

of *materia medica*, and the opinion of various physicians regarding the trouble pointed to a most unfavorable and alarming condition; but it was impossible for me to accept this thought, and my attention having been repeatedly called to Christian Science, I decided to investigate its teachings, and attended a service. This brought me a sense of great joy and certainty regarding my trust in God. I applied for treatment on the same evening, and rejoiced when told that it would be taken up.

At that time my left eye, with which I had been absolutely unable to see for quite a while, was inflamed and protuberant, and presented a hopeless appearance, while the right eye showed an inflamed condition and opacity. The treatment in Christian Science was attended by success from the start. The dancing specks which I had been seeing with my right eye disappeared at once, and the darkness of the left eye was changed into a misty light. The explanations of Christian Science seemed true to me, and eliminated from my thought the fear which I had entertained up to that time, so that I felt strong enough to do my part of the work. This necessitated a great deal of patience, but I did not lose hold of the truth, even when it seemed that I could not bear the rays of the sun—to me a most painful experience. In Isaiah we read: "He that believeth shall not make haste," and these words upheld me and caused me to stand fast for Truth's sake. To my great joy the mist before the left eye grew thinner from day to day, until one morning I was able to see a little. My eye was saved, and I experienced further improvement proportionately to my willingness to follow the behests of Christian Science. To my deepfelt joy it brought me a better understanding of the Bible, in particular of the teachings of Jesus, and freed me of everything which tried to impair the progress of my steadily improving vision. There was nothing now to impede the healing, and it soon was perfect. The first time I was again able to look straight forward, I felt as I had in times past—even the gray specks had disappeared, and I could see very well, although the physician had said that these specks were scars which would remain.

I am deeply grateful to divine Love for Christian Science, also to Mrs. Eddy, the Founder of this movement. It has brought me the light which we have in Christ, the truth about God and man. To this light alone do I owe the brightness which now surrounds me, and my earnest desire is to follow this light henceforward. I feel comforted to know that it will increase "unto the perfect day."

DORIS WEISSENBORN, Hannover, Germany.

Seven years ago one of our little girls, aged two and a half years, was healed of a supposedly incurable disease of the kidneys by Christian Science treatment, and this led my husband and myself to take up the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. The transformation in our home during these seven years has indeed been wonderful. I had always been considered very delicate, and suffered more or less continually from a bowel difficulty. At the time of my introduction to Christian Science I was preparing for a severe surgical operation, which the doctors told me was necessary in order to prolong my life; but, thanks to Christian Science, the ailment disappeared and also all need for an operation, and I am strong and vigorous.

I am also very thankful for the help Christian Science affords to parents in the bringing up of children. Some time ago my youngest daughter showed the very alarming symptoms of a fever. The disease being prevalent in the neighborhood, I had been trying to protect my children from the belief in contagion, but I still seemed to dread the thought of a quarantine placard. The next day the child was very much worse and I could not resist the temptation to look at her throat. What I saw did not allay my fears, but it did spur me to a clearer and more active effort at right thinking, with the corresponding result that the third day the child was absolutely normal and was soon allowed to attend school.

A few weeks previous to this, on my visiting the school one day, the teacher called my attention to the fact that our boy was very deficient in history and arithmetic, and that she thought it would be best to let him drop back a class. That evening I spoke to the boy about it, and he felt very badly at the thought of dropping back; so I told him we must know that God is all intelligence, and that we as His children must reflect intelligence. With the promise that I would help him, he went to school the next morning, and when he came home in the evening he was the happiest boy imaginable. The teacher had told him that he had never done so well before, and wanted to know what had happened to him, and he has kept on getting good marks in his studies ever since. I am, indeed, grateful to God, also to Mrs. Eddy for making this truth so plain that even the little children can grasp and understand it.

MRS. SOPHIE CHELSON, Los Angeles, Cal.

When Christian Science found me, I was to mortal sense at death's door, but God in His tender mercy meant it otherwise for me. What seemed my end was but a beginning in which all things became new. About sixteen years ago I was for three years troubled with hemorrhages from the lungs, the physician saying I would outgrow them if I took good care of myself; and this seemed to be the case, until in February, 1910, when the hemorrhage began again. Medical treatment stopped it, but serious trouble followed, namely, convulsions, lasting three and four hours at the time. This outward disturbance ceased, but the internal condition remained unchanged and the end seemed at hand. Then man's extremity was shown to be God's opportunity, and Christian Science was recommended.

I had never felt any interest in this teaching, for I knew nothing of it except that its adherents did not use drugs, while I was a firm believer in homeopathy and also felt quite satisfied with the religious faith in which I had been reared. When the Christian Science practitioner came, I asked her if she would take my God from me; if so, I would have nothing to do with Christian Science. To this she answered lovingly, "Take God from you, never; Christian Science will make you love God more;" and such indeed has been the case. Treatment was begun, and thank God, I was healed in that same hour. I was asked to rise, and I did so; then I dressed myself, and have not been in bed since during the day. That night I enjoyed the first peaceful sleep in three weeks.

Jesus said: "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." The Bible has become illumined for me through our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and words cannot express the heartfelt gratitude which I have toward God, also to our revered Leader for the many blessings we have received through the teachings of Christian Science.

MRS. KATHERINE G. KORDULA, Baltimore, Md.

For the benefit of any who may be in the same state under which I was, and in gratitude for the many blessings received, knowing that I owe all to Christian Science, I submit the following testimony. I was thoroughly, effectually, and instantly released from the bonds of alcoholism under which I had been held for more than twenty years, a bondage which increased in intensity as time went on. During all these years I had allowed myself to drift with the tide, gradually drawing nearer to the precipice, until the yawning abyss of destruction was visible to my mortal senses. All this time mortal mind had been constantly assuring me that I was all right, and the wonder of the age, on account of my being able to absorb more whisky, stand up before the bar longer, and apparently show less effects, than

Digitized by Google

any one. Friends would often advise better things, but all to no avail. I became separated from family and friends through this terrible curse, and seemingly was completely alone, the demon, strong drink, my only companion, while error constantly championed my case with proffers of more drink for every ache and pain, whether mental or physical.

I cannot picture too strongly my former condition, nor can words portray the mental anguish which my friends and absent ones had passed through in the years that had gone. No one knew just where I was, and I had no desire to have them know. Such was my condition when one Sunday I was finally prevailed upon to attend a Christian Science service. I was so impressed with the harmony which prevailed at that service, and the truth was so forcibly placed before me, that a desire was awakened for more, and I inquired when there would be an opportunity to attend another service. I was told there would be one the following Wednesday evening, and when the time came I was there with the friend who had been instrumental in starting me in the right direction.

Shortly after seeking more of the truth, I became the possessor of a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, also of a copy of the Bible, which I had not even looked into for years. I began to read, at first a very little, then more, until one night, while sitting alone in my room with this wonderful book of Truth before me, I realized that I felt perfectly contented and restful, just as one does after a tremendous burden has been removed. I had no desire to go back up town to visit my old resorts, or to hobnob with former convivial companions, but retired with a full sense that some great change had taken place in my life. The following morning, on the way down to breakfast, I never noticed a place where they sold or dispensed liquors, although I passed no less than fifteen. Always for years previous, the nearer I got to the place the faster I went, in order to satisfy the unquenchable thirst, and would usually consume from one to two hours in imbibing to get ready to eat, and then the breakfast was usually a disappointment; but on this particular morning I ate a hearty breakfast, going to work on time for once. Luncheon was attended with similar results, and finally the dinner hour passed, then the evening up to the time of retiring (about half-past ten), which was the earliest for years.

Thus passed the first day of my new life, and every succeeding day since, now over three years, I have realized the same freedom. Never has there been for one moment since that memorable night the slightest desire to partake of intoxicants in any form, neither has a solitary drop of whisky passed my lips. Since that time I have also been able to give up the use of tobacco, to which I had been addicted, the desire being removed instantly and effectually. Truth removed the basic error, and there was no room left for further argument from mortal mind.

Some time afterward I received a registered letter from one of my friends, who informed me that they had been searching for my address for years, that they might communicate with me. I was also surprised to receive through them a letter from an only sister, from whom I had not heard for years; and the best news of all was when, after I had replied to these letters and told them of the rich and everlasting blessings I had obtained from Christian Science through the reading of Science and Health, I was informed by return mail that they too had become interested in Science and had been reading the text-book for two years previous. Thus had Love and Truth prevailed! Later I met my sister, and it is needless to say that it was a very enjoyable meeting, as we rehearsed all the events in connection with my reformation.

I thank God for the privilege of giving this testimony, and hope it will shed a ray of light and encouragement on those who may be in need.

WILLIAM E. STEINBACH, Utica, N. Y.

FROM OUR EXCHANGES.

[*Christian World.*]

It is still the duty of the church, even at the cost of misunderstanding, to direct men's minds to the ultimate questions, but it will direct them with more power when it is free from the suspicion that it is simply evading a present duty by its reference to ideal considerations. The suspicion can be best removed when the church is ordering its own household according to the standard of values which it preaches.

A new standard of values! A new estimate of the good things! New definitions and scales and measures! It is the business of the church in the present distress to preach these things with the power behind it of lives which are experiments in these things. It will be able to say then that any adjustment of material wealth, to have its value both for the rich and the poor of our present order, must carry along with it the acceptance of these new estimates. If the present values are preserved, if we still define wealth in the terms of material things, as we in the West have done for ages—then it is difficult to see how any adjustment can be permanently valuable or how it can be preserved. And the doubt which comes to us now is not a doubt of the wisdom shown in recent legislation, but rather the doubt lest we fail to create along with the legislation the new spirit without which it must largely fail.

[*Pacific Christian Advocate.*]

Many have no end of wondering why they make such indifferent progress in religious things; why they are not taller, stronger, more robust in spiritual manhood; why there is so little fruit while they know it is their Master's will that they "bear much fruit"; and why so few are led to the Lord by them. There is a sentence of divine truth that may answer all such anxious inquiries, "Ye have not, because ye ask amiss." And this, too, may explain the never-ceasing cry for "power" raised everywhere around us. "Ye shall receive power, after that the Holy Ghost is come upon you," and, "How much more shall your heavenly Father give the Holy Spirit to them that ask him?" "Ask" is the key that unlocks the chest of gospel treasures. Some "have not," because they "ask not," and some "ask, and receive not," because they "ask amiss."

[Charles Howard Shinn in *Public.*]

All of the great philosophies of life conceive of time as only an eddy in the currents of eternities; we are living in and working in that which is—forever and forever. All of the greater prophets and seers love the symbol of the threshing-floor, where the wheat and the chaff are separated. It remains in literature, as the sword and a thousand other things remain, because it eternally sets forth the truth behind the fact, the hope beyond the event. The reason why history must ever be written over, and told in the light of new comprehension, is because of the dust and the noise of the threshing-floors of eternity. After a while the wheat is swept together, the chaff is winnowed and cast out; millions of great reputations perish in an hour; men recognize another Liberator, and for a moment there is a silence on earth and in the heavens.

[*Universalist Leader.*]

The gestating spirit of the gospel is at work everywhere in society. The leaven is in the meal, and will remain until it leaven the whole lump. It is human life as a whole, it is society, it is the world, that is feeling the thrill of the springtime. It is the bud and the flower, the leaf and the twig, the whole tree of life, which is being transformed by the sap from that root which runs up or down into the life of God. It is the total of life, the outside and inside, the

Digitized by Google

mind and the heart and the hand, that is being brought into the circle of the sweet influence of the personality of Jesus. The family, the shop, the office, the market-place, the court, and the state are losing their ancient isolations and are being made one for the service of justice and mercy and truth. The ministry of Jesus to men is becoming really universal.

[*Christian Advocate.*]

A world of great possibilities, in which nothing is really impossible, with an expectation of continuous enlargement—that is the proper outlook upon life. One should always count the good prospects as possessions only waiting to be realized. That was a simple matter in youth. We had come freshly to the task of living, and it seemed an easy thing to succeed. We were even surprised at the failures other men had made, and were quite sure we should never make them ourselves. Yet the very uncertainty of life gave us a thrill of satisfaction.

Give a painter a hundred square feet of canvas, and tell him to fill it with the figures teeming in his brain. That is a type of what life appeared to be at the beginning. Seventy years or more of opportunity had been delivered to us. One could select a business or profession at will, and make of it what he wished. It is that confidence which makes youth so delightful. Elderly people smile compassionately upon it, knowing it will not endure. But it ought to last as long as life, and it glorifies character while it continues. The great need is to project that mood of expectancy into the mature years. When that is done people do not grow old. The secret of perpetual youth is just this: "I will look for the new and the great as long as I live."

[*Zion's Herald.*]

Every man must have his own theology; but it must not be his alone, acquired and matured in complete isolation from the great world of thought and of racial experience. Every thinker ought to reckon with the consensus of enlightened Christian opinion that has obtained during the centuries, or that is now being developed, appropriating to his own use what is good in it, and rejecting the rest. There is room in theology as well as in philosophy both for collectivism and individualism. Let every Christian thinker—and each Christian ought to be a thinker up to the limit of his mental capacity—take into consideration the views or findings of others, and then be fully persuaded in his own mind.

[*Churchman.*]

Inherently, the temperament of the Christian should be manifested by its open-mindedness. Always and everywhere there should be a willingness to believe that betterment is possible and a conviction that, through the application of Christ's teaching, betterment can be actualized through combined Christian effort. The acquiescence in things as they are is in no sense in harmony with that incomparable outlook for change and progress which marked the origins of the Christian church. The stirring vision of optimism should be restored to the church life of today; it should illuminate, especially, all lines of church activity where religion and the world are found in close contact.

[Rev. A. G. Richards, reported in *Mobile* (Ala.) *Register.*]

The world needs another Pentecost, when all churches, Greek, Roman, Anglican, and Protestant, may come together, all speaking, as it were, in one tongue, combining the best in each and uniting for the purpose of forwarding Christianity's power and usefulness in the world.

[Rev. J. Phillip Rogers, B.A., in *British Congregationalist.*]

What were the apostles to do? To preach and heal. They were empowered by Christ to bring truth to the mind and healing to the body. These two should always go together. We must show men that we care for their temporal welfare as well as for their souls.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound: 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The pamphlet "Seeking and Finding" has been translated into Dutch ("Zoeken en Vinden") and is now on sale; 36 pages and cover, at the prices of the regular pamphlets.

Catalogue No. 20, June, 1912, has recently been issued and will be supplied to reading-rooms upon request. This catalogue contains complete lists of all publications issued by the Society, and of the works of Mary Baker Eddy published by Allison V. Stewart.

A new pamphlet, "Christian Science Healing *versus* Mental Suggestion," by Frederick Dixon, reprinted from the *Weekly Budget*, London, England, is now on sale; 36 pages and cover, at the prices of the regular pamphlets.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: ITS RELIGIOUS PHILOSOPHY. By HON. CLARENCE A. BUSKIRK.

CAUSATION: VIEWED IN THE LIGHT OF CHRISTIAN SCIENCE. By FREDERICK DIXON. Also printed in Swedish.

CHRISTIAN SCIENCE VS. MENTAL SUGGESTION. By FREDERICK DIXON. Reprinted from the *Weekly Budget*, London, England.

CHRISTIAN SCIENCE: A RELIGION OF DOING. By JUDGE WILLIAM G. EWING.

CHRISTIAN SCIENCE VS. FINITE SENSE. By FRANCIS J. FLUNO, M.D.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book); single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883 1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

The engineers' calculations as to the sufficiency of the water supply in the Panama canal have been amply vindicated by the figures just reported from the isthmus. The great lake of Gatun, which is being created by the dam at that point, during the week of Sept. 2 to 9 accumulated more than five and a half billion cubic feet of water. During the period the water level of the lake rose three feet. Every time a ship is locked through the canal, five and a half million cubic feet of water must pass, and when the lake is full it will afford enough water to fill the locks one hundred and fifty times daily, which is at least twice as fast as the ships can pass. When the surface of the lake reaches its maximum height of eighty-seven feet above sea level, with the water just flowing over the crest of the dam, it will contain 192,250,000,000 cubic feet of water.

New Orleans, with its population of three hundred and forty thousand, is the first large city to adopt the commission form of government. Six others have one hundred thousand population or more: Oakland, Cal., Birmingham, Ala.; Memphis, Tenn.; Omaha, Neb.; Lowell, Mass., and Spokane, Wash. Since Galveston, Texas, put its government into commission eleven years ago, after its great disaster, over two hundred cities have followed its example, getting short ballots and responsible efficiency.

The fifth international congress of Chambers of Commerce and Commercial and Industrial Associations was held in Boston, under the auspices of the Boston Chamber of Commerce last week. Many countries were represented. The official program was printed in sixteen different languages. President Taft at a luncheon had an opportunity to speak to the representatives of the commercial world on the subject of world peace.

The Panama canal commission has set Oct. 15, 1913, as the tentative date for the passage of the first vessel through the canal. A naval vessel will be selected for the initial trip. Commercial vessels will have its unrestricted use in December, 1914. The canal will be completed below the estimated cost of four hundred million dollars, and it may run as low as three hundred and seventy-five million dollars.

The attendance at the opening session of the Lakes-to-the-Gulf Deepwaters Association at Little Rock, Ark., last week, was taken as an indication that advocates of a deeper channel in the Mississippi river were prepared to continue their propaganda. Colonel Roosevelt spoke at one session.

International.

The question of the taxes on food in Germany has reached a crisis. An enormous demonstration, organized by the Socialists of Berlin and the other great German industrial cities, has been held, to protest against the continuation of the present condition of things, and to demand the immediate opening of the Reichstag; the permission for live stock and flesh to cross the frontiers without duty; the removal of premiums on grain exports, and the abolition of all food duties. In Berlin one hundred thousand people filled between sixty and seventy halls, where the resolutions alluded to were put and carried unanimously.

The Chinese government has negotiated a loan of ten million pounds with London bankers through a London stock broker and the first half million has been paid. The six-power group has made a protest, but it is not considered that it will be able to check the loan. China, it is declared, is in no need of money at present, except sufficient to pay her soldiers and disband the army. The loan will have as security the salt tax.

A new movement to obtain peace in northern Mexico was made last week when President Madero and his cabinet instructed the minister of war to offer amnesty to the followers of Pascual Orozco, the rebel leader. President Madero has sent to Congress a message requesting an appropriation of ten million dollars, or the authorization of making a loan for that amount to be used in conducting the campaign against the rebels.

The present officials of China are drawn from all classes of the people. They must possess some special qualifications, such as a knowledge of a foreign language, not necessarily English. Most of them are men who have been trained in Europe, America, or Japan. A great proportion of the new class of civil servants are Christians.

The commission appointed by the prefect of the Seine to deal with the disfigurement of the streets, and especially public buildings, of Paris by the bill posters is bringing good results, for the municipal council itself has been stimulated into taking drastic action.

The German possessions of Samoa and New Guinea, Kaiser Wilhelm's land, are being linked up by wireless telegraphy. Two large coast stations are being erected in New Guinea, one in Samoa and one in Nauru or Pleasant Island.

Less than three per cent of the land in Norway is under cultivation; twenty-five per cent is covered with forests, and the remainder consists of moors, mountains, lakes, and marshes.

Peking, China, now has a telephone service with two central exchanges laid out for sixty-four hundred subscribers.

Industrial and Commercial.

Eight hundred million feet of sugar and yellow pine in the Sierra forest reserve in Madera county, Cal., has been purchased from the government by the Sierra Sugar Pine Company, a concern recently organized by San Francisco capitalists. This is the biggest amount of lumber that the government ever has sold in one contract. It will be the largest sugar pine belt operation in California. The price under the contract, which was closed after two years' work by the promoters, was three dollars a thousand feet for sugar pine and two dollars and a half a thousand feet for yellow pine. This makes practically a three-million-dollar deal, the timber to be scaled and paid for when cut. The Sierra Sugar Pine Company owns outright three hundred million feet of sugar pine in the same district.

The Southern Aluminum Company has awarded to the General Electric Company, through its Charlotte (N. C.) branch, a four hundred thousand-dollar contract for the electrical equipment for the forty thousand horsepower hydro-electric plant at Whitney, which will supply electricity for the extensive aluminum works to be established at that place. The equipment purchased consists of seven five thousand-kilowatt and two twenty-five hundred-kilowatt, two hundred and fifty volt, alternating current generators, with all necessary switchboard and control apparatus, and the contract is probably the largest single one ever given in the South for electrical machinery.

Bumper crops of corn, white potatoes, spring wheat, oats, barley, rye, and buckwheat are forecasted by the crop reporting board of the department of agriculture in its September report. Corn probably will reach two billion nine hundred and ninety-five million bushels, the white potato three hundred and ninety-eight million bushels, the spring wheat crop three hundred million bushels, oats one billion two hundred and ninety million bushels. It is believed that at least four hundred and twenty-five thousand more cars will be needed for fruit and vegetables alone than were needed during the preceding fall and winter.

The Mallet locomotives just built for the Virginia railway are claimed to be the most powerful in the world. The locomotive and tender weigh seven hundred and fifty-two thousand pounds, the fire-box is large enough to hold a donkey switching engine, and the weight on the sixteen driving wheels is estimated to be four hundred and seventy-nine thousand two hundred pounds. It is estimated that these locomotives will haul one hundred and fifty-five loaded fifty-ton freight cars at ten miles an hour.

When the latest million barrels of cement purchased have been used in construction work on the Panama canal, the amount of cement employed in the building of the big ditch will have reached a total of two billion two hundred million pounds. The cost of this item of construction reaches six million five hundred thousand dollars. If the barrels which contained the cement could be placed end to end they would extend twenty-three hundred miles.

Engineers and surveyors in the employ of Alberta, Peace River & Eastern Railway Company, which purposes building a new transcontinental line from Hudson bay to the Pacific coast by way of Edmonton, have started on ponies on a trip of more than two thousand miles into the north country to survey the route. From Lesser Slave lake the party will continue by dog trains, consuming more than a year in the undertaking.

The movement of peaches from Georgia territory over the Southern railway for 1912 consisted of 5,331 cars as compared with 4,820 cars in 1910. Of this number 4,993 cars originated at points within the state of Georgia. The total movement of peaches over all lines for 1912 is given at 7,139 cars.

The Norwegian government has made a contract with the Marconi Company for the erection of wireless stations in Norway and in the neighborhood of New York for commercial service.

Offices were opened in Bangor, Maine, last week by the Farmers' Union of that state. The great and constantly increasing Maine potato crop, averaging twenty-five million bushels annually, will be marketed systematically.

A new two million five hundred thousand dollar double-track bridge will replace the old structure for railroads crossing the Missouri river at Kansas City, Mo.

Approximately seventy-five billion feet of merchantable timber is standing in the Minnesota woods, according to the report of the state forester.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

CHRISTIAN SCIENCE BUILDING.

WILLARD S. MATTOX.

A CRITIC, not altogether unfriendly, once predicted that Christian Science would survive everything but prosperity. The observation is astute, and if somewhat trite, will nevertheless not be lost upon Christian Scientists. Mrs. Eddy tells us that Christ Jesus was "the most scientific man that ever trod the globe" (Science and Health, p. 313), and he laid down the axiom that "it is easier for a camel to go through the eye of a needle, than for a rich man to enter into the kingdom of God." Materialism cannot enter heaven, because heaven is a state of consciousness in which Spirit and spiritual formations are the only realities. Rome fell because the sturdy integrity and moral idealism of her citizenship had been sapped and enfeebled by luxury and wealth.

Every Christian Scientist has been impressed with the truth that one cannot serve two masters. Some time in his heavenward journey every man will learn the futility of reliance upon material modes or methods, and the degree to which he is able to make this practical in his experiences, will equal the amount of real faith in God which he has cultivated and his corresponding recognition of the transient nature of material possessions. In acquiring this understanding, Christian Scientists have had the advantage of the many admonitions and warnings to be found in the textbook; for example, that notable passage on page 261: "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts." And this agrees with Jesus' appeal to seek "first the kingdom of God, and his righteousness."

What we commonly call the cause of Christian Science is a thing of consciousness; more than that, it is a thing of individual consciousness. It is veritably the kingdom of God, which Jesus distinctly declared to be "within you." It is not difficult to see, then, that the cause of Christian Science will flourish, will grow and prosper, just as the individual consciousness of those who are called Christian Scientists is exalted to apprehend the Science of being and to realize the allness of God. To work for the cause in the best way, and that means in the scientific way, is to be individually good. The universal law of attraction was declared by Jesus when he said, "And I, if I be lifted up from the earth, will draw all men unto me." When Christian Scientists begin to subdue the petulant, hasty, human will; when love becomes concrete and actual in their lives, then the cause of Christian Science inevitably attracts the world-weary, the sick, the fearful, the sinful. Then, truly, the cause prospers and spreads and succeeds, not because of numbers, but because it has been demonstrated that man is governed by God.

It were well if we could remember that growth is always within. To build up the cause of Christian Science means to cultivate the graces of character which signify the Christman. There is no success, there is no greatness, in things. The only success, the only greatness, is a Christlike life. Midas was the prototype of the modern materialist who continually builds up a sense of matter. Everything Midas touched turned to gold, literally, but he is not the only man who has suffered because of a too great desire for material wealth. All these are valuable lessons which the Christian Scientist is learning. There is literally no profit in the acquisition of material things. The apostle said, "Love not the world, neither the things that are in the world," because he knew that none of these things could last. Human institutions and governments rise, flourish, go into decadence, and disappear. The fundamental law of all material organization is one of flux, of constant change. Nothing in the material universe is stable, permanent, or changeless. Students of history need not be metaphysicians to know that this is true. Christian Scientists, more than any others, should know that to build wisely, we must build individually, and build in consciousness, for "other foundation can no man lay than that is laid, which is Jesus Christ."

We cannot substitute a material structure for the church of Christ,—"the church of the living God, the pillar and ground of the truth." We cannot substitute material building for the individual thought building which is all there really is to the vitality and prosperity of our cause. Nor can we substitute a form of worship for that individual unity with our Father which is the heart and life of religion. On the other hand, we are not to get the idea that all these mundane things are to be neglected or avoided or shunned. They may be worthy, relatively speaking, but the pertinent fact about the material thing remains, namely, that it "passeth away." Noble structures and beautiful buildings are without doubt the outward expression of a high idealism. It is well to cultivate esthetics, but we should not forget that right thinking is a fine art. Christian Science architecture is characterized, for the most part, by a chaste simplicity, and the reason is that our church building reflects our thoughts. As these are refined and humbled by the incoming of the saving idea, they will inevitably express themselves in all our outward lives. The prophet said, "Seekest thou great things for thyself? seek them not." When ambition, envy, emulation, selfishness are abated in the individual consciousness of Christian Scientists, there will be no danger that our church building will express any of these qualities, and we shall not be in peril of worshiping "the creature more than the Creator."

The onlooker may view with admiration the stately buildings which apparently mark the progress of Christian Science, but these are only the symbols of that substance which must remain forever unappreciable to material sense. The danger is that these things may engross our attention; that we may deceive ourselves into thinking it is worth while to accumulate that which the apostle tells us is sure to pass away. Christian Science building will find temporary expression in church edifices, but he who is wise in Christian Science knows that to be enduring and permanent, the building must be upon a foundation of right thinking, that corner-stone "in whom all the building fitly framed together groweth unto an holy temple in the Lord."

"IN HIS NAME."

ETTA M. GILBREATH.

In conducting a case under Christian Science, a practitioner should show as much understanding in the audible treatment as in the silent work where the healing is accomplished. He learns through many a mistake, perchance, how necessary it is to have his conversation "ordered by the Lord" and to obey our Leader's wise instructions, namely, that "the tender word and Christian encouragement of an invalid, pitiful patience with his fears and the removal of them, are better than hecatombs of gushing theories, stereotyped borrowed speeches, and the doling of arguments, which are but so many parodies on legitimate Christian Science, aflame with divine Love" (Science and Health, p. 367). He learns that indiscriminate instruction, given only from a mortal sense of enthusiasm, has often a tendency to confuse and frighten the already disturbed thought of the patient and hinder or delay the results of mental work.

The apostles, when called upon for help, used the expression, "In the name of Jesus Christ of Nazareth." This seems rather an odd way of addressing people who did not know Jesus or probably regarded him only as an ordinary man. In considering Jesus' mode of address, we find it still more simple. He once said, "Lazarus, come forth," and to the lame man, "Arise, and walk;" to one man, "Stretch forth thine hand," to another, "Thy sins are forgiven thee." These simple, straightforward commands would have meant nothing, if used by one less spiritually minded than was Jesus, whose absolutely pure thought and motive caused him to have a wonderful spiritual discernment, so that these words so simply spoken were given with the authority of one who commanded every situation and demanded an obedience which should glorify God.

In obedience to his command Lazarus came forth,—came out from matter and corruption, his face bound by a napkin (his true nature covered up by false appearances). The falseness of these material appearances was so apparent to Jesus, the power of Spirit so in evidence, that he used no arguments, but simply gave the command. To the one who was paralyzed by sin he said, "Thy sins be forgiven thee," evidently meaning that man, the spiritual idea, neither had pleasure in sin nor was he bound and enslaved by a sense that temperament, disposition, or inheritance could make him sin's servant. Sin was nothing to enjoy or fear, consequently it was forgiven (destroyed), and the further command, "Arise, take up thy bed, and go unto thine house," seems to mean: You have been resting on a false basis, lying helpless, enslaved by sin, which came from material conclusions, deduced from false teaching and reasoning. Christian Science teaches us to rise out of false consciousness and to know that we ourselves and all others have the God-given ability to obey all the commands of Christ. This leads to the exercise of man's dominion over all things, which surely includes one's own body.

Mrs. Eddy tells us, on page 476 of Science and Health: "Jesus beheld in Science the perfect man," and when the apostles said, "In the name of Jesus Christ, arise and walk," they were lifting their own thoughts above the false evidence before them, and thinking of the real man, spiritual and perfect. Jesus presented this perfect idea to them, and in his name, his nature or character, they also were able to command the situation. As they used these words, addressing those who had no acquaintance with Jesus, because the thought of him lifted their own thoughts to the high, pure, and perfect ideal which they loved so well, in the strength of that love they compelled the lame or afflicted one to recognize also the nature or character of the divine, everliving, and perfect One.

This explains why the "gushing theories" are helpless. They are addressed to a helpless mortal in bondage; they appeal to his will, not lifting thought to the Christ as an ideal. Our Leader says, "Cling steadfastly to God and His idea" (Science and Health, p. 495), and Paul says, "But we all, with open face, beholding as in a glass the glory of the Lord, are changed into the same image from glory to glory, even as by the Spirit of the Lord."

CREATION AND REVELATION.

ERNEST C. MOSES.

Down through the ages of human history, the mind of mortals has held to finite conceptions of creation, and has lost in every process of reasoning based on such conclusions. The common sense of "creation" and "created" involves commencement, therefore the words imply limitation, *finity*—conditions which are opposed to God, infinite *Spirit*, to whom a thousand years are but as a day, who is "from everlasting to everlasting."

Creation, according to a common lexical definition, stands for "the act of God in bringing the world or universe into existence," and finite reasoning immediately deducts that there was a time when the universe did not exist. Mortals read the first chapter of Genesis, and material sense interprets the record of creation as applying to a solar and stellar universe, including our world and mankind, brought out of chaos, or nothing, by the divine fiat, and established in seven twenty-four-hour days on a material basis, governed by conflicting material laws. These estimates of God's accountability for a material creation have even attempted to include the destructive upheavals, storms, and abnormalities of human experience, on land and sea. It has been common to ascribe all this to God, notwithstanding the Scriptures repeatedly affirm that God's work is perfect, complete, and good.

Christian Science, however, disagrees with every concept of the true creation as being material, rejects every theory of the commencement or real existence of matter, and interprets spiritually the inspired record of creation as presented in the first chapter of Genesis. In this interpretation the Bible student obtains a reasonable idea of creation which satisfies, because it is scientific, and therefore unassailable. Christian Scientists, who are slowly working out of the wilderness of mortal beliefs toward the promised land of spiritual understanding, realize that the dreamland experiences of earthly existence testify to a material world and universe, but divine Science does not include these phenomena in the real, spiritual creation. These conceptions are misconceptions, false beliefs, to be recognized at their true value and overcome in the way taught and demonstrated by Christ Jesus. Christian Scientists are not engaged in accounting for the existence of a material universe; they leave that to those who believe in it.

Among the rich treasures of truth unlocked to humanity by Mrs. Eddy in the Christian Science text-book, Science and Health, the "Key to the Scriptures," which comprises the fifteenth, sixteenth, and seventeenth chapters, is indeed wonderful in its interest and illuminations. No commentary on the Bible has ever so thoroughly separated the true from the false and made plain the true spiritual creation, pointing out the unreality of all finite, material conceptions of the universe and existence. In fact, the student of this "Key to the Scriptures," who works from the right spiritual standpoint and from the right motive, soon arrives at this central conclusion: that the word "creation," when applied to the real universe of divine Mind, including man, must be and can be spiritually interpreted to mean "revelation." With this illumination of spiritual understanding, the student perceives that the words "Genesis" (creation) and "Revelation" have but one spiritual significance to the rightly directed human intelligence, and that is, revelation.

Every paragraph and page of this "Key to the Scriptures," in its scientific explanations of the real unlocks or unfolds the truth about God, man, and the universe. It interprets a continuous revelation of spiritual verities,

Digitized by Google

coupled with uncoverings of the nature and falsity of a material creation—that which has a "beginning" in belief only, and must therefore have an ending in the self-destruction of all the beliefs about matter and mortality, including their phenomena. On page 502 of Science and Health, in explaining the first verse of Genesis, "In the beginning God created the heaven and the earth," Mrs. Eddy meets the error of finite belief thus stated in this one abrupt, forceful sentence: "The infinite has no beginning." Then she points out the scientific definition of the word "beginning" as meaning "the only" God and man, and proceeds in most simple and direct language to explain the true nature of the universe: "This creation consists of the unfolding of spiritual ideas and their identities, which are embraced in the infinite Mind and forever reflected."

Here we have an explanation of creation with the material sense of beginning entirely eliminated—there is not one element of finity in it; the explication is purely spiritual. The dictionaries define "unfold" as "to open, disclose, reveal;" therefore, this spiritual idea of creation, freeing the word from a material incubus, plainly shows us that "creation," metaphysically understood, means revelation only, and not the making of something out of nothing by some mystical process outside the realm of man's intelligence or possibility of understanding. This scientific idea of the true creation is pointed to by Mrs. Eddy on page 504 of Science and Health, where, after explaining the true spiritual nature of light, its preexistence to the sun and solar beams (not then created, according to the material chronological order), she introduces this simple question: "Was not this a revelation instead of a creation?"

Spiritually to understand creation as the universe of divine Mind and its ideas, is a constant revelation of truth which disposes of material theories, limitations, commencement, and ending, and gives the student a working basis from which and by which, little by little, he can meet and destroy all the empty illusions of material sense. The one all-inclusive summarizing statement in the last verse of the first chapter of Genesis declares that "God saw every thing that he had made, and, behold, it was very good." The wonderful correlative of this true summary, in the first chapter of John's gospel, reads: "All things were made by him [God]; and without him was not any thing made that was made." Resting his thought on the substance of these two positive statements of truth, the student of Christian Science learns through faith and understanding that evil, sin, sickness, and death, being contrary to the nature and will of God, are not parts of His true creation, not embraced in the unfolding or revelation of infinite wisdom and goodness. They certainly have no relation to all that God reveals, which was accounted by the first recorder of Scripture as "very good."

These discordant elements of mortal mind have no Principle, no cause, no revelator; therefore, in truth they have no existence, no effect. It is because they are unreal and non-existent from the standpoint of the creative Principle, or God, that sin, sickness, and death can be and are destroyed by Christian Science. Their annihilation is caused solely by this Science, which is the revealed truth about God, man, and the universe. If those who have been educated to think of creation as material (a matter world and an infinite realm of material planets, stars, etc.), will substitute for "creation" the word "universe" in its metaphysical sense, their new idea of God's work will rejoice the heart and satisfy the aspirations. The finite sense of creation then disappears, because it is deceptive, irrational, unreal. "Universe" is derived from the Latin words *unus*, one, and *versum* or *vertere*, to turn,—one system of action. Is it possible to conceive of one universal system of turning, only one, as planned, commenced, and created? If there is only one system of activity throughout infinite space, there can be but one Mind, one God.

If we attempt to conceive of the universe as one system of action having a beginning, the question immediately arises: What then existed prior to the inauguration of this one system to start it into action? From what did the created universe spring; what gave it an initial impulsion? Such questions and conjectures lead one's thoughts into chaos; whereas, to conceive of creation as one system of action, or as one Mind in ceaseless activity, is a comprehensible, intelligent revelation of Truth. This is the only creation there is—the manifestation of infinite, indivisible, divine Love, Life, and Truth. This triune God is infinitely expressed in ideas of which spiritual man and woman are the highest, as revealed in Christian Science, the Word of God, the "final revelation of the absolute divine Principle of scientific mental healing" (Science and Health, p. 107).

"THEY SHALL FEED AND LIE DOWN."

ELLEN B. SMITH.

It has often been remarked by people who have gained some understanding of Christian Science, that they are most grateful for the light which this teaching has thrown upon the Scriptures, some parts of which they could never understand in the old way of thinking, the old view-points from which they studied. The writer had known the letter of the Bible very well, and had for years read a chapter or a certain number of verses most religiously every day, but this without an increasing understanding of God or any practical good. When, however, Christian Science was first brought to her notice, this teaching cleared away so much misunderstanding of the Bible that it became a new book to her.

For instance, the following passage in Zephaniah, "They shall feed and lie down, and none shall make them afraid," had formerly conveyed nothing at all; in fact it was simply passed over as unintelligible in the old way. Now, through even a small understanding of Christian Science, made clear by a study of the Glossary in "Science and Health with Key to the Scriptures" by our dear Leader Mrs. Eddy, this entire passage has become one of the most comforting and reassuring of any that are found in the books of the minor prophets. It runs thus: "The remnant of Israel shall not do iniquity, nor speak lies, neither shall a deceitful tongue be found in their mouth, for they shall feed and lie down, and none shall make them afraid." In this and the following verses, the prophet foresees the promises of the Messiah or Christ being fulfilled, not only for the remnant of Israel, but for all nations and all generations, therefore for us, too.

The words, "shall not do iniquity, nor speak lies," now seem to convey to the writer the total destruction of mortal sense or so-called mortal mind, as Christian Science teaches that it is only this so-called material mind which can deceive, sin, and speak lies. As we overcome this asserted mind, with its false testimony at all points, which we can do by knowing more of the allness of divine Mind, God, we shall gradually get into the calm, peaceful consciousness of which Zephaniah wrote, even the consciousness of perfect harmony which our Leader had in thought when she wrote in Science and Health (p. 568), "For the accuser is not there, and Love sends forth her primal and everlasting strain." One morning, when this passage was being studied by the writer, a member of the family had gone out manifesting anything but the consciousness of perfect harmony; and yet the understanding obtained from this Scripture, the assurance that none should "make them afraid," cast out all fear from her thought and showed so clearly the utter nothingness of the error (illness), that at noon the one who had been ill came home perfectly healed and happy. There certainly had been a glorious feeding on the truth, and consequently a peaceful lying down, a calm, fearless trust in that perfect Love which "casteth out fear."

This is only one of the passages illuminated by Truth and spiritual understanding, and a like use is made possible to every one who is willing to study whole-heartedly, intelligently, and without prejudice, the text-book of Christian Science, which does unlock the Scriptures and enables us to "search," as our Master commanded us; and not only to search, but also to find, with rich results.

"IF WITH ALL YOUR HEART."

CLARE ARCHER.

WHILE staying in the Alpine heights, I asked a friend where we could find the most beautiful flowers. Her answer, that one must go up high to find the rare flower, brought home another truth to me, namely, the impossibility of finding and making one's own the joy and peace and harmony that are to be found in Spirit (the heights) if one dwells in the material senses (the lowlands).

"Ye shall seek me, and find me, when ye shall search for me with all your heart." How often, when discouragement comes up, we thicken the cloud by adding to it self-pity instead of stopping to ask ourselves if we are fulfilling the condition, "He that dwelleth in the secret place of the most High, shall abide under the shadow of the Almighty." There are not many who, if honest with themselves, will not own that the poor "finds" are due, not to the lack of flowers on the heights, but because one is looking for them in the lowlands. But if we would climb to the heights we must lay aside everything that would hinder our progress in the straight and narrow way that leads ever upward to the joys of Soul.

No matter what the senses say, we know the promise will be fulfilled, "Eye hath not seen, nor ear heard, neither have entered into the heart of man the things which God hath prepared for them that love him." So, instead of adding to our lack of earnestness, discouragement, etc., if we would bravely face the fact that man is not a helpless victim but can through the strength which is of God overcome every sense of evil that seeks to assert its false claim to place and power, how many more would be standing shoulder to shoulder, and how much more rapid our progress. We know that what enabled Daniel and the three Hebrews to come through their tests triumphantly was the consciousness that they had fulfilled the conditions which ensured divine protection, and having done so were certain of the results.

Christian Science has brought to light the true God, and done away with the manlike God to whom we once attributed all miseries and disasters, and in regard to whom many have felt like doing as Job's wife advised him, namely, to "curse God, and die." It has narrowed the horizon, when looking for the cause of failure or slow progress, and we now know what Carlyle meant when he said that not only the ideal but the impediment also is in ourselves; and although this self seems at times to be all there is of one, we know there is a solvent that can and will sooner or later melt away its seeming substantiality.

When we once grasp the fact of the impossibility of separating ourselves from God; if sons once, sons ever, the relationship stands, we shall have no aim apart from holiness, but will with all our hearts seek, and thus doing cannot fail to find. We must ascend if we would find the rare flowers of Spirit. They are there for a certainty and can be found, and what is more must be found, as good is a magnet which is drawing and will continue to draw until all creation awakes to the fact that it lives, moves, and has its being in God.

CASTING OUT FEAR.

VERNE E. TAYLOR.

QUITE recently, a student of Christian Science, in relating to the writer the story of his healing, said that he had been subject for years to attacks of illness which had occasioned an almost overwhelming sense of fear; that he was healed of these in a few treatments, while the fear was overcome instantaneously. He added that he was freed from the fear with the first treatment, and that it did not return with the recurrence of the physical disorder.

At the time of this recital the writer, then a very young student of Science, had been greatly disturbed for some time by what appeared to be a faulty organic action, the fear occasioned by its frequent recurrence causing, as she was even then aware, far more suffering than the disease itself. In striving to overcome this sense of fear, she had sought to allay it by arguing that it was unreasonably great, that the discordant action was not sufficient to occasion any danger or much suffering, that the attacks thus far had been readily controlled, and other arguments of like nature. Latterly, however, she had had misgivings that this was not a right course to pursue, and that it was not in accord with Christian Science. She had read in Science and Health (*p. 380*) that by "contending for the evidence or indulging the demands of sin, disease, or death, we virtually *contend against* the control of Mind over body, and deny the power of Mind to heal;" and she had begun to see that such arguments as she had used were a compromise with error which could never result in its destruction. But how to gain the mastery of a disease while still in bondage to the fear of it, or how to overcome the fear while the evidence of the disease remained—these were the problems which confronted her on either hand, and with her limited understanding of Christian Science they seemed difficult of solution.

It was at this juncture that the conversation already mentioned occurred, and it furnished her with much food for thought. Here was an instance of fear destroyed while its supposed cause remained; and yet we are taught that cause and effect are inseparable! Reflection on this gave rise to the question, Were the attacks of disease, then, the real cause of the fear? Seemingly they were; mortal sense would certainly insist that they were, and for several days this question was earnestly considered, but without much apparent progress toward an answer. But the solution exists for every problem which we encounter in our search for truth, and an earnest study of the Bible and our text-book cannot fail to reveal it. Like a flash of light from eternal Truth itself came these inspired words from our text-book: "There is but one primal cause. Therefore there can be no effect from any other cause, and there can be no reality in aught which does not proceed from this great and only cause" (p. 207). Disease, then, is not a cause, and fear is neither cause nor effect! There can be no reality in fear, therefore its origin need not be accounted for; since, according to Christian Science, it has no cause, it is utterly unreal!

From that moment the fear of the disease was annihilated, and many times since, when some demonstration was to be made, thought has been steadied and cleared and the work rightly started by dissociating the fear from the physical condition, thus reducing it to its native nothingness. The beloved disciple says, "There is no fear in love; but perfect love casteth out fear."

[Written for the *Sentinel.*]

DESIRE.

LILLIE MARY CARTER.

O HEART of mine,
Put every idle, empty dream away;
Let gentle love within my thought hold sway
With power divine.

O will of mine,
Be still and know that God alone hath power
To guide my steps aright, though dark the hour,
With light divine.

O Love divine,
I long to see thy healing light outflow,
Undimmed by thought of self; and thus to know
True joy is mine.

SELECTED ARTICLES.

[Editorial in *Los Angeles* (Cal.) *Tribune.*]

One of the most hopeful signs of the times is the ever-increasing interest in the study of the Bible. It is said that more Bibles are sold today than ever before in the world's history. One of the great factors in this "back to the Bible" movement is the spiritual awakening that is sweeping over the land. Large numbers of people are now turning to the grand old book of our fathers as the panacea for all human ills. Many are finding new meanings in old familiar texts, and many have found surcease from physical suffering and mental anguish. Multitudes are also finding great joy in the discovery that the Bible texts possess a spiritual meaning which, when understood, make this book a very practical guide in the affairs of life. Moreover, this spiritual interpretation removes the seeming conflict that has been suffered to exist between Biblical teaching and that of natural science, geology, and astronomy.

The Bible is not only the most important book ever written, but it is vastly more. It is, in fact, the foundation stone of all our present-day civilization. All human activities find their resting-places upon this rock. All law, both civil and criminal, primarily begins with the ten commandments; all that makes for perfection in living comes from the precepts of the Master, and the hope of eternal life latent in every breast is confirmed by the gospel of the New Testament.

In the Bible is also seen, from Genesis to Revelation, the advancing light of spiritual understanding in the minds of men. This growth proceeds through the patriarchs, prophets, and wise men, until it culminates in its fulness in Jesus Christ, who gave those who were ready a higher interpretation of law. A striking instance of this is contained in that wonderful sermon on the mount. Speaking to his disciples, he said: "Ye have heard that it hath been said, Thou shalt love thy neighbor, and hate thine enemy. But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you." It is this doctrine of love that is redeeming the world, and will not cease its activity until the kingdom of heaven is established among men.

The understanding that much of the truth contained in the Scriptures came through the medium of human consciousness, and was therefore more or less colored by this medium, accounts for seeming inconsistencies and inaccuracies. While the central theme of all the Biblical writers was divine truth, yet they could give it expression only as they saw it. For instance, some of the earlier scribes, perceiving the existence of evil and suffering, concluded that God must be punishing His disobedient children. The clear-visioned Isaiah, however, saw more deeply, and realized that evil punishes itself. He tells us, "But your iniquities have separated between you and your God, and your sins have hid his face from you." This interesting citation is but one of the many that abound within the covers of the Bible, and he who discovers that the Scriptures are a veritable mine of spiritual treasure is indeed fortunate.

[Frederick Dixon in *Merthyr* (Wales) *Express.*]

In his sermon on "Christianity and Modern Thought," reported in a recent issue, the Rev. Mr. —— alludes to the "cunning craftiness" of Christian Science. I will not do him the injustice of assuming that he meant this in anything but a Pickwickian sense, but I will ask you to permit me to point out how far from the truth such an insinuation is.

For a century or more it has been the aim of certain schools of thought to reconcile the dogmas of orthodox Christianity with the theories of natural science. The effort has been half-hearted, because the designers have always hesitated to push their conclusions logically home, and the results have been meager, because the responsibility of demonstration has never been boldly accepted. Yet it must be possible to gain a knowledge of spiritual truth, at least as full and exact, in a word as scientific, as that which we possess of material phenomena. The Greek phrase which in the authorized version of the Bible is translated "knowledge of the truth," one of the most brilliant scholars in the church has shown to mean the knowledge of the absolute, or that which is; and this knowledge of the absolute is only what, in another phrase of the authorized version, is described as knowledge of God, but which should, of course, be translated, full or exact, in other words, scientific knowledge of God, that is, of Truth.

Now, it follows that the knowledge possessed by any person is necessarily a demonstrable knowledge. A man may think what he likes; but what he knows, he can prove; and Mrs. Eddy insists, most scientifically, in her book, "Science and Health with Key to the Scriptures," that, no matter what theories we may indulge in, our powers of demonstration are bounded by our knowledge. I am not going here into the distinctions of the Greek phrases, believing a person, and believing on a person. It is clear, however, that unless we are going to throw over the great scholars in the churches, while believing a person meant simply accepting a statement, believing on a person meant a realization of the actuality of a statement. When, consequently, Jesus declared that those who believed on him would be able to repeat his works, he could hardly have expressed in language more capable of scientific definition the fact that the work, or miracle, as it has come quite arbitrarily to be described, was simply the proof, or object-lesson, in demonstration of the truth of his gospel or good news. The truth is that the word miracle does not occur from one end of the Greek Testament to the other. If it had, the word would only have stood for the speculations of the philosophers of the first century. When theology calmly translated, and this only in specific places, the two words which mean an act of power and a sign, as a miracle, it was bound to go a step farther and, in defiance of the clear meaning of the gospel, make the miracle supernatural.

It has done the same thing in investing that fine old Elizabethan word, at-one-ment, or atonement, with a sacrificial sense. "The old word atonement," says Norris dogmatically, in his "Rudimentary Theology," "has by a true instinct been deepened into the idea on which it rests, and has come to carry with it the idea of propitiation or expiation." But why "by a true instinct"? It would have astonished Shakespeare as completely to learn that atonement had a sacrificial meaning, as it would have the pagan philosophers to learn that *miraculum* had a supernatural one. The work or miracle was indeed an act of power, since it was a reversal of the crude scientific theories of the day; and it was also a sign, inasmuch as it was the proof or demonstration of the truth of the gospel of the Christ. From the academia of the Galilean hillside, from the rostrum of the prow of the fishing-boat, Jesus the Christ preached that gospel to a generation which had ears but heard not, and when the materiality of that generation shrank from the spirituality of his message, he fell back on the act of power, or sign, declaring that if they would not believe for the words' sake, they must accept the truth on the evidence of the works.

So long as the healing works continued an integral and recognized element of Christian practise, no one thought of describing them as supernatural. It was only as the power of demonstration disappeared in a misunderstanding of Principle, that Christendom found itself preaching a gospel without the signs following. Mrs. Eddy saw, with unerring spiritual insight, that the only proof that the gospel preached was the gospel of Christ, was the demonstration demanded by Jesus the Christ himself, namely, "He that believeth on me, the works that I do shall he do also." She set to work, therefore, to find the reason for the loss of this power, and she discovered it in the non-recognition of the infinity of

Digitized by Google

Spirit and the unreality of matter. Christian Scientists do not claim for themselves any power they deny to all mankind. The failure to demonstrate the power of Christ, they say, lies in the confusion of Spirit with matter. Let the world accept the premise of Christian Science, as taught by Mrs. Eddy, of the allness of Spirit, with its logical consequence, and it will find that it does possess the gift of God, dominion over all. Such a demand is an entirely scientific one, which has been made and insisted on by all the great exponents of natural science, but humanity is always more ready to "render unto Cæsar the things that are Cæsar's," than "unto God the things that are God's."

[Alfred Farlow in *Sandusky* (Ohio) *Register.*]

A recent issue reviews an attack on Christian Science by Henry Dwight Chapin which contains the suggestion that "an adult may elect to be treated by a Christian Scientist but in the case of a child the question is altogether different." First, it should be stated that an adult chooses Christian Science, and having demonstrated by actual experience that his health is more safe under the guardianship of Christian Science than otherwise, why should he be less concerned about the welfare of his child than he is as to his own safety? Why should he deprive the child of the newly tested remedy and leave it to suffer in the "good old-fashioned way"?

A short time ago great ado was made in the city of New York concerning one child which died under Christian Science treatment during a period when 1,714 other children died of the same disease under medical treatment. Not good judgment but force of habit prompts such comment. It has been demonstrated in thousands of cases, to the entire satisfaction of parents who have placed their children under Christian Science treatment, that Christian Science is as safe a remedy for the children as it is for adults. We will grant that to those who have not had experience with Christian Science a dependence thereupon to the exclusion of drugs may seem to be neglect rather than help, but it does not so appear to those who have had experience first with drugs and then with Christian Science. Perfection is demanded of a new remedy, while the older remedies have won a license to fail. It is not in keeping with the spirit of the times to condemn a thing simply because it is new and because it happens to be untried to the critic. The skeptic should weigh all new things carefully and should be in possession of real evidence before he passes judgment.

Regarding the question whether Christian Science heals organic disease, any practitioner of experience will testify that he has succeeded quite as well in the treatment of such disease as in the treatment of what have been called purely functional disorders. The overwhelming majority of such cases which have turned to Christian Science had already been treated for organic troubles by acceptable medical practitioners. Indeed, the line of demarcation between "organic" and "functional" diseases seems to be very indistinct, not only to the layman but to competent medical men as well. One eminent physician has stated that "all diseases are mental at bottom," and it is safe to say that the consensus of opinion even among drug practitioners is such as to justify a universal experimentation with Christian Science, while Christian Scientists have demonstrated beyond the shadow of doubt on their part that all disease is mental and that the proper remedy is an understanding of God as Mind, Spirit.

[Algernon Hervey-Bathurst in *Newcastle* (Eng.) *Mail.*]

I have read in a recent issue an article in which Christian Science is referred to as a freak religion. It is not at all clear why such a term is used in connection with Christian Science, and I will ask you to allow me to point out that, far from being anything in the nature of abnormal, Christian Science is preeminently normal; indeed, it is nothing more or less than the reiteration of the teaching of Christ Jesus.

It is true that Christian Science goes farther than any other system, in so far as it maintains that true Christianity includes practise as well as preaching. Two thousand years ago, Jesus the Christ, looked upon by all Christians as the great Wayshower, taught his immediate disciples and the crowds who were willing to listen to him, that the understanding of the law of God included freedom from sickness as well as from sin. Jesus and his disciples not only taught but proved this, and the Master declared also, with much emphasis, that those who understood his teaching would be able to do, not only the works, but greater works, than he did.

It would be difficult to find anything in the nature of a freak in a system which declares and proves that what Jesus taught and demonstrated is as true and practical now as then. It is true that the teaching of the Master was by no means universally accepted, especially by those who were unable to believe that there could be anything capable of improving upon the theology and medical systems in vogue at that time. So it is today that some people are unable to grasp the fact that far more can be accomplished through spiritual or scientific means than has ever been accomplished by all the material systems which mankind has devised through all the ages.

Christian Science is built on no mere theory, and it has grown in such a remarkable manner during the comparatively short time since it was discovered because it has afforded undeniable proof of the truth of its teaching by the healing of sickness and the destruction of sin. And it is just because it is based on that word which Christ Jesus declared "shall not pass away," that it will continue to grow until "the earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea."

[Eugene R. Cox in *New York* (N.Y.) *Tribune.*]

In a recent issue of your paper there appeared an item from Washington headed "Suffers for His Faith," wherein it was stated that a gunner's mate had been severely punished for refusing to be vaccinated, his refusal being based on the ground that, as a Christian Scientist, he could not conscientiously submit.

Each individual should be entitled to form his own decision on such questions, but the account as published might mislead many of your readers as to the attitude of Christian Science in such cases. Mrs. Eddy long ago defined the duty and attitude of Christian Scientists toward the law. In the *Christian Science Sentinel* of Feb. 21, 1901, under the title "Obey the Law," she published the following:

"On the subject of reporting contagion I have this to say: I have always believed that Christian Scientists should be law abiding; and, actuated by this conviction, I authorized the following statement, which appeared in the *Boston Herald* about one year ago:—

"'Rather than quarrel over vaccination, I recommend that if the law demand an individual to submit to this process, he obey the law; and then appeal to the gospel to save him from any bad results. Whatever changes belong to this century, or any epoch, we may safely submit to the providence of God, to common justice, individual rights, and governmental usages.'

"This statement should be so interpreted as to apply, on the basis of Christian Science, to the reporting of contagion to the proper authorities when the law so requires. When Jesus was questioned about obeying the human law, he declared: 'Render unto Cæsar the things that are Cæsar's,' even while you 'render unto God the things that are God's.'"

This shows the attitude of Christian Scientists toward reporting contagious diseases, as well as toward vaccination. In view of the more than fifty serums now on sale and advocated by practising physicians, a word from the highest authority in this country is not inappropriate. Dr. John B. Murphy, president of the American Medical Association, at

Digitized by Google

the annual meeting of that great body at Atlantic City in June, said: "At the present time our knowledge of vaccines is extremely limited, and they are very dangerous and wicked weapons to play with. A life can be snapped out in forty seconds by the improper use of vaccines." Such a statement from such an authority should certainly raise the question as to the propriety of meting out such a punishment to a seaman for refusing to have diseased matter injected into his veins.

[W. H. Webb in *Southport* (Eng.) *Visiter*.]

Adverting to a letter which appeared in a recent issue, rebutting the reference to Christian Science made by the Bishop of Liverpool in his sermon during the recent Medical Congress, may I be allowed a few lines thereon? The subject of health and healing on Bible lines has been grossly neglected by the church, hence the bishop's reference is surely out of place until the church does its duty in this particular. There is yet another and a more grave reason why this allusion is uncalled for at this time, and that is, the reign of doctordom with which this country is threatened is paralleled only by the priestly reign over conscience during the Middle Ages. Surely we are living in perilous times when Protestant bishops can be found in the camp of materialistic orthodox doctordom, helping to weld the chains wherewith to bind the people's conscience in the matter of the right to care for the welfare of their own bodies, and denouncing in unsparing terms the only body of Christians who are trying to realize the Bible ideal of spiritual healing.

I am not concerned for the moment with what are, to me, the peculiar views of Christian Scientists respecting God and sin, which are a fair field for criticism; but, surely, the fact that their practise is based upon the vitalist theory of life, which is agreeable to Scripture teaching, while orthodox doctoring is based upon the materialistic theory of life, which is diametrically opposed to Bible teaching, ought to deter people from committing themselves unequivocally in favor of materialism and so much against vitalism. Man is something more than bread and butter when in health, or a chemical compound when sick. Health does not depend upon a calculation of a due proportion of the chemical properties of food, nor when health is lost are mineral drugs necessary to restore it. Fasting is miscalled "starvation" according to materialistic calculations, yet, according to Scripture teaching, it is a wholesome exercise and is enjoined on all Christians, especially on those who are called to "heal the sick."

[E. M. Ramsay in *Montrose* (Scot.) *Standard*.]

As Christian Science has once again been adversely criticized in your columns, I shall be glad if you will allow me to make a reply. The writer would put Christian Science outside the pale of Christianity, because it does not interpret the gospel teachings as he interprets them. If there were no difference of opinion in the interpretation of the Scriptures, there would be but one Christian church; but each one of the many Christian sects represents a different view held of some Scriptural doctrine or practise.

The method of comparing isolated Bible texts with isolated statements from Mrs. Eddy's works will not commend itself to the thinkers. The gospel treated in the same way would appear to contradict itself: "I and my Father are one." "Why callest thou me good? there is none good but one, that is, God;" and again, "Now the birth of Jesus Christ was on this wise." "Before Abraham was, I am." There was a time when these and similar statements appeared mysterious and obscure: now, through the teaching of Christian Science, they have become comprehensible, satisfying, plain.

Before becoming a Christian Scientist, I was a firm believer in the doctrine of the trinity; I believed, but did not understand, for, as the Athanasian creed truly says, the doctrine, as therein set forth, is incomprehensible. Through the study of the Christian Science text-book, "Science and Health with Key to the Scriptures," I came gradually to see the mystery disappear, the truth stand revealed in its simplicity and its glory. The healing in Christian Science is founded on a right concept of the trinity, which is impossible without this recognition. The paths of this work-a-day world are transformed by its light. When once a man has seen what the doctrine of the trinity really is, he cannot contemplate life without this knowledge. Finally, let me say that Mrs. Eddy had no belief in spirits, had no faith in spiritualism. She taught that there is but one Spirit, God.

[Henry Deutsch in *Jewish Weekly*, Minneapolis and St. Paul, Minn.]

Christian Science stands on its own merits; and its adherents are those who have come, not by persuasion, enticement, or argument in words, but as the result of the demonstration of its teachings, which have brought surcease from pain, suffering, sickness, disease, sorrow, and sin, and have lifted consciousness to a clearer apprehension of the one God and man's unity with Him, susceptible of practicable demonstration and application in daily life. They say, as did Paul: "And I, brethren, when I came to you, came not with excellency of speech or of wisdom, declaring unto you the testimony of God. . . . And my speech and my preaching was not with enticing words of man's wisdom, but in demonstration of the Spirit and of power: that your faith should not stand in the wisdom of men, but in the power of God."

A Christian Scientist judges no one but himself. His life practise is devoted not to criticism and condemnation of his neighbor of whatever faith, but to the betterment of his own consciousness and life, so that by the example of his daily conduct he may give proof of the potency of his faith; as Jesus said, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."

Christian Science is not responsible for the individual statements of any single one of the thousands of its adherents, any more than is any religion to be judged by isolated utterances of those who have a mistaken impression of its teachings. When mankind attains to the realization of the one God and only one, and lives in obedience to His commandments,—and the principal one is to love his neighbor as himself,— he will have no need for a discussion of his creed or sect, nor will there be opportunity for any of any creed or sect to say, "I am holier than thou."

Christian Science has come into the world to prove the oneness of God and man's unity with Him; to demonstrate and to prove the truth of His promises and the possibility of their fulfilment here and now; to bring to the sick, sinning, and suffering the attainment here and now of those vital promises so oft repeated in the Old Testament.

[Written for the *Sentinel*.]

FOREST STILLNESS.

ADA J. MILLER.

THE forest stillness ever speaks of God
In language clear to those with ear attuned
To nature's silent praise, her harmony.
No anthem ever sung had e'er the power
To lift the heart to God,—reveal the truth,—
As forest hymn in majesty of song
Unvoiced save as the human heart translates
The depths, the heights, in language of its own.
To each who comes with open thought to hear,
The forest gives its message, shows that peace
And joy and strength can only be attained
As man but seeks to know God's will, God's law,—
And seeking finds, and finding knows naught else
But to obey; and in obedience rests,—
His life attuned to nature's harmony.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"FEED MY SHEEP."

THE coincidence and correlation of profession and practise was insisted upon by the Master from the very beginning of his ministry, and he himself set an example in this respect which, had it been consistently followed in the succeeding centuries, could but have long since revolutionized the world and redeemed it both physically and morally.

There is food for thought in this contention, because of the admission so freely made today in religious councils and in the publications of the various denominations, that the gospel has seemingly lost its old-time grip upon the people. No one questions but that the gospel has been faithfully and effectively preached, so far as the clergy themselves have grasped its meaning from their own point of view. No one would think of denying, for instance, that the truth as it has been expounded in the churches for centuries has been the means whereby multitudes of men and women have risen to a high plane of spiritual living, the while they strove to endure unspeakable bodily discomforts, after having tried every available material means for relief, in the mistaken belief that this affliction had been placed upon them by God, despite the inconsistency in the thought that a God who is Love could so misuse divine power.

If we go back to that last meeting of the Master with his disciples, as related by John, we find special stress laid upon the command to Peter, iterated and reiterated, as if to emphasize the duty incumbent on those who were to carry on the work Jesus had begun. "Feed my sheep," he said; feed them as he "the good shepherd" had fed them, with that living bread of which if any man eat "he shall live forever." That the disciples interpreted this command to mean that they were to follow in the Master's footsteps, preaching the gospel of the kingdom of God and healing the sick, cannot be doubted, for we find Peter and John stopping, on their way to the temple to pray, to heal the lame man at the gate; and besides other specific instances mentioned, we are told that "many wonders and signs were done by the apostles."

It is not surprising, then, that good men and women down to the present day should have desired this gift of healing with a great desire, and questioned as to why the seamless vesture should have been divided in this latter age, but it remained for Mrs. Eddy to discover and demonstrate that the healing truth exemplified by the Master and his disciples has lost none of its virtue; in other words, to prove that "inspiration restores every part of the Christly garment of righteousness" (Science and Health, p. 242).

Jesus said, "Blessed are they which do hunger and thirst after righteousness: for they shall be filled;" and the hungering, thirsting multitudes who are daily turning to Christian Science, are finding therein that which satisfies their longing,—the peace of mind and comfort of body which is man's divine heritage. And great is their rejoicing, for daily they are proving for themselves, as did Peter and John, the verity of the Master's declaration, "He that believeth on me, the works that I do shall he do also;" they are learning that mere professions of love carry no conviction, that loving deeds are the true indicators of sincerity; that "the substance of all devotion is the reflection and demonstration of divine Love, healing sickness and destroying sin" (Science and Health, p. 241). Thus and thus only can the whole gospel of Christ Jesus be taught and lived by his professed followers in every age.

ARCHIBALD MCLELLAN.

REMISSION.

THERE are some who fail to understand the teaching of Christian Science relative to sin, and who therefore quarrel with their own misconceptions; but all honest seekers after truth soon discover that Christian Science declares sin and all discord to be unreal because God is not their author, and St. John emphatically states that "without him was not any thing made that was made." Nothing could be clearer on this point than the statement found in the tenets to which all who join the Christian Science church must subscribe, and which reads as follows: "We acknowledge God's forgiveness of sin in the destruction of sin and *the spiritual* understanding that casts out evil as unreal. But *the belief* in sin is punished so long as the belief lasts" (Science and Health, p. 497). Here it should be understood that the one who in any wise continues in sin, does so because to his belief sin is real, it gives pleasure, and has power to sway the will, even where suffering is seen to be inevitable.

The Christian Science worker is, however, far more concerned for the one who is struggling with the belief that sin can hold him as an unwilling victim in the fetters of past deeds or appetites than he is about the critic or caviller. Long ages ago the command was given through the prophet Isaiah "to loose the bands of wickedness, . . . and that ye break every yoke;" obedience to which command is bringing wonderful results in the healing ministry of Christian Science. In the New Testament there are many references to the overcoming or remission of sins as related to the work of Christ Jesus, and it may be remembered that the Pharisees objected to Jesus' words on this subject on the same ground that critics of Christian Science object to its statement that sin is unreal. The Pharisees thought that the Master made light of sin when he said: "Whether is easier, to say, Thy sins be forgiven thee; or to say, Rise up and walk?" The proof of the remission of sin is made clear when we read that the paralyzed man rose, took up his bed, "and departed to his own house, glorifying God."

In the epistle to the Hebrews (10th chapter) is a wonderful treatment of the subject of remission of sin which is in entire accord with the teaching of Christian Science. It tells of "a new and living way" from which we must never draw back, from which we never can draw back when the law of God is written upon our hearts and minds, and we delight to do God's will. The entire obliteration of evil is revealed in the statement: "Their sins and iniquities will I remember no more." Does not this establish the truth that in the purified human consciousness God beholds His own reflection, the man of His creating, born of Spirit, who is never sick, sinful, or sorrowful? In this chapter we are further told that "by one offering he [the Christ-man] hath perfected forever them that are sanctified. Whereof the Holy Ghost also is a witness to us." In Science and Health (p. 43) we read of the descent of the Holy Ghost as the "influx of divine Science;" and this undoubtedly witnesses ever to the ideal man upon whose consciousness the law of God is indelibly written, who in following Christ has made of his enemies, all mortal beliefs, "his footstool," and who therefore expresses the perfection of his divine Principle, God.

Perhaps the most important lesson for us is the statement that in the divine consciousness the remission of sin means its utter obliteration. The things "behind" are to be forgotten,—the doubts, fears, passions, and vain regrets,—these must vanish, one and all, before the spiritual illumination which leads the redeemed to press forward with "boldness" and "full assurance of faith" into the holiest place, where, to use the poet's words,—

> no shadow shall bewilder
> Where life's vain parade is o'er;
> Where the sleep of sin is broken
> And the dreamer dreams no more.

SERVICE AND AT-ONE-MENT.

THE statement by an earnest Christian Scientist that he thought of himself only as the conductor through which "the water of life" reached his patients, expressed in a forcefully commonplace fashion his faith in God as the only healer, and his joyous realization of the abundance of that living stream of which if a man drink he "shall never thirst." It quite fails, however, to express the scientific relation of the believer to the redemptive activities of Truth. The faultiness of any concept which conveys the impression that the human factor in any given ministry is regarded as having no quality in common with the divine agent is found in this, that it adheres too closely to the traditional thought of the creature as something apart from the creator, of the doer as separate from his doing.

St. Paul exhorted the early Christians to offer themselves "a living sacrifice, holy, acceptable unto God;" and he thus defined their possible at-one-ment with the divine activity,—a teaching which is logically inferred from his other notable statement that in God "we live, and move, and have our being." Christ Jesus repeatedly expressed the thought that he gave himself to redeem men from sin, and yet he declared that the Father was the only effective agent,—"He doeth the works." The seeming contradiction is removed only when we understand in Christian Science that man is the manifestation of the divine activity, and that we come to our true self-consciousness only as we become conscious of God.

Christian Science is entirely in harmony with the Master and with St. Paul in its teaching that the Christian's relation to the achievements of Truth is quite different from that of the sculptor's chisel to his acclaimed work. God works in and through man to will and to do, and the at-one-ment to effect which Christ Jesus struggled and suffered, finds its active expression and end in every healing work accomplished. It is determined for the individual by the measure of his attainment of spiritual sense, and it is referred to by Mrs. Eddy when she says that all mortals "will through much tribulation yield to the activities of the divine Principle of man in the harmony of Science" (Science and Health, p. 562). The utensil subserves the end to which the workman's thought is directed, but it is entirely indifferent to that end and no part of it, while man has to do with and appears in every overcoming of sickness and sin.

The teaching of Christian Science that man's relation to God is that of an idea to its Principle, and that when we gain the demonstrably right idea it is the Christ-coming, "God with us,"—this contributes as nothing else, surely, can to one's sense of life's dignity and possible significance to the great world problem; for, God being with us, all power is with us, all wisdom, all good. We are conscious of ideas, and when these prove themselves in spiritual demonstration to be true, we may know that we are actually in touch with infinite Truth, we have begun to know God, we have entered upon eternal life.

It is impossible to read the Master's words in which he affirms his identity with our Father, and their cooperation in his Messianic work, without being impressed that this exalted consciousness of complete at-one-ment was the outcome of his faithfulness to and success in that work, the preaching of the gospel and the healing of the sick. "God is not separate," writes Mrs. Eddy, "from the wisdom He bestows" (Science and Health, p. 6); and when we open our hearts to divine Truth, with the hope of ministering effectively to others thereby, our union "with Christ in God" is being established. The one highest individual gain attending our demonstration of Christ, Truth, with us to heal and save, is the glad realization that in us the at-one-ment has been made so complete that we can understandingly say:

I know no life divided,
O Lord of Life, from Thee.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the new church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m.

OSKALOOSA, IOWA.—The corner-stone of First Church of Christ, Scientist, in Oskaloosa, Iowa, was laid Tuesday morning, Aug. 27, at six o'clock. The church-members hope to have the building ready for use in November. The structure is to be of frame, with exterior covering or facing of white cement plaster. The edifice will cost between eight and nine thousand dollars. The cost of the lot was fifteen hundred dollars. The new church will have an ideal location. It will stand on lots on the south side of High avenue, east of Third street. Seating capacity of the pews will be about two hundred and twenty-five. Upon occasions of lectures or crowded service, seventy-five to one hundred additional capacity may be secured in the foyer. The dimensions of the auditorium proper are thirty-four by forty-seven feet.

Oskaloosa Herald.

INDIANAPOLIS, IND.—An exhibit was maintained at the fair by the forty-five Christian Science churches and societies in Indiana for the purpose of explaining what Christian Science stands for and what it teaches. An assortment of publications, including copies of many periodicals, was there for free distribution. Pictures showing the activities of the Christian Science publishing house and pictures of The Mother Church, The First Church of Christ, Scientist, and others were displayed in various parts of the tent.

Indianapolis Star.

MANCHESTER, ENGLAND.—A reading-room will shortly be opened at 56a, Wilmslow road, Withington, by Second Church of Christ, Scientist, who hold their services at Didsbury. The purpose of the reading-room is to bring within easy reach of the residents regular opportunities for reading Christian Science literature, so that a correct knowledge of Christian Science may be obtained by inquirers.

Manchester South District Advertiser.

BEAVER FALLS, PA.—First Church of Christ, Scientist, has purchased the lot and dwelling at 1603 6th avenue. The first floor has been remodeled, and is now used for church services and reading-rooms.—*Correspondence.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 1, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 16, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to May 31, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul Streets, Boston, Mass.

THE LECTURES.

LONDON, ENGLAND.

The lecture on Christian Science given in Third Church of Christ, Scientist, by Bicknell Young, was the first lecture delivered in the church edifice since the building, including the reading-rooms, was fully opened to the public. The lecture was attentively listened to by a large and appreciative audience, which filled the auditorium to its utmost capacity. The lecturer was introduced by W. N. Miller, K.C., who spoke as follows:—

It is most gratifying to know that Christian Science, the subject about which we have come to hear something definite and authentic, has become an object of earnest inquiry and consideration by a vast number of intelligent men and women. The discoverer of something of vital moment to every individual must, if of a broad-minded, loving, and generous disposition, long intensely to make that discovery known as widely as possible, in order that all may share in its benefits. Mrs. Eddy, after years of devoted and continuous study of the Bible, rediscovered the new-old religion preached and practised by Jesus the Christ, and verified the completeness and accuracy of her discovery by evidence of the same nature as that relied on by the great Wayshower in support of his mission. John's oft-quoted question: "Art thou he that should come? or look we for another?" brought a complete and convincing statement of truth from Jesus: "Go your way, and tell John what things ye have seen and heard;" and then, in telling words, he gave a graphic description of the many wonderful works he had just performed.

Mrs. Eddy, having received this great revelation, took every precaution to keep it "pure and undefiled," so that it should not become beclouded or again be lost. In addition to other methods of upholding its truth, she established a board of lectureship, consisting of duly qualified exponents of Christian Science, to explain what it is and what it does, and to correct erroneous impressions current about it and its Discoverer.—*Correspondence.*

DERRY, N. H.

Virgil O. Strickler at his lecture on Christian Science at the Adams Memorial hall, was introduced by W. T. Morse, editor of the *Derry News,* who said in part,—

We meet today under somewhat peculiar circumstances. In the closing hours of this quiet Sabbath afternoon we have gathered that we may learn something more about that which to many of us is a new theology. And yet we are told that it is not new, but that it was known and understood nineteen hundred years ago, and that the Christ when here among men spoke of and even taught his disciples and followers the basic rules which have been so thoroughly expounded by the Leader of the Christian Science church. I appreciate the honor which the members of this society have conferred upon me in selecting me to introduce the noted lecturer who is to bring to us a message of love and truth today. It was not my privilege to accept this honor as an adherent of the Christian Science faith, but probably on account of the fact that I am not a member of that church.

Centuries ago the question was asked, "What is truth?" All men have not been satisfied with the answers given. Perhaps we have not heard with attention and with a receptive mind the answer that comes from this great body of believers. As our natural eyes love to behold that which is beautiful, so the human heart admires that which is true. Loving truth, we must dislike error. We must all admit that error has caused in the past, and is causing today, an inestimable amount of harm. Some men appear to love error and will cherish it, even to their own destruction. We believe it is the bane of society and the cause of all material and physical derangement. Whether we can conscientiously accept the teachings of this faith today, and practise them in our daily lives, remains for the future to reveal. However, I am convinced that all of us will give our distinguished lecturer a courteous hearing and ponder his teachings in our hearts.—*Correspondence.*

LOS ANGELES, CAL.

Clarence C. Eaton lectured on Christian Science in Third Church edifice, under the auspices of the Christian Science churches and society of Los Angeles. He was introduced by E. E. Sutherland, who said in part,—

Your presence indicates a desire to know more of that great religious movement which is fast changing the world's concept of a God of wrath to that of an ever-present God of love; from lawlessness and discord in the universe to law and harmony; from want and woe to peace and joy. When the voice of Truth came to Moses, while tending his father-in-law's flock at "the backside of the desert," and he received the command to go into Egypt and lead the children of Israel out of bondage, he despaired of making the people understand what should be revealed to him; whereupon he was given two signs, and told that if they would not hearken unto the voice of the first sign, that they would believe the voice of the latter sign. When Jesus came, with whom the truth was spontaneous, instead of revealed as in the case of Moses, he proved it by two signs, in these words: "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?"

Now that the Science of Christianity is correctly stated and set forth in "Science and Health with Key to the Scriptures" by Mrs. Eddy, the truth is again proven by two signs—the healing of sin and of all manner of disease by one and the same metaphysical process.—*Correspondence.*

KENNEBUNK, MAINE.

A most interesting and instructive lecture on Christian Science was delivered in Mousam opera house by Willis F. Gross of Boston. The speaker was introduced by Frank C. Barrett of Portland, Christian Science publication committee for the state of Maine, who said in part,—

Christian Science is now so well and favorably known that there are few well-educated, thinking people who have not given the subject some consideration; and the remarkable growth of the Christian Science movement during recent years gives evidence of the fact that those who have investigated it most carefully have not found it wanting in promoting that health, happiness, and harmony which result from a true Christian experience. However, it is not the purpose of the lecture about to be delivered to convert all here present to Christian Science, nor is it expected that it will. But, if there are any honest doubters here, any open-minded seekers of truth, or perchance any who may have misconceptions as to the true nature and teaching of Christian Science, it is hoped that they may find here that which will remove their misconceptions, dispel their doubts, and that they may receive in large measure the truth which makes men free. This done, the object of the lecture will have been accomplished.—*Eastern Star.*

CHARLEVOIX, MICH.

A lecture on the subject of Christian Science was delivered at the Charlevoix theater by Frank H. Leonard. He was introduced by A. J. Usher, who said:—

It is a pleasure to be called upon to introduce to you the speaker of the afternoon, because I am sure we are all here for some purpose. We have not come for amusement, nor

Digitized by Google

for entertainment, but because we want to learn more about Christian Science.

During the past few years we have seen the teaching of Mrs. Eddy extend over the entire world. We have seen beautiful buildings erected where meetings are held twice a week. We have seen publications established which at once took the first rank. All this we have seen accomplished by the Christian Scientists, quietly, unostentatiously, without seemingly making any effort. We know by our daily intercourse with Christian Scientists that they stand for everything which is good, which is pure, which will uplift the standard of manhood and womanhood, and that the fundamental truths which they teach are part of their everyday life. Such being the case, we want to learn more of Christian Science.—*Charlevoix Courier.*

PARK CITY, UTAH.

A splendid audience greeted William R. Rathvon at the Dewey theater, to hear him lecture on Christian Science. H. H. McCartney in introducing the lecturer, said in part,—

It is indeed an honor for an active layman of another denomination to be called upon to speak at a meeting of this kind. Two thousand years ago there came to this earth one who laid the foundation of all religion. From his being there radiated the truths and axioms by which we live. Since that time many so-called religions have sprung up, seemingly flourished for a while, then died the natural death they deserved. Because their teachings were not founded upon the book given by the Nazarene, they were unable to attract the thinking people to them. If our observation be true, it must follow that a creed, to obtain a hold upon the reliable steadfast people, must have the roots of its thoughts deeply embedded in the teachings of Christ.

There has been a great deal of talk about Christian Science. Many people have disclosed their ignorance in spreading about erroneous opinions in regard to this faith. Some supposed it was a creed which had come to turn the world over, to upset all our ideas of Christ and his teachings. But those of us who know have been led to see the beauty, the faith, the stability, and the truth in this creed. Life in its helpfulness and health is dear to all of us. We cling to it with all our might, and as we see it slipping away from us we look with regret upon the mistakes and misdeeds to which the body is heir. If we lend ourselves to a belief that will lessen our errors, shorten our hours of displeasure, and cause us to forget our grief, we will find ourselves in a more pleasant world.

It is to this great world-effort that Christian Science has set itself. How well its adherents are accomplishing their work is attested by the rapid and substantial growth it has had. Men who before have suffered mental and physical delusions, have through this faith found refuge.

Park Record.

AVALON, CATALINA ISLAND, CAL.

Under the auspices of the churches and society of Los Angeles, Francis J. Fluno, M.D., lectured at Avalon, Catalina Island. He was introduced by Mrs. Blanche K. Corby, who said in part,—

In "Retrospection and Introspection," a book written many years ago by Mrs. Eddy, the Discoverer and Founder of Christian Science, she says, in reference to the growth of our cause, that it is "rapidly spreading over the globe" (p. 85). Today it has encircled the earth, as there is scarcely a remote place where Christian Science has not found its way. These words of Mrs. Eddy bear especial significance to us today, as this is the first Christian Science lecture to be given on this little island of the Pacific, one of the most unique resorts of the world, and it therefore makes this a unique event. Christian Science has found favor with humanity because it has healed them. It has healed of all manner of disease, as well as having delivered mankind from all forms of evil, misfortune, and distress, and has given them that "pearl of great price," peace of mind.

Correspondence.

KALISPELL, MONT.

William D. McCrackan, M.A., in his lecture on Christian Science at the opera house, was introduced by C. H. Foot, who said in part,—

The fact that I have been selected tonight to introduce the lecturer does not mean that I am going to bore you with a speech; neither does it mean that I fully agree with all that the speaker may say, for I do not know whether I do or not until I hear it; neither does it mean that I am a member of the Christian Science church. I say this not only to those who are members of that church, but to those who are not, for I do not wish to place myself before you in a wrong light; but I do know this, that the Christian Scientist is very liberal, that he is not disposed to force his views upon others, nor does he condemn those who disagree with him, and I believe all who do disagree with him should give him the same consideration.—*Correspondence.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship.

Battle Creek, Mich.—Congregational church, Maple street, Sunday afternoon, Oct. 13.
Belmont, N. Y.—City hall, 8:15 p.m., Oct. 17.
Buffalo, N. Y.—Convention hall, 8 p.m., Oct. 18.
Burlington, Iowa.—Grand opera house, 8 p.m., Oct. 18.
Durban, Natal, South Africa.—Lecture hall, Town hall buildings, 8 p.m., Oct. 15.
Fort Scott, Kan.—Opera house, 2:30 p.m., Oct. 13.
Galesburg, Ill.—Universalist church, 8 p.m., Oct. 18.
Grenfell, Saskatchewan.—Cumming hall, 8:30 p.m., Oct. 15.
Highland Park, Ill.—Oct. 17.
Johannesburg, Transvaal, South Africa.—Orpheum theater, 3:30 p.m., Oct. 6.
Joplin, Mo. (First and Second churches).—New Joplin theater, 8 p.m., Oct. 15.
Kansas City, Kan.—Masonic temple, Seventh street and Ann avenue, 8 p.m., Oct. 17.
Kirksville, Mo.—Circuit court room, Court house, 8 p.m., Oct. 17.
Lethbridge, Alberta.—Y. M. C. A. building, 8 p.m., Oct. 18.
Lincoln, Neb.—Church edifice, 12th and L streets, 8 p.m., Oct. 12, and 3:30 p.m., Oct. 13.
Macomb, Ill.—Universalist church, 8 p.m., Oct. 15.
New Albany, Ind.—Maennerchor hall, 8:15 p.m., Oct. 17.
Omaha, Neb.—Church edifice, St. Marys avenue and 24th street, 8 p.m., Oct. 14 and 15.
Oshkosh, Wis.—Armory, 8:15 p.m., Oct. 17.
Pawnee, Okla.—Court house, 8 p.m., Oct. 15.
Pittsburg, Kan.—City hall auditorium, 3 p.m., Oct. 13.
Plattsmouth, Neb.—Parmele theater, 8:15 p.m., Oct. 10.
Plymouth, Mich.—Church edifice, 7:30 p.m., Oct. 14.
Regina, Saskatchewan.—Auditorium, City hall, 8 p.m., Oct. 17.
St. Louis, Mo. (joint lecture).—Odeon, Grand, and Finney avenues, 3 p.m., Oct. 13.
San Antonio, Texas.—Beethoven hall, 4 p.m., Oct. 13.
Sharon, Pa.—Thomas theater, 3 p.m., Oct. 13.
Towanda, Pa.—Universalist church, 8 p.m., Oct. 11.
Virden, Manitoba.—The Auditorium, 8:30 p.m., Oct. 14.
Whitewater, Wis.—Congregational church, 8 p.m., Oct. 18.
Winnipeg, Manitoba.—Orpheum theater, 7:30 p.m., Oct. 13.
Zanesville, Ohio.—Gold hall, 8 p.m., Oct. 14.

TESTIMONIES OF HEALING.

In October, 1910, I had a severe attack of inflammation in one of my eyes. It became worse rapidly and was extremely sensitive to the light. At the end of about a week the doctor told me it was a serious matter; and a few days later, when I could not see at all with the affected eye, he said he would like me to consult a specialist. I did so, and the specialist said it would be a long case, and that there was ulceration as well as inflammation. In a short time the eye was so painful that the doctor said—to my great relief—that I must stay in the dark altogether. For five weeks I was in absolute darkness. Then it was thought advisable for me to go out for as long as I could each day, as I was getting melancholy, which was not surprising. I dreaded the light, but I went out every day, hoping it might cure me. Sometimes my eye was better, and then it was bad again. After about three months the doctor told me I would not be able to use my eyes for nearly a year, and that the bad eye would never be of any use to me for reading.

Some weeks after I began to suffer in this way, I was advised by three different friends to try Christian Science. The third time I asked the friend what she knew about it, and found she knew practically nothing, except that she had seen what it had done for another. The next day I went to see a practitioner, and was amazed at what she told me and very greatly interested, as it had never occurred to me that there might be people living nowadays who believed that God is everything that the Bible declares Him to be. I thought I would like to try Christian Science for my eye, but the people with whom I was living said my family in England would certainly not want me to give up the doctor, and that it would be too great a risk. What I had heard about Christian Science from the practitioner had, however, made me feel so hopeful that I decided I would stay in Vancouver and go on teaching in January, instead of going home to England as everybody advised.

A few days after everything was settled for me to begin work again, my eye seemed just as bad as it had ever been, but it gave me hardly any pain, and was not sensitive to the light to any extent; nor was I at all depressed, which every one thought extraordinary. Three weeks later I telephoned the Christian Science practitioner that I wanted to find out more about Christian Science, but that I could not, as I was not allowed to read. She kindly offered to read Science and Health to me, and though I hesitated to accept, as she was very busy, for more than two weeks she read to me every day except Sunday. It would be difficult for any one who had not been obliged to do nothing for so long a time, but think dreadful thoughts (with the prospect of twelve months more), to imagine what that reading meant to me. After a few days I was so intensely interested that I bought a copy of Science and Health and began to read for myself. The first day I was very nervous about my eye, but after that I did not think of it at all and read most of the day and a good part of the night. I was now most anxious to have Christian Science treatment for my eye, so I decided to ask the doctor whether it was all right for me to try it. He had been extremely kind to me, but he said frankly that I could not come to him and go on with Christian Science. I felt it would be impossible for me to go back to material means, and under these circumstances the people with whom I was living agreed that I could go to the Christian Science practitioner as a patient.

After the first day I realized that if Christian Science was true, then everything I had ever hoped to be true of God must be true. Two weeks after this I was one day rubbing my good eye, when much to my surprise I noticed that I could see the time by a small clock with what had been the bad eye. I was very much excited, and went to tell the first person I could find. With my good eye shut I read a list of names to her, and she looked very startled, as the doctor had told her a short time before that my bad eye would never be of any use to me for reading again. I began to teach again, in February, 1911, and have been teaching full hours ever since, and have had no further trouble with my eye. It is quite impossible for me ever to explain to anybody what Christian Science has done for me, besides healing my eye. I now see quite clearly that it is possible to live here just the life I once hoped I was going to live after I had died and gone to heaven.

M. K. ALLEN, Vancouver, B. C.

I am impelled to write this testimony of my complete cure and emancipation from the drinking habit through Christian Science, in the hope that if it meets the eye of some one similarly afflicted, he may seek its treatment as an effectual means of cure, and thus be restored permanently to health and freedom from the worst bondage against which the business man has to contend. I say "be restored permanently," for I have many times been said to be "cured" by the best physicians in this state, which so-called cures lasted from two to six weeks each, seldom longer, and then I was in a worse plight than before. But no reaction, no craving, has attended my healing in Christian Science, which was obtained in a few treatments over four years ago. There has been no desire to drink again, though I have sat at table with heavy drinkers, at banquets and meetings, at social functions and clubs, and in gatherings where I had placed no embargo, no limit upon myself or appetite; but I simply did not want intoxicants, and my taste revolted at the very sight and smell of them.

I had been, and was, on a prolonged spree when I was given a Christian Science practitioner's card by a friend and told that I could be absolutely cured. I started for the practitioner's office, but I only got as far as my own home, and staggering to a telephone had just sense enough to ask the practitioner to come to me. I hardly knew he was in the room when he gave me the treatment. I had a confused sense of his being there, but that was all. On his second coming I was nearly as bad, but after he left I felt a sense of relief and a clearing up of my confused mentality, which grew better daily, until at the fifth treatment my desire for liquor was a thing of the past. I have never had the slightest craving or desire for it since, no feeling that I am losing something by not drinking (which I expected to have); on the contrary, there has been a joyful feeling of gratitude to God for my escape and healing.

Not a day has gone by since then that I have not studied Mrs. Eddy's wonderful book, "Science and Health with Key to the Scriptures," and through the understanding I have gained from reading it, and the application of the knowledge attained thereby, I have been enabled to obtain a happiness, freedom, peace, and tranquillity to which I had heretofore been a stranger.—W. A. MERIGOLD, Chicago, Ill.

I have thought many times of sending a testimony to the *Sentinel*, and at last my gratitude has found expression. I never knew what health meant until I came to Christian Science. I suffered many years with stomach trouble, severe headaches, and a complication of diseases. While I was being treated in Christian Science, my little daughter was healed of a throat trouble for which we were preparing to have an operation. We are a family of five, and since coming to Christian Science we have had many proofs of the healing power of Truth, as taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy. I feel very thankful to God, and am grateful to Mrs. Eddy for Christian Science.—MRS. MARY M. HEGGBLADE, Omaha, Neb.

For the encouragement of those whose healing is slow, also in gratitude for the inestimable good which came to me through Christian Science, I send my testimony. From

Digitized by Google

childhood I was ill, and was said to have inherited a tendency to lung trouble, my father and many members of my family having passed away with this disease. As the eighth and youngest child in the family, and without a father from the time I was one year old, I was impressed from earliest childhood with the thought of self-support. Being a good student, I was very much crowded in school, the result being stooped shoulders, with a distressing headache as an almost constant companion. As I grew older and took up my work in the world, I became a great sufferer. I had heart, stomach, and liver trouble, also a growth in my right side, besides a tendency to rheumatism, complications being caused by the strong medicines I was compelled to take. The headaches grew more intense, and many times I was delirious, nothing relieving me but an opiate; my physician telling me, however, that an operation might help me.

In this condition Christian Science found me. Not knowing there were any well people in the world, as I supposed every one had some physical trouble, and not thinking that I could be healed of all my suffering, I turned to Christian Science to avoid a second operation for a troublesome abscess. I was healed instantaneously of this, and while I was not healed of all the difficulties for twelve years, I saw from the first the ultimate solution of all my life's problems, and they have been many. As I apply the Principle of Christian Science, as understood through the constant study of the Bible, which I had never understood before, and our inspired text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I continue to solve life's problems correctly. Today my health is perfect, my shoulders are straight, my lung capacity has doubled, I am of normal weight, and completely healed of all the maladies which once seemed so real. I rejoice even in the infirmities which obliged me to search until I found Christ, Truth.

The words of the Master, brought to my notice early in my experience with Christian Science, "O Father, glorify thou me with thine own self with the glory which I had with thee before the world was," remain with me continually. I have also proven that "trials are proofs of God's care" (Science and Health, p. 66); and many a seemingly dark day has been made bright by the application of the first words of the Preface to this book, "To those leaning on the sustaining infinite, today is big with blessings." I have no words to express my unbounded gratitude for Christian Science, but I am praying daily for a deeper appreciation of our Leader and her works, and that I may be upright, honest, conscientious, and true to my fellow men, knowing this to be a privilege as well as a duty.

MRS. CORA E. BARTON, Portland, Ore.

It is with heartfelt gratitude that I send a loving tribute to what Christian Science has done for me. Prior to the time of my own physical healing, I was led to accept the teaching of Christian Science through the healing of a relative who had been a great sufferer for two years or more, and who had been unable to walk. To alleviate her continued suffering, she had become addicted to the use of an opiate, and when I saw her, "clothed" and in her "right mind," also walking upright (in her helplessness she had crept on the floor as a little child does), I wondered at the transformation. On hearing her tell that after trying everything the doctors prescribed, and being in no wise better, she had turned to Christian Science and in a few weeks was walking and praising God,—I was converted to Christian Science then and there. I believed the witness, although I had not then proven for myself how great and good is our God.

I had suffered with very severe headaches since childhood, and was told that they were inherited, as my mother had always been troubled with them. But what a comforting assurance was this: "It is our ignorance of God, the divine Principle, which produces apparent discord, and the right understanding of Him restores harmony" (Science and Health, p. 390). On the occasion of a very severe attack of headache, a friend who was a Christian Scientist came to make a social call, and seeing the bondage I was in, told me I did not need to suffer in this way; that Christian Science would help me, if I was willing to try it. Knowing of the case mentioned above, I was ready to receive the healing, and was advised to get Mrs. Eddy's book, "Science and Health with Key to the Scriptures," and study it. The next day I walked two miles to get the book, and commenced to read that glorious message for the first time.

This was nineteen years ago, and from that day I have used no material remedies, the thought of headaches having been long ago buried in oblivion. The Bible became a daily monitor, and a joy, for the "key" unlocked its treasures. For the many blessings which I have received since knowing the truth that this Science teaches, I feel more grateful than words can express, and it is only in giving to others of what I have been able to understand, that I can in a measure express my love and gratitude to our beloved Leader, who has brought to humanity the knowledge of our divine right to health and harmony.

EMMA J. COOK, Boonville, N. Y.

I willingly and joyfully join my testimony to the record of praise which is giving forth love and gratitude for Christian Science, and its Discoverer, Mrs. Eddy. I have truly found the teaching of Christian Science to be the "pearl of great price," and many are the lessons I have learned and the benefits I have received. I had been reading the literature for a number of years, but did not seem to receive the benefit that some do. About fifteen months ago I left Michigan, almost a total wreck in health, came here, and took up a more thorough study of Christian Science, and I am learning day by day that life and health are not dependent upon matter, but upon God. I find that the more I study this wonderful truth, the more I realize its value; and I have also learned that we must seek before we can find, we must give before we can receive, and we must knock before the door will be opened. I also find that we must turn from error at every point and hold to the truth.

Slowly but surely I am being restored to health, my rightful state of consciousness, and for this, and for the spiritual uplift that I have received, I am truly grateful to the giver of all good. I aim to give thanks by keeping as close as possible to the way our Leader points out.

O. O. DENISON, Los Angeles, Cal.

[Translated from the German.]

I wish to add my testimony of gratitude for the blessings which I have received through Christian Science. For years I had been afflicted with an abdominal trouble, and was in a pitiable condition, being almost unable to do my housework. I then became acquainted with Christian Science through my brother, and devoted myself to the reading of *Der Herold der Christian Science*. I thereby immediately experienced help from God, but being unable to grasp the deeper meaning of this truth, I had frequent returns of the trouble in an aggravated form, and became incapacitated. Thanks be to God, however, who sustained my strength, I never gave up my search for the truth, until the understanding gradually dawned upon me that God is Love, the only creator, who sendeth good alone to His children, if they but follow His leadings; and that evil has power over us only so long as we believe it to be real.

Through this right apprehension the ailment disappeared like mist before the sun, and it has now become easy for me to fill the position of doorkeeper. I am supremely grateful to God for this spiritual understanding, also to our dear Leader, who has given us the "Key to the Scriptures." It is my sincere desire that many people may hear of this

Digitized by Google

wonderful truth, and I shall henceforth earnestly strive to prove my gratitude through righteous living, acceptable unto God, that this truth may lead me more and more toward the goal of perfection.

FRAU LINA VOLKMANN, Köslin, Germany.

Human language is inadequate to express one half of the thankfulness and joy which have come to me through the study of Christian Science. At times my experience seems to me almost too sacred a thing to try to put into words, and I am tempted to keep it within myself, but we know that Jesus' followers spread the glad tidings, and with this thought in mind I will try to tell a little of what this inspired teaching has brought to me.

While I did not come to Christian Science for physical healing, I have been enabled through its teachings to demonstrate harmony and to overcome many things, such as a "weeping sinew," headaches, colds, etc. My greatest gratitude is, however, for the spiritual uplifting it has brought me, and also for the physical healing which has come to many of my family. I have seen much of the healing of so-called physical troubles, pronounced incurable without operations; but to me the most glorious result of even a slight understanding of the teaching of Christian Science is the peace and harmony it brings to those who are in earnest.

This spiritual betterment is surely one of the greatest blessings it brings, and I can truthfully say that it has enabled me to pass through what, to mortal sense, was a terrible sorrow, with joy and thankfulness ever singing in my heart, sometimes even through tears. Truth has destroyed all sense of separation, and filled me with that peace which passeth understanding. I am indeed grateful to God for all these blessings.

I am grateful for our text-book, which has enabled me to understand the Bible, I am sincerely grateful for having been helped over many rough places with loving-kindness, and I am grateful for each one of the splendid articles in our periodicals. Indeed the lines of the old hymn are ever with me: "Rejoice, give thanks and sing."

LILY C. BRAINARD, Cleveland, Ohio.

Through the wisdom of Mrs. Eddy, the students of Christian Science have been given an opportunity of confessing Christ before men, at the Wednesday evening meetings and through the columns of our periodicals. For this privilege I am most grateful, and gladly testify to the efficacy of Christian Science in healing sickness and reforming the sinner. A sense of gratitude impels me to write this testimony, with the desire that my experience may benefit some one who is burdened with the sorrows of so-called mortal existence.

For six years prior to the dawn of truth in my consciousness, I found myself seemingly "having no hope, and without God in the world." At that time I was carrying two very heavy burdens,—a sense of grief, and also of financial limitation. The former was at times almost too deep for tears. My mentality dwelt constantly on the discords of a lonely life and a personal sense of separation, loss, rebellion, resentment, fear, doubt, and despair, and my greatest desire was to end it all—through the agency of a poisonous drug which I had in my possession. Death, or oblivion, was the only door which promised an escape or surcease from my troubles. When the temptation to take my life almost mastered me, my hand was stayed through what I believed was consideration for my only sister; but after the struggle between life and death was over, I toiled on in greater misery than ever.

A great deal of my time was spent in solitude on a neighboring hill, and one memorable day in the spring of 1907 I went to this lonely hillside with a little more spirit than usual. Arriving there, I found all nature reflecting light, beauty, harmony, and peace. The thought of the resurrection morn, as described in the gospels, came surging through my mind, and I fell upon my knees, laid self in the tomb of despair, lifted my thought above the sod, and prayed in my poor way that if there was a God in heaven or on earth, He would lead me into the way of truth. I returned home feeling happier and more peaceful than I had been for years. The next two weeks I was actively engaged in searching for the "pearl of great price," the truth. I read books, heard lectures on the Bible, only to turn from them, mentally declaring that it was the same old story of a God who was subject to changefulness and wrath.

As a last resort, I decided to investigate Christian Science. I began, as I should, with the Lesson-Sermons, and while studying the subject, "Mortals and Immortals," my consciousness was flooded with the light of Truth, which restored my soul, and my cup of joy was "full, pressed down, and running over." For the first time in my life I realized the power and glory of divine Love, and through this awakening I was enabled to lift my thought above the clouds of sense, and claim man's God-given dominion. I have been lifted from despair to hope, from discord to harmony, from death to life. I have been healed of intense pain in my head and eyes, caused, according to an optician, from defective vision, and eye-strain, from which I had suffered off and on for fourteen and a half years. This trouble was entirely overcome in three treatments in Christian Science. I have also been healed of numerous discords, both physical and mental.

I am indeed grateful to our Leader, Mrs. Eddy, for showing us how to overcome the discords of sense. It is through her teaching that I have come into conscious possession of my birthright. All of the health, harmony, peace, and joy that is mine today has been gained through the study of "Science and Health with Key to the Scriptures."

MARY B. WHETSTONE, Montgomery, Ala.

I feel that I have delayed too long the sending of my testimony to the *Sentinel*. I have been interested in Christian Science for over five years, and many times during these years I have seen the power of Truth manifested in my home. I have been able through my slight understanding to help myself and a family of seven children, besides helping some outside of my family. In December, 1910, I was taken with chills and fever, but though I declared the truth as I had many times before, I soon found out that my understanding was not sufficient to meet the case. I then telephoned a practitioner for help, and she assured me of God's omnipresence. I rested well that night, felt much refreshed in the morning, and in a few days was perfectly well.

I am indeed thankful for what Christian Science has done in my home. Mrs. Eddy's inspired book, "Science and Health with Key to the Scriptures," grows more precious to me every day. When I first heard of it I was almost an invalid, and greatly reduced in weight, but I am now in robust health. We use no material medicine in our family, but trust God for everything. I sincerely hope these few words may encourage some one who is struggling under the burden of error to seek the remedy in the teachings of Christian Science, thus to find the perfect love which, as the apostle tells us, "casteth out fear."

MRS. L. B. SPIVEY, Durham, N. C.

It is with deep gratitude that I express my thanks for the many benefits which have come to me through the study of Christian Science. This truth was first brought to my notice in the autumn of 1907. At that time I was blind in one eye and the other was affected. I wore glasses, and no hope was entertained that I would ever be able to do without them. The eye-strain also resulted in severe headaches, but through

Digitized by Google

the reading of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, my sight returned, and for the last two or three years I have ceased to wear glasses, having no further need of them. The headaches also have disappeared. Besides this I have been able to overcome a very troublesome skin affection, from which I had suffered for seventeen years, and bilious attacks to which I was subject have also left me.

Thankful as I am for these benefits, I am far more grateful for the understanding of the Bible which Christian Science has given me, and of the omnipotence of God, in whom I am learning to trust.

MRS. LUCY ROBSON, Wavertree, Liverpool, England.

I would be ungrateful indeed did I fail to mention some of the many blessings of which I have been the happy recipient since taking up the study of Christian Science. I did not come to it for physical help, although I needed it, but took it up for the purpose of investigating its teachings, of which I had heard. I met a stranger, and upon being informed through a fellow workman that he was a Christian Scientist, I asked him if he would give me some of the literature. He said that he would be glad to do so, and in compliance with my request he brought me several copies of the *Sentinel*, telling me to read them and pass them on to others.

After reading the testimonies of healing in the *Sentinel* I was so thoroughly convinced that I went without delay to the Christian Science reading-room, and purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, which I consider the best investment I have ever made. It is indeed the "pearl of great price," for through the reading of this book I was healed of the tobacco habit of nearly twenty years' standing. I had tried for years to refrain from the habit, and had used every material remedy of which I could hear, together with will-power; but they one and all failed me. When, however, I began to read Science and Health, the desire for tobacco left me without a struggle.

I had suffered for years with kidney and bladder troubles, also severe headaches, all of which disappeared when the light of Truth began to dawn upon my slumbering consciousness, and I realized that none of these ills were the creations of God, who is infinite good, and who knows no evil. These are only a few of the blessings which have come to me; I could mention many more, and still the half would not be told. Christian Science is the greatest blessing I have ever known, and I am grateful to God, "from whom all blessings flow," also to Mrs. Eddy, through whom this greatest gift of the ages has been brought within the reach of all mankind, namely, the healing and saving truth known to the world as Christian Science.

WILLIE BYRON GRAY, El Paso, Texas.

[Written for the *Sentinel*.]

LOVE'S HOUR.

MINNA MATHISON.

LOVE waits not for a designated hour
To spread the feast of honey and of wine;
Each moment it is present,—mine and thine
And all mankind's who know and seek Love's power.

Love chooses not the object of its grace;
Impartially its tender blessings fall,
Freeing each struggling heart from grievous thrall;
Now is the time and here the appointed place.

Love, ever present, is our guide and stay;
E'en ere we ask, all blessings are our own;
And Truth, of our deep faith the corner-stone,
Upholds, attends us, verily alway!

FROM OUR EXCHANGES.

[*Watchman.*]

The ecclesiastical rulers regarded Christ with suspicion and were jealous of his tremendous popularity and influence. His disregard of their rules and restrictions made them hateful in their treatment of him. He made light of rules that prevented his reaching the people. As his mission grew in its sweep and power, he came to the stage where he had to commission his disciples, crude though they were and far from being capable apostles; but they had his spirit and imparted his power. This experience of Christ with the outside multitudes has been often repeated. The very churches that stand in his name lose or alienate through one cause and another great numbers of people. The mass of people outside the church sometimes increases as time goes on. One reason for this is that the members of the church lose love. They become imbued with ideas of the church itself as an institution. They exalt unduly the ordinances and regulations of religion. They become religiously high-minded, placing great emphasis upon correct religious conduct and the faithful observance of church requirements. However excellent this may be, the sad fact appears that there are multitudes outside unreached and unsaved.

[*Christian Work and Evangelist.*]

To the man or woman who takes it seriously, all life is a continuous demand. We are always being asked for something; always the voice of the Spirit is calling, calling, for higher effort and nobler service, and always we are making answer by what we say or do in respect to the occasion which presents itself with the call. For most people life is made up of little things—little problems, little crises, little events which make but a poor story in the telling, but produce their spiritual effect in the character they build and the texture of the moral fabric they weave. Most of us have learned never to attribute much importance to the smallness of the scale on which the destiny of any soul is being wrought out, or the seeming triviality of the questions which agitate any human heart from day to day. It is quality of soul that is of importance in the universal order, not the magnitude of one's earthly environment; and the same quality of soul can be developed in the lowliest and most obscure positions as in the greatest and most conspicuous. From this point of view the peasant may be doing more than the sovereign in the furtherance of God's eternal purpose.

[*Standard.*]

History makes nothing more clear than the constant presence of spiritual desire in the heart of man through the long centuries past. Crude and even immoral forms of worship have not sufficed to hide this desire. Underneath the pomp and ceremony of Egyptian or of Roman religious worship one is able to detect that inherent appetite of the human soul for God and goodness which Jesus came to satisfy. We may not ignore the sinfulness of man and the constant tendency of the race to live apart from God, but we are doing man gross injustice if we stop here. In the midst of his wickedness and forgetfulness of God there has persisted always an element in life which makes it impossible that man should be without his aspirations. These aspirations he cannot satisfy by himself. All of the discoveries which make our age noteworthy fail us when we call upon them for the satisfaction of our deepest desires. They may make life more easy and the days more joyous as they pass, but they cannot bring content to the heart.

[*British Congregationalist.*]

Unless those who are responsible for the presenting of the teaching of Christ to the multitude, to the man in the street, to the business man, to the thinker, to those who are indifferent from any cause, seek to do this in a way which

Digitized by Google

will make it "the most precious possession," the life of the churches, whether Anglican or Free, is doomed—if not to failure, then at least to a less full and satisfying success than all followers of Christ so earnestly desire. The old shibboleths are many of them dead, even doctrine itself has undergone violent changes. Nowadays, unless religion can be made an inspiration in life as well as a consolation, it will go yet harder with it. And there will be but little growth in the Christian churches until they draw nearer the first principles of the great Master and Founder of Christianity, and to Christ himself. The man of business, as well as the man of leisure, needs looking after. He needs to be shown that there is nothing irreconcilable between business and religion. He needs an awakening of that vision of "the most precious possession."

[Rev. R. J. Campbell in *Christian Commonwealth.*]

Jesus was right. In all our tumultuous anxieties about the needs of the body, we have actually succeeded in starving ourselves spiritually and keeping the majority poor in all respects. Had we considered the growth of the lilies of the field, were we willing to seek the kingdom of God first instead of second, there need not be a single hungry child in London today, nor any danger of a strike riot, nor any chronic destitution, nor, indeed, any abject poverty whatsoever. There is enough for all, if we could only help one another to get at it instead of fighting each other and getting in each other's way, just as there is earth and sunshine enough to produce in the lilies of the field a beauty rarer than the most lavish splendor the wealthiest potentate ever knew.

[Rev. Charles Stelzle in *Western Christian Advocate.*]

The social question is fundamentally a moral and a religious problem. It will never be settled upon any other basis. Because this is true, the church will have an important part in its solution. The church must have a clear message with reference to the principles involved. The preacher need not discuss social theories, but he must present in the spirit of the prophet the supreme laws of love and justice and service, and apply them to present-day questions. He should speak with no uncertain sound concerning the evils of child labor, of the unsanitary conditions in sweatshop and home, of the curse of Sunday labor, and everything else that is preventing the masses from living the abundant life which Christ came into the world to give them.

[*Christian Advocate.*]

The working men of America are not slow to discern the weakness of much that is proposed by ardent reformers for their advancement. The preacher who hopes to placate them by advocating extreme radical and revolutionary measures is foredoomed to failure. The man who believes that the social gospel of Jesus Christ, applied with unflinching exactitude to all the relations of life, is a solvent for the industrial problems of our time, may say so with concrete illustrations for every position he takes and without alienating any hearer whose friendship is worth having, provided always he leaves the impression that he is a man of sense and sincerity.

[*Universalist Leader.*]

If the ministers knew the main want of the world and could supply it, the day of the prosperity of the church would be at hand. We give men theories when they want facts, we give them recipes when they want food. We give them second-hand knowledge instead of that which we do know from our own experience. And there is the trouble, ministers preach their doubts instead of their faith, they talk about what they do not know instead of telling the one thing they are sure of.

[*Continent.*]

The only Christian that can ever induce the world to come close to God is the Christian sincere—the unmixed Christian—the Christian incapable of two motives.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker *Eddy" is specially* bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

"Confidence and Supply" is the title of a new pamphlet containing the five following articles: "'The Lord thy confidence;'" "Time and Healing;" "'What hast thou in the house?'" "Constructive Work;" "Giving and Receiving."

These have been republished by request from the Christian Science periodicals.

Another new pamphlet has just been published containing the lecture of William R. Rathvon, entitled "Christian Science: Its Results."

Both of these pamphlets are now on sale; 32 pages and cover, at the prices of the regular pamphlets.

The pamphlet "Seeking and Finding" has been translated into Dutch ("Zoeken en Vinden") and is now on sale; 36 pages and cover, at the prices of the regular pamphlets.

Catalogue No. 20, June, 1912, has recently been issued and will be supplied to reading-rooms upon request. This catalogue contains complete lists of all publications issued by the Society, and of the works of Mary Baker Eddy published by Allison V. Stewart.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass, should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please do not send currency.

Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

ITEMS OF INTEREST.

National.

President Taft's veto of the Coosa river dam bill will, it is believed, bring about a settlement upon a fixed policy with respect to the utilization of water-power upon streams under the control of the government. The bill passed both houses of Congress, and President Taft disapproved it, saying that the construction of the dam by private parties brought the water-power privilege within the regulative rights of the government with respect to navigation; that, however much credit was due the originators of the enterprise, it was manifest that in the course of time the return to the investors might far exceed a reasonable return to the government for the value of the privilege granted. The President plainly indicated a leaning to the policy of making the granting of water-power privileges upon navigable streams help to pay for navigation improvement. The advocates of this and similar bills for the utilization of water-power have contended that in fact the federal government's rights extended no farther than the preservation of navigation, the conservation of the integrity of the channels of navigable waters, and that the courts have sustained them and will continue to support them.

President Taft is said to have under advisement a request by the House money trust inquiry committee that he direct Secretary MacVeagh to disclose information concerning the net income revenues of corporations on file with the corporation tax bureau, also confidential reports of national bank examiners concerning the business of the big banks in New York which control large financial operations in that city. It is thought almost certain that he will defer public announcement of his decision in the matter until after the election in November. Under the revised corporation tax law the net incomes of corporations cannot be examined by any one except treasury officials, who are custodians of the records, without an executive order.

Fifteen million miles of free transportation were issued by the Gulf, Colorado & Santa Fé in the year ending June 30. At an average of two and one half cents a mile this represents a sum of three hundred and seventy-five thousand dollars in transportation. The total number of passes issued for the year was forty-five thousand five hundred. Of these thirty-six thousand were issued to employees of the Santa Fé and members of their families. The remainder were issued principally to the employees of other roads.

The 1,114,680 aliens—immigrants as well as aliens temporarily here—arriving in this country during the last fourteen months brought $46,712,607. The immigrants had an average of thirty-eight dollars per capita during the fiscal year, and forty dollars during the two months following. Of the arrivals during the fiscal year ending June 30, 1.6 per cent were debarred. The immigrants from Canada carried the greatest amount per capita, and those crossing the Mexican border had least money.

A contract has been closed with the manager of the George W. Vanderbilt estate in North Carolina for the timber stumpage of sixty-nine thousand acres of land. The price paid was given at between seven hundred and fifty and eight hundred thousand dollars, and the buyer has twenty years to remove the timber, which must be done without injury to young growth. Operations will begin at once.

That not less than two hundred and fifty million dollars would be saved in the cost of hauling the present crop if twenty per cent of the public highways of the country were improved, is the assertion of J. E. Pennybacker, Jr., executive secretary of the American road congress, which was held in Atlantic City, N. J., Sept. 30 to Oct. 5.

With the exception of eleven states all the Governors in the United States appointed delegates to represent their respective communities at the American road congress, which opened at Atlantic City, N. J., last week.

International.

Great relief is being caused by the announcement made by Léon Bérard, French undersecretary of state for fine arts, that his department is taking steps to have the Grande Chartreuse monastery classed as a historical monument, and to obtain from the treasury the funds required for its restoration. The monastery, which was founded originally by St. Bruno in 1084, is situated in a wild and romantic valley, fourteen miles to the north of Grenoble, at a height of over forty-two hundred feet above the sea. The present building, which is a large rambling structure, dates for the most part from the seventeenth century.

An Alexandria despatch states that in the few months since Lord Kitchener decided to establish cotton "halakas," or government weighing and storage markets, in Egypt, ninety-five of these stations have been put in operation, all but twenty-one being in Lower Egypt. Others will be added as needed. These "halakas" will be directly under the control of the local municipalities or provincial councils, with a responsible government inspector, attached to the ministry of the interior.

The New Zealand defense estimates have been passed. An amendment proposed with a view to extending the privilege of conscientious objectors was rejected by sixty votes to five. Speaking on the estimates, the minister of the defense and finance explained that the estimate made by Lord Kitchener had been exceeded because it had been necessary to incur certain initial expenses which would not recur.

A Brussels despatch says that a contract has been signed for a fifty million-dollar loan to China by a Belgian syndicate. This money will be expended on the extension of the Kaifeng-Honanfu railroad into Kansu. The loan was arranged at Peking and the contract signed, but the loan will not be issued immediately.

Industrial and Commercial.

A twelve million-dollar dam is to be thrown across the Columbia river at Priest rapids (Wash.) to develop from seventy-five to one hundred thousand horse-power. The Columbia valley between Wenatchee on the north and Pasco on the south is rich in agricultural possibilities, but lacks transportation and irrigation facilities. The Milwaukee railroad is now building an extension down the west bank of the river from Beverly to Hanford, and this is expected to be in operation by Dec. 1. Tentative plans for the big engineering work at the rapids call for a canal nine miles long, three hundred feet wide at the top, and one hundred and fifty feet wide at the bottom, with a depth of forty-five feet. The board of army and navy engineers who have examined the project, have set forth the condition that this canal must be large enough to accommodate boats and must be provided with locks. It is proposed to distribute the power generated at the rapids up and down the river for light and power purposes.

The island of Porto Rico has shown its appreciation of American rule by spending with the United States during the fiscal year ended June 30, a total of $37,424,545, an increase of more than ten per cent over the values of its purchases from the United States during the preceding year. The total value of the external commerce of the island increased to $92,631,886, and eighty-seven per cent of this trade was with the United States. Sugar to the amount of three hundred and seventy-six thousand tons was sold out of Porto Rico, five times more than was exported in 1901 and an increase of ten per cent over last year's figures.

A state-wide activity among the citrus fruit growers of Florida, in packing and shipping the greatest and best crops ever produced in that state, has begun. Development up to now seems to confirm early estimates of a yield of about seven million boxes, one million two hundred and fifty thousand of which will be grape fruit. It will require twenty-three thousand cars to move the crops to the markets.

A Frenchman has invented a glass that may be cracked but not broken into pieces. Two sheets of glass are taken and one face of each is covered with a thin layer of gelatin; the sheets, gelatin faces opposite, are placed together, with a very thin sheet of celluloid between them. The whole is subjected to hydraulic pressure to make the combination solid.

The government chartered steamer Homer has just arrived at San Francisco, Cal., with one million dollars' worth of sealskins from the Pribilof islands. The Homer left the Bering sea eighteen days before. The vessel was chartered by the government after the lease of the North American Commercial Company to hunt seals had expired.

Amoy, in China, sends about three million narcissus bulbs to the United States every year. The declared value of these bulbs in 1910 was $10,514 and in 1911 $7,043. This is also the part of China from which a great amount of the joss-sticks in this country are imported.

Road building is being undertaken throughout Chosen (Korea), the government having adopted a plan for twenty-three roads measuring fourteen hundred and fifteen miles, to cost five million dollars. The work has begun and will cover four years.

A news despatch from Paris says that Julien Bethenod has invented a sparkless wireless telegraphy by which he says two hundred words a minute can be sent without mixing of messages.

Clock making in the Black forest of Baden and Württemberg now employs fourteen thousand persons. Of the ten million dollars' worth of goods produced, about three fourths are exported.

During the blueberry season just passed, the blueberry barrens of Washington county, Maine, have been worth nearly two hundred and fifty thousand dollars to that county.

The Boston Elevated Railroad Company transported 310,310,009 passengers during the year ended June 30, an increase of 4,811,344 over the preceding year.

The mineral output of the South African Union for 1911 was valued at £47,679,294.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

LOYALTY.

WILLIAM D. MC CRACKAN, M.A.

FEW sentiments have been so often abused as loyalty. The true sense of loyalty is so noble, and appeals so unerringly to humanity's best qualities, that the false or personal sense of it is correspondingly deceptive and therefore dangerous. That it is a human virtue to be loyal to one's family, friends, and country, is universally admitted. Among primitive peoples this quality of mind and heart often brings a semblance of order in the midst of warring individuals; it sometimes does duty as a substitute for laws and regulations, but at the same time it is apt to engender a clannish spirit and to narrow one's interests to his immediate surroundings. At its worst it foments feuds and has been known to nourish the fires of resentment and revenge, the vendetta being carried down from one generation to another.

The true sense of loyalty develops in men as they acquire ideals, and the supreme loyalty of all is loyalty to God, divine Principle, the creator and controller of the infinite number of ideas constituting the universe, including man. We may all admire the chivalric loyalty of the medieval knight to his overlord, the trained loyalty of a soldier or sailor to his superior officer, the helpful loyalty of an employee to his employer; we are justly proud of the achievements of our native land and sustain it loyally in the hour of need, but the loyalty that transcends all these lesser loyalties is devotion to God, based upon a spiritual understanding of Him as He really is. This supreme loyalty must be the aim of every student of Christian Science.

In referring to the subject of loyalty Mrs. Eddy uses the following words in "Retrospection and Introspection" (p. 50): "By loyalty in students I mean this,—allegiance to God, subordination of the human to the divine, steadfast justice, and strict adherence to divine Truth and Love." These words virtually sum up the duties of Christian living. Here, then, under the heading of loyalty we find mapped out for ourselves a grand career, of which "allegiance to God" and "steadfast justice" to others are the leading features. It will be recognized at once that loyalty involves a correct understanding of God and man, else it is useless to expect allegiance to the one or justice to the other.

Now God is the first and only cause of all that really exists, and the Scriptures inform us that He "saw every thing that he had made, and, behold, it was very good." We are also told by Jesus that "God is Spirit" (Revised Version), and by John that "God is love." These Scriptural statements suffice to lay an imperishable foundation for a true understanding of God, a foundation on which a superstructure can be erected which no hand can overturn or disfigure. Prevailing theological doctrines do not accord with the Scriptural statements just cited. It is generally assumed in these doctrines that there is an evil force or energy, sometimes called devil or Satan, not created by God, but nevertheless real, and defiant of Him. This false view would imply that God permits evil and would by implication make Him responsible for all the sin and suffering of human experience. It is quite useless to urge genuine loyalty to such a misconception of Deity, and the attempt to do so has in the past only fostered rebellion and made skeptics. Furthermore, the fact that "God is Spirit" indicates that His creation is spiritual, including man, made in His image and likeness.

Here again a correct understanding is essential, that we may manifest loyalty to our fellow man by meting out to him "steadfast justice." With the best possible intentions, it is not feasible to do exact justice to our fellow man if he is supposed to be the bundle of contradictions which scholastic theology and material anatomy imagine him to be. If he is that strange mixture of good and evil, mind and matter, life and death, truth and error, which passes for man according to prevailing notions; if he is at once the miserable sinner of the Mosaic law and the aggregated organisms of physiology, then the task of treating him with steadfast justice would be hopeless indeed. Shall our loyalty to man include also loyalty to the evil and error which is supposed to go into his mental make-up, to those qualities which lead from matter through decay to dissolution and death? Or shall our loyalty be given with a whole heart and without mental reservation to the man of God's creation, perfect and indestructible, reflecting only divine qualities and attributes?

It is obvious that in order to be truly loyal mankind must first learn something of the nature of God and man. This task Christian Science is fulfilling for the world. Many centuries have passed since the Master taught the pure gospel of God as Spirit and of the Christ-man who is one with God in quality. The transcendent superhuman import of his words was not fully understood, and in course of time literal and material interpretations were placed upon them. The works which Jesus did and commanded his followers to do were declared to be exceptional and assumed to be contrary to law, and instead of educating thought to perceive divine metaphysics, Christendom allowed itself to sink into a slough of false thinking and unrighteousness concerning God and man. The work of healing the sick and raising the fallen which had been the spontaneous demonstration of spiritual understanding, fell into abeyance; the acts of early Christianity became dry history, meaningless to modern men and women.

Then came the discovery of Christian Science by Mrs. Eddy, the rediscovery of the Principle by which the healing and saving was done in Bible times. Then came also the demonstration of the correctness of her teachings through the doing of the works which the Master enjoined. Today people all over the world are rejoicing that through a right apprehension of God and man, the sinner overwhelmed by his sense of sin can be truly forgiven through the destruction of sin; that the sick pronounced incurable, so far as material means are concerned, can be raised up to health and usefulness; that those crushed beneath sorrow or oppression can find deliverance in Christian Science; that the world-worn and disillusionized can become once more like little children and proclaim their "allegiance to God" and "steadfast justice" to their fellow men, because they have found the key to true loyalty in spiritual understanding.

The constant demands made upon thinking people in the past, for loyalty to mere ceremonies or traditions, has alienated multitudes from religion itself, but that tendency is passing rapidly away. The sign of its gradual disappearance is found in the reappearance of the Science of Christianity, which turns man's allegiance to substance not to form, to Spirit and not to matter. In the last report of the clerk of The Mother Church, as published in the *Sentinel* of June 8, was a reference to loyalty full of encouragement to the field. As an evidence of loyalty this report cited "the promptness with which Christian Scientists now discern the indications of personal ambition and self-seeking, and defeat their misdirected efforts." This is true loyalty at work uncovering the practises of a spurious pretense of loyalty which demands a personal following and claims personal allegiance whether its objects be right or wrong. In contrast with this false view let Mrs. Eddy's words be recalled, "Follow your Leader only so far as she follows Christ" (Message, 1902, p. 4).

Among Webster's definitions of the adjective loyal is the following: "devoted to the maintenance of law." The derivation of the word loyalty from the Latin *legis*, or law, through the French *loi*, is also indicated. True loyalty, then, upholds the law of God, spurious loyalty the make-believe laws of personal sense, personal domination and control, the claims of matter and therefore of sin, sickness, and death. To admit the reality of a law of disease is to be disloyal to God's law which never ultimates in sickness. To bow down to the dictum of mortal belief that death is inevitable, is disloyalty to Christ, of whom Paul declared that he "hath abolished death."

The old conception of loyalty, that conception which is being discarded by degrees, was satisfied with a mere creed. The word creed is derived from the Latin *credo*, I believe; therefore, under this old conception it sufficed to believe in God in order to fulfil the requirements of loyalty to Him. But the new yet ever old interpretation of loyalty involves understanding, definite knowing. Today the demand is made for scientific religion, not merely for sentiment, however exalted that may seem. One must be able to declare with Job, "I know that my redeemer liveth," and with the apostle Paul, "I know whom I have believed." Belief is a step in the right direction, but it must blossom forth into understanding before the individual Christian can learn to walk alone with God and demonstrate the power of Spirit over matter. Mrs. Eddy writes in "Retrospection and Introspection" (p. 54), under the heading of "Faith-Cure": "Millions are believing in God, or good, without bearing the fruits of goodness, not having reached its Science." Loyalty to a vague belief cannot resist the strain of actual test nor withstand the buffetings of the storm, but to know God as the only power, His law as the only activity, is to have the certainty of deliverance for ourselves and others.

Moreover, this true knowing calls forth man's devotion and love, and makes loyalty natural and spontaneous. Who would not claim allegiance to God, when He is understood to contain within Himself all those qualities and attributes which are desirable? Who would not be loyal to man, when it is realized that man is the reflection and expression of this sum total of perfection, the divine Mind? It is ignorance of God and man which has so often halted the seeker after Truth at the very threshold of God's kingdom, and it is a misunderstanding of the true nature of man which complicates human relationships and brings discord and contention where loyalty and devotion should abound. Actual experience proves that loyalty to God and man, when it is based upon spiritual understanding, exerts a harmonizing influence upon the whole world. As understood in Christian Science, it ennobles and enlarges individual character, making it both loving and lovable. It is already extracting the sting from sectarian strife and national rivalries, and is destined to unite and bless all peoples and weld them into the unity of good.

ONE OF OUR OBLIGATIONS.

ABBIE J. BAIN.

AFTER the election of readers in a branch church the church has before it a testing time. The first year's experience after new readers are installed is usually supposed to be a test of their ability, but close observation will reveal the fact that it is also a testing time for the congregation. In thinking upon this subject the writer recalled an experience of the children of Israel, and its study may be helpful to others. It began at the time when Moses, directed by God, struck the rock and the waters gushed forth in streams to supply the need of the famished and thirsting host of Israel. We can well appreciate their gratitude and their increased faith in "so great a God," one who could meet their need in this dire extremity, in the midst of the wilderness where there was no water. No doubt they felt, after such a proof as this, that they could rely upon His care for every need.

They were, however, soon put to the test in quite a different way. We read that they were attacked by the Amalekites, a tribe who made war upon them at various times, with the persistent intention of preventing their entrance into the promised land. We find these assailants appearing and reappearing from the time of Moses to the reign of Saul, always alert and aggressive. In this particular attack, Joshua was chosen leader of the armies of Israel to repel the Amalekites. The battle was being waged in the valley, and Moses, accompanied by Aaron and Hur, the record says, stood upon a very high place witnessing the scene. While Moses stood with hands raised heavenward, the Israelites prevailed; but when his hands became weary and heavy and sank to his side, immediately the tide of battle seemed to turn and the Amalekites prevailed over the Israelites. Then Aaron and Hur, we read, "stayed up his hands, the one on the one side, and the other on the other side; and his hands were steady until the going down of the sun." Thus Joshua, leading the hosts of Israel, discomfited the Amalekites and won the victory.

How like this is our experience! We have been drinking of the waters which flow from the spiritual rock,—Christ, Truth. We have been filled with gladness that proofs of Truth's sustaining power have come to us in the wilderness of lost hopes, doubts, and fears. We feel that nothing could be too great for Truth to accomplish, and we want the world to share it with us, but we have yet to learn that after our enemy is repulsed in the open, it may reappear in a more subtle form. The Amalekites are still in the land, and history shows them to have been a persistent and aggressive enemy, appearing and reappearing, compelling the Israelites to war with them all the way from Egypt to Canaan. At this point in our church experience it is well for us to discern the enemy's mode of attack.

After an election of readers, as faithful students and workers in Christian Science we have a victory to gain over the Amalekites of personal sense. The enemy can be recognized by its constant effort to direct our thought to the personality of the readers, their manner of reading, pronunciation, appearance, etc. It comes in open or silent criticism, or in the habit of contrasting them with other readers, in commenting upon any omission or commission of word or phrase, and in the degree that we yield to these aggressive suggestions we lose the benefit of the Lesson-Sermons and fail to uphold the hands of our readers.

It is not likely that Aaron and Hur commented upon Moses' weariness, nor wondered why he could not hold up his own hands unaided until the enemy was overcome. No, "they took a stone, and put it under him, and he sat thereon; and Aaron and Hur stayed up his hands,"—sustained them until the victory was won. Our individual responsibility is like that of Aaron and Hur. If we abide in the true consciousness, it is a stone upon which to rest; and by it we shall support the hands of our readers. Thus,

Digitized by Google

too, we take our rightful place in the work for the regeneration of mankind, in the healing of sickness and the casting out of sin, which is being done by the Christian Science organization throughout the entire world. By our faithfulness we are aiding in the victory as did Joshua in guarding against the Amalekites.

It need not be dwelt upon here that to indulge the spirit of criticism robs us of the priceless blessing which should come to us from hearing the words of Truth, and that it may delay the healing of ourselves or of a brother. If we are absorbed in the contemplation of the perfection and beauty of God's law as it is unfolded to us in the hymns, Scriptural reading, and the Lesson-Sermon, there will be no place in our consciousness through which the enemy can enter. We will thus support and sustain those whom we have chosen, and if at the end of our first year's experience we have measured up to the stature of Aaron and Hur, we shall find that conformity to the high standard set for us will so illuminate our understanding and strengthen our love for God and for our brother man that the years to follow will be brightened by the light of Love all the way, and every stranger within our gates will catch some glimpse of that "light that never was on sea or land,"—the light of Truth that comes from above and dwells in the hearts and lives of men.

GAIN, NOT LOSS.

ELMER A. WOLFE.

To be profitable and useful, all study must be pursued in a spirit of deference which concedes that the instructor knows more than the pupil. Likewise, if he is to gain the knowledge for which he is seeking, the student of Science and Health must acquire the habit of continually suspending *his own judgment*, for he will find himself in contact with *much which, in the light* of commonly accepted beliefs, may seem to be transcendental and even contradictory. He must be ready to cast out as fast as possible any opinion which his study reveals to him to be erroneous, no matter how fixed or treasured the belief may be, and by so doing he will acquire an understanding before which all doubt as to the possibility of putting into practise the teachings of Christian Science here and now will vanish and even the apparent contradictions will disappear.

It is the implicit belief of the average individual that man is now both spiritual and material, and that he has material tendencies and desires, but that he has a possible chance of attaining a spiritual state of consciousness after death, and not infrequently the student of Christian Science gains the impression that man gets into the understanding of Truth and the kingdom of God by commencing where he is, and that by correcting, enlarging, and developing that which he already has, he finally reaches perfection. It is as impossible, however, to build an understanding of spiritual life on a foundation of knowledge derived from the carnal mind or on anything of which the carnal mind gives evidence, as it was for the ancients to succeed with the building of the tower of Babel, and such efforts will result in the same confusion. Paul declared the carnal mind, the mind of materiality, to be "enmity against God: for it is not subject to the law of God, neither indeed can be." Therefore the seeker must be ready to cast out, as having neither truth nor value, every way of thinking and all the so-called knowledge which is based directly or indirectly upon the physical senses.

The history of the ages, with their long and apparently almost fruitless struggle against evil, surely offers proof that the beliefs held respecting evil, and the methods of overcoming it, have been based upon an erroneous conception of its nature. The acknowledgment and recognition of evil as a power, and the acceptance of the reality of matter and its supposed laws, has apparently rendered Christianity helpless. Christian Science, recognizing the omnipotence and omnipresence of God as a present reality and factor in the affairs of men, declares that "Spirit and its formations are the only realities of being" (Science and Health, p. 264); and he who is gaining the light begins to perceive that in his search for truth evil (error) cannot be admitted as a factor, since God, the Principle of being, the only cause and creator, is good and good only, and hence that evil is no part of His creation and cannot be expressed in the infinite manifestation. He learns also that evil has no place, even under present conditions, except as a false belief to be guarded against and cast out through a knowledge of reality.

Mrs. Eddy says, "The great spiritual fact must be brought out that man *is*, not *shall be*, perfect and immortal" (Science and Health, p. 428), and it is for this man the Scientist is always contending; for the knowledge that it is the rightful and only heritage of man, as a son of God, that it is his to have, in and about him, those conditions which must accompany the expression of spiritual law; viz., harmony—recognized as health, holiness, and happiness. Our Leader tells us that "when we subordinate the false testimony of the corporeal senses to the facts of Science, we shall see this true likeness and reflection everywhere" (Science and Health, p. 516). Jesus said, "Let the dead bury their dead," and the seeker should learn that as fast as the nothingness of a given phase of mortal belief is recognized, it should be put aside and not resurrected; it certainly must not be rehabilitated, if he would not renew its claim to reality and power. No consideration should make one retain a sense of evil, or renew it in his thought, after it has been seen in the true light as an unreality, because it is the acceptance of the belief in its reality which hinders the understanding of man's spiritual perfection.

Jesus also taught that the question of salvation is an individual matter and that each must work out his own. Each individual's false concept of God and His creation must be yielded up, so it can be seen that the means by which one can escape from the bondage of belief is through the correction of his own understanding and lies within his own reach. It is easy to see that the removal of sin or disease from our knowledge would not take from us anything which is good, but it would certainly leave us in better condition and increase our possibilities of development and growth.

Paul speaks of the veil which hid the true meaning of the Scriptures during his time until that veil was "done away in Christ." Mankind have since then been reading the Bible and seeking truth under a veil of mortal belief, but their efforts to comprehend the Scriptures have not been with "signs following." The text-book of Christian Science has, however, thrown such a new light on the Bible that the veil is being lifted and the world is beginning to know something of the results which accompany the recognition of the presence of the "Spirit of the Lord;" to know something of that liberty to which Jesus referred when, speaking to the Israelites, who claimed their freedom as the sons of Abraham, he said, "Ye shall know the truth, and the truth shall make you free."

"STEP ON THE HIGH PLACES."

MARY I. MESECHRE.

MORNING had dawned bright and sunny after the rainy night, and spring's balmy breath welcomed those who ventured abroad, although it was necessary to look to the ways of one's going and to exercise caution in crossing the streets. Down the walk came a mother and child. "Oh, what a bad crossing!" exclaimed the mother. "Be careful, dear, and keep out of the mud!" Half-way across the little foot slipped, and no amount of trying served to regain the firm path. In sheer despair the boy soon ceased to struggle, and clumped defiantly through the mud, while his mother alternately chided his carelessness and lamented the appearance of his once tidy feet.

Digitized by Google

Shortly afterward a second mother and child approached the crossing. "Step on the high places, dear!" was the gentle admonition; and so intent was the child upon selecting the high places, that not once did the little feet slip into the treacherous mire, and reaching the other side of the street without mishap, he ran happily along by his mother's side.

Each mother was solicitous for her child; each child endeavored to follow his mother's loving admonition. In one case failure resulted; in the other the attempt was successful. Wherein lay the difference? After long musing, the reply to my query was found in the difference in the method by which the warning of danger was given by the two mothers. "Be careful, and keep out of the mud," said the one. "Step on the high places," advised the other. The first noted only the danger, thus filling the child's thought with fear, and suggesting failure as a possibility. The second mentioned only the best that was to be seen, thus lifting thought from possible defilement or danger and presenting no opportunity for aught but success.

The contrast here presented has given the writer valuable help at various times. Perilous crossings sometimes seem to confront us in our earthly journey. To essay them with eyes fastened upon the dangers, with thoughts filled with care and burdened with apprehension, is to invite failure. But to step forth confidently, certain that the royal highway can never be wholly obscured, noting only the high places in the path and using them steadfastly, brings us at length to stand safely beyond the reach of harm, often actually unconscious, and always unfearful, of the threatening ills through which we have so calmly passed.

Christian Science teaches clearly that to contemplate the mire found in one's mental pathway never furnishes reliable guidance, but when the sunlight of Love is welcomed and full attention is given thereto, its beams "mark the way," for they render visible and prominent the high places. Again and again has our revered Leader reiterated in substance this loving injunction to "step on the high places." Especially is the writer grateful for her teaching in "The Way" (Miscellaneous Writings, p. 355), and for the clearing of vision which has resulted from the study of this article. Two statements therein have often served as incentive to renewed effort: "Learn what in thine own mentality is unlike 'the anointed,' and cast it out" (p. 355); and "Love is greatly needed, and must be had to mark the way" (p. 358).

In Isaiah's wondrous prophecy we read of the highway where the redeemed shall walk,—a way so plain that every wayfarer shall tread it safely, and in which even the foolish shall not err. Surely the redeemed are they whose feet seek the high places, whose hearts echo that cry of patient, grateful obedience: "He knoweth the way that I take: . . . My foot hath held his steps, his way have I kept, and not declined."

OUR BUSINESS MEETINGS.

HERBERT M. BECK.

A GENTLEMAN who had recently become a very keen observer of things connected with Christian Science, remarked as follows: "If I wanted to see a man about whom I knew nothing, except that he was a Christian Scientist, I would attend a Sunday or Wednesday evening meeting of that church and expect to find him there."

The regular attendance at the Christian Science services —Sunday and Wednesday, summer and winter—has often been remarked on, and the fact noted that the attendance is usually much larger than the membership. This, of course, is a pleasant thing to contemplate, and should be appreciated as an evidence of the drawing power of the word of Truth; but it is also a fact that the business meetings, at least in the smaller churches, are not so well attended, in some instances, as they should be. Some members are usually excused on account of being absent from the city, others no doubt have excuses which seem reasonable to them, but the question is, Is anything reasonable that takes us from the councils of our cause? The loving commendation of Article XVII, Section 1, of the Manual of The Mother Church, should not be forgotten nor taken lightly. A Christian Scientist cannot be fatigued in doing his duty toward Truth and Love,—and are not the weary and heavy laden those who are looking to sense, and not to Soul, for happiness?

It is often noted that those who are absent from business meetings, for one reason or another, are perfectly loyal in supporting the conclusions of the rest, but to those present, —"the faithful few,"—to know what is the right course to pursue is a burden and responsibility which *should be mutually* shared by every member of the church. The treasury may, or may not, at a particular time, be in need of the loving consideration of every one; however, it should not only be kept abreast of the current expenses, but even more, that the greatest work in the world, that of saving the world, may go forward with every new and broader opportunity that offers. Yet it is not money alone that this work must have; at least, not money first. It is love first,—love of the cause,—the love which led woman to be last at the cross and first at the sepulcher, for one is not easily separated from that which he loves.

If we really love our cause and expect great good from the business meetings, will we allow anything to interfere with our presence at them? It is only by giving ourselves that the church can be seen to enter the hearts of men and to save them. Shall we not therefore bring love into the storehouse, that there be that which is needed in our Father's house? Surely it is not a sacrifice to give love, such free-hearted, whole-hearted giving as our dear Leader has inspiringly said "does not impoverish us in the service of our Maker, neither does withholding enrich us" (Science and Health, p. 79).

TRUST.

STELLA BEDFORD WILSON.

IN striving to know more of the truth in Christian Science, the word trust has come to mind many times. Before taking up the study of Christian Science, we may all think we know the meaning of trust, but do we? In looking up the definition of the word we find many given, but the following seems to me the best: "assured resting of the mind on the integrity, veracity, justice, or other sound principle of another." Where, then, should our trust be placed, if not upon God, who is divine Principle and embodies all truth, all integrity and justice?

While working on some problem which has presented itself to us, there may seem to be much to overcome, many obstacles to be removed; like the children of Israel at the Red sea, we may seem to be hemmed in on all sides; but if right there we stop to search our consciousness, we may detect wherein lies the error that has withheld from us the solution of our problem. Perhaps there has been a thought of how it would have to be brought about. We may have wondered in what way our release would come. Would not this very thought be a doubt of God's power to deliver us? Does God need our help to point out the way of deliverance? Our work is to have absolute trust that all things are possible to God; an assured resting of our minds in divine Principle; and if we put aside every doubt, never thinking how or when the deliverance is to come, but knowing that God's ways are not as our ways, we shall never fail to find our freedom.

Then, as we bow in silent gratitude and praise for His infinite, never-failing guidance and love, we realize in some degree what the psalmist meant when he said, "Trust in him at all times; ye people, pour out your heart before him: God is a refuge for us."

[*Los Angeles* (Cal.) *Tribune.*]

An important thing necessary to an intelligent understanding of the Bible is to grasp its true mission—the imparting of spiritual understanding to mortals. It does this through the inspired writers of its books, who gave forth the light as they saw it. Their perception of truth necessarily varied with their varying degrees of spirituality, and this explains that which is sometimes referred to by critics as contradictions and inconsistencies. To careful Bible scholars, who understand the origin and expression of this grand old book, the thread of truth is always visible, although at times it seems to be closely interwoven with human misconceptions.

[Frederick Dixon in *Sevenoaks* (Eng.) *Chronicle.*]

In his recent letter our clerical critic alludes to the atonement, yet he knows as well as I do that there is no such thing as an orthodox doctrine of the atonement. He says, for instance, that "the Christian church has never ceased to teach the sacrifice of the Son of God, as removing the sin of the world." These are mere words, which can only deceive readers profoundly ignorant of the subject. Here are the words of a member of the clergyman's own church, the vice-principal of the Theological College in the cathedral city of Lichfield, who has expressed his opinion that the world would not accept any doctrine of the atonement which contradicted its fundamental moral instincts, and that these moral instincts were outraged by the teaching that God could be "appeased or propitiated by the death of an innocent victim." "Our whole mind," he adds, "revolts against the Miltonic view of the atonement, which, besides offending our moral sense, logically and rapidly leads us to undiluted Arianism." I do not know if the critic will still have the controversial audacity to use such an argument again. Then in eleven lines the gentleman disposes of all the difficulties concerning Jesus and the Christ. He knows, as well as I do, that the greatest thinkers in his own church have devoted not merely books, but veritable libraries, to this subject. There seems, therefore, almost a want of diffidence on his part in assuming that it is so casually to be disposed of, and in inviting me to follow him into such a futile process of exegesis.

Next, I come to the really lamentable attempt, on the part of the critic, to explain away what I said about his contention that Christian Scientists never took up the cross. I said, and I repeat with emphasis, that Christian Scientists take up the cross in the fullest sense. One example alone, out of innumerable ones which I could have given, was the one selected of a Christian Science practitioner sitting by the bedside of the sick, striving to save life, with the knowledge that if he failed he would be dragged into the coroner's court and subjected to every sort of insinuation. I added that, after this explanation, I thought the critic was too much of a gentleman to repeat the offense. I have now to apologize to your readers and to him for having thought anything of the sort. He retorts by saying that he regards my argument as too "funny" to be serious. It may be exquisitely humorous to him; as humorous as, I am told, the sufferings of an animal under vivisection sometimes are to the operator. But then the point of view of a Christian Scientist, striving at the cost of insult and contumely to heal the sick, in accordance with the command of the Founder of the Christian religion, is a little different from that of the clergyman who regards that effort as "funny."

The critic differs, as he is entitled to, from the teaching of Christian Science, but in pouring out his scorn he will do well to remember that he differs from a good many people; from the vice-principal of the Lichfield Theological College, on the subject of atonement, and from the theologians of Sevenoaks, in the sixteenth century, if his church existed in those days. Indeed, had the critic had the bad fortune to have had Bonner for a bishop, in the days of the Marian persecution, he might have learned exactly how "funny" it is to expose yourself to bigotry and intolerance. The critic's state of mind is rather like that of the Roman emperor who attributed to perversity the presence of the Christian martyrs in the circuses of the empire.

Finally, this clergyman makes a most unwise attempt to dissociate healing from the practise of the Christian religion; unwise, partly because you can only do so by repudiating the gospels, and partly because an enormous number of his own church not merely subscribe to it, but are endeavoring to restore it. Again and again, without reference to time or place, Jesus insisted on healing as an essential of belief. The critic most unwisely argues that there is no reference to healing in the closing verses of Matthew. Is there not? Jesus bade the disciples go unto "all nations, teaching them to observe all things whatsoever I have commanded you." Does the critic seriously mean to contend that the healing of disease was not one of these things? Even supposing the impossible, suppose it was not; did he not say, as recorded in the last chapter of Mark, "These signs shall follow them that believe"? Does the critic hope to persuade any one that the word "them" applied only to the apostles, or the believers of the first century? If he does, he will have to convert an enormous number of ministers of his own church, as well as to explain away the record of healing in the works of the fathers down to the time of Constantine. And again, there is the statement in John, "He that believeth on me, the works that I do shall he do also." Would this critic care to argue that the works done by Jesus did not include physical healing?

The clergyman admitted at the beginning of this controversy that he was "truculent." I think he has made good the admission several times over. But I will tell him this, that truculency is a sign of weakness and defeat, and is not exactly a proof of Christianity. In the attempt to escape from the clear issue of healing, he has disappeared in turn down every by-alley in the maze of orthodox dogma. He finds it much easier to talk of the "evil deeds" of Christian Science practitioners than to emulate their efforts to heal. Let me remind him, once more, in the inexorable words of the gospel, that the only proof he can give that the doctrine he preaches is the doctrine of Jesus the Christ, is the proof Jesus the Christ demanded, "He that believeth on me, the works that I do shall he do also."

[S. R. C. in *Leeds* (Eng.) *Weekly Citizen.*]

At the time of Mrs. Eddy's passing on I poured ridicule upon Christian Science, because I had not the slightest knowledge of what it was and what it proposed to do. Since then I have studied the subject a little, and now I feel sorry I did not become acquainted with the fundamentals of Christian Science earlier. Last Sunday evening I went to the Cavendish road First Church of Christ, Scientist, and spent a very enjoyable, and, to say the least, instructive time. Although I was a complete stranger to every one present, nevertheless I felt at home; and after the service I was a welcome visitor.

Beautiful poetic thoughts run through the whole of Science and Health, and one can only come to the conclusion that Mrs. Eddy was a devout, spiritual woman, and a worthy head of the new church of thought. Christian Science healing is wonderful, and the more one hears testimonies from people who have had the experience, the more one is convinced that the religion of Christian Science is common sense and, above all things, practical. Locally and nationally, the Christian Scientists are making great progress. A new church is to be erected in Headingley lane, the site having been purchased at a cost of two thousand pounds. The cost of the building will be ten thousand pounds.

[From *National Review*, Shanghai, China.]

During the past week the correspondence columns of our senior morning contemporary have been devoted to a controversy on the subject "Science and Religion," in which local representatives of various schools of thought have expressed various and diverse views. It is notable that every one of these authorities has treated his subject from the point of view that science has little if anything to do with religion, and *vice versa*, and that each and every one of them appears to have overlooked the true meaning of the word science, which is, "truth ascertained and capable of demonstration," and not simply an exact knowledge of material as distinct from artistic principles. Unless religion embraces the science of life—the knowledge of how to live, and not of how to die—it degenerates into a superstition in which tradition and an idolatry, all the more pernicious on account of its outwardly reverent nature, exert a preponderating influence. Such a "religion" will never appeal to the people of this country, and until those concerned make a radical overhaul of their ideas on this subject, we are of the opinion that the criticisms contained in the letter of "W. B. L." will be capable of infinite repetition.

[Herbert M. Beck in *Fort Smith* (Ark.) *Booster*.]

It is frequently said in some quarters that hell is not preached nor believed in so much now as it was some years ago. Most of the ministers of this city expressed their views on the subject of "Hell" in last Sunday's *Times-Record*, and the unity of these opinions would indicate that a belief in hell is still strongly upheld by the popular churches. The one and only opinion expressed which did not favor fire and brimstone [Herbert M. Beck, Christian Science committee on publication for Arkansas] is given below (*The Booster* is not acquainted with the place in question and knows nothing about it. It reprints this opinion):—

"Hell is certainly not a literal place of fire and brimstone. It is of the same order as its reputed chief occupant, who is known to be 'a liar, and the father of it.' No man makes his own hell entirely, but it is the result of wrong human thinking. It results, first, from fear that there is a law of evil; or, second, from the false belief that there is pleasure in sin. Hell is neither God-created nor God-permitted. 'Sin makes its own hell, and goodness its own heaven' (Science and Health, p. 196).

"Sin is not geographical, therefore hell is not geographical, but represents a condition of mortal thought only. It begins when sin begins and lasts so long as the sin lasts. A man may be in hell just as much before death as after death. To know the divine truth as Jesus pointed it out, makes man free because it insures right thinking, involves the understanding of God as the only power, dissolves and destroys sin, sickness, death, and hell, and so reveals the primal man in God's image and likeness—never condemned and never lost—who, therefore, must forever live and move and have his being in the kingdom of harmony—the kingdom of heaven.

"A great poet of the heart has well said, 'The fear of hell is a hangman's whip to hold the wretch in order,' but a greater prophet said, 'Perfect love casteth out fear.' Therefore, to that mind which is able to know the omnipresence of God's perfect love, there can be no hell of whatever sort, not even in belief."

[Algernon Hervey-Bathurst in *Newcastle* (Eng.) *Mail*.]

Books by the hundred have been written, theories innumerable have been started on the teaching of the Bible, but beyond perhaps encouraging some people to study the Bible for themselves, it could not well be said that they have benefited humanity to any extent, for they have certainly not given mankind a scientific, demonstrable method whereby they can prove that there is still a God "who forgiveth all thine iniquities; who healeth all thy diseases." Having, however, perceived the absolute, that is, the scientific or spiritual meaning of the statements of our great Master, Mrs. Eddy has been able to show mankind how it is their privilege and duty to be free from sin and sickness. To put it in another way, Mrs. Eddy, in writing "Science and Health with Key to the Scriptures," prepared what might be termed a commentary on the Bible, and although commentaries on the Bible had previously been written by various people, none had accomplished what Mrs. Eddy has achieved. It does seem strange, therefore, that just because Mrs. Eddy has given spiritual teaching of a real, practical nature to humanity, just because she has published a text-book the value of which is being daily proved by thousands of people, there should be found men who could write letter *after letter with* the object of arguing that disease cannot be cured, *that sin* cannot be destroyed in the only way Jesus the Christ stated most emphatically these results must be obtained.

Christian Science is a great movement in the world, and requires no advertisement beyond the natural and inevitable results of an honest investigation and application of its teaching. It will be remembered that in the case of the man quoted in St. John's gospel as being healed by Jesus of blindness, he said, in reply to the criticisms and jeers of the Pharisees, "One thing I know, that, whereas I was blind, now I see." Now it is just such an answer as this that is being given, not day by day, but many times a day throughout the world in this twentieth century, as a result of having experienced the healing power of Christian Science. And so long as these proofs are forthcoming, so long will Christian Science continue to grow, thereby proving beyond all argument that it is based upon that immutable foundation, that absolute Truth, which cannot be moved.

[Warwick A. Tyler in *Salt Lake City* (Utah) *Tribune*.]

In a recent sermon, as reported in a late issue, the preacher classifies Christian Science with theosophy and various forms of the religions of the East, and in speaking of these he mentioned that they insist it is wise to study all religions and pick out the best from each, and so make up a composite religion suited to the individual taste.

Christian Science has nothing whatever to do with any religion of the East, ancient or modern, nor is it founded upon any such. It has for its foundation the very elements of Christianity, namely, the words and works of Jesus Christ. It is quite true, as the reverend gentleman states, that Christian Science differs very widely from "traditional Christianity." Is it not also true that the teachings of the Nazarene differed very widely from the traditional religion of the rabbis? Yet the pure religion of Moses, stripped of all tradition and ceremonial, was and is found to be the same as that of Christ Jesus, *i.e.*, a belief in and an understanding of the great fact that there is but one God. "Hear, O Israel: The Lord our God is one Lord." Moses taught this. So did Jesus; and he said in answer to the scribe's question that all the law and the prophets was fulfilled in man's loving God supremely and his neighbor as himself. This, too, is exactly what Christian Science is teaching.

Our reverend friend suggests that the twentieth century may need a religion differing very widely from that of the first century. Christ Jesus showed that the first century needed to know God as He is, and he proved by his works that this knowledge of God and of man's relation to Him, brought surcease from sin, sorrow, disease, and death. The Master taught and practised a religion of works. He also promised that those who believed on him (understood his teaching) should do the works that he did and even greater works. His disciples and apostles accepted this as true and proved it to be true, for the word was confirmed "with signs following." Such was the religion of the first century; and surely the twentieth and every other century can need nothing save a better understanding of the religion of Christ Jesus, who said, "If ye continue in my word, then are ye

Digitized by Google

my disciples indeed; and ye shall know the truth, and the truth shall make you free." Christian Scientists are accepting this promise and its condition (to continue in his word) in its entirety, and are proving, according to the measure of their continuing (understanding), that "signs" are still following "them that believe," by the healing of all manner of sin and disease.

[Alfred Farlow in *Topeka* (Kan.) *Capital.*]

A recent report of the Lutheran synod, held in Kansas City, gives the information that the Lutheran church proposes to "publish pamphlets to combat the spread of Christian Science in that state." We assume that this means the state of Kansas. The incident leads us to believe that this body of honorable men have been misinformed on the subject of Christian Science, which advocates all that is pure and holy, and demands right living in all things. It is based upon the Holy Scriptures, taking for its fundamental propositions the declarations of Christ Jesus. Therefore any effort to "combat" its teaching would in reality be an effort to combat the Christian religion, to combat the teaching of Christ, and we doubt if our clerical friends desire to enter into a propaganda which virtually means opposition to God's word. We would advise them to weigh this matter with extreme care before they venture upon the task.

[Avery Coonley in *Chicago* (Ill.) *News.*]

In a recommendation headed "Pupils, Parents, Teachers," and signed "A. R. M.," in a recent issue of the *Daily News*, the statement was made that physical examination of school children has been placed in the hands of "school doctors and nurses" by "the authorities." Readers should be advised that this has been done without warrant of law. Examination cannot legally be required, and there is no authority for the expenditure of the large sums of money involved. The order of the board of education which will send three hundred thousand patients to physicians this fall, is a step toward an end, and that end should be recognized when the steps leading to it are under consideration. As stated by the health commissioner of Chicago, in a recent bulletin published by the extension division of the University of Wisconsin, we may expect nothing less than compulsory medical treatment.

To quote: "The vision, the hearing, the speech of pupils, their physical deformities, their mental defects, their nutritional status, all have come to be matters requiring attention by medical inspectors of schools, and justifying correction at the expense of the community if the circumstances make it necessary." This treatment will obviously be according to the theories of that particular system of medicine which dominates health boards throughout the country. The important question is not whether one method is as good as another, but whether any may be compulsory in a free country. This question will face every parent of Chicago upon the opening of school.

[William J. Bonnin in *Liverpool* (Eng.) *Post and Mercury.*]

According to the report of his sermon to the Medical Congress, the Bishop of Liverpool unfortunately thought it necessary to preface his statement of the truth he had discerned in Christian Science with some rather strong expressions in condemnation of that religion. The general nature of these charges precludes the refutation of them in the limited space you could allow me. Perhaps, however, you will permit me to say that when their religion is assailed by Christian ministers, or any one whose efforts are devoted to the amelioration of the race, Christian Scientists deplore most of all the wasteful internecine nature of such warfare. After all, the goal is the common one of truth. If the bishop thinks that the healing of the sick is not a duty attaching to a Christian life, but is rightly undertaken by a separate profession, Christian Scientists have no desire to find fault with him. They themselves honestly believe that it is such a duty, and that spiritual healing is scientific healing. The discovery of what they are convinced is "the better way" does not blind them to the fact that clergymen and doctors are working for the spiritual and physical betterment of humanity to the best of their ability, and to them they would say, as Abraham said to Lot, "Let there be no strife, I pray thee, between me and thee, and between my herdmen and thy herdmen; for we be brethren."

[E. M. Ramsay in *Aberdeen* (Scot.) *Free Press.*]

That Christian Science interprets the gospel teaching in a manner new to the thought of this age, we do not for a moment deny. The Master plainly stated that in the years to come the world would receive fresh light on the momentous subjects on which he had spoken, and that this fuller light was not to supersede but to explain his words. "I have yet many things to say unto you," he told them, "but ye cannot bear them now. Howbeit when he, the Spirit of truth, is come, he will guide you into all truth: . . . he shall receive of mine, and shall show it unto you."

The wonderful discoveries of the present age which have revolutionized to a great extent the conditions of modern life, are rightly connected with the names of the men on whose thought these discoveries dawned, but as Bell, Kelvin, Edison, and Marconi did not create the forces they have pressed into the service of man, so Mrs. Eddy did not create Christian Science; she perceived something in the Saviour's teachings which the ages preceding her had failed to perceive. Thus it has come about that those who are willing to be instructed may know things of which the sages of the past were ignorant, that the man of today may get a grasp of the fundamental facts of life as never before, and may find this new, deeper understanding express itself outwardly in a wonderful improvement in health and happiness, and in a greatly extended capacity to be of service to others.

Before I became a student of Christian Science, I was convinced that there were two lives, a spiritual and a physical, governed by laws in many respects antagonistic to one another, and it was a constant source of difficulty to know how far one could disregard the laws of bodily health in order to conform to the requirements of the spiritual life. The Bible, however, gives no indication of such a divided government of the world, and the explanation of Christian Science shows that there is a method of thinking, wholly Christian and equally beneficial to what we are accustomed to call soul and body, which may now be employed by man.

Christian Scientists do not expect that those who are happy and satisfied with the knowledge of God which they at present possess, will be willing to accept the teachings of Christian Science as a whole, though there is much in Mrs. Eddy's books that would appeal to earnest-minded people in general as true, helpful, and beautiful; but the number of the wholly satisfied grows less and less. Progress is on the winds, abroad in the world, and there are thousands hungering for a more practical presentation of Christianity, for a clearer sense of the divine guidance, for a nearer walk with God. To such as these, Christian Science brings a message of incomparable hope and joy.

A little deed of kindness may
Thy ransom be from cares of day;
The scales of mercy, balanced true,
Each kindness done gives back to you.

Think not this rule shall ever fail,
Nor that injustice shall prevail:
Who good shall do, he good shall know,
And peace within his heart shall glow.

CHARLES C. SANDELIN.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

CIVIC DUTY.

IN these days when things political seem to loom largely in the national horizon, the welfare of the people at large rightly commands something more than a passing interest from every good citizen, a class from which Christian Scientists are by no means excluded, as throughout Mrs. Eddy's writings there is distinctly manifested a love of country and good citizenship, and her counsel to her followers has always been along the line of obedience to law. When the publication of *The Christian Science Monitor* was announced in the fall of 1908, its politics as a newspaper became a matter of national interest, and Mrs. Eddy's letter to the *Boston Post* (reprinted in the *Sentinel*, Nov. 7, 1908) was widely circulated. We quote it below:—

"Mrs. Mary Baker G. Eddy has always believed that those who are entitled to vote should do so, and she has also believed that in such matters no one should seek to dictate the actions of others.

"In reply to a number of requests for an expression of her political views, she has given out this statement:—

"'I am asked, "What are your politics?" I have none, in reality, other than to help support a righteous government; to love God supremely, and my neighbor as myself.'

"MARY BAKER G. EDDY."

There is nothing in Mrs. Eddy's writings which would justify the belief said to be entertained by some Christian Scientists, that they should not exercise their right of suffrage. As to the right of woman suffrage she has written: "Our laws are not impartial, to say the least, in their discrimination as to the person, property, and parental claims of the two sexes. If the elective franchise for women will remedy the evil without encouraging difficulties of greater magnitude, let us hope it will be granted" (Science and Health, p. 63). The doctrine here inculcated is in keeping with the teachings of Christian Science, and is confirmed by her further statement (p. 340): "One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes."

It may be set down, therefore, as a duty of Christian Scientists to participate in the government of the country, and he is the best citizen who most carefully, prayerfully, and punctually exercises the right of suffrage. Not that the admittedly undesirable in political methods should be perpetuated, or that blind and unreasoning partizanship should govern the actions of any one, since right thinking and acting must be paramount in the domain of public as well as personal affairs, and only rightly directed individual effort will bring about this condition. The ideal of good government is civic righteousness, which entails just and equitable laws and their impartial administration, and they who possess this ideal cannot delegate their duty in this regard to those who are actuated by selfish motives.

It is the part of every good citizen, then, to see that those who are elected to public office are men of unselfish motives and sterling integrity, who will stand unflinchingly for just and wise laws and their fearless administration. To plead that one does not approve of methods now in vogue, or that the heat and turmoil of the ordinary political campaign is distasteful, does not exempt from duty, neither will standing aloof cure the evils of the partizan and corrupt methods which have so often been justly criticized. If practical politics are not what they should be, surely the blame lies largely with those who decry present methods without taking active steps to correct them. Personal ambition and selfish desire for private gain can have no place in the ideal social condition, and there must be individual and concerted effort on the part of public-spirited citizens to secure the elimination of these undesirable elements from civic affairs.

Whatever improvement is to take place in political methods and conditions must come through the individual whose ballot is cast unselfishly, whose every thought is one of love for his fellows, and whose every desire is for the establishment of Christ's kingdom. We would commend to Christian Scientists who are seeking to be guided aright in civic as in all other duties, a prayerful study of the "Rule for Motives and Acts" as laid down by our Leader on page 40 of the Church Manual, for a practical solution of this problem.

ARCHIBALD MCLELLAN.

ORDER AND SOVEREIGNTY.

UPON the material plane there can be no pearl without an oyster; the little jelly-like animal seems absolutely necessary to the production of this gently-lighted gem. And yet even the deist who declared for the divine approval and support of this order could not say that God is incapable of forming a pearl without the oyster, and one big enough to serve as the gate of the city of St. John's wondrous vision.

The divine agent determines the order of manifestation, and not the order the agent. This is a leading thought in Christian Science, and its truth would no doubt be conceded even by those Christian believers who have been educated to think that there can be no variation from the order of material experience, and who thus deny the lordship of spiritual truth. Christ Jesus' way of providing bread for five thousand and more had in it no recognition of or dependence upon the material. Though it satisfied a physical want, his act was certainly indifferent to "the established order," and thus proved that the material aspects and limitations of production are quite apart from God and in no sense necessary to His creation. Matter and its modus being thus shown to be unrelated to the divine activity, it must so remain today, and consequently it must be regarded as not of God.

Christian Science brings home the fact of the vital significance of this line of thought to the fulfilment of our Lord's command to heal the sick. So long as we regard a given order as expressing the direction and limitations of the divine activity, all effort to modify or interfere with it must be felt to be out of keeping by every reverent sense, since we manifestly cannot be working together with God in the doing of that which sets aside and thus defeats His plan of operation; in other words, if the law of God were against us, in our aspiration and effort to escape from sickness and death, it would be manifest folly to continue the struggle.

Belief in the legitimacy and immutability of the material order not only explains the attitude of the many toward so-called miracles, but, obtaining as a bias of mentality at large and thus affecting unconsciously the attitude of the practitioner, it may and no doubt often does account for his failure to effect a given demonstration. Standing quite alone, Mrs. Eddy dared to deny the authority and power, the legitimacy and right to rule, of the material order. She dared to say that God is Spirit, and that all His ways are spiritual; that materiality is a delusion and a snare, and that it is ours not to worship at its altars by consenting to its rule, but to resist its claims in obedience to the first great commandment, "Thou shalt have no other gods before me. . . . Thou shalt not bow down thyself to them, nor serve them."

This is the distinctive declaration of Christian Science: that God is Spirit, the infinite good, and that Spirit is

Digitized by Google

supreme and acts only through spiritual law and order. It teaches that the multiplication and maintenance of the divine ideas, "the sons of God," are not effected through materiality or dependent upon its manifestations. To burdened hearts in all this realm of sickness and sin it calls, "Citizens of the world, accept the 'glorious liberty of the children of God,' and be free! This is your divine right. The illusion of material sense, not divine law, has bound you" (Science and Health, p. 227).

Belief in the inevitability of a given experience begets an attitude not of resistance but of toleration, this tendency being the more controlling in the instance of those who think of it as a divine provision; and since consent to error is the strength of error, the recognition in Christian Science of the freedom of God and of man from subjection to material law becomes related to our highest spiritual interest and welfare.

JOHN B. WILLIS.

UNDERSTANDING.

ALL through the Scriptures great emphasis is laid upon the need of understanding, the fervent prayer of the psalmist, "Give me understanding, and I shall keep thy law; yea, I shall observe it with my whole heart," being specially worthy of our consideration. It is very evident that no one can keep God's law without understanding, even though he may desire to do so, and it is surprising that any should refuse to seek that which will not only enable him to obey God's law, but to realize the infinite protection which that law has to offer. The psalmist tells us of one whose delight is in God's law so that he meditates upon it day and night, and he adds, "Whatsoever he doeth shall prosper," which is surely a very inclusive statement.

There are a good many sincere Christians who do not hesitate to admit that Mrs. Eddy has rendered immeasurable service to the cause of Christianity by throwing a great light upon the words and works of Christ Jesus and by her insistence that these belong to every period of Christian history; but these same people confess that they are unable to accept her statements as to the unreality of matter. They argue that they do not consider this an essential of Christian teaching, and, as some express it, they consider Jesus' teachings sufficient without raising a contention as to the nonexistence of matter. This is, however, an evasion (though doubtless unintentional) of the main issue. Before Christian Science was brought to the notice of these people, they were no doubt sincerely striving to be followers of Christ Jesus, but they never thought of relying upon divine law to heal either themselves or those dear to them. They simply used the same means as those employed by the most materialistic worldlings, and when these failed to heal, the failure was attributed to the inscrutable decrees of Providence.

A prominent Christian worker once remarked to a student of Christian Science that faith was all very well in its own place, but that he would prefer to trust a good pair of oars on a storm-swept lake. The Scientist replied that she would feel as he did if reliance were limited to the kind of faith which he meant. This led at once to the teaching of Christian Science, which demands the understanding of God as Spirit, and of man as governed by spiritual law, and this as the basis and support of our efforts toward the overcoming of every form of discord, including sin and disease. It was also explained that the belief in matter involves an endless struggle with sin, sickness, and the fear of death. Paul admits this in his epistle to the Romans, and he cries out against the wretched bondage imposed by this belief. He even says that those who are in the flesh, or the belief of life in matter, "cannot please God," but he straightway adds that we "are not in the flesh, but in the Spirit," if the Spirit of God be with us. The Master himself declared that "the flesh [or matter] profiteth nothing," and on the basis of the allness of Spirit and spiritual law he healed the sick and even raised the dead.

The history of nineteen centuries shows conclusively that belief about Christ Jesus, or a blind faith in him, will never do the healing work which he demanded as proof of discipleship. All earnest thinkers admit that Christian people are too material. Why should they be material at all? It is the belief in materiality which makes sinners and which also makes men sick. Then why not let it pass out of our consciousness by seeking and finding the understanding which the Bible holds to be above all the treasures of earth? Our Leader counsels us to "emerge gently from matter into Spirit" (Science and Health, p. 485). This does not mean by the slow process of material resistance to Truth, but by loving and grateful acceptance of the spiritual fact. The Master's keen interrogation echoes down the centuries: "Are ye also yet without understanding?" What is our answer?

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

DAYTON, OHIO.—Two of our Dayton papers, the *Journal* and the *Herald*, made kindly references to the Christian Science tent at Montgomery county's big fair. This is the second time we have had a tent of this kind at the county fair grounds. No charge was made by the officials for space. Not only was the tent more attractive this year, but the committee in charge reported that it was visited by a greater number of people and that more literature was distributed. As near as a record could be kept, over six hundred people visited the tent to rest, read, and write. At least five hundred and fifty copies of the *Sentinel*, as many *Monitors*, a few *Journals*, etc., were distributed, and more people sat down to read the literature than last year. One lady asked for treatment, and another came in to say that as a result of visiting the tent last year she had become interested and had purchased the text-book.—*Correspondence.*

MONTGOMERY, ALA.—Plans are being made for the maintenance of a Christian Science booth at the annual exposition of Montgomery, Ala., which opens Oct. 22. There will be a rest-room open to all, and tables for the distribution of literature. Prominence will be given to *The Christian Science Monitor*, and all the periodicals and pamphlets of the Publishing Society will be on hand for distribution and for reading.—*Correspondence.*

MILWAUKEE, WIS.—Christian Scientists in the state were provided at the state fair with rest and reading accommodations in a tent near the executive building maintained by the four Milwaukee churches.—*Milwaukee-Wisconsin.*

PHILADELPHIA, PA.—Just off the midway, at the Philadelphia county fair, First and Second Churches of Christ, Scientist, provided a rest-tent for women.

North American.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 1, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 16, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to May 31, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul Streets, Boston, Mass.

THE LECTURES.

MANILA, P. I.

The lecture on Christian Science given by Bliss Knapp in the roof garden of the Manila hotel, was attended by a large and representative gathering of Manilans, who gave the speaker the closest attention. The introductory speech, by Judge George R. Harvey, was as follows:—

Our presence here this afternoon is evidence of the fact that we want to know the truth about Christian Science. I am not a member of the Christian Science church, but have given considerable study to its teachings, and I am deeply impressed by them. Christian Science not only points to the promises contained in the Holy Scriptures, but shows exactly how these promises are made available to each and every one of us. The fact that Christian Science has had such a remarkable growth in a few years, and has won the enthusiastic approval of so many thinking people, is proof positive of merit, and it is good for all of us to become informed as to its real teachings.

Christian Science does not attempt to build up its cause by making war on other Christian denominations. Mrs. Eddy, the Founder of the Christian Science church, counseled her followers to "love all Christian churches for the gospel's sake; and be exceedingly glad that the churches are united in purpose, if not in method" (Christian Science *vs.* Pantheism, p. 13). We learn from the Bible that Jesus of Nazareth, during his brief ministry on earth, went about doing good, healing the sick and the sinning and doing other wonderful works. He commanded his disciples to preach the gospel and heal the sick, and said, "He that believeth on me, the works that I do shall he do also;" and he admonished them, "If ye love me, keep my commandments." Christian Scientists believe that the command of Jesus to heal the sick is as imperative as his command to preach the gospel, and that both should be obeyed by all Christian people.—*Cable News American.*

BLACKPOOL, ENGLAND.

The Christian Science cause is strong in Blackpool, and from time to time advantage is taken of the opportunity which this city presents for proclaiming to the wider world something of what Christian Science is and what it stands for. During the Blackpool seasons some of the leading lecturers of the movement have visited the town, and addressed large audiences. Recently Bicknell Young paid a return visit to Blackpool, and under the auspices of First Church of Christ, Scientist, lectured upon Christian Science in the Palace theater. There was a very good attendance, all parts of the theater being well filled, and the remarks of the speakers were closely followed. The Rev. Percy Burnett, pastor of the Whitegate Drive Baptist church, occupied the chair, and said:—

First Church of Christ, Scientist, of Blackpool, has put upon me a great honor in asking me to preside on such an important occasion as this lecture. In coming thus to one who is not of their own persuasion, one of a different denomination, they at least demonstrate that they are not guilty of that narrow sectarianism which in all past church history has proved itself so disastrous. I feel glad that they have asked me, if only for that fact, to preside for them here today. They have asked me in the complete knowledge that I am not a Christian Scientist, and I like them all the better for it. They have asked me because they felt, and rightly so, I should not abuse the privilege which has been granted me. They rightly assume that I do not regard them as spiritual lepers, and that I shall not wish to call down fire from heaven to consume them because they are not of my way. Positively, also, I think they know I think of them as fellow workers in the one great Christian attempt to overcome evil with good. We may express ourselves differently, but I think that at the bottom the aim of our work is the same. They have justified their existence as a church and separate organization, and I think they welcome the common standard of judgment given by our Master, "By their fruits ye shall know them."

Under the teachings of Christian Science the thoughts and deeds of a great many have been purified and elevated, lifted up to a higher plane of life. I feel sure that any unbiased onlooker must in common honesty admit as much as that, if they are not prepared to go any farther. I cannot speak much of personal knowledge of Christian Science. It has a language and terminology peculiarly its own, and which is certainly mystifying to the outsider. I confess to a good deal of mystification myself; consequently, I am glad of this opportunity to have some of the mists rolled away by the statements of our lecturer. I cannot close my eyes to the fact that the teaching of Christian Science has had practical and beneficial effects, and that is good enough to justify any church in its separate organization. We are here to have an exposition, and I think you will agree that all who call themselves Christians should be prepared to listen calmly and sympathetically to Christian teaching, however much it may differ in presentation from that to which they may be accustomed to listen. In that way they can heed an apostolic injunction and "try the spirits whether they are of God."

Doubtless that intention accounts for the presence of so large a company this afternoon. I understand that these lectures are not given with the intention of proselyting, but that the lecturers seek to remove popular misconception and give authoritative statements of Christian Science. Personally, I am glad of the opportunity of listening to a lecture given by one who speaks with the authority of a teacher and practitioner.—*Blackpool Times.*

DOVER, MAINE.

A large audience which completely filled the auditorium, reading-room, and foyer, where extra seats had been provided, listened attentively to Virgil O. Strickler of New York city, who delivered the tenth annual lecture on Christian Science for First Church of Christ, Scientist, Dover and Foxcroft. The lecturer was introduced by Gorham H. Wood, Esq., of Bangor, who said:—

Through enlightened understanding we are learning that there is no mystery in godliness. Moses learned this fact while listening to the voice of God, and down through the ages true knowledge has always come to the attentive ear. The problem, then, is how to listen rightly. In this last century Mrs. Eddy, with purity of purpose, listened so effectually that she was enabled to give to humanity the gospel of Christian Science, which is today proving its truth in every corner of the globe. Shall we not listen, that we, too, may learn?—*Piscataquis Observer.*

EAST JORDAN, MICH.

The lecture on Christian Science given under the auspices of the Christian Science society of Charlevoix, Mich., by Frank H. Leonard, at the Temple theater, was attended by a large and appreciative audience. The speaker was introduced by John R. Eckstine of Jackson, Mich., who said in part,—

Permit me, as one not a member of the Christian Science church, to say that I have had opportunity to see the benefits derived from its teaching in physical healing, and have found Scientists everywhere a happy and contented people, standing for all that is good and true. I trust you have all come with open minds to judge the things said by the standard of God's word; then this meeting will have fulfilled its mission.—*Correspondence.*

TOPEKA, KAN.

A large audience heard the Christian Science lecture by William R. Rathvon at the Grand theater. He was introduced by Prof. R. W. Coppedge of the high school, who said:—

There have been some remarkable discoveries made in the last few years. With those made in the physical realm you are well acquainted. The wonders wrought in the application of steam and electricity, the steam turbine, the telephone, the telegraph, stand out prominently in your minds. But some of us at least do not realize that greater discoveries, discoveries more permanent and enduring, more powerful in their ability to lift the burden from the shoulders of humanity, have been made in the realms of mind, of spirit.

A number of the best educated men of the country have recently made the statement that the change which has taken place in the religious thought of the world in the last few years is much greater than the change produced by that mighty upheaval known as the Reformation. But the Reformation was accompanied by the roar of cannon and the murder of thousands. This movement, on the contrary, has proceeded without bloodshed, quietly, peacefully, a mighty undercurrent reaching all parts of the world, changing and transforming thought, and yet producing scarcely more than a ripple on the surface. Philosophy was startled several years ago, when Henry Drummond published his well-known book entitled "Natural Law in the Spiritual World." The work was inadequate to meet the needs of humanity, but it did arouse thought to a realization of the problem, and proclaimed a desire to secure the solution. It was a woman, however, who presented a clear and concise statement of the exact truth in the matter, namely, the reign of spiritual law, producing perfect harmony in both the mental and the physical realm. Today mankind is rapidly awakening to a realization of the power and far-reaching effect of this wonderful concept, which has been presented to the world under the name of Christian Science, and that you desire to secure a better understanding of this life-giving truth is shown by your presence here this afternoon.—*Topeka Capital.*

DENVER, COL.

Judge Clifford P. Smith delivered two lectures on "Christian Science: The Gospel of the Kingdom," to audiences which crowded First Church of Christ, Scientist, to the doors. On the first evening he was introduced by E. N. Clark, general attorney of the Denver & Rio Grande Railroad Company, who said in part,—

I know, and you know, that in a spiritual sense more than half the world is still in the condition of the storm-driven traveler of the old prophet, and that this is so, notwithstanding the fact that the doors of countless orthodox churches are wide open, and notwithstanding the fact that many good and holy men stand at their doors inviting the weary traveler in. There is no rebuke in this, but somewhere, somehow, there is the lack of an effectual appeal or the lack of an understanding of the appeal or failure to grasp its import.

I recognize the momentous truth that a new and somewhat startling spiritual world-power has arisen in our midst; that it is embodied in and typified by this church, and that its appeal is being felt and its compelling force recognized. The time was, and not so long ago, when our orthodox friends were inclined to sneer at Christian Science, and the rest of the world to smile—indulgently, perhaps—but still to sneer and smile. Obviously, that day is past. I recognize it and know it when I feel the inspiration of this great audience. Some of you have already heard the invitation, and some of you are straining your ears to catch it. Some of you have found the hiding-place and have tasted the waters, and some of you are still seeking the shadow of the great rock.

There is one here tonight who comes with authority to speak of the appeal of this new spiritual power—a member of the board of lectureship who gave up legal and judicial honors to take up this work and point the way to the weary traveler. He comes not to admonish, not to exhort, and not to proselyte, but merely to say to you that the man of whom the old prophet spoke has come and gone and left his word and his teaching as a hiding-place from the winds and a covert from the tempest; to say that here are the rivers of water, and here the shadow of the great rock.

Denver Republican.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship.

Atlanta, Ga.—Lyric theater, 3:30 p.m., Oct. 20.
Chattanooga, Tenn. (First Church).—Lyric theater, 8 p.m., Oct. 22.
Chicago, Ill. (Fifth Church).—Church edifice, 4840 Madison avenue, 8 p.m., Oct. 24, 25, and 26.
Cleveland, Ohio (Third Church).—Grays' armory, 8 p.m., Oct. 25.
Decatur, Ill.—Power's opera house, 8 p.m., Oct. 21.
Downers Grove, Ill.—Dickey's hall, 8 p.m., Oct. 24.
Elgin, Ill.—Star theater, 8:15 p.m., Oct. 15.
Elkhorn, Wis.—Universalist church edifice, 8 p.m., Oct. 24.
Elmira, N. Y.—Federation hall, Church and State streets, 8 p.m., Oct. 21.
Emporia, Kan.—Whitley opera house, 8 p.m., Oct. 22.
Erie, Pa.—Masonic temple, 8 p.m., Oct. 24.
Fairbury, Ill.—Opera house, 8 p.m., Oct. 22.
Fairbury, Neb.—Steele's opera house, 8 p.m., Oct. 25.
Hartford, Conn. (First Church).—Parsons theater, 3:30 p. m., Oct. 20.
Hastings, Mich.—Reed's opera house, 8 p.m., Oct. 25.
Hurley, S. Dak.—Christian Science church, 8 p.m., Oct. 24.
Iola, Kan.—Grand theater, 3 p.m., Oct. 20.
Kansas City, Mo. (Third Church).—Morton hall, Westport avenue and Main street, 8 p.m., Oct. 21 and 22.
Laconia, N. H.—First Unitarian church, 8 p.m., Oct. 25.
La Grange, Ill.—Oct. 21.
Lebanon, N. H.—Town hall, 8 p.m., Oct. 24.
Mechanicsburg, Ohio.—Town hall, Oct. 15.
Mexico, Mo.—Church edifice, 223 East Promenade street, 8 p.m., Oct. 18.
Mt. Pleasant, Mich.—Christian Science church, 8 p.m., Oct. 18.
Nelson, B. C.—Trinity Methodist church, 8 p.m., Oct. 21.
New York, N. Y. (First Church).—Church edifice, West 96th street, 8 p.m., Oct. 22.
Niagara Falls, N. Y.—Lumberg theater, 3:30 p.m., Oct. 20.
North Yakima, Wash.—Masonic hall, 8:15 p.m., Oct. 24.
Oak Park, Ill. (Second Church).—Warrington opera house, 3:30 p.m., Oct. 20.
Olean, N. Y.—Church edifice, 8 p.m., Oct. 18.
Polo, Ill.—Public Library, 8 p.m., Oct. 22.
Piqua, Ohio.—May's opera house, 3 p.m., Oct. 20.
Rome, Ga.—Carnegie Library, 8 p.m., Oct. 21.
Rossland, B. C.—Miners' Union hall, 8:30 p.m., Oct. 22.
Salem, Mass.—Empire theater, 7:45 p.m., Oct. 20.
Seattle, Wash. (Second Church).—Junction hall, Ballard station, 8 p.m., Oct. 25.
Spokane, Wash. (First Church).—Auditorium theater, 3 p.m., Oct. 20.
Streator, Ill.—Good Will church, 8 p.m., Oct. 14.
Tacoma, Wash.—Tacoma theater, 3 p.m., Oct. 27.
Webb City, Mo.—Blake theater, 8 p.m., Oct. 14.
White Plains, N. Y.—Newell theater, 3 p.m., Oct. 20.
Wilmette, Ill.—First Church of Christ, Scientist, 8 p.m., Oct. 25.
Yonkers, N. Y.—Yonkers Public Library hall, 8 p.m., Oct. 22.

TESTIMONIES OF HEALING.

Having enjoyed the privileges of Christian Science for several years, I desire to express publicly what I have gained therefrom. My health in 1906 had given way completely. After having medical treatment for a number of months, this culminated in an operation which left me helpless and suffering, much worse than before. I did not know where to turn for relief, and wished for death, as I thought that was the only thing which would end it.

At this point Christian Science was presented to me, and after a few treatments I began to read the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and soon became convinced of its truth, for as I read I gained courage and hope, and had a strong desire to get well and busy again. My help came slowly, and I was often beset by discouragement, but I knew the teaching was true, and Jesus said, "He that shall endure unto the end [of error], the same shall be saved." Severe headaches were the first to vanish, the nervousness and depression yielding later. I, however, rejoice greatly that the healing was not instantaneous, as I am losing sight of the physical in the wonderful transformation which is going on in consciousness, daily and hourly. Through Christian Science I have found satisfying work, fuller, richer friendships, a higher sense of beauty, and many spiritual joys in place of the material pleasures left behind, which once seemed so alluring and desirable.

I feel more grateful each day to our creator for His "wonderful works to the children of men," also to Mrs. Eddy, His messenger and standard-bearer, for her great love and self-sacrifice in blazing the trail for us to follow, and finally for the many channels—the churches, literature, reading-rooms, etc.—through which the light is shining upon all in such abundance. May it shine unto that perfect day when he shall reign "whose right it is," and when "death shall be swallowed up in victory." I am grateful beyond expression to be permitted to understand, even in a slight degree, the teaching of Christ Jesus as explained by our Leader, Mrs. Eddy. To live in this great age is indeed a privilege and a blessing.

MISS FRANCES SNOWELL, Chicago, Ill.

It was nineteen years ago that I first attended a Christian Science meeting, and although I was only eight years old I desired to be a Christian Scientist. I did not however become one then, even though I attended the Sunday school and church services for a number of years, until I was old enough, as I thought, to leave both church and Sunday school. I then grew to hate Christian Science, and fought against it in our family. At the same time I would go out and drink, and I also used tobacco, and would lie and do many other wicked things,—practically everything that is wrong.

I was only seventeen years old, but looked and passed for twenty-one before the great change came to me. During the last few years of this kind of life I became troubled with several different ailments, such as catarrh, chilblains, toothache, etc., and every little thing troubled me. I had been persuaded to read Science and Health through for the first time, but did not think there was much in it for me, although I took special notice of the statement that a thorough perusal of the book often healed people. (See Science and Health, p. 446.) One day the toothache which I had nearly all the time became very bad; my face was swelling more than ever, and when I got home that night the first thing I did was to get out Science and Health. I opened it at the chapter called "Christian Science Practice," and I had not read very far before the toothache ceased, and I had only one return of it, which was in the following year.

Encouraged by this experience, I at once began to study Science and Health, and when I had read it through the second time the desire for a wild life had left me. For the next year I suffered more from the other ailments than I had suffered all my life before, but I came out in the end with a lasting desire to live right and without the least bodily ailment. I have since had some dental work done without the slightest pain. I have not had sickness of any description since, and recently passed a medical examination for insurance as a perfect risk, the doctor being told that I was a Christian Scientist. I now control a prosperous and well-established business, where I make good use of the understanding I have gained from the study of Science and Health, and I can safely say that no one has lived more happy or contented than I have in the last nine years.

For all this I feel very thankful to God, and am also grateful to Mrs. Eddy, our Leader, for the good I get from Science and Health. All she asks us to do is to understand and practise more of Christian Science so that we may become better and happier each day, and this I am trying to do. I would that I could express myself better, as my feeling for Christian Science is strong. Truth is in the end my all.—NORMAN R. LEADLAY, Toronto, Ontario.

[Translated from the German.]

My knowledge of Christian Science is limited, yet I have often derived comfort and help through its application. Only lately I have had wonderful proof of what Christian Science will do for mortals, and it is with a grateful heart I would tell of this experience. Sept. 10, 1911, our eleven-year-old boy was suddenly taken ill with a severe bowel complaint and vomiting. The physician whom we called advised us to take the boy at once to the hospital and have the specialists make an examination, as to all appearance there was appendicitis, which would necessitate an operation. For years my sister, whenever she spoke of God, had referred to Him as Love, and yet I did not seem to be able to rise to the apprehension and recognition of such a God; but in this case I clung to the thought of divine Love and tried to realize that it would protect my child. With such quieting thoughts in my mind we arrived at the hospital, where the immediate examination ended with the same verdict we had received from our family physician. The operation was performed on the same day, and the surgeons then discovered that the appendix was in good condition, but that the boy had a double twist of the bowels. The physician's opinion was that this condition dated back to the child's birth, and he considered the case not only complicated and serious, but such as he had never met with before.

I told my sister all this, and asked for Christian Science treatment to be taken up for the child. The operation was a much more serious one than in a case of appendicitis, and although fever was expected to set in, the boy was entirely free from it, the pain grew less, and everything went harmoniously. We took him home at an earlier date than we had believed possible at first, though we did so with the physician's explicit instructions that in case pain should set in, he or our family physician must be sent for without delay. When a few days later the boy began to feel pain, I did not send for the physician, but endeavored to see in place of the child the spiritual man, perfect and without pain, and I read aloud the 23d and 91st Psalms, with the result that the pain subsided and did not return. How the case might have turned out without Christian Science treatment I do not know and would rather not try to imagine, but I know this much, that it took a rapid course and was attended by comparatively little suffering, with no untoward incidents occurring. These wonderful proofs of God's ever-present, protecting love awakened in me the desire to know more of this power that shields us.

I would also like to mention that Christian Science was a wonderful help to me at the birth of my now six-year-old daughter. The same child, when beginning to walk, had

Digitized by Google

inflammation of the hip-joints. She had been examined by the family physician and three other doctors, besides an X-ray examination, and there was a consensus of opinion. Christian Science treatment was, however, taken up, and in about a week's time the child was healed. Long after our family physician, referring to her case, said: "Was it not wonderful about your little girl? If my opinion had not been supported, I could believe that I was mistaken, but three other physicians expressed themselves identically."

I am deeply grateful for all that Christian Science has done for me, and it will be my endeavor to know more of the truth which makes free, and let my life prove my gratitude.

MARGARETE WILUTZKI, Wahren b. Leipzig, Germany.

While laboring under the burden of a great sorrow, living amid conditions which seemed humanly impossible to bear, and hungry for the truth, I turned in trembling hope to our heavenly Father. Through the light of Truth reflected in such purity and strength as to be unmistakable, I was gently and lovingly drawn into Christian Science and found myself sustained by it. It has given me spiritual food, it is feeding "the famished affections" (Science and Health, p. 17); it has healed my children of many distressing conditions, among which are a heart affection, stomach and liver trouble, croup, poisoning, and rheumatism. I have applied the rules of Christian Science in the handling of an estate, and have been given courage and strength to take the right steps in working out difficult business problems. All these tests have proved to me that God is indeed an ever-present help in time of trouble.

In looking wholly to the Father, divine Principle, for guidance and comfort, as I strove to follow the narrow path which I knew to be the only way out of Egypt and the wilderness, allowing no human opinion or personality to influence me, I have not only found my real estate as a child of God, the abundance of good my only heritage, but helpful companionship has been given me. I have come out of the darkness of despair into God's own sunlight, out of the bondage of unreality into the freedom of Truth, and have found that real joy is spiritual, born of gratitude and obedience.

I write this testimony with the prayer that divine Love may send its message of help and hope to some one who feels overburdened as I once did. I am striving through obedience to Principle, and by alertness to every opportunity for the giving of good unto others, to attest my gratitude for Christian Science and for the life of Mrs. Eddy, who was loyal and unselfish enough to stand alone, as Jesus did, that the world might know salvation. I am also grateful for the kindness and help which have been given me by Scientists.—ESTHER RITCHIE LEMON, Claremont, Cal.

Having read an article in the *Sentinel* which dealt with Christian Science and children, I feel that I can verify the statement of the writer, who said that little ones ask for Science help as naturally as they ask for food. We have four children, and they each and all know what the truth will do. I have seen attacks of croup, fever, bowel disorder, toothache, etc., all disappear under the rule of divine Science, and I am glad to say that these ills are really overcome. During the last year there was a marked improvement in our little family of children. One of them had two days of discomfort, but apart from this they have been free. A while ago a young doctor came to my door with a medical book which he wished to sell. My family were all about me, and as he saw the children he doubtless expected I would be glad of such a book, as we were in the country and removed from any physician. I told him I did not need the book, and while he seemed a little disappointed, he remarked, as he turned to go, "Well, you surely have a very healthy family; they look now as if they did not need any medicine."

I am indeed thankful for Christian Science, which has done so much for us all; and for the comfort of any mother who is in doubt, hesitating between Christian Science and material medicine, I would say that Truth can do the work and we can safely trust it. I have had many struggles with fear, but "perfect love" has cast it out and the truth has made us free. I am thankful to all who have helped me to see the truth, especially to Mrs. Eddy, and I rejoice in knowing the truth itself.

MRS. H. F. PARR, Hood River, Ore.

It gives me great pleasure to express my gratitude for Christian Science and the blessings that have come to me through its teachings. I have been healed of the tobacco habit in its worst form. After having been a slave to this habit for twenty years, I had only two weeks' treatment in Christian Science. This was over four years ago; I have had no desire for tobacco since, and feel better both physically and mentally. I have also been healed of heart trouble, and we have had many proofs of the healing power of Christian Science in our family. I am indeed thankful to Mrs. Eddy for having shown us the way to receive this healing truth.—JESSE A. LYLE, Kansas City, Mo.

I feel it a duty to write my testimony, and perhaps it will help some one. I was healed of a bronchial attack of several weeks' duration, through Christian Science treatment. I have also been healed of conditions more serious than the above, and for this healing I am deeply grateful. I firmly believe that a knowledge of Christian Science meets every human need, and that all we have to do is to understand how to apply it. Marvelous things have come under my notice and in my own experience, through having had help in this Science, and my gratitude to Mrs. Eddy, our dear Leader, is growing each day.

MRS. S. S. VEAZY, Durham, N. C.

When I was about fourteen years of age I was attacked with a fever, and to all appearance it was in a very malignant form. Before this we had known practically nothing of Christian Science, although I had had treatments several times for colds and catarrh. My parents were very much frightened about me, but as I wanted Christian Science treatment they decided to let me try it. A practitioner was sent for, who came immediately and stayed two nights and two days. During the morning of the third day the fever left me and I was entirely healed. I got up, was dressed, and ate dinner with the family.

MRS. F. C. YERKES, Denver, Col.

In reading the *Sentinel* of late, I have felt that I must tell others what divine Love has done for me. Some years ago, I had a severe stomach trouble for which I tried medicine without receiving any help. I was growing worse all the time, when a friend asked me to try Christian Science. I did so without any faith that it could help me, but in a short time I was healed, not only of the stomach trouble, but of a cough which I had had for years.

Many blessings have come to me through this great truth, and I feel thankful to God, also grateful to dear Mrs. Eddy for Science and Health and all her other writings. I know that I only need to keep the first commandment to receive the blessings of Truth daily.

LILLIAN G. SMITH, Manchester, N. H.

It is with deep gratitude that I send my testimony. Before I knew much of Christian Science, a friend asked me to go to a Wednesday evening meeting, and it took much urging before I consented to go, as religion had never helped me out of my difficulties, so I was not much interested in the subject. It rather surprised me, as I entered

Digitized by Google

the Christian Science church, to see nearly every seat taken, and the silent prayer appealed greatly to me. I was then living in a world of materiality, and those few moments of quiet gave me a sense of peace such as I had never felt before. Several testimonies were given about the healing of the eyes, and as I was wearing glasses, and my eyes were getting worse all the time, I was much interested. The verdict of a celebrated oculist was, that I must have an operation for my eyes, consequently these testimonies appealed strongly to me. I went away from that meeting with a ray of hope and a touch of peace that I have never forgotten. When Sunday came I went to the service alone,—the silent prayer seemed to draw me. That week I bought a copy of Science and Health, and the study of this book opened up to me a new world. It answered my questions, and I knew it was the truth. In a few weeks I left off my glasses; the pain ceased, and I have been able ever since to use my eyes all that has been necessary, as they are perfectly normal.

This was the first proof which the study of Christian Science gave me of the power of Truth, and for ten years it has been my only physician and guide. To have a God to go to who is unchanging good, is priceless knowledge, and this truth is free to all who will "study thoroughly the letter and imbibe the spirit" (Science and Health, p. 495). I am trying to live the gratitude I feel.

MISS SARA F. SON, Utica, N. Y.

I wish to testify to an almost instantaneous healing of a very severely injured leg and a great mental shock. I was traveling alone in a Pullman car from Brighton to London, when, in that terrible accident which occurred at Stoats Nest, I was thrown suddenly with great violence across the car. The conductor with two gentlemen lifted me from the floor in a half-dazed condition, and later assisted me over to the station, where a young lady from my dictation sent a telegram to my husband, who was in Hove, asking him to treat me in Christian Science. I had been suffering intense pain, but all at once the pain ceased. This sudden change really startled me, and I asked my companion what time it was. The answer being given me, I knew that my husband had received my message, and that he was treating me. I found out later that this actually was the case.

The day following the accident (Sunday) I had arranged to meet my husband at Victoria station to attend the evening service at First Church, Sloane square, and this with the aid of a stick I was able to do. I am not a Christian Scientist, but am deeply interested, and this has been a very real experience to me. My gratitude is exceptionally great for the realization of what Christian Science is and what it can do.—K. M. AUSTIN, Hove, Sussex, England.

I know Mr. and Mrs. Austin intimately, and I saw Mr. Austin the day of the accident, or the day after (I am not sure which). He told me his wife was in the railway accident at Stoats Nest, and he showed me the wire he had received, asking him to treat her, and told me she was to meet him and go to First Church, London, to the service. He said that he should know she would be able to be there just the same. Soon after Mrs. Austin's return to Hove I saw her, and she told me about the accident, also of the healing and what a great impression it had made upon her, and that she had met her husband at Victoria station and gone with him to church. She expressed great gratitude for the healing—ELLEN PIERCE, Hove, England.

[Translated from the German.]

Gratitude to God, also to our beloved Leader, Mrs. Eddy, impels me to tell of the blessings which have come to me and to my family through Christian Science. After the passing on of a sister a few years ago, several ailments manifested themselves, such as perturbation of mind, lack of appetite, internal cramps, and sleeplessness, making it impossible for me to attend to my housework. I remained in this condition for several weeks, and as it grew worse every day, my husband went to see a Christian Science practitioner, who lovingly took up work for me. Our understanding of Christian Science was very small at the time, thus making it very hard for the practitioner to reach my mental condition, especially as I seemed to have lost the faculty of thinking; but after a few weeks' treatment I improved in every way, whereupon treatment was gradually discontinued. Since that time I enjoy the best of health, and it is my sincere desire to grow into a better understanding of God.

FRAU LINA MÜLLER, Hannover, Germany.

In June of 1909, our fourteen-year-old boy fell eighteen feet, severely injuring his left leg just above the knee. I was "instant in prayer," as we are taught to pray in Christian Science, and hastened to him. I had telephoned my sister, a Christian Science practitioner living in another city, but it seemed best to call a surgeon and an attending physician. Both pronounced the case a serious one, and said that the boy would not be able to be out of bed for six or eight weeks, or to go to school the following winter except as he used crutches. The healing, however, progressed rapidly; there was no nausea, fever, or swelling or discoloration after the setting of the limb, which seemed marvelous to the medical attendants, and as no drugs or stimulants were used, after two visits they were dismissed. On the eighth day all splints and bandages were discarded, and within three weeks the boy was able to get about with the aid of crutches. By September he was walking to school without them,—and this was a distance of twelve blocks,—four times a day. At first he limped, but ere long the leg was perfectly normal.

I am very grateful for strength, for freedom from fear, and for the peace which came to me at that time. This is only one of many proofs we have had in the past eight years of the effectual healing power of Christian Science. Surely "God is our refuge and strength, a very present help in trouble." My gratitude to God is unbounded, nor can I adequately express my thankfulness to our dear Leader, Mrs. Eddy.—MRS. ROSETTE K. CAVE, Frankfort, Ind.

[Translated from the German.]

A feeling of deep gratitude impels me to tell of what I owe to Christian Science. In August, 1910, my foot slipped on some débris, and I sustained a deep wound. The result was a very serious case of inflammation, but I applied to a Christian Science practitioner for treatment, and after four weeks was freed from the trouble to such a degree that I was able to leave my bed. A couple of weeks later the wound had completely healed up, and there was nothing to remind me of the injury. I have also been healed of an ear trouble of years' standing, and am most sincerely grateful to God, also to our beloved Leader, Mrs. Eddy, for showing me the way to the truth through which I have been delivered from these difficulties.

WALTER FRANKE, Berlin, Germany.

I gladly give my experience in Christian Science, as taught by our beloved Leader Mrs. Eddy, although pen can never tell what Christian Science means to me. Several years of my life, prior to coming to the truth, had been spent in a school of sad experience, which was slowly but surely weaning me from belief in false gods. These I now see falling one by one, as with the understanding I have gained I try to help others who are bound.

Over three years ago, I first learned something of Christian Science and its efficacy in healing sickness and sin. It was when my child was, to quote Mrs. Eddy, "apparently near the confines of mortal existence, standing already within

Digitized by Google

the shadow of the death-valley" (Science and Health, p. 108), that I learned the truth of the statement that "man's extremity is God's opportunity." After nine weeks of hoping for the better, but only seeing conditions grow more alarming, with no hope left, Christian Science was presented to us. We turned to it for the healing of the child, and within the same week we attended our first Christian Science service, the child accompanying us. On the wall of the church was this quotation from the Psalms: "Who is so great a God as our God?" This meant much to me at that time, and I felt greatly uplifted; indeed, it seemed that with the healing of our child there had come to us that "peace of God, which passeth all understanding;" but from the service I was not conscious of deriving any special good, or even of understanding it, neither did I realize that I had been on the mount and had seen the Christ-healing demonstrated.

For several years prior to this, I had been a great sufferer from sorrow and sickness, material law having sentenced me to about one year more of the earthly pilgrimage. Feeling that I had a great burden of sorrow to bear, which material pleasures had failed to lighten, my mental suffering was so great that the physical pain was but secondary. Here Christian Science found me. In three days after I had turned to God for help I was the owner of a Bible and a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I began to read, and in a short time all my suffering was gone,—I was neither a physical nor mental wreck any longer.

I might say that up to this time I had not gained any demonstrable knowledge of Christian Science, my healing coming from an impersonal reading of the Bible and our text-book. I learned thereby that "the Christian Science God is universal, eternal, divine Love, which changeth not and causeth no evil, disease, nor death" (Science and Health, p. 140); also the meaning of many Bible passages, such as, "Every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning." "He sent his word, and healed them." I have found this word to be the truth of which Jesus spoke, when he said, "Ye shall know the truth, and the truth shall make you free;" and I know that the Bible contains it.

As I have studied more of the text of Christian Science, I now see why Mrs. Eddy called Science and Health the "Key to the Scriptures"—for through this text-book the Scriptures are being opened up to me and the word of God is becoming a demonstrable healing power. This truth is indeed sweet when we are healed, but when we come to digest it according to Christian Science, we find it bitter, for what we could once charge to environment, to other people, and sometimes to God, we now have to charge to ourselves, to our ignorance of God and His law; and we begin to learn how much self-love, self-pity, self-will, self-justification, and self-righteousness we have to overcome before we can be called Christians according to the true standard. But if we look to the Bible and our text-book as our guides, and follow their teachings, we cannot stray far, for Christian Science and Christianity are one.

MRS. CARRIE SHELTON BALLEW, Cleburne, Texas.

I feel it a privilege to tell what Christian Science has done for me. In July, 1910, while on the way to Colorado to spend the summer, an attack of malaria came on, complicated with dropsical swelling in one limb and foot, and when we arrived I was so lame that I could not walk or put on my shoe. My mother called a Christian Science practitioner, and in one hour I got up, put on my shoes, and went out with my friends. I am indeed grateful for Christian Science, and hope this may help some one else to find the truth.

PRESTON GREENWOOD, Stroud, Okla.

FROM OUR EXCHANGES.

[Pacific Christian Advocate.]

Jesus in the darkness comes to the disciples walking on the water. He appears to be an evil spirit. They are terrified. But he is their dear Lord and Master; Master, too, of sea and land, with all the power in heaven and earth to press elements and forces into harmony with the best interests of those who trust him. This same Master comes with complete relief to a country where a man was afflicted with a legion of demons. Those cast-out demons are permitted to enter a herd of swine, which rush headlong down the hillside and are drowned in the sea. The owners of the swine cannot see the worth of the man. Their loss looms more largely on their horizon than the proof to them that "the desire of all nations" is among them, working demonstrations of his character, showing to them and to all the ages to come that one sorely afflicted man fully restored to health and quietly sitting at the feet of Jesus is not only of more "value than many sparrows," but of greater worth also than thousands of herded swine, and in alarm they beseech him to depart from among them. Their hogs and their profits are dearer to them than the restoration of a neighbor in life-long and dreadful torment and the staying with them for a season of One mighty to save. Translated into terms of modern materialism their doctrine was, "A bird in the hand is worth two in the bush." Pigs with a fixed commercial value are preferable to a mysterious visitor over whose character the authorities of Jerusalem are disputing and whose further tarrying is a menace to their business interests.

[British Congregationalist.]

Some writers maintain that never before has the idea of brotherhood come with such tremendous impact into the consciousness of universal humanity as at the present time. Undoubtedly there is a keen awareness of the rights and privileges of the other man—especially if he be the underman—glimmering so pervasively through the social atmosphere today that not infrequently the glimmer breaks into lightning. Oftentimes, to be sure, it is wild-fire, uncontrolled and misdirected; but even wild-fire is better than total darkness.

"I believe in human brotherhood." Surely, it is a glorious article for a creed—comprehensive, vital, Christlike. But how far, how much do we believe it? How profoundly does it influence our actions, create our motives, and color our visions of human betterment? The one conclusive answer, final for this and all worlds, is: Only so far as we are playing the part of a brother. Otherwise, brotherhood may furnish us abundant "thunder," in its theological and philosophical aspects, for either our social program or our sermons. But brotherhood, as lived and taught by our Lord, is a stranger to us so long as we ourselves remain unbrotherly. Brotherhood reveals its inmost heart only to a brother. It is content to satisfy the unbrotherly with pleasingly deceptive dreams and philosophically pat speculations. A man must have really the brothering life before he can lay hold of the fact of brotherhood.

[Continent.]

As to whether the fashion of ignoring the spiritual is wholesome for humanity or not, there needs to be asked but one question: Is the spiritual real? It is not wholesome in religion or any other sphere of man's responsibilities to ignore anything that is real. If there is any genuine spirituality at all, then there is no adequate religion without spirituality. Unless one is prepared to affirm that God never does actually speak to men when they make silence in their hearts and listen for Him—when they adore and pray—there cannot possibly be a rational reason for one's failing

Digitized by Google

on his own part to keep silence and pray. It will not do to argue that all this is peculiar experience for a few mystical souls alone. If it is real at all, it is for everybody. The whole Christian Scriptures are meaningless if they do not mean that the privilege of personal communion with God in prayer and meditation is a privilege universal. Not to meet God thus is simply to be satisfied with religious dwarfhood. No Christian is fullgrown but a spiritual Christian. The Christian who is spiritual—who has touched God in his own soul—will hate the label of holiness as much as ever; but he will realize that he can never renounce the quest of holiness. Having dealt with God face to face, he will know that God will not rest with half-way measures—part good, part wrong. After that, the Christian, too, will find that he cannot rest half-way. And that restlessness pressing to what is all good—that is holiness.

[*Christian Work and Evangelist.*]

If you read the New Testament mechanically and give it a wooden interpretation, you are driven to the conclusion that Christianity is an impracticable thing in a world like this. If you assume that the New Testament is a code of laws and give to the flowing phrases of conversation the rigidity of statute law, then how can you escape the conclusion that none of us are Christians, and that indeed none of us ought to be? If you want to ruin the New Testament completely, become a literalist and interpret it not by the spirit, but by the letter. Literalism has been one of the deadliest foes of religion from the beginning. Through all the centuries it has dogged its steps and left its blighting influence all the way. It was literalism with which Jesus was obliged to struggle from the beginning of his career to the end. He came into a land that was full of pedants, men without imagination and insight, to whom religion had become a dry and formal thing, and for whom figurative language had little or no significance.

[*Christian Register.*]

The Master tells us to love our enemies, but we often find it difficult to be kind and courteous to those who are not of our set. Our pettiness crops out in a thousand ways, trifling, but still significant of a society infinitely removed from being sanctified. Yet it is through religion that expansion comes most readily. If it is genuine, it is a deepening, an enlargement of the whole nature. To resolve to live for God and to be God's man is the most wonderful experience, for it takes hold of all the springs of action, all the secret places of thought, all the sources of conscience. What care must we not take that it does not die down into formalism, mere routine of observance, cut and dried dogmas, that are but the cold ashes of a sacred fire! Only by the higher view can we keep the expanding bud at the top of our tree of growth forever green. Thus religion is always vital, and its experience a treasure of deathless significance in our upward climb.

[*Universalist Leader.*]

It is a serious mistake to think that the only need of people today is the need of food and clothing and amusements. Men have souls today as truly as ever they had, and these souls must receive nourishment. The great trouble with the world is that there are so many people in it whose souls are starved. Soulless lives are far worse than soulless corporations. If the souls of men were well fed, if they were strong and virile, there would not be the trouble in men's relations to each other. The employer of other men who has starved his soul will beat the law every time and wrong his employees, while the employer whose soul is strong and aflame with righteousness will always be better than the law compels. Give the people what they need, of the food that belongs to the kingdom of heaven, and all these other things will be added unto them.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston,

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

"Confidence and Supply" is the title of a new pamphlet containing the five following articles: "'The Lord thy confidence;'" "Time and Healing;" "'What hast thou in the house?'" "Constructive Work;" "Giving and Receiving."

These have been republished by request from the Christian Science periodicals.

Another new pamphlet has just been published containing the lecture of William R. Rathvon, entitled "Christian Science: Its Results."

Both of these pamphlets are now on sale; 32 pages and cover, at the prices of the regular pamphlets.

The pamphlet "Seeking and Finding" has been translated into Dutch ("Zoeken en Vinden") and is now on sale; 36 pages and cover, at the prices of the regular pamphlets.

Catalogue No. 20, June, 1912, has recently been issued and will be supplied to reading-rooms upon request. This catalogue contains complete lists of all publications issued by the Society, and of the works of Mary Baker Eddy published by Allison V. Stewart.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass, should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized Book); single copy, $9.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of *Divine Science, alias* Christian Science, in the *form of questions* and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 70 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage.

For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy . . .	$ .05	$ .06	$ .07
Twenty-five copies .	1.00	1.15	1.30
Fifty copies	1.80	2.05	2.30
One hundred copies .	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XII indicate the year 1912; XIII, 1913. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Yielding to the demands of conservationists that coal lands hereafter be leased by the government to private concerns, instead of allotted or sold, the interior department has announced that the plan would be tried. As a result the assistant director of the bureau of mines has left for Lander, Wyo., where he will complete the details of leasing twenty-four hundred and eighty acres of government coal lands in Wyoming. The lease as approved by Secretary Fisher of the interior department gives the bureau of mines absolute control over the operation of the mine as to the methods of mining and the provisions for its safety. The lease proper is for ten years, the company to have preferential right of renewal for successive periods of five years each up to a total of thirty years on terms to be fixed by the secretary of the interior at or before the beginning of each five-year period. The company agrees to pay at the beginning of the lease and on July 1 of each succeeding year, twenty-four hundred and eighty dollars, or one dollar for each acre. It also agrees to pay on the production of all coal mined a royalty of six and a half cents a ton for the first five years and eight cents a ton for the next five years. The royalty thereafter is to be fixed by the secretary of the interior at the beginning of each period. The company must not assign the lease or any interest in the premises; it shall not permit traffic in intoxicating liquors on the property, and the secretary of the interior has the right to forfeit the lease for any violation.

The great American desert is vanishing and it no longer presents a formidable barrier to the growth and progress of the far West. Twelve million acres of this rainless country have been subdued by means of agriculture and irrigation and are producing bountiful and assured harvests every year. A quarter of a million families are residing on farms and as many more have found homes and occupations in the cities, towns, and villages which have sprung up in the midst of the agricultural areas. Great dams have been constructed to impound the floods and through seventy thousand miles of canals and ditches the water thus stored has been utilized in making the desert productive.

Four hundred wireless equipped American ships, nearly one hundred commercial wireless stations, many more stations connected with colleges, schools, and experimental laboratories, and several thousand amateur wireless stations are affected by regulations just promulgated by Acting Secretary Cable of the department of commerce and labor to enforce the radio-communication act beginning on Dec. 13. The act establishes a complete federal control system over radio communication and requires licensing of all wireless operators working across state lines or in communication with ships at sea.

Maine is spending more than seven hundred thousand dollars for permanent road work this year, in an effort to counteract the cry that has gone up that Maine roads are not the sort to attract the automobile tourist, or enable the farmer to haul his product to market cheaply. The people have voted to change the constitution so that the state can issue two million dollars in bonds for good roads.

To construct a scenic wagon and automobile highway along the Columbia river from Portland to the sea, is the purpose of many officials and other citizens of Portland. The plan is to have a wide, substantial boulevard, hugging the banks of the river, so that it will be a scenic road as well as an avenue of commerce.

Two million acres of cut-over timber land in Washington and Idaho will be reclaimed and placed within easy reach of the small investor if the program mapped out by the Inland Empire Federation of Commercial Clubs is carried out by favorable action of the Legislatures of the two states at their next sessions.

It has been estimated by the geological survey that the available water-power of the United States at minimum low is approximately thirty-six million horse-power, and that this can be increased five or six times by suitable storage facilities.

The student registration of Columbia University, New York city, is 8,794, of Harvard, in all departments, 4,194, and of Princeton about 1,700.

International.

The anniversary of the Chinese revolution was celebrated last week with great rejoicing in Peking and other important cities. Festivities lasted three days and all the houses were decorated with flags. A reception held by President Yuan Shi Kai was attended by all the notables except the Manchu princes. A review of the garrison of Peking, composed of sixteen thousand troops, was held and this called forth a remarkable demonstration.

A sum of not less than ten million rubles is to be spent in the extension of the admiralty, Baltic, and Obukhoff dockyards at St. Petersburg, Russia. The new shipbuilding program will entail so much work that it has been considered necessary by the ministry of marine to spend this sum of money on making the necessary extensions to enable the dockyards to cope with the work.

Profits of the tourist traffic in Norway are estimated at about nine hundred thousand pounds per annum.

Montenegro has declared war against Turkey.

Industrial and Commercial.

A bill for the construction of two lines of railway on Eyre's peninsula, South Australia, was introduced in the House of Assembly recently. The measure provides for the extension of the Port Lincoln-Minnipa line to Decres bay, a distance of one hundred and eight miles, and also for the continuation of the Port Lincoln-Darke's Peak line for a further twenty-eight and a half miles, to a point in the hundred of Solomon. In moving the second reading of the measure the commissioner of public works said that by the time the lines now in course of construction and the lines included in the bill were built, approximately four hundred and twenty miles of railway would be laid. Other projected extensions would bring the total up to six hundred miles on Eyre's peninsula. The total expenditure would reach one million five hundred thousand pounds.

The scheme for the enlargement of the harbor docks at St. Thomas, West Indies, in the expectation that the opening of the Panama canal would greatly increase the shipping trade, has been abandoned owing to the lack of financial support. Only one million two hundred and fifty thousand dollars of the five million dollars required has been subscribed. The company received its concession from the Danish government last May. It proposed to fit up the harbor so that it could accommodate the largest ships afloat. It also planned to construct large docks, shipyards, and warehouses and make the port the international commercial shipping center of the West Indies.

The increase of Philippine sugar exports from 112,694 tons in 1910 to 183,077 during the fiscal year ending June 30 last is given additional interest by reason of the fact that for the first time even a small part of the crop was the output of a modern mill. The first large mill in the Philippines has recently been completed on the San José estate in the southern part of the island of Mindoro. On this estate some eight hundred acres are already in cane, and there are about twenty-five hundred laborers at work preparing land and planting cane.

On Big creek, two hundred and seventy-five miles from Los Angeles, a large hydro-electric plant is now being built. Current from this plant will be conducted to Los Angeles at a voltage of between one hundred and fifty and one hundred and seventy-five thousand. The gradual increase of voltage used on transmission lines in California is due to the low hygroscopic conditions of the atmosphere. It is predicted that before long voltages of two hundred and two hundred and fifty thousand may be employed.

The Grand Falls Company is to spend upward of eight million dollars in the development of the water-power at Grand Falls, on the St. John river, N. B., and in the erection of pulp and paper mills. The surveyor-general has been empowered to convey by deed to the company the water-power and five acres of land along the banks of the river. Below the falls only one half of the river can be conveyed to the company, the other half being held by the crown for ordnance purposes.

Apple shipments of the Northwest will reach twenty thousand carloads, including nine thousand carloads from Yakima valley and four thousand from Wenatchee and Methow valleys. Shipments of fancy apples worth nearly one million dollars are being made to England. Australia is buying the fruit in ten-carload lots.

Officials of Hocking Valley and Chesapeake & Ohio railroads have announced plans for new concrete coal and ore docks and terminals at Toledo, Ohio, to cost approximately two million dollars, to be completed for navigation opening, 1914.

The Boston Elevated Railway Company is to begin its operation of a freight service Oct. 21. By agreement the Elevated will handle all express and freight coming to it at junction points from other Massachusetts electric companies.

By a unanimous vote the stockholders of the Boston & Providence railroad, under lease to the New York, New Haven, & Hartford railroad, decided in favor of electrification of the railroad line to Providence.

The yield of gold in the state of Victoria, Australia, for the last eight months amounted to three hundred and thirty-nine thousand four hundred ounces of the value of £1,337,500.

Tin has been discovered in the Dutch East India island of Billiton.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

WITHHOLDING FROM GOD.

SAMUEL GREENWOOD.

To the human sense of things, accustomed to look through the lens of desire rather than of worthiness, it may seem at times that God is indifferent to the human appeal, if He does not actually withhold His blessing; but in the light of Christian Science we see that from God's standpoint, that is, from the standpoint of the perfect creator, man is ever in a perfect state. As we discern this truth clearly in its application to ourselves, we begin to see that as God's children we cannot be separated from our divine source, that there can be in us no place for evil, no place for defect or deficiency, and we consequently begin to exclude these errors and their effects from consciousness. Any difficulty we may experience in realizing God's presence is wholly on our own side, and whatever withholding there may be must be on our own part, inasmuch as God, by the very infinitude of His being, is ever present and cannot withhold Himself from any one.

The demonstrable and therefore unescapable fact that good is the sole reality of man's existence brings mankind face to face with the necessity of giving up their belief in evil in order to reach the immortal and perfect sense of things. Not only the desire for evil but the belief in it must be abandoned, if God is to be All-in-all to us; but do we not too often pray for the healing of sin's effects, and for material ease, rather than for deliverance from the sense itself of evil and materiality? Closing our eyes to the divine standard, we virtually ask that we may find freedom in rather than from a sense of sin, hence our need to learn that the only possible refuge from evil is the consciousness of good; for so long as we accept the claim of another power than God, we shall find no exemption from its servitude and no protection from the suffering which accompanies it.

The question of time in respect to human redemption is purely relative. The passing of weeks and months, or even years, does not of itself indicate that one is not becoming conscious of better conditions as rapidly as God is unreservedly relied upon and obeyed. On God's side it is not a question of time, but of whole-hearted seeking of good. We know best ourselves whether there is any reserve in our attitude toward God; whether, while one hand is reaching out for the healing of our diseases, the other still clings to the false beliefs which produce and support them. Improved bodily conditions can be permanently realized only through an improved state of consciousness, and this higher consciousness is gained, not through desire alone, but through honest reformation. God relieves human distress through the discernment of His perfection and omnipotence, not through a humanized sense of pity for the sufferer, else He were responsible for the continuance of the miseries which He has power to prevent. If one, in his own consciousness, refuses to acknowledge the allness of God, and declares for the existence of something beside Him to which he concedes a power to harm and destroy mankind, it should be easily understood that he is not, in his own consciousness, fully ready to receive God's blessing, although it stands waiting for him and for all mankind to accept.

The problem with humanity is not primarily their release from physical disorder, but of coming into touch with divinity, of the awakening to man's real position and birthright as the child of God. The requisite steps in this awakening are apparent in the laying down of a material sense of existence for the spiritual, and the giving up of all that is inconsistent with the nature of God. If there is not the willingness to do this, there is not the willingness to be redeemed in God's way, and to that degree one's salvation is not being accomplished. Hence when things are amiss in the way of results we may be sure the fault is with ourselves, not with divine Principle, and we must look within for the obstruction. It is in the individual human consciousness that God's kingdom needs to come and His will be done, and it is there that the purchase price of one's freedom from evil, the giving up of the ungodlike, is being paid or withheld.

Mankind are slow to grasp the idea of God as Principle, instead of a changeable person like themselves, hence they are slow to give up the delusion that their sins will eventually be pardoned without individual reformation. We cling instinctively to the expectation of deliverance from trouble by some less exacting way than doing all that God requires of us. There would be less objection to Christian Science healing if its benefits could be realized without meeting the demands involved in the discovery that Christianity is demonstrable Science. It is not to be inferred, however, that one must, in every case, become a Christian Scientist in order to be physically healed, but honesty and sincerity toward both God and man are justly required, and when one seeks Truth honestly it should be for the casting out of all his error. When Truth is thus sought, there will be no shrinking from the struggle and sacrifice that may be necessary to effect that end. "Divine Mind," Mrs. Eddy tells us, "rightly demands man's entire obedience, affection, and strength. No reservation is made for any lesser loyalty" (Science and Health, p. 183).

Mankind have ever sought to have their sins and mistakes passed over lightly, but experience has revealed that there is no other way of deliverance save by putting off "the old man." However lovingly and faithfully a Christian Science practitioner may work for his patient's freedom, he cannot demonstrate God to be different from what He is, nor lessen in any degree His demands upon that patient. In the parable of the prodigal, it was only when the son had turned from the delusions of false sense and was on the way home that the father went to meet him. One's discordant experiences imply that a wrong mental road has been traversed, and the willingness to turn from his mistake and seek the right road is the first step in the return journey. The next and great essential is the unconditional surrender to good, the practical recognition of the fatherhood of divine Principle. The signs along the way will indicate the progress Godward, for no one can be healed through divine influence

and be just the same mentally and morally as he was before; he must in the process have been lifted in some measure nearer the Christ-ideal.

The promise is given to those who seek with all their heart, and it is at this point we sometimes fail, asking success for our half-hearted efforts, or expecting more to be measured to us than we are ready to mete. Because we are not receiving today all that we are working for, is no reason for discouragement, if we are working for the demonstration of Principle and not for personal reward. Each day's application, however insignificant in itself, is needed for the perfect solution of our life-problem. To be sure, if we are cherishing evil in our hearts we are not in a position to receive anything of God, but every righteous effort will bear fruit in the fulness of time. If we are seeking Truth with the whole heart, we shall be in readiness to leave the untrue behind at every opportunity, and this relinquishment of error is the only satisfying evidence of one's growth in Christian Science.

It was the Master's overcoming of all evil that opened the way for human redemption, but each must walk therein himself in order to realize his own freedom. No one can walk in this way for another. A Christian Science practitioner cannot accomplish my overcoming of evil for me, nor substitute his work for mine, nor relieve me of the necessity for my own reliance upon God. He cannot exercise my self-denial, love my neighbor for me, or make up for my unwillingness to become Christlike. He may help me on my feet and put my staff in my hand, if I have fallen by the way. He may banish the ghosts of my disordered dream, show the needlessness of my fears, and revive my confidence in God's ever-presence and omnipotence, and with his help I may again take up my journey; but this pilgrimage out of material sense into the spiritual consciousness of being is for each one individually, just as much as the exodus was for each Israelite who followed Moses out of *Egypt*.

When we face this question frankly and unequivocally, we shall see that each individual's problem must be worked out on the basis of Christian Science, and in accordance with its divine Principle. Then we shall learn that God's demands are impartial, and are indispensable to human salvation. To be honest, sincere, and whole-hearted in the desire and effort to be good, is within the reach of all, therefore it is required of all. Not that mortal man can of himself bring anything to pass, but through divine help he can turn away from evil and obey what is right and good moment by moment to the end of time. Not that we can undo aught that is true, or make of ourselves more than man already is, but we can be faithful to what we discern of our real self as God's child. How can we do less than these things and reach that worthiness which alone wins God's approval and blessing?

OUR CHOICE.

VIOLET KER SEYMER.

CHRISTIAN SCIENCE brings to all who are ready to receive it, the glad message of universal salvation and complete redemption from bondage. The vastness of this message cannot be grasped all at once; still less can it be demonstrated immediately, and eagerness and patience combined are the twin footsteps by which we reach the goal of spiritual realization, or heaven. In addition to this spiritual eagerness which is required to speed our footsteps, patience must be ours also, in order that these footsteps may not be found halting or retreating.

The effect of Christian Science on human consciousness is very marked and progressive. Perhaps we start with a sense of guilt, fear, and discouragement which seems insurmountable. When Truth is first presented to us, perhaps we are willing to acknowledge in a far-off way the beauty and desirability of Christian Science, but at that stage we know no better than to yield to the silent suggestion that the goal is unattainable in our case, since we lack the courage to make even a start against the errors, including the inertia or dejection which appears to possess us. To this state of consciousness the example of Jacob's struggle with his difficulties, and his triumph over them, comes as a stimulating message of hope, and one feels emboldened to rise to that plane of activity indicated by Isaiah when he says that one "shall call himself by the name of Jacob."

Such an individuality has undoubtedly risen a rung in the mental ladder, Jacob's ladder, but he who would continue to advance must needs rise from the rung *of struggling to* that of rejoicing in the affluence of good, *and in this way* reflect good. There is no harm in struggling less, provided we are accomplishing more along the line of reflection of the divine nature. This divine nature does not require to be made over; it is eternally perfect, and is the only real nature, since God is the only creator and His likeness the only type of man. Hence, as the great revelation dawns upon us, illuminating our consciousness like the most wonderful sunrise, we may, and indeed we must, plead that God, good, is All-in-all; we must plead for the Science of creation, and proclaim in all gratitude, consecration, and humility, "I am the Lord's," as Isaiah farther on declares.

Once we have honestly stepped out of the depths of submission to error, be it sin or sickness, up to the next rung of active repentance, through recognition of the falsity of our yoke, we should look higher still, for it must not be forgotten that those who linger too long on the plane where Jacob was before his spiritual illumination, are deliberately involving themselves in wrong thinking, and so are preparing for themselves a prolonged struggle attendant on the belief in a dual nature. Our text-book tells us that "mankind must sooner or later, either by suffering or by Science, be convinced of the error that is to be overcome" (p. 240), and thus are we given our choice. Instead, then, of looking with bowed head at the great distance between a sinful mortal and spiritual perfection, why not "lift up your eyes on high," and behold that far greater abyss, which sin and suffering cannot cross, between God's perfect man and the mortal dream of error and pain?

To mortal sense, aspiring humanity seems to stand midway between the two. Then, by what name shall humanity call itself,—by the name of Jacob, and struggle proportionately, or by the name of the divine Mind, and so glorify God by the careful, constant, confident rejection of all that is not His reflection? By which method will the widest and most satisfactory results be obtained? Surely by the one enjoined by our Master when he spoke these memorable words to his disciples on the hillside: "Be ye therefore perfect, even as your Father which is in heaven is perfect." Christ, Truth, is reiterating the same command today, and pointing to the divine origin of man as the only foundation upon which to base all pure endeavor.

Is it presumptuous to believe in God's gift of perfection to His creation? Some theological teaching would have us so believe; but is it not rather presumptuous to believe in some mysterious addition to God's handiwork, a slur on the creation which in the inspired Scripture has been pronounced to be "very good," and which can never be added to nor taken from? Too long has the human race been told that men are miserable sinners, unmindful of the fact that this must have a tendency to degrade rather than to uplift the individual who believes it, since as a man "thinketh in his heart, so is he." Too soon the race cannot awaken from this sense of guilt and gloom into the daylight of regeneration which the revelation of Christian Science has brought within the present reach of every suffering and sinning man and woman. God's way of redemption is the thorough, the permanent, and the joyful way, whereas the way of suffering is of mortal invention.

Digitized by Google

Nearly two thousand years ago St. Paul, suddenly enlightened, perceived and proved that "as many as are led by the Spirit of God, they are the sons of God," passing "from glory to glory even as by the Spirit of the Lord." Is there not greater enlightenment and humility in the admission that the creation of God is His reflection, and therefore perfect, than in the assumption that perfection has been marred, or is in the making, and that we are either to make, or else regain it, by our own efforts? What effort there is lies in the direction of awakening, of ascending in thought, and not in the direction of descending deeper into superstition through remorse and suffering, thus sojourning in hell when man's present heritage is heaven. Provided that honesty and activity constantly spur us on to nobler aspiration and greater purity of thought, word, and deed in our every-day life, we need not hesitate to proclaim with the prophet the great scientific truth "I am the Lord's," for by no other means can that fact be demonstrated. In order to reach the right conclusion, one must start with the true premise.

He who would awaken in this way must be prepared to silence many times a day, if need be, the deceiving suggestion that he cannot awake, that Truth is too remote and error too imminent; that matter is substance, whereas Spirit seems like shadow; for these are lies, one and all, and each one requires a pointblank denial. The student will silence these pernicious arguments all the more easily when he realizes that this seeming difficulty is not peculiar to him, is not his besetting sin, but is the universal temptation, calling for individual resistance. These false arguments are the only thing that appear to hide man's ever-present and unclouded spiritual consciousness. We should not foster self-pity and discouragement by listening to such adverse arguments, nor maintain stoutly that there is more density in our dream than in our brother's, but we should turn from the error, and not fail to encourage ourselves just as faithfully as we seek to encourage others along the selfsame road to harmony and freedom. We read that Jesus was "tempted at all points like as we are, yet without sin;" it is therefore possible to remain sinless, albeit tempted.

The habit of denying error will presently become as natural as the heretofore practise of agreeing to it has seemed. To the beginner, taking his first footsteps into the new country of right thinking, material sense seems apt to argue that his difficulties are very large and his spiritual understanding very small; but by sure degrees the outlook changes, the line of demarcation between true thoughts and false grows more marked, and he learns quite easily to take his stand on God's side, for to him the Father's presence has become the open secret and the sure place of refuge. Thus surely does "the sword of the Spirit" clear the mental pathway ahead of us, and the redeemed of the Lord shall walk there.

REJOICING.

JOHN F. BRAUN.

IT is the Christian's province ever to rejoice. The fetters of his seeming enslavement fall when he turns his face smilingly toward divine Love. He who would look to Truth for his all, should strive to show to the world a brow unclouded, serene, and this cheerfulness must be the reflection of spiritual thought. We should never dignify the shadow, the seeming darkness, by turning upon it a lowering glance. The psalmist says, "He that sitteth in the heavens shall laugh." If we see clearly the absurdity of that thing which is trying to assert its reality, then our work is finished at that moment. Does it not seem preposterous to think that any form of evil should set itself up on a pedestal and claim to be as real as that which God creates, and then try to enforce its claim? There are moments when a sense of humor is a not to be despised therapeutical agent.

One of the fundamentals of Christian Science is in the sublime fact that we are "the sons of God," and St. John brings it down to the present moment when he adds to this statement that momentous word "now." We may search over the broad expanse of land and sea in vain for a better reason for happiness than this. The great "now" in which we are the sons of God is the eternal, the vital moment when this truth becomes clear to us. Many a time and oft we should ask ourselves the question, Why am I happy? The more dark seemingly the moment, the more searching should be the question, and the Bible as illumined by the teachings of Christian Science supplies the answer.

WHERE IS GOD?

EDNA C. HARRIS.

IT often happens that a seemingly unimportant circumstance has made manifest an important truth, and such an occurrence came to my notice recently. A Christian Science student was sent to see a family who were very poor. They belonged to the class of people who are continually moving from place to place, and in this family was a little boy who had been normal until, when he was about five years old, he had an illness which resulted in what is known as epilepsy and idiocy, the child apparently being unable to hold any connected thought. It was an interesting case, and came under the care of a number of well-known physicians for several years, during which time two operations were performed on the boy's head; but they were not successful, and the other conditions remained apparently unchanged. The boy was put under Christian Science treatment when he was about ten years old, and when he began to awaken from this long dream he was still but a child of five in respect to intelligence. The healing, which was complete and permanent, was just an unfoldment of the intelligence which is a reflection of the one Mind, and in six months he was going to school like any normal boy of his age.

Prior to his healing the boy had usually sat in sullen silence during the visits made by the practitioner, and on one particular occasion, when she was talking to the father, trying to give him a gleam of light, the child abruptly said, "I know about God!" The practitioner turned to the child and said: "Well, what do you know about Him?" "He's up in heaven," replied the child. "Oh, no, He is not," said the Scientist, "God is right here, all around you." "Say that again," was the demand. The statement of God's ever-presence was repeated several times at his request, and then came a long silence. The Scientist continued talking to the father, and when she was leaving, the child called out: "Say! I'm so glad that God has moved." This was the first intelligent remark made by the boy for many years (except to ask for food or water), and from this dawning realization of God's omnipresence the healing came quickly and naturally.

I, too, was glad when I first learned that God is not to be thought of as dwelling in a far-away heaven, beyond the blue sky. When healing came to me through Christian Science, I was awakened to the knowledge of "a new heaven and a new earth," radiant with the ever-presence of Truth and Love. God's habitation ceased to be a locality based upon material belief, when it was realized that He fills all space and that all which reflects Him is beautiful and good. Solomon exclaimed, "But will God in very deed dwell with men on the earth? behold, heaven and the heaven of heavens cannot contain thee; how much less this house which I have built!" and Paul wrote to the Corinthians, "We have a building of God, an house not made with hands, eternal in the heavens." God does indeed dwell in heaven, but this heaven is not a locality or a place, it is in the consciousness of harmony of which material sense does not know. Mrs. Eddy says, "Heaven is not a locality, but a divine state of Mind in which all the manifestations of Mind are harmonious and immortal, because sin is not there and man is found having no righteousness of his own, but in possession

Digitized by Google

of 'the mind of the Lord,' as the Scripture says" (Science and Health, p. 291).

The knowledge that God is here now, that He is above, below, and round about me at all times and in all places; that I live, and move, and have my being in Him who is Love,—this consciousness has brought to me a sense of security and peace unknown before. God's promises through the Scriptures are many, and Isaiah gives us this one: "The work of righteousness shall be peace; and the effect of righteousness quietness and assurance forever."

REFLECTED RAYS.

FREDERIC H. SKEELE.

IN Christian Science we learn that God is Truth, revealed to us through the Christ, the Word made manifest. Jesus said, "The words that I speak unto you, they are spirit, and they are life." If Christians have been asking, as did Pilate, "What is truth?" it must be because they have been without Christ, or without the true understanding of the Word; and it is the mission of Christian Science to demonstrate anew the truth of being, taught of old, to give to every yearning hope a definition of the Christ-idea, an understanding of what Truth is, and make it practical in solving the daily problems of life.

God, Truth, ordained the Christ-Science, that spiritual understanding by which Jesus overcame all material law and manifested or demonstrated the power of Truth in his healing works. This spiritual method of the Christ-Science was revealed to our beloved Leader, who has recorded this revelation, with systematic rules which are a guide as to how we should live the life and do the works of Christ Jesus. The Christ-idea came to her, as Christ must come to each and all of us, and she did not reject or crucify it, but received the divine idea with a heart full of love and thanksgiving. Invited to the marriage feast of divine Love and Love's idea, she went gladly, and being clothed in the simple white robe of humility which all must wear at this wedding, she partook abundantly of this manna from heaven, even the "bread of life." Having partaken of this bread, she has done no less than did the disciples,—she has "borne this bread from house to house, *breaking* (explaining) it to others" (Science and Health, p. 33), and to hundreds and thousands of homes she has brought comfort.

When we know Truth as manifested by Christ Jesus, Truth knows us and abides with us. The acquaintance must be mutual, for Christ said, "I am the good shepherd, and know my sheep, and am known of mine." That he knows his sheep in Christian Science is evidenced by the fact that as a result of its teaching divine Truth speaks to us the Christ word, the healing word, so that we meet the test he imposed, namely, "By their fruits ye shall know them." Moreover, Christ Jesus taught men how to proceed to know this true doctrine; he said, "If any man will do his will, he shall know of the doctrine."

All who are looking to the divine will alone for guidance, will accept Christian Science as true, the essence of which is found in one phrase of the Lord's Prayer, namely, "Thy will be done." If we thus pray "Thy will be done" understandingly, with a heart full of joy (instead of gloomy resignation), knowing that if we let His will be done in us and for us, every possible good will come to us, then Christ, Truth, will come as naturally as the sun smiles upon the waiting flower. The Christ is God's man, His perfect idea which was made manifest in the Prophet of Nazareth. Illumined with the light of divine Love, he proclaimed our kinship with the Father, saying, "Whosoever shall do the will of God, the same is my brother, and my sister, and mother." More we cannot ask for; therefore let us prove the relationship by doing the will of the Father in doing the works of the Son.

Our Leader proved the verity of her spiritual apprehension in adopting the Master's life-work. Jesus did not attempt any mighty works until he had been baptized, until the Christ-consciousness had come to him. This realization established his sonship through the Christ, and heaven opened wide its portals to his spiritual perception, while a voice out of heaven, or perfect harmony, ratified his acceptance of the truth of being, and he knew the Christ as God's "beloved Son" manifested in him.

Jesus claimed nothing for himself that he did not claim for all those who would walk in his steps, therefore we do not assert too much when we say that heaven has been opened in the consciousness of unnumbered thousands of Christian Scientists who are today engaged in the healing and uplifting of humanity.

GRATITUDE FOR THE *MONITOR*.

ELLA LEWIS.

RECENTLY I had an experience of which I should like to tell, as I feel especially grateful for it. One day I seemed to be quite overwhelmed with a sense of loneliness and sadness; I had opened the door to grief, and self-pity had crept in. It is true I had endeavored to rise above it, to change my thought, but seemingly with no result, and when I retired that evening I was still "hugging my tatters close about me," as Mrs. Eddy similarly expresses it in Science and Health, (p. 201).

I awakened the next morning still suffering, and I decided to remain at home that day, feeling too sad to attend to business, and as I sat down, forlorn and dejected, my eyes fell upon a copy of *The Christian Science Monitor*, lying unopened on the table at my side. I picked the paper up, thinking that perhaps I might find something in it which would help me, and on opening it at "The Home Forum Page" my eyes rested on these lines by Fiona Macleod: "Listen, and in the deepest hollow of loneliness, we can hear the voice of the Shepherd." The words seemed illumined, and I read the beautiful lines over and over again, realizing that the message was indeed for me; and I desired above all else to put myself in the mental attitude of listening.

And what did it mean to "listen"? On looking up the meaning of the word I found that it meant "to attend to closely, so as to hear, hearken, obey." Then I noticed on the same page of the *Monitor* an article entitled "Come up hither." So, in order to listen that I might hear "the voice of the Shepherd," I must obey the call, "Come up hither." I must lift thought above the mortal sense of things and seek to know the truth,—spiritual reality.

I did listen, and there, in "the deepest hollow of loneliness," I heard the voice of the Shepherd. It said, "Count your blessings, and rejoice! Surely you have something to be glad about;" and as I began to deny the thought which had held me in bondage, the many blessings which had come to me in Christian Science began to flood my consciousness, and truly they were more than could be numbered. The sadness was dispelled. I arose and went about my work with a joyous, grateful heart, thanking God that dear Mrs. Eddy had been guided in giving to the world our daily newspaper, which brings to each waiting heart a daily message of love and truth.

Ask no more, Why?
Declare the truth,—
That all is good,
And error but a lie!
Thy cup of blessing
Shall run o'er,
And thou shalt have
Of Love full store
To meet thy brother's need,—
Thine own, and more!

ELIZA C. MILLER.

SELECTED ARTICLES.

[Frederick Dixon in *Newcastle* (Eng.) *Evening Mail.*]

Mr. ——'s reply to me, which appeared recently in your paper, though a fairly long one, may be said practically not to touch the question at issue. May I begin by saying that, whatever I wrote, what I intended to write was, not that the tone of this critic's earlier letter had been irritating, but irritated, and I think his present reply is ample evidence of the truth of that statement. He may be, as he says, the coolest individual his friends have ever met. What I objected to was the coolness of his assumption that Christian Scientists were necessarily a quite ignorant body of people, devoid of any knowledge of natural science or anything else.

The gentleman objects to my parallel of Mrs. Eddy's position and that of other great religious teachers. May I remind the critic of what his argument was, and what my answer amounted to? He argued that Christian Science was fantastic, on the ground that it was merely one individual's (Mrs. Eddy's) interpretation of the Scriptures. I asked him in what particular this differed from the teaching of Augustine, of Luther, of Calvin, of Fox, or of Wesley. Take Lutheranism alone. What is it but Luther's interpretation of the Scriptures; and what are Lutherans but the people who have accepted that interpretation?

The critic now replies that Mrs. Eddy's interpretation is fantastic because it differs from that of orthodox theology. I had not gathered that he was a great believer in the sanity of orthodox theology, or that he would have regarded a departure from the teaching of orthodox theology as particularly fantastic. However, accepting his change of argument, what does his new argument amount to? Was not Christianity an absolute departure from the religious teaching of Rome and Greece? Did not the philosophers of Rome and Greece regard it as fantastic? Jesus of Nazareth, the Galilean Founder of a despised religion in a remote province of the empire, was a pitiable figure enough to the Roman philosopher Celsus, while the steadfastness with which his followers preached his doctrines, and suffered for preaching them, was put aside by Marcus Aurelius himself as mere perversity. The ecclesiastics who attempted to seize Luther after his flight from Worms, regarded his teaching very much as the priests of Diana regarded that of St. Paul, and Calvin had to maintain himself in Geneva in a practical state of siege. Fox made the tour of most of the prisons of England, while Austin Dobson has sung of Wesleyanism:—

> Whitfield preached to the colliers grim,
> Bishops in lawn sleeves preached at him.

I am afraid the critic's argument goes to pieces a little when you regard it historically.

As to the question of atoms, electrons, and ether, I may still be permitted to ask this gentleman if he regards these things as ascertained facts or as scientific speculations? I do not think he will find anything in Christian Science so completely speculative as the existence of these things. Mrs. Eddy has taught, as I have repeatedly pointed out to the critic, that Jesus of Nazareth was the most scientific man the world has ever seen. He taught the purest idealism the world has ever known; the idealism that the only absolute existence is Spirit, and that material phenomena are nothing but the negation of Spirit. Not only did he teach this, but he demonstrated the truth of his teaching by means of the miracles, or object-lessons. As time passed by, this teaching was gradually lost sight of. First, the proof, or miracle, gradually disappeared, as the healing of the sick was made over to the generations of doctors whose methods are simply ludicrous to thinking people at the present day.

When once the necessity for the demonstration of the teaching was put aside, the teaching could be altered with impunity; it had ceased to be scientific. These alterations came in in the form of the innumerable sects into which Christianity was gradually divided. What Mrs. Eddy did for humanity was to perceive the Science of what Jesus of Nazareth taught, and to insist that a Christianity which was not scientific, and therefore not demonstrable, was not the Christianity taught in the gospels. From the time of the disciples until the dawn of Christian Science, scientific Christianity was as much lost to the world as if it had ceased to be altogether. The teaching of Mrs. Eddy restored the scientific teaching of Christianity to the world, and so has again made possible the scientific demonstration of healing the sick, and those greater proofs of divine Principle which will be demonstrated as her followers succeed in better understanding her teaching.

[Howard C. Van Meter in *Eugene* (Ore.) *Register.*]

In the Health and Hygiene Department in a recent issue there is reference to the bill before Congress establishing a bureau of health. Since you mention Christian Scientists as included in the opposition to this measure, and as I am in a position to know the attitude of Christian Scientists in the matter, I will ask space to explain briefly the reason for it.

The proper provision for safeguarding the people with respect to sanitation and quarantine is something every one is interested in and desirous of having made as effective as possible. Competent sanitary engineers (not physicians) have done unquestionable good in the Panama Canal Zone, and Christian Scientists as well as others appreciate their success in reducing the mortality rate there and everywhere else. If there were nothing else contemplated in the proposition of a national health bureau than this, there would be nothing but support for it. Irrespective of the statements against favoritism in the conduct of such a bureau, it is so well known that the allopathic school of healing dominates exclusively the governmental supervision in health matters, that any increase in power in this direction would amount practically to governmental endorsement of that system, and would provide an increased use of governmental agencies for the exploitation of the opinions of that school. This would tend to fasten upon the people by degrees the necessity of relying upon that system, through the unusual opportunities given, as government officials with the United States government back of them, and through the literature they would be permitted to circulate as government documents. This all tends toward state medicine, which is as un-American as state religion. Any step in this direction should be opposed by all who believe that choice of a healing system should be made on the basis of experience and observation, on the part of those who desire help.

The health of mankind means to the Christian Scientist more than mere animal cleanliness or fitness. It means mental purification, since it is being proven conclusively, through the healing of all kinds of diseases by Christian Science, that the cause of sickness is mental. Consequently the Christian Scientist does not regard with favor any extension of privilege to any school of healing, directly or indirectly, whereby the opinions of that school, based upon material causation and consequently the use of material drugs as the remedy, would be given increased circulation. Government health officials whose business it is to show a reasonable activity by way of justification of their appointment, will be perniciously busy in keeping constantly before the people the importance of their office and what they are doing. This tends to concentrate thought upon disease as a necessary experience, instead of away from it. Increased governmental supervision in the direction of health, as contemplated by the bureau referred to, simply means a step toward a tax-supported medical class of doctors. This is what the American Medical Association is working for, and it is no more justifiable than for Christian Scientists to ask the government to give them charge of the health of the people of this country.

[David Anderson in *Melbourne* (Aus.) *Herald.*]

In an interesting résumé of a Whitsunday sermon, the preacher appears to have discriminated between the joyous atmosphere of the early Christianity, when the church was full of life triumphant, and the modern clerical visitation of the sick, in which the minister of religion, who has been called in after the doctors have done all they could, must not come to the bedside as the agent of the life-giving Christ; all energy in that direction having been abdicated in favor of the "cranky followers of Mrs. Eddy."

"Cranky" is a somewhat indefinite description. It conveys the suggestion of mental weakness, although Webster also gives as an obsolete meaning, "full of spirit, brisk, lively." The reverend canon is too much of the manly sportsman to seek from the vantage of pulpit and clerical position to sneer at a woman or to scoff at a religious belief because it may not be in accord with his own conviction. He may, however, be one of those who, having formed opinions of Christian Science at second hand, feel justified in launching ridicule and invective at what they have not taken pains to investigate. Probably some of the Whitsunday congregation would have liked to hear what authentic knowledge the preacher had of the life and work and teachings of Mrs. Eddy, and how many of her followers he personally knew, by way of justification of his conclusion that Christian Scientists are cranks.

In less than half a century Christian Science has encircled the globe. Its church-membership comprises intelligent people in all grades of life, and includes judges, doctors, university professors, and ministers of the canon's own and other denominations; and more than a million witnesses are living to testify to its efficacy as a healing agency. The preacher would appear to have recognized that the proportion of Christian Scientists who are "full of spirit, brisk, lively" church-members, is greater than in his own communion. The percentage of the mentally unstable is not.

[Charles E. Jarvis in *Los Angeles* (Cal.) *Examiner.*]

Our reverend critic loses sight of, or else is not aware of, the fact that Christian Science is based fundamentally and absolutely upon the Bible and the teachings of Jesus Christ, who demonstrated by his works his knowledge of the power of the divine Principle to destroy sin and pain, and who commanded his followers not only to do likewise, but "greater works than these." Christian Science is essentially a religion, and while many of its adherents have first had their attention drawn to it through the healing of pain and disease, that phase of its teaching is but incidental to the far more important condition, that of spiritual regeneration, which follows the study of the Bible in the light of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. It is hardly necessary to add that those who have experienced the destruction of sin and discord from their lives, are most profoundly grateful. Christian Science therefore becomes a genuine and gratifying means to salvation here and now, and in the degree that we apprehend the fact that the kingdom of heaven is not a place afar off, but a state of consciousness, a condition of mind, we are released from the bondage of our former beliefs and are freed from our pains, sorrows, and fears, and this realization brings with it the joy of true living, and the "peace of God, which passeth all understanding."

When our critic classes Christian Science with theosophy and spiritualism, he again displays a lack of knowledge of the subject, for the truth of the matter is that Christian Science is the very antithesis of both of these beliefs, and in Science and Health Mrs. Eddy has differentiated so clearly between Christian Science and these beliefs that there is no excuse for confounding them. As to the time-worn inference that Christian Scientists deny the existence of pain and sin, allow me to quote from the text-book above referred to as follows: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction" (p. 460). But Mrs. Eddy has pointed us to a way out of sickness and of sin as well, and countless thousands have proved that the steps of this way lead to health, happiness, and freedom. Her followers are endeavoring to show by their lives the gratitude they feel for the good that has come into those lives through this teaching, and they are striving to follow in the footsteps of him who gave us the golden rule.

[Avery Coonley in *Chicago* (Ill.) *Inter Ocean.*]

A recent issue of the *Inter Ocean* in connection with an account of the reduction of the force in the city health department, quotes Dr. Young, health commissioner of Chicago, as ridiculing the protest of the National League for Medical Freedom against the medical inspection of school children, which the board of education is undertaking to make a requirement for admission to the privileges of our "free schools." Dr. Young intimates that no treatment of ailments is involved.

We call attention, however, to the fact that the inspection is but a step toward treatment, and Dr. Young himself makes this clear, since he has consistently urged that treatment shall follow inspection as fast as this can be accomplished. He stated before the City club in December that he was trying to push the work beyond mere inspection, and in an address delivered last fall he indicated more specifically what he means by saying: "The vision, the hearing, the speech of pupils, their physical deformities, their mental defects, their nutritional status, all have come to be matters requiring attention by medical inspectors of schools and justifying correction at the expense of the community if the circumstances make it necessary. From excluding diphtheria to removing adenoids and filling defective teeth is a long road, but we have traversed it and are going farther."

The treatment will be practically compulsory, as the inspection is practically compulsory. For instance, it has just been reported to the league that where a note was sent asking that the child be excused from inspection, the inspector held the child up to public ridicule. Whether his brother in another room will have the hardihood to present his note remains to be seen, but if he does, he will prove his heroism. Compulsory treatment will be the next step, and those who care to preserve the right to select their own practitioner to care for their children would better act now than to wait till their child has been subjected to some such operation as Dr. Young indicates.

In the address above quoted from, Dr. Young throws out the hint that the schoolhouse can be made "the center of a propaganda" which will be most effective by reason of "the natural interest of the community in its children," and he predicts that it will result in making "instruction in preventive medicine" as important a factor in the school as the principal himself. People may disagree with him as to what are the relative values between instruction in the educational fundamentals and instruction in "preventive medicine," but with scores of differing systems of cure in the field they cannot fail to agree as to the advantage to that system which can secure the schools as their basis of operations. But Dr. Young's comment upon the league's position evades the real question; namely, that medical inspectors are now in our public schools without any legal right there whatever.

[Charles K. Skinner in *The Arrow*, Flint, Mich.]

With all due respect for the view of a "tolerant skeptic" concerning Christian Science, there are some points of its teaching on which he seems confused, and I beg to say a few words in connection therewith. There was a time when the writer saw "through a glass darkly," even as does our skeptic, but continuous study and application of the teaching of Christian Science has brought a clearer view.

Digitized by Google

Our "skeptic" is to be congratulated on his good health and equanimity of temperament. He also has our thanks for the courteous way in which he has treated the subject of Christian Science. He should, however, bear in mind the words of the Master, "They that be whole need not a physician, but they that are sick." To all those who are satisfied with their present religious affiliations, Christian Science says, "Peace be unto you," but to the heartsick and suffering, the sinner too discouraged to struggle longer, the sick who have tried all material means to no avail,—to these Christian Science bears the word of healing truth.

The Christian Scientist has no quarrel with the honest physician who is doing all he can, from his own standpoint, for the relief of the suffering. Far from it, for he realizes that there are very many whose reliance is strictly on material methods. Christian Scientists are earnest advocates of right sanitation, pure air, pure water, pure food, and are sticklers for cleanliness, good habits, and good nature. They do not force their religion on any, but having made known their willingness to help, wait to be called.

As opposed to the materialist, who believes that the body governs the mind, that the stomach creates a good or bad disposition, the Christian Scientist understands that everything is first thought; therefore he begins to regulate that. He knows that neither the stomach, brain, nerves, muscles, nor any part of the body, has any life, intelligence, or power of itself, to express either discord or harmony. One does not need to be a Christian Scientist to accept this position, for the body of one who has passed away is the proof; every organ and member may be perfect, but there is neither life nor intelligence. If "digestive chemistry" and brisk circulation are the forces which keep life intact and harmonious, why this stoppage of perfect action?

Is it not manifest that not a nerve, muscle, drop of blood, or any secretion can move without a mental impulse to instigate it? What about the spasm of sudden fear which stops the heart almost instantly, the flash of rage that flushes the cheek, stops digestion, and obstructs general circulation? That there must be a mentality which controls the functions and general action of the body, for harmony or discord, is the teaching of Christian Science. This mentality is the thought force which has found tacit acceptance in the human mind. Where does this thought start? It starts from the pessimist, who is always looking for trouble and fearing evil, and like Job always finding it and forcing his views on the indolent. It comes also from the theories of so-called medical science, whose doctrine of a new disease and its sure remedy is heralded today only to be discarded tomorrow. One has only to look back over the history of *materia medica* to prove the truth of this statement. No one welcomes the destruction of disease and all manner of discord more than the Christian Scientist, but he believes in the destruction of the cause as well as the effect.

[Warwick A. Tyler in *Deseret News*, Salt Lake City, Utah.]

Christian Science has nothing whatever to do with the different religions of the Orient, ancient or modern, nor does it in any way contemplate the borrowing of anything from any sect or denomination. It is not a rival to Christianity, for the reason that it is founded absolutely upon the teachings of the one who gave Christianity its name—Christ Jesus. It is the fact, however, that Christian Science differs as widely from "traditional Christianity" as the words and works of Christ Jesus differed from the traditions of the rabbis. Traditional religion now, as then, seems to be intent upon an interpretation of doctrine; whereas Christ Jesus came teaching that the kingdom of God is at hand, and through his knowledge of God and of man's relation to Him, he proved that this knowledge of God set men free from traditional beliefs and practises. The Jewish religion was founded absolutely upon the teachings and demonstrations of Moses. Jesus did not destroy or nullify those teachings. He simply showed men the beauty and simplicity of the Mosaic religion by removing the traditions and ceremonies added to it by the overzealous, and left his hearers with a sense of God's immanence; and through this he proved again that God forgiveth all iniquities and healeth all diseases.

Christian Science is based solely, wholly, and without the least equivocation upon the life, the words and works, of Christ Jesus, and it, too, is removing tradition from Christianity and is again proving by "signs following," namely, the healing of sin, disease, sorrow, and all forms of inharmony, mental, moral, and physical, that it is possible here and now to know God and to be the recipients of His tender mercies and loving-kindness, as in the days of Moses, David, the prophets, and Jesus and his disciples. Did not the great Teacher say: "These signs shall follow them that believe [know God]: . . . they shall lay hands on the sick, and they shall recover"? Christian Scientists therefore say with James, "I will show you my faith by my works," and point to the unnumbered multitude of cases of healing of all manner of disease and sin, as evidence that their religion is the same as that taught and practised by Christ Jesus.

[Ezra W. Palmer in *Denver* (Col.) *Republican*.]

A writer in a recent issue, under the pseudonym of "An Old Subscriber," urges that Christian Science "must be very open to attack," because assaults on it by contributors to the press are promptly refuted. Perhaps no stronger evidence of the genuineness of Christian Science can be produced than these attacks, which are frequently under cover. If Christian Science were doing nothing for humanity, the ire of hostile critics would not be aroused; but it is because it is a religion of positive results that attempts are made to discredit it.

If "An Old Subscriber" will read the life of Jesus as presented in the New Testament, he will find that Jesus was constantly assailed during his ministry on earth; but our hidden friend could hardly argue from those attacks that there was something wrong with the religion of Jesus Christ. Because Christian Scientists fairly and openly defend their religion from misrepresentations, is no evidence of weakness. The critics might deem it more convenient for themselves to be unmolested in their assaults on Christian Science, but Christian Scientists see clearly that only harm could come should they submit to such uncalled-for aspersions.

This anonymous contributor defends the sincerity of a recent assailer of Christian Science. The sincerity of an individual has no bearing upon truth. A person may be sincere in his purpose in attacking Christian Science, but if he misrepresents it and holds it up to the public in a false light, his sincerity avails him nothing against the truth which he attempts to overthrow.

[Written for the *Sentinel*.]

FREE.

ADA JANE MILLER.

FOREVER free! These are the words I sing
As toward the heights I speed on dauntless wing,
And flash on flash of light illumes the way
To sunlit realms of joyous, perfect day.
The bondage of wrong thoughts, which ever bring
Cloud-shadows dark to which there seems to cling
A motley throng of shapes that ever call,
"No use, no use, there is one fate for all,"—
No longer holds me bound. The day's at hand!
Night only bides where thought cannot expand;
So prisoned close it is by baseless fear
That e'en it shrinks from light and doth appear
To love its narrow, dark, and cheerless cell
Where heavy earth-mists cold forever dwell.
Loose thine own bonds, and let thy thought soar free!
Then shalt thou hear God's word,—then shalt thou see!

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"REAL STRENGTH."

IN every movement, whether it be religious or otherwise, there is a tendency to gage its success wholly from the material standpoint, that is, to measure its importance by its numerical, social, or financial strength; and this all too common tendency, so far as it has a bearing on Christianity, is recognized and rebuked in a recent issue of the *British Congregationalist,* from which we quote the following paragraph:—

"It should be clearly and definitely stated and acknowledged that the strength of the Christian church never was and never will be primarily a numerical or a financial strength. It has been in character, in faith, in courage, in piety, that the real strength of the church has consisted; in a word, the history of Christianity has been the supreme example of the truth that in the long run it is quality that tells."

By narrowing the application of this statement to the past and present of Christian Science, we can see wherein the great strength of this movement has been, and we can also see wherein its future is assured if the same spirit of unselfishness, faith, humility, and righteousness with which our Leader was so splendidly endowed, shall continue to animate her followers. It is not of such great importance that a vast multitude shall call themselves Christian Scientists, as it is that those who take upon themselves this name shall be truly Christian, in that they shall yield full obedience to the commands of the Master and thereby be able to do the works which he did and which he declared should be the tokens of discipleship, the "signs" which should "follow them that believe."

It is an old saying that "nothing succeeds like success," and because of the pronounced growth of Christian Science it has pleased some of our critics, one especially, to exploit this movement as a great material or commercial achievement, while entirely ignoring the real success it has gained and the only objects it has had in view, namely, the commemoration through and by The Church of Christ, Scientist, of "the word and works of our Master," and the reinstatement of "primitive Christianity and its lost element of healing" (Church Manual, p. 17). Christian Scientists should not be deluded into believing that such exploitation of their cause has any value either to it or to them. The most subtle attack possible upon Christian Science, the one most calculated to misrepresent and belittle it, and to draw unworthy persons to it, is the one which puts in the foreground the numerical or financial strength of the movement and utterly ignores what Christian Science is, namely, a Christian religion whose real work and purpose is the present-day application of the truth declared by the psalmist, that it is God "who forgiveth all thine iniquities; who healeth all thy diseases;" or, to use Mrs. Eddy's own definition, it is "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1).

Mrs. Eddy, both by precept and example, continually called upon Christian Scientists to be more righteous, more vigilant against temptation, more Christlike in word and deed, and only to the extent that these qualities are manifested in the daily walk and conversation of Christian Scientists, only as they work, watch, and pray, will the great religious movement of which they are a part continue to be a success, and they themselves be worthy of the name they bear.

ARCHIBALD MCLELLAN.

"SINCERITY AND TRUTH."

THE apostle Paul directs thought away from creed and ritual, even from that which meant so much to his coreligionists, namely, the passover, with its unleavened bread; and he tells them of a better way to keep the feast, which is to get rid of the "leaven of malice and wickedness," and to partake of "the unleavened bread of sincerity and truth." What strong words are these, and how grandly do they characterize the advancing thought which is fast parting with the mortal concept through Christian Science, and is putting on Christ, to use again St. Paul's way of describing the great change which comes to one who accepts the truth of being!

"Sincerity and truth"! How much these words stand for, and yet time was when Truth was regarded as something cold and unapproachable to say the least. Perhaps Isaiah's words which tell of the attitude of mortals toward the Christ-idea would very fittingly express their feeling toward Truth. He says: "When we shall see him, there is no beauty that we should desire him." Christ Jesus said to those about him that the truth he had to offer would make them free, but they turned away from it; yet when he was arraigned before Pilate he did not hesitate to declare that the end and aim of his earthly mission was to "bear witness unto the truth." In the centuries since that day many professed followers of Christ Jesus have been in large measure sincere, but they have not understood the truth which he taught; hence the general failure to prove it in healing works, as did the Master.

It is very evident that Pilate saw the sincerity of the one before him, even if he failed to grasp the mighty import of the truth declared, but he was not prepared to meet and master the pride and prejudice of mortal mind which preferred its own false concepts, based upon material evidence, to the truth which Jesus voiced in this last stirring appeal to his would-be judges. There may have been a certain desire on the part of Pilate to hear about the truth, but there was no answering sincerity in his nature, or in that of the priests and rulers who stood by, ready to condemn this fearless exponent and demonstrator of Truth, and so he had to turn away from them and trust to the sincerity of his small band of unlettered followers to give forth to humanity by their works more than by words his divine teaching.

In ringing words, our beloved Leader said, at the great gathering of Christian Scientists, at Chicago, in 1888: "In no other one thing seemed Jesus of Nazareth more divine than in his faith in the immortality of his words. He said, 'Heaven and earth shall pass away, but my words shall not pass away;' and they have not" (Miscellaneous Writings, p. 99). At the same time she called upon her followers to go if they must to the prison or scaffold, "but," she added, "take not back the words of Truth." Truth has indeed grown beautiful to them through her teachings, and they have known its divine influence in their lives, healing them of sickness and sin. It therefore remains with them to make Truth beautiful to those about them by their sincerity and love, for the one virtue is inseparable from the other.

There may be some blinded mortals who think that a harsh utterance of personal opinion means "sincerity and truth," but such is rather the "old leaven" which should be purged out, because it can never "evoke healing from the outstretched arm of righteousness" (Science and Health, p. 365). In his epistle to Titus, Paul again urges the need of sincerity, with other spiritual graces by which we "may adorn the doctrine of God our Saviour in all things." To be, not merely to seem, is the end and aim of Christian Science, and we should never forget that Truth is the rock of ages, and that its reflection in human consciousness, in words and deeds of simple sincerity, will outlast all the storms which may arise, and reveal Truth's idea in its own beauty, purity, and power.

LIGHT AND LIFE.

THEY who are privileged to look out upon New England hillsides these days have found themselves surrounded by battlements of color of wondrous variety and richness. On every hand the vision is flooded with a bewildering prodigality of tints which are no less brilliant than profuse, and he who finds good fun in following the rustling wood paths is sure to come home with a deepened sense of the marvels of light. If linked in our thought to the falling leaves, this display speaks for decay and death, but linked to light it becomes a revelation of an inner wealth, vast and unfailing as the resources of the sun. Thought is thus broadened and enriched, a passing pleasure has been transformed into a perennial profit.

This experience is a simple result of an education of sense, and it illustrates, though feebly, the gain of those who through Christian Science have been led to think of God as the source of all real being, all Life, Truth, Love, all goodness and all joy. The localization of our thought of color is a disability only to the freedom of a finer sense, but the localization of intelligence, the belief of life in matter, of mind in personality, bases our most significant thinking upon a misapprehension. It prepares the way for a course of reasoning which would make ideality the source of unideality, righteousness responsible for unrighteousness, God the creator of the devil. It is an error into which the best intentioned have fallen, and for the reason that it is endorsed and insisted upon, even today, by a majority of the world's religious teachers; nevertheless, for every thinking man it can but involve a hazard of the wreck of faith, and in protesting against it Mrs. Eddy has inaugurated nothing less than a Christian reformation. The identification of all real life, all that is forever good, beautiful, and true, as the manifestation of the divine nature and nearness, is the logical and saving sequence of genuine loyalty to the first commandment. It is the only concept of God which is consistent with the declaration that He is the only cause and creator, and it invests every thought of man, of the universe, and of life's events, with a new and nobler meaning. On the other hand, a confused sense of Deity has an ill-shaping influence over all our thinking and activities, and it is more largely responsible for the present devastating rule of materiality than we are possibly able to measure or estimate.

One can accept the fact that the science of numbers sweeps far beyond the compass of his present capacity of thought, and yet have entire confidence in its dictum; but if this science were to demand the acceptance of a contradiction, he would at once become skeptical respecting its reliability and right to rule. So, too, one can honor God, though he recognize his inability fully to apprehend Him; but the moment he is asked to entertain concepts of Him or His doings which are contradictory, which cannot dwell together, then he is sure to become indulgent toward skepticism. Our thought of the oneness of the ray of light is in no way disturbed by the disclosures which the approaching frost has brought us of the complexity of its composition, and this because the unity of the light beam is no less manifest than the diversity of its spectrum. The revelation is simply that of a hitherto undreamed of richness of content or nature.

All this is equally true of the thought of God which is awakened by the teaching of Christ Jesus as spiritually interpreted in Christian Science. Our first step toward the true apprehension of color and an intelligent delight in it is the recognition that it belongs to and is an expression of the activities of light, and our first step toward the perception and attainment of the true, ideal life is the recognition that it belongs to God, is the expression of the activity of infinite Mind; and in our effort to gain this right point of view the glory of the autumnal woods may prove a gentle helper.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

NEWCASTLE-ON-TYNE, ENGLAND.—Twelve years ago Christian Science was practically unknown in Northumberland, while today there is a flourishing church in Newcastle, a regular meeting in Ashington, and a goodly number of Scientists in outlying parts. In September, 1900, two students of Christian Science commenced work by reading the Lesson-Sermon in a private house. Slowly but surely the numbers increased till, in March, 1903, a small room in the Geographical Institute was rented, and public services were started with an attendance of fourteen, including four children. Much hard and honest work by these pioneers resulted in a reading-room being opened to the public.

Soon more commodious premises became a necessity, and suitable rooms were found in Ridley place. About this time the first lecture on Christian Science was delivered in Newcastle, Judge Hanna lecturing to an appreciative audience. In 1904 the Christian Science Society of Newcastle was formed, and in 1906 suitable service and reading-rooms were taken in Eldon square. In 1909 First Church of Christ, Scientist, Newcastle, was organized, and owing to increasing attendance a further move became necessary. A suite of rooms in the front of the same building, consisting of an auditorium with a seating capacity of one hundred, reading-room, readers' room, and librarian's office, was leased for three years. From that time until the present, interest in the work has steadily increased, and in June of this year services were opened in the Northumberland hall, a spacious concert-room seating three hundred, and new reading-rooms were opened in Northumberland street, the chief shopping thoroughfare of the city. Already results have proved these progressive steps to have been wisely taken.

Correspondence.

MUSKOGEE, OKLA.—The new edifice of First Church of Christ, Scientist, at the corner of Seventh and Court streets, was opened Sunday, Sept. 15, for regular services. The church is of early colonial style throughout. The main auditorium has a seating capacity of about four hundred. The completed church cost approximately fifty-five hundred dollars, exclusive of the lot.

It is just a little over seven years ago that six persons met together in the library of a Muskogee residence and perfected plans for the organization of a Christian Science church. Services were first held in a small room in the old Carolina building at the corner of Third and Okmulgee streets, upon the site of the present Equity building. About five years ago the present church property was purchased. The residence that then occupied the lot was remodeled and services held in it until this spring, when the old building was removed and work started on the present structure.

Muskogee Times-Democrat.

LONG BEACH, CAL.—The word published in the *Telegram* a few months ago, regarding the plans of the members of First Church of Christ, Scientist, in Long Beach, to erect a handsome church edifice on Elm avenue, south of Fifth street, is now followed by the announcement that an architect is working on plans for the proposed new church, which will be built on lines similar to those of First Church in Pasadena. It is reported that ground for the new church may be broken within sixty days.—*Long Beach Press.*

NEEDHAM, MASS.—Papers have been passed conveying to First Church of Christ, Scientist, about fifteen thousand square feet of land upon which to erect a church edifice. The lot has a frontage of over one hundred feet on Highland avenue, adjoining the Nickerson estate. Plans for the future have not yet been decided upon.

THE LECTURES.

BRISBANE, AUSTRALIA.

Bliss Knapp lectured under the auspices of First Church of Christ, Scientist, of Brisbane, at the Albert hall, the attendance being about three hundred and fifty. He was introduced by the Rev. W. Osborne Lilley, a retired minister of the United Methodist Free church, whose introductory remarks were as follows:—

I have indeed great pleasure in being here this evening to preside over this gathering. I have very great sympathy with the Christian Science movement, as I think it is very useful and is doing a great deal of good in the world. This is an age of great investigation in all religious matters, and the air seems sometimes full of new thoughts, new aspirations; but there is room in the world and room in humanity for all the thought that is in the world, and I think that every movement is a part of that wonderful revelation of God in this age, for God expresses Himself in many ways.

There are two aspects of the Christian Science movement which have strongly impressed me. One is the belief that the Scientists have in the living God; God is a reality to them,—God is Life, God is Love, God is inspiration, God dwells with humanity—is the source of all gladness. Now there are hundreds of people who profess Christianity, but who have no consciousness of God. God is only a name to them—only a dream; but to the Christian Scientist God is real. There is another aspect which I think most valuable, that is, they do not look upon sin and suffering in any morbid way. They recognize that [to the human sense] there is sin and that there is suffering, but they try to overcome both, try to prove them of no worth—something they want to get rid of. Thus, having God's Spirit within, they are a living force for the benefit of humanity.

Correspondence.

BERKELEY, CAL.

That great interest is taken in Christian Science at the educational city of Berkeley, Cal., is shown by the large attendance which crowded the High School auditorium, the largest hall in the city, to the doors to listen to a lecture on Christian Science by Dr. Francis J. Flumo. The hall seats over twelve hundred and the lobby will furnish standing-room for five hundred more. That this space was all used tells of the many seekers for advanced knowledge in California's college city. The speaker of the day was introduced by Thomas Hull, who spoke in part as follows:—

As Christian Scientists we believe we found the "pearl of great price" spoken of in the Bible, when we discerned the true meaning of Jesus' saying, "I am the way, the truth, and the life;" and we know that it is a way of peace and joy to all who follow in the footsteps of him who "went about doing good." This afternoon we have with us a gentleman who I believe has followed in "the way;" who can tell us of the freedom that the truth will bring to all who seek it, for as we seek, so shall we find.

Berkeley Courier.

ST. JOSEPH, MO.

Willis F. Gross spoke on Christian Science at the church, Twelfth and Felix streets, to an audience which filled the large auditorium. Mr. Gross was introduced by Fred E. Ernst, who said in part,—

If one person goes away from here apprehending just a little more of spiritual truth, with a better understanding of God, good, then we shall feel well repaid for giving this lecture. That this truth taught in Christian Science is demonstrable, is proven every day. Christian Science is neither a fad nor a passing fancy, and only asks you to believe its statements so far as they can be proven. Mrs. Eddy, the Founder of Christian Science and the author of its text-book, "Science and Health with Key to the Scriptures," asks that we follow her only so far as she follows Christ. By doing that we certainly cannot go wrong. We are willing to rest our case on the saying of the Master: "By their fruits ye shall know them."—*St. Joseph Gazette.*

RAPID CITY, S. DAK.

A large audience gathered to hear an address on Christian Science by Judge Clifford P. Smith, in the Elks theater. The speaker was introduced by Judge Levi McGee, who said in part,—

The subject of religion never grows old to mankind. Man has ever peered into the great silent depths about him with questioning awe. He has ever felt that somewhere beyond the narrow circle of his knowledge and experience, beyond the horizon of the known, there was some great source of power and mighty influences, from which infinite knowledge, love, and joy might be received; and from out the same unknown, the coming of pain, sorrow, and misery was ever feared. He has ever felt the silent influence of something superior to himself, to which he owed obedience. And today this same feeling, to a greater or less degree, exists among us all.

Religions have come and gone and stand out like a great panorama on the pages of history. But can it be used as an argument against religion because it has gone through many changes? May not each religion correspond in thought to the degree of intelligence of its adherents in the expression of the relation of man to the eternal and universal power,—the infinite? Is there any reason for supposing that religious thought should remain the same—why not progression in this thought as well as others?

We have assembled this afternoon to listen to one who is to speak to us on this religion from the standpoint of the Christian Scientist, claiming new interpretations and advanced thoughts on this old world-wide religion. Let us listen to him.—*Rapid City Journal.*

GREAT FALLS, MONT.

William D. McCrackan, M.A., lectured on the subject of Christian Science at the Grand before one of the largest audiences that ever attended a Christian Science lecture in this city. The lecturer was introduced by William C. Kaufman of this city, who spoke as follows:—

Since God is ever present, He is constantly expressing Himself. We become conscious of this fact whenever we see the nothingness of materiality and reach out for the spiritual. God is expressing Himself through Christian Science, because of humanity's demand for that which is spiritual. Christian Science, therefore, had its origin in God. Mrs. Eddy, its Discoverer and Founder, has stated the Principle and rule of Christian Science in that spiritual text-book, "Science and Health with Key to the Scriptures." Students of this book have in a degree become conscious of the nothingness of sin, disease, and death, and this has revealed to them the ever-presence and allness of God. As a result of this spiritual enlightenment, the sick have been healed and the sinner has been reformed, and we believe that this demonstration of "God with us" is the fulfilment of Christ Jesus' promise, "Lo, I [the spiritual reflection of God] am with you alway." If any have come to scoff and criticize, this lecture will assure them that we have a reason for the hope that is within us. If any have come who are weary of discord, sin, and suffering, it will be for them the bread of life. After hearing this lecture you will know more about God, more about Christ, and more about the real man.

Great Falls Leader.

SEYMOUR, IND.

The first authorized lecture under the auspices of the Christian Science Society of Seymour was given at the Majestic theater by Virgil O. Strickler. The Hon. Harry S. Downey, an attorney from Shelbyville, who introduced the lecturer for the evening, in his introductory remarks said in part,—

Because of the physical improvement and spiritual uplift in my own life, the wonderful betterment in other lives near to me, and the increasing acceptance of Christian Science among the people of the whole world, I am grateful for every opportunity to add my mite toward the universal adoption of this new-old truth. Since Christian Science was first given to the world by its Discoverer and Founder, less than fifty years ago, it has not escaped the reception usually accorded every new idea, especially those affecting religious matters. By those who have mistakenly thought they knew its nature, it has been doubted, denied, and wilfully misrepresented. Because of these conditions, and for the purpose of promulgating true ideas of Christian Science and of its Founder, The First Church of Christ, Scientist, in Boston, Mass., commonly known as The Mother Church, has organized and maintains what is known as a board of lectureship, composed of those who are competent and authorized to speak of Christian Science and its teachings, and it is to hear a member of this board that we are met tonight.

Seymour Republican.

LAKE GENEVA, WIS.

Frank H. Leonard lectured on Christian Science in the Y. M. C. A auditorium. He was introduced by Attorney Franklin J. Tyrrell, who said:—

Probably all of you know that I am not a Christian Scientist, but this world has grown too old, and the Christian religion is too broad and liberal for any one to entertain the opinion that any sect has, or that any set of sects has, a monopoly of all the good in Christianity. We grant the sincerity of all Christian bodies. We seek the same goal, and differ only as to the means of attaining it. It is eminently proper and fitting that every sect have its day in the court of public opinion, and that it be represented in that court by the most eminent counsel obtainable, duly accredited and empowered to speak with authority. To that end, and on behalf of Christian Science, we are to listen this evening to a member of the board of lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Massachusetts.—*Correspondence.*

MILFORD, UTAH.

A large audience listened to an address on Christian Science at the Pat theater by William R. Rathvon. J. A. Ingols introduced the speaker, saying in part,—

We have gathered here this evening to obtain knowledge. Some have come out of idle curiosity. Some have come to satisfy, if possible, a craving for religious light. Some have come who, having already gained some knowledge of Christian Science, know that greater knowledge will be obtained from this student of their doctrines and greater peace result. With the curious ones, let us hope that the seed of knowledge may be sown, grow, and ripen, and a rich harvest result; with the others, that their craving may be satisfied and greater knowledge obtained; and with all, that the peace and harmony which pervade all nature may be the reward.

The doctrine of Christian Science as expounded by Mrs. Eddy is of but recent years, although founded on fundamental truths given the world over nineteen hundred years ago. Like all new religious doctrines it has had adverse criticism, its doctrine has been wrongfully stated, even ridiculed. To correct the erroneous impressions resulting therefrom, is the purpose of these lectures, and to this end the board of lectureship of The First Church of Christ, Scientist, was formed. Let us come with open hearts and receptive minds, and may we all take away some truth that will aid us in our search for that "peace of God, which passeth all understanding." I have been asked to introduce the speaker of the evening, and in that I am not a Christian Scientist, I assuredly deem it an honor to do so.

Beaver County News.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship.

Altrincham, Cheshire, England.—Public hall, 8 p.m., Nov. 7.
Bellingham, Wash.—Beck's theater, 8 p.m., Oct. 28.
Berlin, Germany.—Oberlichtsaal, Bernburgerstr. 22/23, 8 p.m., Nov. 1.
Bloomington, Ind.—Court house, 7:30 p.m., Nov. 1.
Brattleboro, Vt.—Auditorium, 8 p.m., Oct. 31.
Bromley, Kent, England.—Drill hall, 8 p.m., Nov. 12.
Cambridge, Mass.—Scenic temple, Temple street, Central square, 8 p.m., Oct. 27.
Cedar Rapids, Iowa.—Greene's opera house, 8 p.m., Oct. 22.
Concord, Mass.—Association hall, Concord Junction, 8 p.m., Oct. 28.
Council Bluffs, Iowa.—Dohany theater, 8 p.m., Oct. 29.
Harrisburg, Pa.—Majestic theater, 8 p.m., Oct. 31.
Hull, England.—Royal Institution, Albion street, 8 p.m., Nov. 11.
Indianapolis, Ind. (First Church).—Murat theater, 3 p.m., Oct. 27.
Iowa City, Iowa.—Englert's theater, 3 p.m., Oct. 27.
Lancaster, Ohio.—City hall auditorium, 8 p.m., Oct. 28.
Le Mars, Iowa.—Opera house, 8:15 p.m., Nov. 1.
Leominster, Mass. (auspices First Church, Fitchburg).—A. O. U. W. hall, 7 Main street, corner Mechanic, 3:30 p.m., Oct. 27.
Le Roy, Kan.—Union hall, 8 p.m., Oct. 29.
Lexington, Ky. (Second Church).—Opera house, 8 p.m., Oct. 31.
Ludington, Mich.—Church edifice, 8 p.m., Oct. 29.
Mitchell, S. Dak.—City hall, 8 p.m., Oct. 29.
Montreal, Quebec.—Windsor hall, 3:30 p.m., Oct. 27.
Mt. Vernon, N. Y.—Westchester theater, 3 p.m., Oct. 27.
Plainfield, N. J.—Plainfield theater, 8 p.m., Oct. 31.
Plymouth, Wis.—Lyceum hall, 8:15 p.m., Nov. 1.
Portland, Maine.—New city hall, 7:45 p.m., Oct. 31.
Portsmouth, Ohio.—Columbia theater, 3 p.m., Oct. 27.
Pottsville, Pa.—Merchants National Bank building, 8 p.m., Oct. 29.
Quincy, Mass.—Alpha hall, Hancock street and Cottage avenue, 3:30 p.m., Oct. 27.
Racine, Wis.—Danish Brotherhood hall, corner 7th and Grand avenues, 8 p.m., Oct. 31.
Reading, Pa.—Rajah temple, Franklin and Pearl streets, 8 p.m., Oct. 28.
Reno, Nev.—Grand theater, 8 p.m., Nov. 1.
Rochdale, Lancashire, England.—Royal hippodrome, 3:15 p.m., Nov. 10.
Rutland, Vt.—Church edifice, Cottage street, 8 p.m., Nov. 1.
Sacramento, Cal.—Tuesday Club house, 8 p.m., Oct. 31.
St. Johnsbury, Vt.—Colonial theater, 8 p.m., Oct. 29.
Sharon, Mass.—Unitarian church, 8 p.m., Oct. 28.
Syracuse, N. Y.—Wieting opera house, 4 p.m., Oct. 27.
Wheaton, Ill.—Adams' Memorial Library hall, 8 p.m., Oct. 31.
Yankton, S. Dak.—Church, Sixth and Douglas avenues, 8 p.m., Oct. 28.
Yates Center, Kan.—Auditorium, Oct. 28.
York, Pa.—York opera house, 8:15 p.m., Oct. 29.
Youngstown, Ohio.—Masonic temple, 8 p.m., Oct. 29.

TESTIMONIES OF HEALING.

For twelve years I had been a traveling salesman, and during this time had contracted many bad habits, which eventually brought me to the point where I was willing to give up fighting for my health. Physically and morally I was nearly a wreck, although I tried every material remedy; but I had lost faith in all. Having heard of Christian Science, I borrowed a copy of the text-book and tried to read it, but the statements which now mean so much to me meant nothing then, since I did not care for anything good or uplifting. Mentally I was in a state where anything which did not deal with pain or pleasure in matter did not interest me in the least, consequently a year or more went by without my opening Science and Health. Nevertheless, it seemed that nearly every day I would observe something which tended to convince me of the truth of some statement I had read in my brief perusal of the book. My health kept on getting worse, until I was simply driven to Christian Science, and I determined to study it in order to see for myself if it were true. I felt that I had no other hope, so I came as a little child, willing to do anything if I could only understand that God does not send sin, pain, and torture to His children.

Again taking up Science and Health, I read the first words in the Preface with an entirely new sense of their meaning: "To those leaning on the sustaining infinite, today is big with blessings." This sentence made a profound impression on me. Indifference was gone, and in its place was an intense desire to understand this teaching. Before I had read very far my mind began to get much clearer, my body responded at once, and I was healed. Since that time numerous small ailments have been met and overcome by a realization of the truth. In each case, as soon as I could see the truth of being the ailment disappeared at once, and I feel it to be indeed a duty and a pleasure to tell what Christian Science has done for me,—the good which has come to me through the study of the Bible and Science and Health. It is my hope that others who have like problems will also come to see this. While many things yet remain to be unlearned, I am certain that the truth will be found by me and by all who earnestly search for it.

For all these blessings I am most grateful to God, also to Mrs. Eddy for pointing out the truth in such an understandable way.—GEORGE T. KINKEAD, Columbus, Ohio.

For a long time I have wanted to express my gratitude for what Christian Science has been to me for over five years, but a sense of timidity seemed to keep me from it. I was healed of a chronic bowel disorder by studying the Bible in conjunction with "Science and Health with Key to the Scriptures" by Mrs. Eddy. Some time later I went to a dentist who had been recommended to me, and told him that I wanted a set of teeth. He examined my mouth, and told me to come at noon the same day. He said I would have to take something for the extraction of my teeth, but I told him I did not want to do that. At the appointed time I was at the office with a friend who is a Christian Science practitioner, but no mention was made of Christian Science. The dentist again asked me if I did not want an anesthetic used, and when I said I did not, he called another gentleman, who came and stood by me during the operation. When the dentist had extracted several teeth, he turned to my friend and said, "You ladies must be Christian Scientists." She replied that we were, but mere babes in our understanding of Science. Both gentlemen seemed very much surprised at my calmness during the operation, as I never so much as groaned during the time which it took to extract sixteen teeth, and in two weeks I was ready to begin using both plates with very little difficulty.

I am truly thankful for what Christian Science has been to me physically and in the working out of business problems, but most of all for the spiritual understanding which I gain in reading and studying the Bible with Science and Health. I am also very thankful to God for the love and patience with which I have been helped over the seemingly rough places.—MRS. IDA R. STAFFORD, Los Angeles, Cal.

While I am not a Christian Scientist, I have had enough experience in it to know there is great power for good in its teachings. For five years I have had treatment in attacks of illness, for myself and for our children. The first experience, five years ago, was when I was suffering from mental depression and wished only for death. The remarkable part of it is that I have never been troubled in that way since, and I had been subject to this trouble all my life before Christian Science came to me.

In the fall of 1910 I had treatment when my baby was born. I sent for the practitioner at daybreak, had no pain after she came, and at one o'clock the baby was born. When this child was only a few weeks old she suffered greatly from what seemed to be a serious trouble in her head. My fear was great, as I had no idea what the trouble was, and we were so far from a doctor that I could not find out what was the matter. I took the child to the practitioner, and her first work was the overcoming of my fear. The baby never suffered in the least after receiving treatment, though it was about three days before the healing was effected.

MRS. LURLYNE LANE, Alto, N. Mex.

In return for the help which I have so often received from the testimony of others, I should like to add my word of gratitude for the blessing of Christian Science. Some years ago I was in a hospital for four weeks, undergoing and recovering from a serious surgical operation, and while I lay there, one of several hundreds under the same roof in various degrees of suffering and pain, all my reason rebelled against the worship of a God who had made helpless mankind undergo suffering that even mortals would not inflict, one upon another. I had read Science and Health twice, and had voted it perfect nonsense; but in those days it came back to me as the only teaching of which I had ever heard that said God did not create mankind to suffer, nor was their pain inevitable.

I had a most devoted doctor and nurse, and for four months I faithfully followed their requirements, but the moment my nurse closed the door after her dismissal, I took up the once despised copy of Science and Health, and it has been my guide and help ever since. It was no longer nonsense to me, but clear, absolute truth. There are some difficulties still unmet, but as I look back and see how, one by one, the dark places have become light, how fear and discontent and self-pity have given place to joy and love and a deep sense of security, I know that through the teachings of Mrs. Eddy I have learned of a true God, and gained an understanding which will meet every difficulty, however small or however great it may seem.

INA M. TAFT, Chicago, Ill.

I owe so many blessings to Christian Science that I cannot begin to relate them all; but to keep silent would brand me an ingrate, and I am far too grateful to run the risk of deserving any such title. It is over six years since I took up the study of Christian Science, to overcome intense mental fear, and in the strenuous effort to overcome this, I came to comprehend what Paul meant when he said he rejoiced in tribulations.

The physical overcoming was a constant but delightful experience in proving the truth, and it showed the unreality of sickness, for I had been for years a semiinvalid. In a few months I was able to overcome a bad attack of bronchial trouble in a night. A bad cold with a dreadful cough was

Digitized by Google

driven away quickly when I awoke to the fact that I was harboring a keen sense of hatred. An attack of acute lung trouble was mastered in a night, a fever was overcome in three days. The strength received in these demonstrations enabled me to meet and master a life-long affliction of epilepsy for a member of my family in less than half an hour. That was three years ago, and he has never had an attack since, so we feel that this healing is for all time. One of the bones in my right hand was dislocated, and at the same time that I was treated for the fever this bone settled back into its natural condition, and has not troubled me since.

I feel that I only stand at the threshold of this wonderful kingdom of harmony in which we shall surely dwell when we know God aright, but thanks be to our revered Leader, Mrs. Eddy, for the blessed insight which enabled her to give us Science and Health, our text-book. I have learned to love God in the right way, and now with sincere prayer and continued study of Christian Science I am striving to press forward, knowing that in good time I, too, will inherit that perfect peace which "passeth all understanding." In the mean time I am not unmindful of or ungrateful for the many blessings already received.

ETHEL BALCH WEST, Glendale, Cal.

I became interested in Christian Science not long ago, and was entirely cured of a hernia for which I had worn a truss for two years. I am thankful to say that, through the work of a Scientist, and the goodness of our heavenly Father, I have been able to discard this altogether, and not only so, but I have been benefited spiritually as well as physically. I also wish to express my gratitude toward our dear Leader, Mrs. Eddy, for enlightening humanity and showing them how to get rid of suffering.—MRS. E. DALTON, Reading, Pa.

I wish to submit my testimony in conjunction with that of my wife, whose cure was wrought through Christian Science. I had suffered for years from distressing backaches, to such an extent that it was impossible for me at such times to stand upright, the pain being excruciating. During this period my wife had been taking treatment in Christian Science, and had been cured. I naturally became interested, and tried treatment for myself, with the result that I was cured perfectly. Since that time I have become a different man, both physically and spiritually, and I cannot give too much thanks to Mrs. Eddy, through whom this wonderful healing truth has been revealed.

RALPH J. DALTON, Reading, Pa.

In August, 1910, I injured my ankle badly. I did my best to relieve it according to the teachings of Christian Science, but toward evening it commenced to pain me very much, so I called on a practitioner for help. One treatment was given me, with the result that in the morning my ankle was all right, and it has not troubled me since. I am grateful for even the little understanding which I have gained of Christian Science.

MRS. SARAH W. SCOUTT, Kearney, Neb.

Christian Science found me at a time when there seemed to be no help from any other source. I had suffered untold agony for three years, and had gone through a severe operation and found no relief; but in three weeks after I first heard of Christian Science I was doing all my own housework, and am now as well as I ever was. I became interested about the close of 1910.

No words can express my gratitude to God, also to our dear Leader, Mrs. Eddy, for this healing truth.

ELIZABETH BUTTS, Durham, N. C.

I wish to express my gratitude for what Christian Science has done for me. I feel that I have been benefited both spiritually and physically. I have been entirely healed of severe headaches and bilious attacks, which would last for a week at a time; but these have been wholly overcome, and I am deeply grateful to God for having been led into an understanding of spiritual Truth.

MRS. J. W. REYNOLDS, Mitchell, Ind.

Each day Christian Science is more beautiful to me. I have received many benefits from its study. One of the most recent healings was of a trouble in my left hip. The leg began to pain me, and in a few days from the hip to the knee there was no feeling in it except for sharp pains every few minutes. The pain seemed so real that I was unable to do any work for myself, so I telephoned a practitioner, and in five treatments I was entirely healed. The work was done by absent treatment, and although I have done a great deal of walking, and have been on my feet continually, I have felt no return of the trouble.

I am truly grateful for the knowledge of this truth which I am gaining.

MISS CONSTANCE M. REED, Kansas City, Mo.

I feel it to be a pleasant duty to tell of what Christian Science has done for me, through the study of the Bible with Science and Health, and also through a kind practitioner. I wish to relate one thing which occurred while the practitioner was helping me to overcome a physical ailment. She was visiting my mother in New Mexico, and while there she learned that I used tobacco. I had not written her about this myself, but within four days I had completely lost the desire for tobacco, which I had used for twelve years. It is now over a year since I lost the desire for same, and it has become very obnoxious to me.

I am indeed thankful to God for this truth, and am grateful also to our dear Leader, Mrs. Eddy, and my desire is to prove more worthy each day to be called a Christian Scientist.—MRS. LETITIA C. BAUGHN, Olton, Texas.

I wish to express my gratitude for what Christian Science has done for me. I had been suffering for a long time from incipient lung trouble, and had been to doctors who said they could do nothing for me. They gave me some medicine, but it did me no good. I was then asked to go to a hospital for such cases, and this I was quite willing to do, in the hope that I might get free of the disease, as I used to become much depressed in thinking that I would never be any better.

I was then advised by a lady to see what Christian Science would do for me, and at the same time she gave me a copy of the *Sentinel*. When I reached home I read it, but could not understand it. On the following Thursday the lady sent to say that a practitioner would see me if I would go to her, and this I was only too pleased to do. I was given treatment, and after a most helpful talk about Christian Science I felt the benefit at once. I shall never forget it, I felt so thankful to the practitioner. My home was in the village called Sevenoaks, Weald, three miles from the town, but the lady who first told me of Christian Science was so kind as to put me in a house close to where the practitioner saw her patients. I had to be taken in a cab to the house, being too weak to walk, but at the end of five days I was able to walk home and back again, the distance being between six and seven miles. I was there for five weeks, and I cannot express how well I felt when I came away. After my healing divine Love opened the way whereby I was given a situation at Hove near Brighton, among Scientists.

I am very thankful to God for what Christian Science has done for me, as I am perfectly healed of the lung disease and have been healed of many other ailments, such as headache, toothache, day and night sweats, etc. If it had not been for Christian Science, I know I should not be free now. At first it seemed to me very hard to understand its

Digitized by Google

teaching, as I had not heard of it before. I should like to say that what helped my mother and myself very much was the understanding that God is the only Father and Mother of man. I am also very thankful to the dear Leader who has brought to the world the light which was so greatly needed. I am only a young girl, but I intend to study Christian Science and live in harmony with its teachings.
KATE SIMMONS, Patience Cottages, The Weald, Sevenoaks, Kent, England.

I have great pleasure in corroborating what Kate Simmons writes about her health and ability to work. Since she came to live with us she has seemed very strong and well, even visitors remarking on her perfect health. She is bright and happy, and most anxious to prove her gratitude to God, also to our beloved Leader, by honestly following the path to eternal life as pointed out to us in "Science and Health with Key to the Scriptures."
MRS. E. A. WHITTAKER, Hove, Sussex, England.

From a heart filled with love for God and gratitude for Christian Science, I wish to tell what Truth has done for me. I was a brewery salesman for over ten years, drank and smoked to excess, and was unable of my own will to stop, although I had often tried, and many a night have I lain down and cried, thinking there was no help for me. At last my wife induced me to attend a Christian Science church and listen to the truth, and there I found what I had been seeking. Within six months I had resigned my position with the brewery and sold a saloon which I owned, and I have not drank or smoked from that time until now, nor have I had a desire to go back to the old life.

I am now a traveling salesman, and I never leave for a trip without the Bible and Science and Health in my grip, as they are my only true companions, for I have learned through the study of these books that I am never alone, since God is ever present with me; and I know that divine Love is watching over those dear to me, when I am away from home. We have had many beautiful demonstrations of the power of Truth, for which I am deeply grateful.

I am so truly thankful for the peace which has come to me through the study of the Bible and Science and Health, that I am trying each day to live the life exemplified by Christ Jesus, and I know that divine Love will show me the way.—HARRY N. BANKS, Denver, Col.

[Translated from the German.]

I had been suffering for quite a while with an abdominal complaint, with nervousness and sleeplessness, and in the beginning of November, 1908, was taken ill with peritonitis. We summoned two physicians, who declared that in view of the seriousness of the case I must go to a hospital. I did so; and while there remedies were applied day and night. The lungs were also affected, and there was much loss of blood therefrom. Eight weeks later I was brought home in a hopeless state. According to the physicians' statement, the condition had become chronic, and other ills had set in. We had consulted two other physicians, and nothing was left untried in order to afford relief, but it was all of no avail.

During this dark period (in June, 1909), my husband, through divine Providence, heard of Christian Science. We asked a practitioner to call, which she did most willingly. I had spent six months in bed and had had to leave the household in the care of strangers. At the Scientist's first visit my husband expressed the desire to take me to the country as soon as possible, and we spoke about all we would need to take with us,—warm clothing and many other things,—so that I might be able to stand the strain of the journey; but the lady remarked that we would probably need none of these, and so it proved. After the first treatment there was such a marked change that I put aside all the material remedies which had covered my table. I experienced a sense of strength such as I had not known formerly, and at once partook of any kind of food I desired, as the bowel trouble was completely overcome. I was filled with joy, and realized that with divine Love as my shepherd, I could not want. (See Science and Health, p. 578.)

On the morning of the following day I got up alone, my husband being at the office and no one else at home, put everything in order in the house, and packed up my things, as my husband expected to return by nine o'clock in order to start on the trip contemplated. When that part of the work was done, I wondered why he had not returned, and looking at the clock saw that it was only eight. I could not help feeling surprised that I should have been able to attend to everything so easily and quickly, and so was my husband upon his return. We were expected to call at the Scientist's home before we left, and it seemed incredible to me that I should be able to walk there, but to my husband's great joy I did so with ease. We made the call, and then started on the railroad trip, which lasted several hours, but I experienced no unpleasant effects. After we arrived, my relatives, to their great surprise, could not succeed in having me go to bed immediately. Absent treatment was kept up, and I had a most pleasant vacation, taking daily walks and reading assiduously the Bible and *Der Herold der Christian Science*, both of which became indispensable to me. We frequently had pleasant callers, still I gladly anticipated the hour when I could be alone with my books.

When I returned home, I knew that the truth is applicable under any circumstances, and through the understanding which I acquired with the help of the faithful practitioner, I have been enabled to do successful work for myself in several instances. Not one day goes by without bringing me proofs of Truth's activity, and my gratitude to God, also to our faithful Leader, Mrs. Eddy, is unbounded. I feel that I can best prove this through earnest and constant striving to assimilate more of the nature of divine Love.
FRAU SELMA KRETZSCHMAR, Dresden, Germany.

I am grateful for many blessings received in Christian Science, as my thoughts go back to the time when I believed I had nothing to live for and when each morning's awaking from sleep brought a sense of disappointment to find myself still among the living, for I had hoped each night when I closed my eyes that I might never wake. My heart now overflows with love and thankfulness to God for all His goodness to me.

For thirty years I suffered from a bowel trouble, and had taken all kinds of medicine, but got no relief. The doctors told me that I must take medicine the rest of my life, but I have learned it is not needed when we understand the truth, as I have not taken any since my healing in Christian Science and I am now in better health than ever I was in all those many years. Besides having the bowel trouble, I could not hear or speak, and thought I would never be able to do so again; but with the help of a practitioner, I was healed in three weeks. I had also worn glasses for thirty years, and for ten years had used them steadily; but since I have known Christian Science, all my ills have been overcome. I am filled with gratitude to Mrs. Eddy for Christian Science.
MRS. A. DETERMAN, New York, N. Y.

While reading the testimonies of healing in the *Sentinel* today, I recalled that I had never yet sent my sheaf of gratitude to our periodicals. Were I to recite all the blessings that have come to me and mine through Christian Science during the past eight years, I could fill many pages. During that period we have relied absolutely upon God, the "great Physician," in all our need, and not one drop of medicine in any form has been used by us. We have two children under seven years, neither of whom knows what medicine is. The knowledge of God gained through the study of the

Digitized by Google

Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy has met all our needs and enabled us to overcome every physical ill that has presented itself. Christian Science has healed one child of measles and prevented the other from taking it, though they were together all the time; has overcome whooping-cough; destroyed scarlet fever in its incipiency; and besides this has met and overcome every childish difficulty that has come up.

Although I did not come into Christian Science for physical healing, I have received many benefits of that nature. The first was the overcoming of a severe attack of grip in one treatment, after I had battled with delirium for some twenty-four hours. I was healed of the tobacco habit while reading our text-book one evening, though I had smoked for fifteen years. Social drinking, though never indulged in to any extent, fell away from me also, but I cannot remember when. My gratitude to Christian Science would be incomplete if I did not bear witness to the fact that I know from experience it is possible today, through the understanding of the allness of God, to heal the sick in Jesus' way and to do the works he did, for God has graciously enabled me to help others as I also have been helped, and in my personal experience I have seen many diseases healed by the application of Christian Science.

I know that I owe all these blessings to the truth which Christ Jesus brought to men, as it is explained by Mrs. Eddy, who by her consecrated life and inspired teaching has brought us a knowledge of "Him whom to know aright is Life eternal" (Science and Health, Pref., p. vii).

WARWICK A. TYLER, Salt Lake City, Utah.

It is with sincere gratitude to God for the many blessings which I have received through Christian Science, that I give this testimony. Over a year ago, I met with an accident from which I was in great pain. My husband sent for a doctor, who told me I had injured my chest. I did not, however, use the remedies he provided, but went to the Christian Science meeting and had a treatment from a practitioner. I was much relieved thereby, and after the third treatment I was perfectly well. I am very thankful for the many ways in which I have been helped in Christian Science.

MRS. EMMA MEADWELL, Lyndon, Oakham, England.

After having suffered for three days and nights with an affected tooth, and there being no cessation of the pain, I telegraphed at four o'clock in the afternoon to a Christian Science practitioner for treatment. In two hours I was feeling better, in the evening I attended the testimony meeting at the Christian Science church, and by the next day all pain had ceased. I am truly thankful to God for this help, also grateful to Mrs. Eddy for Christian Science.

MRS. J. CORBETT, Denver, Col.

[Written for the *Sentinel.*]

GROWTH.

EVELYN SYLVESTER KNOWLES.

THE lowly floweret growing at my feet
  Lifts trustingly its face toward the light,
  By sweet reflection groweth ever bright
And brighter, and its breath more pure and sweet.
No eye beholds it in this lone retreat;
  From all save One, its beauty hidden quite.
  As hides yon beaming star the cloud of night;
Yet smiling on, it lives its lifetime fleet.

Shall man, then, of mankind seek plaudits vain,
  Or strive for tawdry vanities that please
But for a moment? Or for stupid gain
  That hurts instead of helps? Look not for ease
Or hardship in the growth toward heaven's goal.
As flowers grow, such be our growth toward Soul.

FROM OUR EXCHANGES.

[*Continent.*]

Even the slow of sight have come to see that these are new times. The world is being shaken out of its ancient ruts. The old order is changing. Nothing that has been is now taken for granted. This is the day of the interrogation point. Society everywhere is in a transition period, a state of flux. "Unrest" is the big word of the hour, the world around. The changes in "the changeless East" are scarcely more dramatic than the changes that are in progress in our own western world. And these processes are striking clear down to the deeps—they are stirrings of the fundamental human heart.

An astonishing aspect of present social conditions—astonishing only because we have somehow come to regard religion as a technical thing, carefully preserved within ecclesiastical boundaries and definitions—is that the manifest restlessness and outreach is essentially religious. We listen almost incredulous while we hear the great words of religion taken over into the vocabularies of the politicians and the social reformers. A political meeting nowadays bears many of the marks of a religious revival. Even the time-honored songs of Zion have become battle hymns of political parties. Without apology, because they have clearly perceived the deeper mood of mankind, campaign speakers make the direct religious appeal to the consciousness of the people. The basic spirituality of the twentieth century, and of all centuries, makes reply to the voice of religion, even though that voice comes from the political leader and not from the preacher. A far-visioned observation of our times perceives that there is something fundamentally akin to a renaissance of religion sweeping through the world.

[Rev. W. E. Orchard in *Christian Commonwealth.*]

Now you assume that the present condition of things is the divine order, and that you ought to love it. This is an unpardonable reversion of your own instincts. Your theology or your philosophy may drive you to the conclusion that this present condition is what God has willed. But our hearts cry out against this system. To argue to ourselves that it is a divine order is to crush our own intuitions. It would be far better to be an atheist than to do that. Then why does God allow it to exist? I do not know. All I do know is that I am moved to alter it to accord with quite another order which I feel within me. It is this inward thing which I call the divine order, and the first admonition of religion is to put one's faith in this order and to believe that it comes from God. Then where does the external order come from? I do not know. Yet if I admit that it has a different origin from the order within, then surely I have denied all belief in God as supreme. Well, that may be a question for philosophy; it is not a question for religion. My obvious religious duty is to accept that which is ethically imperative within, and to believe that this is what primarily concerns me and is supreme for my universe.

[*Christian World.*]

Nothing has been more disconcerting in church history than the rigidity of Protestantism. Owing its origin to an outburst of religious spontaneity, it has in more than one crisis of its destiny sacrificed its interests to a conservatism, not only stupid in itself, but in direct contradiction to its initial and fundamental principle. That spirit still exists, and its influence will be disastrous in proportion as we allow it to predominate. For all the signs show that the church, if it is to survive and to triumph in the coming days, will have to give fullest play to the spontaneous verdicts and deliverances of the soul. For it is the living soul, the spiritual nature, as it stands before God and the universe, that is the center and receptacle of all revelation, the vital organ

Digitized by Google

of all religion. And it is being spoken to and acted upon today as never before. It is being disciplined by new circumstances, taught by a new knowledge. Its response to all this will be the religion of the future.

[*Universalist Leader.*]

If we believe that the history of Christendom is a process of emancipation, and that the spirit of the new time is the noblest expression of faith in Jesus, we must organize that spirit, we must give it tongues of fire, we must make it a cloud and pillar of fire for those who are going forth in search of the kingdom. It lies with us to solidify Christian thought, clarify Christian experience, and formulate the message of Christian faith in the terms of the new speech and in the dimensions of the new creation. If we can do this, if we are big enough to do this, tomorrow will witness another advance in the world's effort to image forth the spirit of Jesus in society and history. We must proclaim the promises of the larger faith. We must make the vision of the new age more vital, tender, heroic, Christlike, persuasive than the message ever was which is slowly dying in the Christian consciousness of the world today.

[Rt. Rev. Bishop C. H. Brent, D.D., in *Living Church.*]

No life is so rich as that which, living loyally to conviction, is always gleaning new harvests from others of diverse or even opposing views. The intelligent grasp of the position of those who differ constitutes the only hope of durable unity—and the only ground of justifiable warfare or controversy. Our thinking and praying, our reasoning and interpretation, are so lopsided without the reinforcement and support of opposing and varying views, that we can hardly avoid the poison of prejudice and the incompleteness of at best a half truth. Moreover, men of passionate conviction, whose sincerity is above suspicion, have a right to a respectful hearing, and our own intellectual self-respect and integrity will suffer if we refuse it.

[*Standard.*]

Thoughtless the world may be; self-centered and indifferent to the great things of life many doubtless are; but the human soul has appetences that earthly things cannot satisfy and that find their complete gratification only when Jesus Christ becomes Lord and friend. In companionship with him, all the best tendencies of our hearts are strengthened, new and holier purposes are begotten, and the darkness which death brings is made light. If any so-called Christian fails to find in Christ this inspiration to and answer of spiritual needs, he has not yet found the Christ of yesterday, today, and forever.

[*Western Christian Advocate.*]

The spirit of the modern age is not morally strenuous, and the exposures of collapse and ruin which have startled us lately will continue to increase unless the men and women with a firm grip still on ethics and religion awaken to their personal responsibility to the community in which they live. The church in this crisis must not only be a conservative force, but she must also be a regenerative and constructive agency, a guardian of the common good, and a stalwart upholder of public righteousness.

[From an editorial in *Melbourne* (Aus.) *Herald.*]

In many respects our age is one of almost unexampled spiritual upheaval, and possibly that religion or philosophy alone will survive which—from out the warring strife and clash of all the creeds—shall the most successfully garner into one harmonious scheme—like golden threads from many a skein—those vital and unquenchable elements of truth which know not death, but are instinctive and eternal as the spirit of man.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the *Rev. Mary* Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Three new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"The Father's Business," containing five articles as follows: "The Abundance of God," "One Business," "The Closed Hand," "Christian Science in the Business Life," and "Truth is Power."

"The Law of Kindness," containing four articles and a poem, entitled as follows: "'Forgive, and ye shall be forgiven,'" "The Habit of Hating," "The Law of Kindness," "'Ye shall be as gods,'" and "Two Roses."

"Confidence and Supply," containing the five following articles: "'The Lord thy confidence,'" "Time and Healing," "'What hast thou in the house?'" "Constructive Work," "Giving and Receiving."

Another new pamphlet has just been published containing the lecture of William R. Rathvon, entitled "Christian Science: Its Results."

These pamphlets are now on sale; 32 pages and cover, at the prices of the regular pamphlets.

Catalogue No. 20, June, 1912, has recently been issued and will be supplied to reading-rooms upon request. This catalogue contains complete lists of the works of Mary Baker Eddy published by Allison V. Stewart, and of all publications issued by the Society.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass, should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth street, Boston, Mass. **Please do not send currency.**

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: ITS RELIGIOUS PHILOSOPHY. By HON. CLARENCE A. BUSKIRK.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book); single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883 1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman E. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 70 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

ITEMS OF INTEREST.

National.

A verdict for eighty thousand dollars and costs was awarded for the plaintiffs. D. E. Loewe & Co. of Danbury, against members of the United Hatters Union of North America in the United States district court at Hartford, Conn., last week. Under the Sherman antitrust law this award will be trebled, making the total amount two hundred and forty thousand dollars. This already famous case has been before the court for nine years, during which time it has gone to the United States court of appeals twice and once to the United States supreme court. In the first jury trial three years ago the award for the plaintiffs was two hundred and twenty-two thousand dollars. Suit was first brought in 1902 against two hundred and forty members of the United Hatters of North America residing in that state, and was based upon the allegation that a conspiracy existed to injure the business of the plaintiff, who is a soft hat manufacturer, because he declined to unionize his factory.

Radical uniform state legislation, based upon the principle of agricultural cooperative credit now in use in practically every country of Europe, is urged by President Taft in a letter to the governors of all the states. He recommends the establishment of land-mortgage banks under state charters, and the formation of cooperative mortgage-bonded societies along the lines of the Landschaften societies of Germany, provided that uniform state legislation can be secured to govern their organization and operation. As a later step he favors the enactment of laws by Congress permitting the organization of national land-mortgage banks, to be operated under strict government supervision with the power to guarantee and market the guaranteed debenture bonds of the state land-mortgage banks or cooperative societies.

The government suit to dissolve the American Naval Stores Company of Savannah as falling within the prohibitions of the Sherman act, has been brought to hearing in the circuit court of appeals at Atlanta, Ga. The government alleges that the company arbitrarily fixes the price of turpentine and rosin for practically the world; that it controls ninety per cent of the American production of these articles and seventy-five per cent of the world's production, and that it has throttled competition. The equity suit is to dissolve the corporation into its component parts as they existed prior to 1902, and to establish a receiver for the properties if the corporation does not comply with such decision of the court.

As commander-in-chief of the army and navy, President Taft inspected the great Atlantic fleet mobilized in the Hudson last week. Under the eyes of seventy-five thousand spectators lining the shores of Manhattan and the New Jersey palisades, the yacht Mayflower passed slowly up the river to an anchorage off Thirty-first street. There she broke out the President's flag and each ship in the line of more than fifteen miles boomed out a salute of twenty-one guns. The battleships, cruisers, torpedo boats, destroyers, and other smaller craft made up a total of one hundred and twenty-three vessels.

Suit to test the right of the government to enforce the federal law of Aug. 24, 1912, requiring newspapers and periodicals to publish their circulation figures twice a year, and imposing other requirements, has been filed in the United States district court at New York by the *Journal of Commerce and Commercial Bulletin* company.

President Taft has signed an executive order putting thirty-five thousand fourth-class postmasters in the classified service. The execution of this order will put every fourth-class postmaster in the United States under the civil service, twenty-five thousand having previously been put in the classified list by the President.

Postmaster-General Hitchcock has called for bids for nearly seventy thousand scales, which will be required for use in the parcels post system that is to go into effect Jan. 1. Two hundred of the largest post-offices and their branches will be supplied with automatic spring scales.

The fraternities in American colleges have a total membership of over three hundred and eighty-nine thousand and more than twenty-five hundred active branches or chapters, owning or renting property for residential purposes worth at very low estimate more than fifteen million dollars.

More than one million two hundred and fifty thousand boys and girls are attending the American high schools, public and private, during the school year 1912-13.

The sale of two hundred and eighty thousand acres of grazing land in the old Uintah Indian reservation has been opened at Provo, Utah.

International.

The task of bridging the Ganges has been assigned to a group of English engineers. The bridge, which is over a mile in length, is to carry the Eastern Bengal State railway over the Ganges from Damukelia to Sara Ghat, the place of pilgrimage to which hundreds of thousands of devout Hindus repair once a year to wash away their sins in the sacred river. Spanning the river, the bridge will be carried on steel trestles, which in turn will be supported on massive steel grilles in granite piers. The contract consists of fifteen main spans, each three hundred and fifty feet long and fifty-two feet high and weighing thirteen hundred tons.

A practical step has been taken toward the improvement of the appearance of the London streets, in the suppression of the indiscriminate distribution of handbills. This system of thrusting papers and pamphlets into the hands of pedestrians had become a public nuisance, but its cheapness has been its source of popularity, and the opinion is given by the manager of a large firm of advertisers that half a million handbills are distributed daily in London, and that fifty thousand pounds a year is spent in this way.

Several sky-scraper building proposals of Sydney, New South Wales, have recently sought municipal sanction, but without success. The authorities maintain that a building limit of one hundred and twenty feet should be adhered to, and public opinion is with them and does not see any need to rob the inhabitants of the benefits of light and air by permitting the construction of buildings of twenty stories or more.

China has decided to send sixty-two students abroad to study separate subjects. Of these, eight are to study naval matters in England, eight military matters in Germany, twenty mineralogy in Belgium, ten industry in the United States, eight law in France, and eight mathematics in Italy.

Turkey has signed the protocol for a treaty of peace with Italy and is now involved in war with Bulgaria, Servia, and Montenegro, with the probability of trouble also with Greece.

Industrial and Commercial.

Of the large irrigation projects now under way, one involving sixty thousand acres of land, has been undertaken at Plainview, Texas. The land owners of Lewis and Clark counties, Missouri, have undertaken to reclaim twenty-five thousand acres of land in the Des Moines and Mississippi bottoms. Some two hundred thousand acres of land in the Sacramento valley from Tehama south are to be irrigated from waters stored in Big Meadows dam after they have been used to develop electric power for the Great Western Power Company. Ten million dollars are to be spent in an irrigation scheme in Yolo and Lake counties, California. Water from the Big Bow river carried through a canal two hundred and six miles long will be used to irrigate some half million acres in the so-called dry region of Alberta, Canada.

The successful completion of the Burrinjuck dam, the immense state scheme carried out by the New South Wales government to conserve the waters of the Murrumbidgee river for irrigation purposes, has turned the attention of agriculturists to the possibility of utilizing other great rivers in the state in a similar practical way. The question of conserving the waters of the Macquarie river in the west of New South Wales for irrigation purposes is one that is interesting centers of the West at present. The undertaking would be planned to water three hundred thousand acres at an estimated cost of nearly two millions sterling.

The production of Tungsten ore in 1911 in the United States amounted to eleven hundred and thirty-nine short tons of concentrates, valued at $407,985. Tungsten is used chiefly in making steels that will hold their temper when heated, but it is most generally known as supplying the filament of tungsten incandescent lamps. Diamonds are used for dies in drawing tungsten wire. Wire six ten-thousandths of an inch in diameter can now be drawn in quantity.

A resolution has been passed by the legislative council of Victoria, Australia, to the effect that it is desirable that action should be taken by the government to prevent the American beef trust or its agents from obtaining a foothold within the commonwealth. It is held also that the government should consult other states with a view to the simultaneous passing of the legislation necessary to that end.

During the last few years an area totaling millions of acres has been added to the previously recognized wheat-growing lands of South Australia. Last season the wheat, hay, and grain crop was valued at £5,410,005, and, as a result of the government's vigorous policy of development, it is anticipated that within the next few years the area under wheat will be doubled.

The prices of coal in Germany are now higher than they have been for a generation and are considerably above the maximum reached in 1899, which caused an industrial crisis. The Prussian government, an extensive mine owner, has withdrawn from the German coal trust as a protest against the raising of prices.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

OVERCOMING.

SUE HARPER MIMS.

THE basis of Christian Science being the infinitude of God, omnipotent Mind, Spirit, Life, Truth, Love, together with man and the universe as the expression or manifestation of God, in His own likeness, spiritual, harmonious, and eternal, it must logically follow, in the thought of all those who accept these premises, that the contradiction or unlikeness of this Mind—all that is material, finite, and discordant—pertains to a false, unreal sense of being, which should be overcome, put aside. In our effort to realize the truth of being we have the teaching and example of Christ Jesus, made luminous by the great revelation of Truth known as Christian Science.

Christ, the true idea of God, was expressed through Jesus, who in his humanity cognized the unreal or illusory sense of existence and overcame it through his realization of the truth which makes free. Having the Christ-mind, Jesus was the first great overcomer, to whom is promised glory, blessing, and dominion; as we read in the Apocalypse: "To him that overcometh will I grant to sit with me in my throne, even as I also overcame, and am set down with my Father in his throne." This conquest of false sense, or unreality, all that is opposed to the divine reality and perfection, alone enables us to attain that unity with God, eternal Life, for which Jesus prayed, saying, "that they may be one, as we are." This entering into the true, divine consciousness effects the annihilation of all error; it is, indeed, the heavenly Jerusalem or "tabernacle of God," that wondrous city, "coming down from God out of heaven," in which there shall no longer be a consciousness of death; where there shall be "neither sorrow, nor crying, neither shall there be any more pain," for God Himself "shall wipe away all tears from their eyes."

One reason for the human acceptance of sin, disease, and death, instead of its denial and overcoming, is this, that the human mind has been taught to be reconciled to them because sent from God; yet Jesus would surely not have healed the sick and raised the dead, if sin and death had been part of the Father's plan. He came doing and to do the will of the Father. In Hebrews we read: "Forasmuch then as the children are partakers of flesh and blood, he also himself likewise took part of the same; that through death he might destroy him that had the power of death, that is, the devil; and deliver them who through fear of death were all their lifetime subject to bondage." The author of this remarkable epistle to the Hebrews certainly did not consider death a part of the divine plan, for both he and St. John clearly taught that sin brings death. Paul says that "by one man sin entered into the world, and death by sin;" and James tells us that "when lust hath conceived, it bringeth forth sin: and sin, when it is finished, bringeth forth death." Again Paul declares that Jesus Christ "hath abolished death, and hath brought life and immortality to light through the gospel." The teaching of all these passages is clear, and the last selection, Paul's statement to Timothy, is very scientific, implying as it does that life and immortality were and are the eternal realities of being, brought to our understanding through the gospel.

In Science and Health (p. 427) Mrs. Eddy writes: "The tenor of the Word shows that we shall obtain the victory over death in proportion as we overcome sin." If this were merely a theory, without the fruits of demonstration, it would not be worth while to give it serious thought, but because it vitally concerns the health, harmony, and morals of mankind here and now, it is of the deepest import. Again our Leader says (p. 426): "The relinquishment of all faith in death and also of the fear of its sting would raise the standard of health and morals far beyond its present elevation, and would enable us to hold the banner of Christianity aloft with unflinching faith in God, in Life eternal. Sin brought death, and death will disappear with the disappearance of sin. . . . The human concepts named matter, death, disease, sickness, and sin are all that can be destroyed."

Death, then, is only a phase of the belief that existence is material instead of spiritual, an experience of the human mind, and we have but to awake from the dream of materialism to the joy and fruition of spiritual understanding. As we learn that mind makes its own embodiment and cannot die, the change called death is seen to be neither corrective nor transforming; the body must be redeemed by the spiritualization of thought. Jesus was appreciable to human view after the resurrection, and bore in his hands and side the print of the nails and the spear wound; but he finally rose beyond human vision through the absolute putting off of the fleshly consciousness and the perfect realization of spiritual substance or consciousness, thus coming into perfect at-one-ment with the Father, Spirit. This is the important thought with respect to death; namely, that we "die daily," as St. Paul puts it, to sin. Should death seem inevitable upon this plane, the true preparation for it would be made in learning so to live that we shall have acquired the assurance of David when he said, "As for me, I will behold thy face in righteousness: I shall be satisfied, when I awake, with thy likeness."

Throughout the Scriptures it is seen that the poets and prophets caught glorious glimpses of the continuity of Life. Enoch was translated, Elijah was transfigured, and doubtless the angels beheld Moses' transfiguration,—all these foreshadowing Jesus' triumphant victory over death and the grave. For our enlightenment Jesus took each step in the ascending way, to show the universality of eternal life and its possible demonstration. Transfiguration and ascension became for him, as they are to become for us, the logical steps to divine Life.

Mrs. Eddy has said that "during the sensual ages, absolute Christian Science may not be achieved prior to the change called death" (Science and Health, p. 254); but she calls for the evangelization of mortals, she demands that they awake to the consecrated unworldly work of destroying sin in themselves and others, on the basis of their unreality, as revealed in the Scripture declaration that "God saw every thing that he had made, and, behold, it was very good."

"READY TO EVERY GOOD WORK."

W. W. TOTHEROH, LL.D.

CHRISTIAN SCIENCE is preeminently a religion of profound thought and deep spiritual understanding. At the same time it is intensely practical, its beneficent influences being adapted to every human need. Much is heard and read of the "metaphysics" of Christian Science, but more in evidence to the world in general are its wonderful demonstrations of all manner of healing.

To maintain a constant growth in grace, Christian Scientists find it necessary to be persistent and conscientious students of the Bible, with the aid of their text-book, "Science and Health with Key to the Scriptures," and Mrs. Eddy's other writings, and that it is equally important for them to reflect or transmute their understanding of divine Truth in example and deeds. Jesus, the original exponent of Christian Science, during his ministry never ceased to emphasize the practical side of his message. He showed by precept and example that the higher attainments proceed from going about and everywhere doing good, which in the broadest sense means the healing work. The practise of Christian Science is what truly defines a Christian Scientist, and Mrs. Eddy tells us that "when man demonstrates Christian Science absolutely, he will be perfect" (Science and Health, p. 372).

An oft-used and certainly an appropriate illustration with Jesus, when bent on bringing his disciples to a recognition of their responsibility, was light. He told them that they were "the light of the world," warned them that this light must not be hidden, and exhorted them to let it so shine that all about them might have opportunity to share its effulgence. The apostles in their preaching and epistles repeated the lessons received by them, in order that those of the new way won by them might for their own spiritual growth and the good of their fellows be doers or exemplifiers of the word. Paul, the metaphysician among the first heralds of the "good news," was second to none in exhorting those whom he addressed to put into daily practise the truths which had been taught them. The words of the caption of this article are found in his letter to Titus, whom he directs to counsel those who have apprehended Christ to "be ready to every good work."

Christian Science, rediscovered and restored by our revered Leader, Mrs. Eddy, after years of testing has won a reception in the world that is amazing. Its achievements have largely silenced those disposed to antagonize it, and it is now widely known as the religion which heals the sick, reclaims the sinner, dispels fear, awakens hope, affords joy, develops love, elevates citizenship, makes for the best in character, society, trade, art, literature, and philanthropy,—a religion, in short, which brings heaven to mankind here and now. Christian Science is no longer on trial, except as the Christian Scientist is on trial. He is expected to fulfil so far as possible the promises of his religion, and Christian Science will go forward, conquering and to conquer, proportionately as its adherents are faithful in the exemplification of its truth in their lives and practise.

Mrs. Eddy, who was awake to all the requirements of an interested but critical world, repeatedly lays stress upon practical every-day demonstration as a conclusive and effective proof of the efficacy of Christian Science in the regeneration and salvation of mankind. Commodious and ornate church edifices, large assemblages, and the irrefutable logic, Scriptural truthfulness, and spiritual beauty of the lessons unfolded, may produce a favorable impression; but that through which Christian Science in the main wins men, is the interpretation by its votaries of their spiritual understanding in love and good works. The example of dignity, unity, love, harmony, and cooperation set before the world by a Christian Science church or society, and the consistent life of the Christian Scientist, mean healing.

Paul's exhortation was that the disciples of Christ should be "ready to every good work." Readiness implies willingness: a disposition that prompts us to say, "I will try to do." It is usually the unwilling individual who sees difficulties in the way and who proffers excuses for inaction. Willingness also precludes the spirit and motive of the "hireling," who is ready to flee from duty when selfish interests are at stake. Jesus laid much stress on willingness. He taught, pleaded, and exhorted, but he never resorted to force to gain followers. Discipleship was to be individual and voluntary. Readiness also implies fitness. In Christian Science, spiritual scientific understanding precedes demonstration. Not every one who is pleased with the teachings of Christian Science, who commends the movement, attends the services, owns a copy of Science and Health and reads it, is because of these things a Christian Scientist and qualified to do good scientific work. The promise of Christ Jesus was that every one who believed on him aright, who understood him, could follow him as the Wayshower and do the works which he did. The thought of fitness is calculated with some to suggest the matter of gifts and attainments. But experience and observation have disclosed that people cannot be chosen for spiritual work according to the standards commonly followed in selecting agents for other service. In this connection astonishment and perplexity are often excited. Paul's words are recalled where he says: "Ye see your calling, brethren, how that not many wise men after the flesh, not many mighty, not many noble, are called: but God hath chosen the foolish things of the world to confound the wise; and God hath chosen the weak things of the world to confound the things which are mighty; and base things of the world, and things which are despised, hath God chosen, yea, and things which are not, to bring to naught things that are." The great apostle furnished the key to the situation when explaining his own confidence of success. His exceptional intellectual equipment and prestige from social and professional standing and influence among his fellows were not given consideration, but he declared: "I can do all things through Christ which strengtheneth me." Christ Jesus buttressed the commission which bids us preach the gospel and heal the sick, with the assurances of needed help. "All power is given unto me;" "Lo, I am with you alway, even unto the end of the world."

"Be ready to every good work." Note the distinction—not every great, but every good work. Opportunities for great work, as accomplishments are commonly regarded, are rare and come to few. Every-day life is a constant succession of little incidents, and consequently the services possible correspond therewith. Inconsistent though it be, there are to be found even among Christian Scientists those who seem hesitant to heed the call of "little duties." They seem to be looking for something which they count "important" or "great" to engage them. But who is qualified to decide what is "important" or "great"? Indeed the question is sometimes raised as to whether there is anything that can be rated as insignificant. Considered in their relations and in the light of their after effects, most minor matters assume a grave importance. In reality, viewed aright, there are no trivial duties. The author of "Vanity Fair" wrote: "Are there not little chapters in everybody's life, that seem to be nothing, and yet affect all the rest of the history?" A cheerful greeting, a warm grasp of the hand, a fit word of truth in season, a simple kindness, patience, consideration, a loving smile, the gift of a copy of the periodicals,—these little things, which any one possessed of the Christ love and spirit can and should do, have repeatedly turned the scale for good for men and women. The all-important thing is, to do whatever falls to our lot to do with a great motive.

Those who magnify and selfishly aspire to only such duties as they denominate "great," clearly show thereby that they are thinking more highly of themselves than they ought to think, and certainly that they have come short of apprehending the mind that was in Christ Jesus, who in both teachings and example set forth that among his followers to be "great-

Digitized by Google

est" is to be childlike and to be ready and prompt to serve wherever opportunity offers.

In Christian Science no one is "greatest," and there will be no ambition for anything of the kind among Christian Scientists, where it is understood that Principle, not person, provides the work and fits us to do it, or, better, does it through us. Mrs. Eddy frequently warned against everything that partook of the nature of a desire to be conspicuous and to be a "leader" in the popular sense of that term. For herself, time and again, she disclaimed having any other purpose than to be an humble servant of the most High, and she lovingly counseled those who looked to her for guidance to accept her for an ensample only so far as she followed Christ Jesus. As for opportunities for good works, they are on all sides and are ever present. They can be discovered in the home, on the street, in the place of business, in the church. They only require recognition.

A world awaits the healing work of Christian Science. No one need be, no one can afford to be idle, if prepared to answer the call for help. All have a right to work and no one can be deprived of it. Not a few have erred seriously from an eagerness to work away from where they are located, distance apparently having lent enchantment to a remote field, and thus they have been hindered from seeing and improving fine opportunities near at hand. The actual daily life of the Christian Scientist, wherever he may be, who heals himself and those about him, is what always tells. Each individual street-light faithfully serves its purpose where it was placed, by sending out its radiance and illuminating all the place allotted it; its rays also blend with those of neighboring lamps, and thus all contribute to make bright the great highway. So every Christian Scientist, "ready to every good work" in his respective place, serves not only in that immediate locality, but also cooperates with all workers everywhere, for a world-wide diffusion of the Christ light, with healing in its beams.

In "Miscellaneous Writings" (p. 177) Mrs. Eddy forcefully says: "Never was there a more solemn and imperious call than God makes to us all, right here, for fervent devotion and an absolute consecration to the greatest and holiest of all causes." Then she puts the question, "What will you do about it?" In Christian Science individuality is emphasized. It is for each one to make his or her own answer to the searching inquiry noticed. What say you?

"NOW IS THE ACCEPTED TIME."

M. ETHEL WHITCOMB.

JOHN THE BAPTIST came preaching, "The kingdom of heaven is at hand," and thus he turned men with expectancy to the truth revealed by Christ Jesus, to the golden now as the time in which to experience health, holiness, and heaven. It is surely well for us to realize often the truth so sweetly voiced by Whittier:

> God's love and blessings then and there
> Are now and here and everywhere.

Because yesterday and tomorrow are not ours, the only time we can claim is now, and if the now is not improved by positive right thinking, we cannot know health or peace. To think and act in "the living present" is a divine requirement, and until it is obeyed one is not ready for progress. It is therefore helpful to ask oneself, Am I living in the now? So long as one's thoughts drift back to yesterday, or dream of or dread tomorrow, one is not living in the now. To such Truth is calling: Now, the present moment, it is "high time to awake out of sleep," and behold the glorious reality of life in all its beauty and perfection.

One who lived in Mrs. Eddy's household wrote of her, "She never allowed her day to dawn darkened with the clouds of yesterday, but with forward gaze she pressed toward the mark" (*Journal*, May, 1911, p. 74). We are bidden to "remember the Sabbath day, to keep it holy," but when is it Sabbath day? He who is from "everlasting to everlasting" knows no time; to Him there is no Saturday or Sunday, He knows only the one eternal day. This hour, then, is the Sabbath, to be kept holy by spiritual right thinking. How significant is the "remember"! We are to keep in mind, never to forget, that this moment is the time to be hallowed. And how shall it be kept holy? We must not only forgive, but forget all injuries, all wrongs, all hardships of the past, to keep the "now" hallowed with peace and acceptable unto divine Love. No dates of past sorrows should be recorded, no darkness or doubt; no unkindness or criticism can be thought or spoken in this ever-present Sabbath. Rather should we say with Paul: "This one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus."

The eternal Sabbath is a day of rest; there must be no toil or worry, fear or anxiety; we must rest in the sacred sense of the government of infinite good. In hours of perplexity, when material sense whispers that we know not what step to take; when decisions must be made, when human wisdom is found helpless and the heart cries out, What shall I do? from Truth comes the answer, "Remember the Sabbath day, to keep it holy." Keep the "now" hallowed with active, positive faith in the operation of divine good, and in the expectation of the present manifestation of good in human affairs. We have no time to waste in thinking upon what might have been, or in questioning if it can ever be; our part is to deny the temptation to look either backward or forward, and stand in the "now" with the firm conviction of Job: "I know that my redeemer liveth,"—know that Truth is redeeming this very hour from every phase of suppositional evil. As one insistently dwells in today, and refuses to try to solve questions of tomorrow, fear and anxiety dissolve, and thought becomes so transparent that divine wisdom shines through unhindered, illuminating one's way before him.

The vital import to a sufferer of dwelling in the "now" was illustrated to the writer at a time when she awakened in the night with the manifestation of a severe physical difficulty. She knew the medical name, also that according to its so-called law the suffering must continue. She had learned, however, through Christian Science that God is the only lawmaker, and therefore refused to accept this verdict, but affirmed instead God's ever-presence and the availability of His power to deliver. Suddenly there came to thought an important duty which she had promised to fulfil at eight o'clock the following day, and for the next two hours thought vacillated between the contemplation of divine power and the work to be done at eight o'clock. Mortal thought pressed the question, "What will you do with the work of tomorrow?"

At last came the conviction that one thing only should concern her and that it was the Sabbath "now." To look beyond to the duty of the tomorrow would make her unfaithful to the present duty. Then flashed across her thought the words of Scripture, aglow with a new meaning, "Now is the accepted time; behold, now is the day of salvation." She saw that now is always the time accepted by divine Love for man to experience freedom, and that now is the time for us to expect to realize it. With this call thought turned wholly away from tomorrow, and she found herself joyously declaring that now is God, divine Love, supreme; now is heaven here; now there is no law, force, influence, power, presence, or intelligence apart from God; in a word, "Now is come salvation, and strength, and the kingdom of our God, and the power of his Christ," as saith the Scripture. The recognition that "now is come" brought with it the consciousness of present health; every evidence of disease disappeared, and there were yet two hours intervening before the morning duty.

In order to claim intelligently our heritage, we must know that now is the only time and here the only place. It matters not how long one may have worked in his endeavor to be

Digitized by Google

freed from some burden or disease, the present always holds deliverance from every weight, the perfection of every faculty; it holds the inspiration, light, and strength needed for the solution of every problem; it holds for each child of God capability, possibility, opportunity, health, joy, and boundless freedom. Nothing can be lost, neither can one good or holy thing be withheld from man today. Why? Because "we live, and move, and have our being" now,—in the ever-present, ever-loving, ever-living God, whose law is unchangeable and who holds man in perpetual good. He who is the "same yesterday, and today, and forever," gives the same good to creation every day.

From this reasoning we see that we cannot receive more of good than we are now experiencing, until we are prepared to receive it; time neither gives nor takes. Then why delay the acceptance? All that ever has been, all that ever can be, is here today. Jesus proved this to be a divine fact when he said to the man infirm for thirty-eight years and unable to walk, "Rise, take up thy bed, and walk." No time was needed to convalesce, for "now" held within it the needed health and strength. The man with the withered arm immediately stretched it out when Jesus spoke to him the word that is corrective and redemptive. Even Lazarus walked forth at once in living response to the truth that is "spirit" and "life." Blindness, lameness, and disease have grown no more real in the last nineteen hundred years. Today Christian Science is giving proof of this, and men are rising on every side and claiming in the Sabbath "now" their holy heritage of sight, hearing, health, and life.

In "Unity of Good" (p. 37) Mrs. Eddy writes: "Our Master said, 'The kingdom of heaven is at hand.' Then God and heaven, or Life, are present, and death is not the real stepping-stone to Life and happiness. They are now and here; and a change in human consciousness, from sin to holiness, would reveal this wonder of being." Because disease of every name is a mental experience, a supposition instead of a condition, resulting from fear, mistakes, discord, selfishness, and ignorance of God, a change from material to spiritual thinking alone can bring health to the body. Because life is a thinking process instead of a breathing process, freedom from disease can take place in "the twinkling of an eye,"—at any moment when discordant thinking yields to godlike thinking.

What an imperative injunction and sweet reward is given in the command of Scripture, "Acquaint now thyself with him [God], and be at peace"! Acquaintance with God turns us from the material teaching which says that man is subject to disease and evil here, but that he will be perfect hereafter, and with Job we can exclaim, "Yet in my flesh shall I see God." No longer need the weary bow under the enslaving beliefs of age, sin, sickness, or sorrow, when they realize that they are "sons of God," and "joint-heirs with Christ." Can the heir of eternal Life grow old or lose any of his faculties? Can the heir of boundless strength be weary? Can the heir of omnipotent good be bound by evil appetites? No, for it is written, "Son, thou art ever with me, and all that I have is thine." When? Now! Now is the life, light, health, and peace of God ours as sons and heirs.

What hope thrills the heart of the burdened one, trying to carry life's load through human strength, when he sees the meaning of this passage! Awakened from the dream of helplessness, he affirms with thanksgiving its mighty import. He had once hoped to see the Father and be known as His son in some future heaven, but now he hears with the hearing ear, "Arise, shine; for thy light is come." Throwing aside his beliefs of heredity, age, and disease, he rises as son and heir in the present kingdom, and with grateful heart opens his consciousness to receive the heavenly good that his Father is giving here in the eternal now. In the familiar words of Barlow—in our Hymnal,—

Why search the future and the past?
Why do ye look with tearful eyes,
And seek, far off, for Paradise?
Beneath thy feet, Life's pearl is cast.

MENTAL VAGRANCY.

LOUIS J. DU BOIS.

It has been well borne in upon mankind that there is no excellency without labor. In Christian Science, also, industry is a very desirable quality for the individual who hopes to progress steadily and maintain his growth. It is all very well for us to rely on the labors of others in our behalf, when we are beginners in Science and know not how to work for ourselves; but this cannot go on indefinitely, or the individual will miss the experiences meant for his growth and advancement. We learn in Science that Truth gives us our work to do; but if we do not do our work day by day as it comes to us, if we have relied on others to shield us from experiences that should have been ours alone, then there is a sudden and perhaps disagreeable awakening for us when we discover that we are unequipped for the impending task.

With this awakening will come the realization that each must work out his own salvation; that another cannot possibly do it for us. When this point is reached the individual is ready to welcome work in Christian Science. Trials will not then be regarded as calamities, but as blessed opportunities to learn the power of Truth over error, to gain experience, to see Truth at work, to advance in Christian Science. The student is no longer a mental parasite. He does not beg, plead, or whine over error, but he works out of it, rejoicing that he has the opportunity to do so, and happy in the knowledge that the exercise of his spiritual faculties will strengthen them. It must not be assumed, of course, that we are never to avail ourselves of the assistance which our Christian Science friends or a practitioner may render us as special occasion may demand it, but habitually to rely upon the labors of others to solve our problems is wholly to unfit ourselves for their solution.

No one is disliked quite so much in human affairs as the person who can work but will not. There seems to be no room in the economy of existence for this type, and fortunately this condition is comparatively rare, as the majority of mankind are active and honest. The condition of mental vagrancy, however, seems more common, and because it is not so easily recognized it is more insidious in its effects. When this type is recognized, one is justified in refusing to give of his gems of thought that this condition of mind may be nourished and encouraged in its vagrancy. Let us, then, guard ourselves against mental vagrancy, so that we will not be a detriment to ourselves or a burden to our friends. If we are members of a church, let us try to be workers, always building up and never depleting the organization by our inactivity. The final word on this subject cannot be stated more expressively than it is given in our Leader's Message to The Mother Church in 1900 (p. 2), where she says, "The song of Christian Science is, 'Work—work—work—watch and pray.'"

[Written for the *Sentinel.*]

"TEACH US TO PRAY."

KATHARINE T. PORTER.

O Father Mind, may I e'er read,
Mark, inwardly digest, and heed
With eager sight, undimmed, untired,
Thy written Word—the page inspired;
Nor errant thought rob consciousness
Of aught which would uplift and bless.
May e'er the lines for me retain
Their erstwhile freshness—may I gain
With each perusal clearer view—
A higher thought of what is true.
Oh, grant me ne'er to rest content
With lower sense of what is meant,
But rise and ever rise, till I receive
All that the writer had to give.
And, Father, this my earnest prayer:
May I obey what I find there!

SELECTED ARTICLES.

[Frederick Dixon in *The Times*, London, England.]

Under the heading of "The Medical Schools," in your issue of yesterday [Oct. 11], you print some remarks of Dr. Grimsdale, in which he politely refers to Christian Science practitioners as charlatans. A charlatan, in his opinion, is somebody who has the misfortune to differ from him. Of course this is unpardonable; but Dr. Grimsdale's remedy is perfectly simple. It is that the medical profession should heal the sick themselves. If they will do this, they may make up their minds they will be quite untroubled by the charlatans, as the public's sole desire is to get well, and it will only go to the people who it finds help it.

[Alfred Farlow in *Roswell* (N. Mex.) *Record*.]

In a recent issue there was published a communication which undertakes to discredit the teaching of Christian Science by comparing quotations from the Bible and the Christian Science text-book. First in line are the following:

"The Bible says: 'In the beginning God created the heaven and the earth.' The 'key' says, 'There is no matter.' The only evidence of a material universe is gathered from the five personal senses. This evidence Christian Science has dethroned."

There is no conflict whatever between these two statements. Christian Science does not deny that "in the beginning God created the heaven and the earth," but insists that the creation of God was "after his kind," partook of His nature, in keeping with the scientific truism that "like begets like." Christian Science agrees with the Scriptural declaration, "God saw every thing that he had made, and, behold, it was very good;" also, "Thus the heavens and the earth were finished, and all the host of them," and "God created man in his own image, in the image of God created he him." God is not matter but Spirit, hence man in God's image and likeness is not material, but spiritual. Christian Science holds steadfastly to this fundamental proposition of spiritual truth.

Our critic quotes: "The Bible says, 'All have sinned, and come short of the glory of God.' The 'key' says, 'Man is incapable of sin.'"

Here again we say there is no conflict when the context is considered. The Biblical text refers to sinful mortal man, while the text from "Science and Health with Key to the Scriptures" (p. 475) refers to God's man, made in His own image and likeness. It is the teaching of Christian Science that the real man, who is the image and likeness of God and who partakes of His nature, is incapable of sin; that the sin and evil which appear to be in the so-called mortal man are no more a part of the real individual than is the besmirching clay a part of the diamond which it hides; and that eventually the sinner will awaken to a consciousness of his true individuality, will put off all evil, and awake into the likeness of God.

Again it is quoted: "They brought unto him all sick people," in connection with which our critic declares: "The 'key' observes, 'Man is never sick.'"

This, I presume, is intended to make it appear that Jesus believed in sickness while Mrs. Eddy did not. On the contrary, the Master taught exactly what Mrs. Eddy teaches concerning the nature of sickness. He did not say of the woman, "She has rheumatism and is very sick." He declared, "Satan hath bound [her], lo, these eighteen years," and he defined Satan as a "liar," and his offspring as a "lie," thereby teaching axiomatically that disease is a falsity which is to be destroyed by truth, in keeping with his teaching, "Ye shall know the truth, and the truth shall make you free." Christian Science does not deny the relative existence of sin and sickness in erroneous human experience. It calls them by the same name, but differs from other theories as to their nature and the needed remedy therefor.

Our critic quotes the Scriptural statement, "It is appointed unto men once to die," and adds, "On the same subject the 'key' says, 'There is no death'; 'the body cannot die.'" We are wondering why our critic did not quote the Master's statement, "The damsel is not dead." Then he would have had a parallel with Mrs. Eddy's statement. Jesus plainly denied the existence of death, affirming that it was simply a dormant mental condition from which the damsel could be awakened, and he proved the truthfulness of his proposition by raising her up out of that condition. As to the statement, "It is appointed unto men once to die," the entire text reads as follows: "And as it is appointed unto men once to die, but after this the judgment: so Christ was once offered to bear the sins of many; and unto them that look for him shall he appear the second time without sin unto salvation."

This clearly bears out the explanation that the death which is "appointed unto men once" is that all must die to sin, that the sin and evil in each individual must eventually die in order that salvation may be assured. The real man is coexistent with God, for he is the "express image" of God. Solomon said, "God made man to be an image of his own eternity," but referring to the mortal the psalmist tells us that "his days are as grass: as a flower of the field, so he flourisheth. For the wind passeth over it, and it is gone." The psalmist insists that it should be otherwise; that we should so live as to prolong our lives, that we should awaken to a consciousness of our spiritual individuality and let it overcome the material, false sense of manhood and thereby lengthen our days. Christian Science shows how to do this, and already there is evidence of increased longevity because of its effects upon the human race. Each successive generation will do better, and eventually the Scriptural prophecy will be fulfilled, "There shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

While Christian Science insists that God is not "person" in a limited or anthropomorphic sense, it teaches that God is Person in the infinite sense and that Christ is the "express image" of this infinite Person.

Christian Science does not deny the atonement as it is taught in the Scriptures. It is in perfect accord with the text, "The blood of Jesus Christ his Son cleanseth us from all sin," which means that through the sacrifice of our Lord we are made aware of certain facts concerning divine Love, concerning the Science of Life and Truth, which mortals may practise and thereby work out their own salvation, according to Scriptural admonition.

Christian Science accords with the Scriptural teaching concerning the final resurrection. It also endorses the word of God that when Jesus was risen from the grave he had not yet finished his work, had not yet fully demonstrated the allness of spiritual being, but that this achievement was consummated in what is known as the ascension.

Mrs. Eddy's teaching does not conflict with the Biblical instruction as to the "judgment to come." What it repudiates is the speculative doctrine concerning the final judgment. It teaches that each mortal is judged at every step in his journey heavenward, and that eventually this judgment will be completed and he will have entirely put off mortality and inferentially put on immortality.

Our critic quotes, "For this shall every man that is godly pray unto thee." "Men ought always to pray and not to faint." Then he quotes from the text-book, "Prayer to a personal God is a hindrance." The following is the correct quotation: "Prayer to a corporeal God affects the sick like a drug, which has no efficacy of its own but borrows its power from human faith and belief" (Science and Health, p. 12). Mrs. Eddy does not repudiate prayer, as our critic insinuates, but she repudiates that particular sort of prayer which is based upon a false belief concerning the nature of Deity, the false belief that God is a humanly circumscribed, corporeal person, who could be influenced by mortal man.

Digitized by Google

Prayer as it is understood in Christian Science and is taught in the Scripture consists of communion with God, which brings one into a consciousness of what God is and what His relation to man is, and which in consequence destroys the power of sin and disease.

Our critic quotes as follows: "The personality of Jesus is not to be worshiped." The following is the exact wording as given in Science and Health (p. 40): "Our heavenly Father, divine Love, demands that all men should follow the example of our Master and his apostles and not merely worship his personality." In other words, personal worship is inadequate, and we should be ruled and governed by that which the name of Jesus Christ conveys to us, namely, the understanding of spiritual truth which dominated the man Jesus and which enabled him to do the mighty works which were associated with his life. We must understand and utilize what he knew in the overcoming of sin and sickness.

Mrs. Eddy's declaration, "The material record of the Bible is no more important to our well-being than the history of Europe and America," does not conflict with the statement, "All Scripture is given by inspiration of God, and is profitable for doctrine, for reproof, for correction, for instruction in righteousness." Most modern Bible teachers agree with Mrs. Eddy that certain portions of the Scriptures contain inspired declarations of truth which are essential to the salvation of man, while other portions are merely historical statements which are profitable and important, but secondary to the more spiritual portions.

[William J. Bonnin in *Rochdale* (England) *Observer*.]

At the close of his remarks on a recently published pamphlet attacking Christian Science, your contributor "Observer" says that "no Christian Scientist can have any but a controversial objection to it." Permit me to say that when a Christian Scientist learns of a minister of religion misrepresenting and heaping obloquy upon what experience has convinced him to be the greatest blessing awaiting the race; and stigmatizing what is most sacred to him as a "force working ruin of body and soul," it is something more than a "controversial objection" that rises within him. What he does feel is a deep regret for such utterances, and a hope that as few as possible may be misled by them.

I cannot ask you for space to examine the statements of the author in any detail. The pamphlet is mainly extracts from the Christian Science text-book, stripped of their context, and used in an effort to show that Christian Science does not square with what the author calls "Christianity," meaning thereby his own Christianity, and hence to justify him in calling it names. The tract bears the title "What is Christian Science?" but one may search it from beginning to end without finding any attempt to answer the query. Nor does the author pretend to any first-hand acquaintance with results. And more and more is the world now growing interested in results. To be sure, our critic admits that there are Christian Scientists of excellent character, but their virtues, we are told, "are doomed to disappear" if they continue in the faith. It is nothing to him that there is not to be found in the whole huge army of Christian Scientists one who will not avow that his faith has made him a better man. It is nothing to him that a true Christian Scientist is one who by purity of motive, thought, and conduct is endeavoring to form a channel for the healing power of love to reach his brother man. He is a "monstrous heretic" and "callously cruel." It is nothing to him that there are multitudes who declare themselves to have been healed through Christian Science after all material means had failed them. It has not healed all the sick in the hospitals, so it must be a fraud, he says. One is led to wonder whether the author remembers that the Founder of Christianity and the apostles would not be left unaffected by such an argument. But perhaps the most astounding statement in the tract is one to the effect that Christian Science "repudiates healing in answer to prayer." The whole mission of Christian Science is directed to teaching one how to pray so that healing from sin and sickness may result. The secret of that prayer is knowledge of God, a scientific understanding of His omnipresence.

Our critic says that Christian Science is advancing "by giant strides." That is true, and the reason is not far to seek. In a recent number of the *Nation* there appeared an article over the initials H. W. N.,—initials that will carry no little weight among those who have the progress and the betterment of the race at heart,—and the writer therein describes the results of his visits to a Christian Science church, and his own observations there. The concluding passage of the article runs thus: "When we know that some tortured sufferer under a slow and incurable disease suddenly loses his fear, looks cheerfully out on life again, and goes happily on his way as though nothing ailed him; when we see a devouring sensualist choose decency as the finer pleasure, and a malignant gossip put on loving-kindness like a garment; when we feel within a community the breath of that peace which passes all understanding, and which has power to pervade even the most skeptical intelligence,—then we may begin to suspect that the age of divinity is not passed, and that miracles do really happen.

[John L. Rendall in *Marengo* (Iowa) *Sentinel*.]

In a recent issue I find an anonymous article under the caption "Fallacy of Christian Science Tenets," in which some critic who has not chosen to make himself known endeavors to prove that the first tenet of the Christian Science faith is not consistent with the Bible. It is evident to one who reads this carefully that this critic has failed to grasp the essential view-point of Christian Science, and for this reason is not qualified to criticize intelligently its teachings.

The tenet to which he objects reads as follows: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." Our critic states, "If this is true, that the Bible is sufficient, why does Mrs. Eddy say in Science and Health, page 456, 'A Christian Scientist requires my work Science and Health for his text-book, and so do all his students and patients'? What is this other than saying that the Bible is not sufficient?" It is a matter of common knowledge that all Christian people find it advantageous to use commentaries, Bible dictionaries, etc., in order more thoroughly to understand the teachings of the Scriptures. "Science and Health with Key to the Scriptures" is the Christian Scientist's commentary on the Scriptures, and to them it has indeed proved to be a "Key to the Scriptures," in that it has unlocked the treasures contained therein and made them more practical to the individual need.

A great many Christian Scientists were members of orthodox Christian churches prior to their accepting Christian Science, which they accepted only because it brought into their experience a more complete and satisfactory understanding of God and man's relationship to God; and more than this, it gave them positive proof that God's power is not in any degree limited or restrained, but that through the exercise of this power they might not only be healed of whatever sinful beliefs they may have entertained but also of physical disease. Christian Science heals the sick and reforms the sinner, gives peace and comfort to those who need it, and in every respect accomplishes the full mission of the Christian religion as established by Jesus Christ. He who contends for a literal interpretation of the Scriptures misses the vital, spiritual element which is the essence of Scripture. As a matter of fact, in order to be of any value to humanity, the Scriptures must be spiritually interpreted and understood. Science and Health is giving its students this spiritual understanding of "the Word of God," and therein lies its great value. On page 406, in Science and

Digitized by Google

Health, Mrs. Eddy states: "The Bible contains the recipe for all healing. 'The leaves of the tree were for the healing of the nations.' Sin and sickness are both healed by the same Principle." This has always been true. Jesus knew it, the apostles and prophets of old knew it, but it remained for Mrs. Eddy to make it known to this age through her "Key to the Scriptures." Perhaps if our critic understood this same "Key" he also might recognize the value of Christian Science in its healing and redemptive mission.

It is very certain that the plainest teachings of Christianity as Jesus taught it included the healing of the sick, and it is upon this issue that Christian Scientists stand and that some people calling themselves Christians take exception to its teachings. Either the "Word of God" heals or it does not. He who says it does not repudiates the very plain teachings of the Bible. The statement that Christian Science "discredits" either the Old or the New Testament, is too fallacious to need comment. Any one who knows even a little of its essential mission, of its teachings and its practise, cannot fail to be impressed with the close fidelity to the Scriptures of its adherents and their complete dependence upon the infinite power of God at all times and under all circumstances.

[Editorial in *Similkameen Star*, Princeton, B. C.]

Preachers and church officials are in a quandary to find the reasons for empty seats in churches and the general indifference toward religion manifested by the worldly world. With all their scholasticism, form, and sensational allurements, ministers and evangelists fail to draw the multitudes as did the unlettered humble carpenter and fishermen in the days of primitive Christianity. The Master had no lack of audience, although there was no oratory, high-sounding subject, or classic music. The inseparable teaching and healing of Jesus, his earnest simplicity, faith, and love, won the crowd, the common people, and they followed him, though they lacked food. In departing from the flesh, he gave commission to preach the gospel and heal the sick in the manner that he did. Ministers and other disciples observe the first part of the commission with a "vengeance," but ignore the second part, leaving that for the doctors. "The works that I do shall he do also; and greater," said the Master. When return is made to the simple teaching and healing of Jesus, there will not be room in church edifices for those of the new birth and others desiring to know that truth which makes men free from the bondage of sin, disease, and death.

[Jno. M. Dean in *Memphis* (Tenn.) *News Scimitar*.]

Christian Science does not teach that "there is no pain or sickness or suffering beyond the imagination," and on page 460 in Science and Health, Mrs. Eddy says: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being."

In interpreting the teaching of Christian Science in this connection the relative must be distinguished from the absolute. It is one thing to say that evil is very real to human experience and quite another thing to say that what human knowledge would insist upon as the truth of being is very far from being true or real. Relatively speaking the sun rises and sets, and this is a sense conviction based on a universal human observation, that is more than mere individual imagination. Indeed, this belief has become so fixed that even those who are thoroughly instructed otherwise involuntarily speak and think of the sun as rising and setting, but no amount of such sense testimony can shake the unalterable facts. So it is with evil of every kind. Human knowledge would say it is true, while divine understanding declares its untruth because of its destructibility. Can that which is real be touched by the mutations of time or sense? Reality is—must be—indestructible. "All things were made by him [God]," and characterized by Him as "good," and "whatsoever God doeth, it shall be forever." Hence, evil and its results are false concepts existent in universal as well as in individual mortal consciousness; they are negations of good just as darkness is the negation of light. And just as darkness is revealed as a nonentity when the light appears, so error vanishes into its native nothingness before the presence of truth. Christian Science does not destroy sin and sickness by superficially ignoring them, but by exposing their false claims and supplanting them with a right concept of God and man and things. Ignorance seems very real until dispelled by education, but when this is done what becomes of ignorance? Does it go anywhere? No; it simply disappears and that is the last of it. Christian Science is an educational process that removes former convictions which ignorance would claim to be solid realities, and this is a spiritual evolution which we believe will ultimately do away with everything that is unlike God, good.

Also let me say that in Christian Science the human mind is never given power to heal or to hurt, for all action proceeds from the divine Mind, which is but another name for God. The use of will-power or the attempt to influence the thought of another by a materially mental process, so to speak, is rank hypnotism, which is not countenanced in Christian Science practise.

[E. M. Ramsay in *Aberdeen* (Scotland) *Free Press*.]

In a letter which appeared in a recent issue, the writer says that Christian Science is found in a "stagnant backwater of superstition and credulity where miracles are boomed." As a student of this subject for a number of years, I should like to make a few comments on these statements.

I believe that any unprejudiced person who has made a study of the New Testament will admit that our Lord started a great mental revolution which was to show itself in deeds, a revolution of thought so fundamental that he called it being "born again." This new way of thinking was primarily to be practised by each man on his own behalf, and secondarily to be preached to others. It was not sufficient, he taught, that his followers should refrain from sinful acts; they must go deeper, and cast out of thought all that is unlike God, and continue this process till they should become as perfect as the Father in heaven. Our Lord also declared that belief in him and his teachings would be followed by the outward signs of bodily healing, as well as by an abiding sense of peace and joy which the world could neither give nor take away, and that friendship and prosperity would likewise be found by those who first sought "the kingdom of God, and his righteousness." When, then, we find that prosperity and bodily health, peace and joy, do not follow belief in Jesus Christ, is it not a more reasonable and Christian position to suppose that there is something lacking in our faith, than to infer that the Saviour's statements have ceased to be true and his promises out of date?

Mrs. Eddy, in the Christian Science text-book, "Science and Health with Key to the Scriptures," has presented the world with an explanation of the Bible teaching which has enabled thousands of men, women, and children all over the world to prove their faith to some extent by their works. As their understanding increases, and their confidence in the power and activity of good grows stronger, they find themselves emerging from superstition and credulity, from belief in the miraculous, in the pleasure, power, or necessity of evil, into health and happiness, the wide liberty of the sons of God. This transformation is being accomplished not by miracles, but by "the renewing of the mind" of which St. Paul speaks: "Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love him."

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

ONLY ONE STANDARD.

ONE of the best known and most vital truths of Christian Science is that embodied in the "scientific statement of being" (Science and Health, p. 468). Sunday after Sunday, in the hundreds of Christian Science churches all over the world, there is read to the assembled congregations, at the close of the service, Mrs. Eddy's inspired and inspiring declaration that "there is no life, truth, intelligence, nor substance in matter. All is infinite Mind and its infinite manifestation, for God is All-in-all;" and its clear and logical conclusion that "Spirit is God, and man is His image and likeness. Therefore man is not material; he is spiritual." This sharply defined and unchanging distinction between the spiritual and material is again emphasized on page 476 of the text-book, where Mrs. Eddy writes: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick."

How important to the welfare of Christian Scientists our Leader deemed a thorough understanding of the immortal truth voiced by the apostle John: "Beloved, now are we the sons of God," is shown in her answer to a question on this point (*Sentinel*, Sept. 3, 1910), in which she says: "You can never demonstrate spirituality until you declare yourself to be immortal and understand that you are so. Christian Science is absolute; it is neither behind the point of perfection nor advancing toward it; it is at this point and must be practised therefrom. Unless you fully perceive that you are the child of God, hence perfect, you have no Principle to demonstrate and no rule for its demonstration. By this I do not mean that mortals are the children of God,—far from it. In practising Christian Science you must state its Principle correctly, or you forfeit your ability to demonstrate it."

If the "correct view of man healed the sick" in Jesus' day, it stands to reason that the same correct view must be just as efficacious today. It also stands to reason that, unless error is as real as truth, an incorrect view of man would not have healed the sick then, nor will it do so now. The lesson of this is that it is incumbent upon Christian Scientists, if they would prevent sickness, to keep before them at all times this "correct view of man;" that they cannot be divided between two opinions of man's true being, —one to be adhered to when they are sick and the other when they are well. The trouble that some Christian Scientists seem to have is in the failure in their own thought to distinguish between man as God's idea and the mortal concept of man which claims that he is sick, sinning, and dying. To regard man as mortal because in belief he seems to manifest mortality is a mistake, and inevitably results in the setting up of two standards.

The truth is that man is forever spiritual and eternal, the idea of divine Principle, and only by claiming and demonstrating this fact for oneself can the truth of being be made available in human affairs. To claim less than perfection is to lower our standard, or rather to accept a second standard which embraces both good and evil. Our Master was emphatic in pointing out the danger of a house divided against itself, and Mrs. Eddy has been no less emphatic in teaching and proving that there can be but one standard, namely, infinite Mind, good, and its infinite manifestation. That which, in human experience, does not measure up to this standard is unreal and untrue, and must be recognized as such. As Christian Scientists we must always claim our birthright as God's children, and regard as unreal and untrue all that is inconsistent with this high ideal.

ARCHIBALD MCLELLAN.

HANDLING THE SERPENT.

No word spoken by the Master expresses a more inspiring thought, or embraces a greater prophecy and privilege for men, than his familiar saying, "Ye shall know the truth." It speaks for humanity's highest innate capacity, for divinely provided opportunity, and for that supremest achievement, the gain of spiritual freedom, man's inherited estate and possession, dignity and happiness.

From the metaphysical point of view it is apparent that we can know nothing but the truth, since falsity cannot be a matter of knowledge but only of belief. To the Christian Scientist it has become equally clear that man does not need to know anything save the truth; that the so-called knowledge of evil is not essential to good or to any of its manifestations. The contrary belief in the necessity of evil in the best universe God could create, involves the contradiction that evil is a necessity to good; that error is not only the associate of Truth, but essential to our perception of Truth! Such an assumption brings chaos to Christian thought, not only because it denies the rule of the law that like begets like, but because it is opposed to the most emphatic teaching of Scripture that we are not to know evil, since it is "an abomination unto the Lord."

While the unprofitableness of evil, its entire absence from God's kingdom, and the consequent sin of any consent to or fellowship with it, has been made manifest to all Christian Scientists, they have also been led to understand and appreciate the ministry of Truth in making known to them the hall-marks of evil, the falsity of its innumerable claims before the tribunal of an awakening sense. Error rules the ignorant without begetting protest, because it is an unperceived influence or predisposition; but in inquiring thought error's claims are brought to light, and their falsity must be proven in order to escape their rule. To intelligence stupidity is unknown, the divine idea has no touch with untruth; but in the arena of human sense error appears in the garb of Truth, and its nakedness must therefore be exposed. Of this Mrs. Eddy has repeatedly spoken. She says: "Ignorance must be seen and corrected before we can attain harmony." "To prove scientifically the error or unreality of sin, you must first see the claim of sin, and then destroy it" (Science and Health, pp. 251, 461).

Christian Science thus teaches that human sense cannot ignore evil with impunity, and that we need to know the truth respecting the pretensions of evil, namely, their nothingness, as well as the truth respecting the nature of good. The boy who has never thought otherwise than that three and three make six, has no need whatever to consider any other statement,—his knowledge respecting this fact is sufficient and complete; but he who has been thinking that three and three make seven must be awakened to see the error of this belief, in order that the right concept may find place in consciousness. It is thus seen that in the "renewing" of the mind we are to acquire a larger compass of truth not by shutting our eyes to error, but by recognizing the falsity and proving the nothingness of its claims.

Here one can but remember the predisposition of mortal sense to resist the uncovering of error, its tendency to assert its willingness and desire to know the truth, while consciously or unconsciously holding on to error. With an air of devotion to good which may seem convincing, it sometimes refuses to recognize any claim of evil, and argues that to do so is unscientific and unchristian. Instead of separating one from error, this course lends one's influence to its support, and it can but conduce to the loss of moral sense. When one fails to distinguish between the acceptance of the

Digitized by Google

reality of evil and the recognition of the claims of evil, between the concession that a given declaration is true and the concession that such a declaration is made and its falsity must be shown, he has fallen into a grievous mistake.

JOHN B. WILLIS.

"MARTYRS."

OUR revered Leader tells us that "martyrs are the human links which connect one stage with another in the history of religion" (Science and Health, p. 37). She also enlarges upon this thought, and says on page 134: "The word *martyr*, from the Greek, means *witness;* but those who testified for Truth were so often persecuted unto death, that at length the word *martyr* was narrowed in its significance and so has come always to mean one who suffers for his convictions." It may easily be seen how a false sense of martyrdom can be entertained; indeed, it has often been held in the past and present time, until the mere fact of suffering for one's opinions, whether these were right or wrong, has been regarded by many as martyrdom. From this mistaken view-point one would not, however, be a "witness" for Truth, and respecting such a mental state Mrs. Eddy says, "The selfish *rôle* of a martyr is the shift of a dishonest mind, nothing short of self-seeking" (Miscellaneous Writings, p. 288). It is, however, the mission of Christian Science to separate the false from the true, and thus get rid of all counterfeits.

In the sixth chapter of Revelation we have a remarkable picture of the mental condition which is rightly named a martyr, as it depicts those slain for their testimony to the word of God. It is, however, well to note that their "souls" (sense) were "under the altar," not upon it or above it. In other words, they represented a belief that evil has power to make the good suffer and that the processes of divine justice were unduly delayed, a belief which Christian Science not only repudiates but proves untrue. The opening of the fifth seal in presenting this condition leads up to the higher state of consciousness typified by white robes. Even the noblest Christian martyrs needed the purification thus prefigured, for each and all who would enter the kingdom of God must yield up every vestige of belief in a power opposed to God; and this is where the crucial test comes.

It is not enough that we love good rather than evil, we must hold to the omnipotence of good up to the entire exclusion of evil,—to its complete annihilation; and we must include in our concept the all-power of divine Love to protect not only ourselves but our "fellow servants" and our "brethren," so that none may suffer from their failure to grasp the absolute power of spiritual law. This does not mean that we are to do the work which belongs to others, but that we must never burden any with a false sense of pity, born of the belief that divine service entails suffering of any sort. Instead we should help our brethren to win the white robes, and to "rest" in knowing that divine justice is neither slow nor uncertain, but sure! And why should we not be satisfied to wait upon God both for ourselves and those dear to us, especially when we know that thus a larger sense of omnipotent Love will be our portion and a more inclusive demonstration of divine justice and Truth?

To be a martyr today should mean to be a witness to Truth, so protected by the understanding of the supremacy of Truth that all the shafts of envy, hate, and ignorance will fall powerless at his feet. Do not the Master's words come down to us through the corridors of time: "Why are ye so fearful?" "Not an hair of your head shall perish"? What if all that makes up the material panorama be rolled up as a scroll and the mountains of mortal belief be "moved out of their places," in church and state! The witnesses for Truth will be purified, protected, and strengthened, made ready to enter the realm of Spirit, where "the Lord God omnipotent reigneth."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

SPRINGFIELD, MASS.—Following the recommendation of First Church of Christ, Scientist, a Christian Science society was organized Aug. 13. to hold Sunday services and Wednesday evening testimonial meetings in Touraine hall at 182 State street, in order to accommodate the steady increase in attendance at Christian Science church services. The first plan considered was to secure an auditorium large enough to accommodate all who attended these services as one congregation, but a suitable hall for such an arrangement could not at this time be obtained, thereby making the formation of the society a necessity. It is expected that the majority of the Scientists will continue to attend First Church, at the corner of State and Orleans streets, and that the growth of the society will be commensurate with the overflow of First Church. It is also the intent of the two organizations to cooperate in all important matters pertaining to the work of the Christian Science cause in its general phases, and to join in raising a building fund for the erection of a new First Church edifice that will in all probability accommodate the two congregations.

Springfield Homestead.

KALAMAZOO, MICH.—One of the most inviting attractions, if it may be called an attraction, at the "big fair" is the booth of *The Christian Science Monitor,* where hundreds of copies of the paper are given away each day. The *Monitor,* by the way, is a daily paper published by The Christian Science Publishing Society, and is considered one of the best, cleanest, and newsiest daily papers in the country.—*Kalamazoo Gazette.*

We gave out a thousand *Christian Science Monitors,* several hundred *Sentinels,* and other Christian Science literature, including the pamphlets so kindly sent us by the Publishing Society. The article in a recent edition of the *Monitor* regarding our new Y. M. C. A. seems to have been much appreciated, and we mailed about five hundred of them. Our lecture comes soon, which will afford another opportunity for disseminating the literature; and so the good work goes on.—*Correspondence.*

TIFFIN, OHIO.—Work has begun for the erection of a building for First Church of Christ, Scientist. The church will be erected on Water street, on the property adjacent to the Harter flats, and the work will be rushed to completion as rapidly as possible. Ground was broken for the foundation Aug. 31, and an effort will be made to get the building under roof before the weather interferes with building operations. The structure will be twenty-six by forty-six feet in dimensions and will make a very comfortable church for the rapidly growing congregation. The corner-stone was laid Sept. 21.—*Tiffin Tribune.*

JANESVILLE, WIS.—First Church of Christ, Scientist, of this city laid the corner-stone of their new building on the corner of Pleasant and High streets Sept. 17. Work on the building is progressing steadily. The lot on which this church is being erected is near the center of the city, across from the high school. The auditorium, exclusive of the foyer, will seat about three hundred people. The cost of the building is estimated to be between sixteen and twenty thousand dollars.—*Correspondence.*

DAYTON, OHIO.—Members of the two Christian Science Sunday schools of Dayton held their annual outing at White City park on a recent Saturday afternoon. A number of impromptu addresses were delivered, and the usual picnic amusements were on the program.—*Dayton Journal.*

THE LECTURES.

OCONOMOWOC, WIS.

Frank H. Leonard delivered a lecture on Christian Science for the Oconomowoc Christian Science society in the Auditorium to an attentive audience. The speaker was introduced by the Rev. A. W. Stephens, pastor of the First Baptist church, who said in part,—

A member of this society asked me to preside and introduce the lecturer of the evening. Somehow it became known to the public, and a friend who met me on the street wanted to know how it was that I was to introduce a Christian Science lecturer. I replied, "First, because I believe that they are Christians; second, because I do not believe that any sect has a monopoly of divine truth; and third, because they are trying to do as the great Teacher taught us all to do and was concerned about, and that was to think, to love, to live. Jesus knew what many a professor of religion never seems to learn, namely, that a degree of clear thinking is absolutely essential to loving and living, and Jesus' method was the method which stimulates thought."

Now, right thinking implies concentration, or in other words attention. To make children think, is to educate them; not to think for pupils, but to make pupils think for themselves,—that is education. To teach is not to pile facts into the mind, like bales of cotton, though this may be a part of education, but to help the child think. We are to learn where things are and what they are, in order to make knowledge available. And I believe Jesus intended to make us avail ourselves of our supplies. Again, thought life implies contemplation; in other words, silence, self-communion, thoughtfulness, apartness. One fairly feels the quiet in the Scripture's brief description, "And Isaac went out to meditate in the field at the eventide." Christian Science teaches the necessity of this quiet communion, and urges all of its followers to heed the apostle's injunction, "Think on these things;" for the Scripture tells us that as a man "thinketh in his heart, so is he."

Right thinking is a cure for superficiality, and to love the most we must have an abiding thought. Milton may be said to be exhaustless, because his thought had a steady quiet. Dr. William V. Kelley, in a beautiful essay entitled, "The Fable of Ætna," says among other things, "Life lacks not so much in breadth, as in height," and the way to have height in life is to spend time in solitude, in silent communion with the higher things of God. I have often imagined that John the revelator sat quiet on Sunday, thinking of the infinite, and of love, until he was completely lifted above all things material, and that it was then God swept the eternal city into John's soul with moving, majestic power. And every devoted Christian knows it is in these quiet moments that God lets us into His secrets, for He says, in the words of the psalmist, "Be still, and know that I am God."

The intellectual thought of the world has ever revolved around three great questions, "Whence am I?" "Why am I?" and "Whither go I?" and Immanuel Kant says that the business of philosophy is to answer three questions, "What may I know?" "What may I do?" and "What may I hope for?" but the philosopher admits that the more he studies to answer these questions, the more profound they become. The Christian Science teacher answers the question, "What may I know?" and says, "I may know God, and in that knowledge know all things that are good." And to the question, "What may I do?" he answers, "Love, and love impels me to go about doing good as did the Master." And to "What may I hope for?" he says, "All things pertaining to health, happiness, and eternal living." So I believe that we are fortunate in having with us tonight one who has made a study of this subject, and who will tell us more about this great theme.—*Oconomowoc Enterprise.*

MINNEAPOLIS, MINN.

A lecture on Christian Science under the auspices of the churches of Minneapolis and St. Paul, was delivered in the Auditorium by William D. McCrackan, M.A., before an audience of about twenty-one hundred. The lecturer was introduced by Henry Deutsch, state publication committee, who said:—

As one looks upon this vast audience of eager and expectant faces, he cannot but feel that those who are here this evening for the purpose of listening to an exposition of the Principle and doctrine of Christian Science may, broadly speaking, be divided into two classes. One is composed of those into whose lives has come the glad light of Christian Science, bringing on its wings the healing of sickness, the destruction of sin, and the removal of sorrow; and that class, I believe, are here tonight to hear again, as they are always ready and eager to hear, the story once more, in one of its varying aspects, of the glad tidings that were presented to this world by the Discoverer and Founder of Christian Science, Mrs. Eddy. In the other class are those who have seen what Christian Science has done for their neighbors and friends, and are interested to know what is the faith that has brought this joy and this gladness and this light into the lives of those with whom they come in contact. And it is to this second class that the lecture this evening is particularly directed.

It has been often and truly said that it is not the purpose of Christian Science to proselyte and convert, and it may with still greater truth be said that it is not the purpose of these Christian Science lectures to persuade or coerce or compel people to become adherents to the Christian Science faith; but, like all great movements, and like the revelations of truth which have come down through the ages, the Principle and doctrine of Christian Science have been misrepresented, and people have been given an opinion or an idea of Christian Science which is the exact reverse or antipode of what it actually is, and so there has arisen in the years a wrong conception of what Christian Science is, and many have been deprived of its helpful ministrations through hesitancy to embrace the misrepresentations of what it is. This evening it will, however, be our privilege and pleasure to receive a true exposition of Christian Science.

Correspondence.

OGDEN, UTAH.

William R. Rathvon, who delivered a lecture on Christian Science for First Church of Christ, Scientist, was introduced as follows by George Halverson:—

In 1866, Mrs. Mary Baker Eddy discovered Christian Science,—a system of thought for the regeneration of mankind, mentally, morally, and physically,—a system of divine healing, it is claimed, resulting from correct Christian thought and conduct, which dissipates sin, sickness, and error. In 1879, only thirty-three years ago, the first Christian Science church was founded in Boston. Today, the Christian Science cult probably numbers over a million adherents from every country on the globe and from every vocation in life. In far-away India, in China, in South Africa, in the southmost south of South America, Buenos Aires, it has its churches and its votaries. It numbers among its members the educated, the cultured and refined. There are, perhaps, more lawyers, members of my own profession, who are naturally skeptical, who belong to the Christian Science church, than to any other denomination of like numbers.

What is it, then, which in so short a time has thus attracted and bound together so many people in a common interest? Each thoughtful person must answer the question for himself, upon due consideration after the evidence is all in. Speaking for myself, I am not a Christian Scientist. I know little about it, but I number among my friends many

Digitized by Google

who are firm believers, many for whom it has apparently wrought wonders,—many happy, satisfied, and contented men and women, who have been bettered by being Scientists, and whom I am proud to call my friends.—*Correspondence.*

CAMDEN, MAINE.

At a lecture on Christian Science delivered by Virgil O. Strickler, the speaker was introduced by Robert Coates, who spoke in part as follows:—

Christian Science has come to this age preaching the gospel and showing forth the works of our Master. Preaching the gospel was the smaller part of our Master's mission. It was his mighty works that gave the most convincing proof that he was the Christ, the Son of God. Jesus said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." He also commanded, "Go ye into all the world, and preach the gospel to every creature," "Heal the sick." It is recorded that these mighty works were continued about three hundred years after the Master's ascension. About forty years ago this lost element of Christianity was discovered by a woman, Mary Baker Eddy, and she named her discovery Christian Science. Today there is hardly a civilized country in the world where there are not to be found living witnesses to the truth of Christian Science.

Camden Herald.

PASADENA, CAL.

Clarence C. Eaton lectured at the church to an audience which comfortably filled the spacious auditorium. He was introduced by First Reader J. L. Mothershead, Jr., who said:—

Throughout all human history we see the efforts of mankind to get a clear idea of God. There has always been the recognition of the presence of a power controlling the universe, although that power has been called by many names. Two thousand years ago Jesus of Nazareth went from city to city explaining the truth about God, and his beloved disciple John expressed these teachings in the words "God is love." Now Christian Science is the proof that God is Love, and any statement which would give any other impression of Christian Science is a misstatement.

Correspondence.

SEATTLE, WASH.

Judge Clifford P. Smith delivered lectures on Christian Science at Moore theater and Arcade hall. He was introduced by Thos. F. Hoyt, who said:—

In behalf of Fourth Church of Christ, Scientist, I most cordially welcome you, knowing, as you will also realize, that it is a great privilege to be permitted to listen to the truth about so great a subject, a subject that is interesting the candid, honest thought of mankind today. In St. John's gospel we read that Christ Jesus said: "No man can come to me, except the Father which hath sent me draw him: and I will raise him up at the last day." It would appear from this declaration of the Master that man's extremity is God's gracious opportunity. This is true perhaps of the great majority in Christian Science today.

Nearly a half century ago, our revered Leader, the Discoverer and Founder of Christian Science, modestly handed to a skeptical world "Science and Health with Key to the Scriptures," and in that act Mrs. Eddy laid the ax at the root of human thought. When she gave to the world this precious volume there seemed to be no place for it; politically it had no place, socially it was sneered at, and religiously it was said of it that it would never be read, that it was too transcendental,—a Utopian dream, never to be actualized in the life of man. There was but one chance or hope for the success of Christian Science, and had Christian Science failed in meeting that single hope, mankind today would still be in the gall of bitterness and the bonds of sin, sickness, and death; but because Christian Science has not failed, countless thousands, in the language of our textbook, rejoice "in the proof of healing,—in a sweet and certain sense that God is Love" (Science and Health, p. 569).

Again, the great Teacher has said: "And I, if I be lifted up from the earth, will draw all men unto me." For the half century past Christian Scientists have unflinchingly held above the mortal senses this truth, the fruits of which are seen in the unparalleled success of Christian Science throughout the world.—*Correspondence.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Aldershot, England.—Alexandra hall, 3 p.m., Nov. 13.
Bloomington, Ill.—Church edifice, Monroe and Prairie streets, 8 p.m., Nov. 5.
Brighton, Sussex, England.—Town hall, Hove, 8 p.m., Nov. 19.
Burlingame, Cal.—Masonic temple, 8 p.m., Nov. 7.
Camden, N. J.—Temple theater, 415 Market street, 3:30 p.m., Nov. 3.
Chicago, Ill. (Third Church).—Church edifice, Washington boulevard and Leavitt street, 8 p.m., Nov. 7 and 8.
Croydon, Surrey, England.—Public hall, George street, 8 p.m., Nov. 15.
Evanston, Ill.—Evanston theater, Sherman avenue, between Davis and Grove streets, 3 p.m., Nov. 3.
Fremont, Neb.—Larson theater 3 p.m., Nov. 3.
Geneva, Ill.—Congregational church, Nov. 8.
Janesville, Wis.—Myers opera house, 3:15 p.m., Nov. 3.
Kewanee, Ill.—Grand opera house, 8 p.m., Nov. 1.
Lawrence, Mass.—City hall, 3:30 p.m., Nov. 3.
London, England (Second Church).—Church edifice, Palace Gardens terrace, Notting hill gate, 8 p.m., Nov. 14.
Lynn, Mass.—First Universalist church, Nahant street, 8 p.m., Nov. 7.
Mattoon, Ill.—Grand theater, 3 p.m., Nov. 3.
Morristown, N. J.—Palace theater, 4 p.m., Nov. 3.
Mt. Vernon, N. Y.—Westchester theater, 3:30 p.m., Oct. 27.
Newark, N. J. (First Church).—Symphony auditorium, corner Broad and Hill streets, 8:15 p.m., Nov. 4.
Newburgh, N. Y.—The Palatine, 8 p.m., Nov. 8.
Northampton, Mass.—City hall, 8 p.m., Nov. 8.
Oswego, Kan.—Grand theater, 8 p.m., Nov. 8.
Pittsburgh, Pa. (First Church).—Carnegie music hall, 8 p.m., Oct. 31.
Pottsville, Pa.—Y. M. C. A. building, 2d and Market streets, 8 p.m., Oct. 29. (Note change of place.)
Redlands, Cal.—The Contemporary Club house, 8 p.m., Nov. 4.
Rockford, Ill.—Church edifice, 515 N. Main street, 8:15 p.m., Nov. 4.
Salt Lake City, Utah (First Church).—Salt Lake theater, 8 p.m., Nov. 3.
Santa Cruz, Cal.—Knight's opera house, 8 p.m., Nov. 8.
Santa Rosa, Cal.—W. O. W. hall, 8 p.m., Nov. 9.
San Diego, Cal.—Church edifice, Second and Laurel streets, 8 p.m., Nov. 5.
Somerville, Mass.—Anthoine hall, 136 School street, 8 p.m., Nov. 7.
Springfield, Mass.—Court Square theater, 3:30 p.m., Nov. 3.
Taylorville, Ill. Elks' theater, 8:15 p.m., Nov. 4.
Waterbury, Conn.—Leavenworth hall, 8 p.m., Nov. 7.
Watertown, Wis.—Masonic temple, evening, Nov. 2.
Wauseon, Ohio.—Court house, 8 p.m., Nov. 4.
Waverly, Neb.—Waverly hall, 8 p.m., Nov. 4.

TESTIMONIES OF HEALING.

Realizing that it is often through the reading of a testimony that a sufferer is led to look into Christian Science for help, I gladly give mine. From childhood I was never considered strong, and when I was in high school I began to take medical treatment and continued to do so until I learned of Christian Science. I managed to finish the high school course, but when I began to talk of college our family physician said it must be given up, as I could never expect in my state of ill health to complete the course. I managed to teach school for three years, at the end of which time I completely broke down, being under a doctor's care for a long time. I was not then allowed to do anything, and up to the time I became interested in Christian Science I was very much limited in my work.

It is now over five years since I came to Christian Science, other members of my family being interested over two years before I saw that I needed it. Previous to my acceptance of this truth I had been a church-member for thirteen years, but during that time I had much illness, although I endeavored to live up to its teachings to the best of my ability. It was through a Christian Science lecture that I finally grasped its message. While listening to it I saw where I had made many mistakes; I found I had been worshiping a God who had a human form, although the Bible tells us that God is Spirit; I had been believing that God sent sickness, and that He knew evil, yet the Bible told me that God is "of purer eyes than to behold evil;" also that He "saw every thing that he had made, and, behold, it was very good."

Before hearing this lecture I had begun to have some doubts about going to my old church, and during the week following my decision was made. I was taken with an attack of asthma, and as I had had a similar one only a short time previous, and had become discouraged with physicians and material remedies, which were used with no good results whatever, I decided to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, to see if I could get relief. The first day I read, one sentence impressed me very much: "Seeking is not sufficient. It is striving that enables us to enter" (p. 10). During that night I was unable to sleep, but decided to read more the next day. The following night I was able, with the help my mother could give me, to rest all night, and the attack was overcome very quickly. I had but one attack after that, and now the disease has vanished.

I began to attend the Christian Science services, and the Wednesday meetings impressed me very much, although during the time that I attended my former church I seldom went to an evening service, on account of a very weak throat, which it was feared might lead to lung trouble. I also suffered very much with my throat, even in warm weather, often having it cauterized. When I began to attend the Christian Science meetings it was in the fall of the year, and very soon snow-storms began to come; but I wanted to attend, and so set to work to make my demonstration. I realized that we live and move and have our being in God, and that if this were true nothing could harm me. The fear was soon destroyed, and now I go out in all kinds of weather with no ill effects.

For ten years or more before I came to Christian Science I had worn a pad over my chest and shoulders as a protection from cold, and once during that time I left it off in summer, but felt obliged to put it on again. I had not been studying Science long, however, before I knew it was not right to depend on matter for protection, but how to leave off the pad I did not know. I finally decided to wait, knowing that some time I would have the understanding to do this. One Sunday morning I left it off and was dressed more thinly than usual, but before going to church I opened the Bible for help and read the 27th Psalm through three times very carefully. When I went to church the Scripture reading was the same psalm. Some people might say that this was simply a coincidence, but I felt that divine Love was meeting my need, and I have never had the least bit of trouble in that way since. Many other ailments have disappeared and my health is now very good; *in fact, if* any one had told me that Christian Science *could do so much* for me, I should never have believed him, for I was *nearly* always taking medicine to keep up my strength.

In the fall of 1910 I passed through a great sorrow, but even with my slight understanding of Christian Science I was able to see that life is not in matter, and can never be destroyed by what mortals call death; that true Life is eternal. This helped and comforted me as nothing else could have done. While I value the physical help greatly, it is small as compared with the spiritual help that one gets. In Christian Science I know God better and find I can learn something more about Him every day. I also find that the more I put into practise what I know, the more truth is unfolded to me. I always endeavor to work out my own problems, knowing that each one solved gives an increased understanding by which to meet something more difficult.

I am deeply grateful to those who have contributed so many helpful articles to the *Sentinel* and *Journal*, as these have been of great value to me. I am thankful, too, that we have a daily paper which is doing so much good. I am glad that I can see and appreciate the great work which Mrs. Eddy has done to uplift mankind from sin and suffering, and to point them to a God whom they can understand and worship and love.

MISS PHEBE L. KING, Providence, R. I.

Not long ago I was involved in a business transaction in which a man was inclined to take an advantage, and which would mean a heavy financial loss to me unless I could raise quite a sum of money by a certain time. I had tried in many ways to collect some funds which were due me, but without avail. I took the matter up in Christian Science about two weeks before the final transaction was to take place, and worked faithfully to the extent of my understanding, but seemingly without making very much progress.

The morning of the day arrived, and the matter did not appear any clearer to me than at any other time, but my wife and I read over the Lesson-Sermon together, as is our custom, and I started for my office. After going a few blocks, the feeling came over me that I did not want to go by the direct route I was accustomed to take, so I turned off and went another way. Somehow I wanted to be alone, and as I walked along the street, with the matter still very much upon my mind, I began my Science work again, for I could not bring myself to believe that it was right for me to be deprived of that which was rightfully mine. I realized that there could be no loss in divine Mind; that as God's spiritual child, I was guided by that Mind and therefore could not suffer loss. I held firmly to this thought, and almost before I knew it found myself quietly humming a tune. For a few minutes I did not recognize the air, but soon the words of a hymn by Emily F. Seal (Hymnal, p. 181) came to me,—

> If God is all in all,
> His children cannot fear.

From that moment I felt as if a burden had been lifted from me. I went on to my office, looked over my mail, and, as it contained nothing demanding immediate attention, I told my partner I was going out for a while.

When I left the office I did not know where I was going, but I went to the Christian Science reading-room and read the Lesson over again, then I started down the street in an aimless kind of way, with no special destination in view, but earnestly praying for guidance—I wanted the light to

Digitized by Google

come which would show me the way clearly. As I was passing the open door of one of our banks, the president, with whom I was well acquainted, gave me a cheery greeting, and I stepped inside and shook hands with him, at the same time telling him I would like to talk with him for a moment if he was at liberty. He said he would be presently, and after a few minutes invited me into his private office and sat down beside me. I told him the whole story, and explained that I did not know why I had come to talk with him about it, as I was not a customer of his bank, any more than that we always like to talk with a friend when we have something in mind which perplexes us. He looked at me, smiled in a kindly way, and said, "You know it is against the rules of our bank to discount paper for any one who is not a regular customer, but I do not propose to let that man give you a short turn. If you will fill out a note for the amount you need, and get one of your friends to endorse it, which will satisfy our rule requiring two names on commercial paper, I will guarantee it to the bank and give you the cash for it." I did so, and in an hour the matter which had caused me so much annoyance was amicably settled and I sustained no loss. Money came in within a short time, and I was able to pay the note at the bank before it matured.

This was positive proof to me that Christian Science is an every-day religion, one which can be used at all times, because God is ever present, a guide and protector in every time of need. I thank God every day for the many blessings that have come into my life through this knowledge of Him, and for the revelation brought to us through the consecrated life-work of our beloved Leader, Mrs. Eddy.

OLIVER A. PHELPS, Washington, D. C.

For many years I was an invalid. My sufferings were both mental and physical, but the healing of mental anguish was far more to me than the healing of physical ills. All these years I had not only been under the care of doctors, but never out of their hands, as my case necessitated long stays in different sanitariums for those who were mentally affected; and it was while I was in one of these institutions that Christian Science was brought to me.

I was in constant fear,—afraid to live and afraid to die, afraid of light and of darkness, of everything around me and of everybody, especially of myself; but above all I was afraid of God. The treatment I had been under consisted of much drugging, including the taking of opiates to relieve my mental condition, also my bodily pains, and I took sleeping-drafts regularly every night. I had been treated by hypnotism also, which left me much worse than I had been before. Previous to the other treatment I had been under faith-healing, receiving the "unction of oil" three times a day on my head (in order to heal my brain, it was said), and my not recovering was accounted for by the faith-healer as the consequence of some sin which my family had committed and which God would not forgive.

I had been under well-known specialists, and on more than one occasion was forbidden to read religious books, even the Bible being taken away from me. In addition to my mental miseries I was suffering from the result of a fall which occurred during my stay at a sanitarium, and for this I had received massage and every form of medical treatment for eighteen months. I was walking on crutches, and the doctors could give me no hope of recovery unless I had an operation, which I so much dreaded that it seemed better to remain a cripple.

Christian Science came to me in this condition, and words cannot express the hope and the peace that gradually came to my consciousness as I tried to gain some sense of the meaning of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I received absent treatment from a practitioner, and in three weeks I threw my crutches aside, as I could walk without them. My leg, which had been dreadfully enlarged, gradually resumed its normal size and condition. Four months after this I left the sanitarium, and from that time I have had no medical treatment whatsoever. Gradually I was healed of certain other complaints, —rheumatism, a skin disease, throat trouble, and the result of an internal injury. As I emerged from all this darkness and discord, through the light of Christian Science, I began to rejoice in the new concept of Life which had been unfolded to me,—as God, good; and with the slight understanding already gained, I have found happiness in being useful to others.

My gratitude to our dear Leader, Mrs. Eddy, can only be expressed by obedience to the truth revealed through her. Through her having unfolded to us the nature of God as Love, the fears which had held me in bondage have been gradually disappearing. I am very grateful also for the reflection of divine Love through all the dear Christian Scientists who have helped me.

MDLLE. C. J. VILBERT, Elgin Crescent, London, W., Eng.

[Translated from the German.]

It is with a sense of deep humility that I avail myself of this opportunity to express my deep gratitude to God, through whom my thought has been enlightened and I have been freed from my infirmities. My thought also turns to Mrs. Eddy, that great and noble woman whose untiring efforts in behalf of her fellow beings will be a constant inspiration to me and make me strive to put her teachings into practise. The experience which follows may prove encouraging to many who are taking up the study of Christian Science.

After I had been in Science but a short time, I applied for help, as I was afflicted with a swelling on my back which extended from the shoulder-bone to the waist, and had caused me inconvenience for the past seventeen years. At the time when it was forming the physician told me that it would continue to grow larger, and pointed to an operation as the only means of its removal. As I could not make up my mind to have this done, I resorted to medicine and had treatment for ten years, though without success. Then I had massage for a couple of years, besides trying other and drastic remedies, but the growth could not be checked. After the first treatment in Christian Science it was lessened, but somehow I rendered the healing process difficult, as I seemed unable to realize the fact that I was being freed from my affliction. In trying to help others I seemed to succeed in the majority of cases, while my endeavor for myself seemed abortive. Still I was being led into the right way with so much kindness and compassion that God's power eventually became manifest in my own case, that is, the solidified condition which appeared to be the result of various growths combined was dissolved.

I had long before yielded to the thought that I was unable to do certain things on account of defective eyesight, and for two years had been wearing rather strong glasses which had been prescribed by a first-class oculist. These I laid aside, but at my first attempts to read the characters seemed entirely blurred, and I thought I would have to give up trying. While in dejection on account of this failure, the thought came to me that the only reason for my discomfiture was that I had failed to see my own wishes instantly realized. I saw that it was incumbent on me to entertain good thoughts and to realize good, then there would be no failure on my part to realize the all-power of God. My endeavor to work along these lines within a short time brought about an improved condition of my eyes, and I have not used the glasses for the past two years and a half, although I have much reading and writing to do daily.

Blessed as is the experience of being freed from physical ills, it is far less significant than the sense of peace and happiness attending the elimination of mental distress. The latter for a period of seventeen years made me long for death, but this error was refuted in such a convincing

Digitized by Google

fashion that life has become to me worth living; nay, more, for I experience a sense of deep inward peace and blissfulness. I suppose the fault was mine to a large extent, as I was not sufficiently forgiving and compassionate. The watchful compassionate thought, the necessity for which Science inculcates, constantly brings back to my mind the Master's words, "Bless them that curse you;" and his further utterance, "Father, forgive them; for they know not what they do." This gives us a strong hold, and the result usually is seen in that our antagonists are abashed, recognize their mistake, and feel sorry for it, while we have the profound satisfaction of having helped them, through Christian Science, to strive against their faults.

Thus it is that I daily give thanks unto God for having been led into this wonderful way, and my prayer is that I may be able to take part in the blessed activity of this body of people in a spirit of faithfulness and purity.

NATALIE HOLTZ, Berlin-Charlottenburg, Germany.

My purpose in sending in my testimony to the *Sentinel* is twofold. Primarily, of course, it is to help some earnest seeker who wishes to know if Christian Science really does heal and if it helps us to a clearer understanding of God. Then, too, this testimony is written to express my gratitude to God, and to let many kind friends who have helped me to an understanding of the truth know that they did help both by words and actions, even though no attention was paid to them at the time. It was nine years ago that friends in Chicago first advised us to try Christian Science, but it was not until three years later that we (a family of six) decided to turn to it for help, and then it was almost as a last resort. In our family at home I have seen many diseases healed within the last six years, including fevers, boils, burns, headaches of various kinds, and many other ills. In our little family here, consisting of my husband, little boy, and myself, Christian Science has been an ever-present help. I feel healthier and happier than I ever did before.

I hope I may show my love and respect for that dear woman, Mrs. Eddy, who has helped me to a better understanding of God and the Bible, by striving each day to have that Mind in me "which was also in Christ Jesus."

MINNA PORTER ROEDEL, Cairo, Ill.

It is with a deep sense of gratitude that I send this testimony. I am truly thankful to God for what He has done for me through Christian Science, as I have been greatly helped, both mentally and physically. One of the greatest blessings that ever came into my life was the result of my treatment in Christian Science. Before this time life seemed hardly worth living, my mental condition being such that I worried over trifles, things that I now feel will gradually vanish as I advance in the truth. I also had my boy treated for the overcoming of a sinful habit, and he has been greatly helped. I knew that doctors could not do him any good. I am very thankful to God for what He has done both for my boy and myself.—MRS. W. F. CRAWFORD, Roanoke, Va.

I have been receiving the blessings of Christian Science for over five years. At the time I found this truth I had been for years a sufferer from severe headaches, also from chronic bronchial and stomach trouble. I indulged in whisky drinking, and often woke up at night with such suffocating spells that I would think the end had come. I was very despondent at times, and while living in San Francisco, in 1905, a young student of Christian Science, seeing my helpless condition, spoke to me about this teaching. I told her I knew nothing about it, and she asked me if I would like to know. I said I would. She then asked me if I knew I had a birthright; I answered in the affirmative. She asked me if I knew what man's birthright meant. As she went on to explain it to me, I said I was ready to trust God, to trust Him forever, and would never take another drop of medicine. She told me I need not say that, as God would heal me of all my sickness; that man, the divine idea, had never been sick, for God made him good. I seemed to understand her meaning, and grasped it as a drowning person clutches a rope. She gave me a treatment by silent prayer, which seemed strange to me; but I needed help very much, and was rejoiced to feel that I had found it.

That was at eleven o'clock in the morning, and at half past four of the same day all pain left me, also the taste and desire for whisky, though I did not realize for several days that it had gone, as I had not expected it to leave me so suddenly. The neuralgic headaches, bronchial and stomach troubles, also the whisky habit and suffocating spells, were all healed in two months in Christian Science, and I ceased to travel about in search of a healthful climate. A number of physicians had treated me at different times during the fifteen years I had been battling with these ailments. For my slight understanding of the truth that God is light and that in Him is no darkness at all, which I have learned from the Bible, as explained by the text-book of Christian Science in my daily study of the Lesson-Sermons, I am truly thankful. This understanding gives me constant hope and strength. All of the literature is helping me to work out my salvation.

My object in writing this testimony is that it may bring hope and relief to some who are suffering, and deliver them from their sickness, sin, and sense of lack. I am realizing daily that these beliefs are not of God, and for this I would express my sincere gratitude to Him, also to our beloved Leader for giving us this understanding of God as Mind, and man as His image and likeness or reflection.

AMON DORSEY CAIN, Milwaukee, Wis.

I wish to express my sincere gratitude for what Christian Science has done for me. Three years ago I was one of those "having no hope, and without God in the world." I had been a seeker after truth for many years, and had hoped to find it outside the church; but all was in vain, I could not believe without understanding. Darkness was round about me, and sickness, sorrow, and trouble of every kind seemed to be my portion. Man's extremity is, however, God's opportunity, and in September, 1908, I bought a copy of Science and Health by Mrs. Eddy, and to me it has truly been a "Key to the Scriptures." It has opened up the treasures of the Bible, answered every question about God and man, healed me physically and mentally, given me a better sense of love, and from it I have learned that "joy is no longer a trembler, nor is hope a cheat" (Science and Health, p. 298).

I know that without the help of Christian Science I would not be here today to testify to the healing power of divine Truth and Love, made clear to all mankind through the teaching and life of Mrs. Eddy, and I am grateful that my thought is changed from a material basis to spiritual understanding. May my life bring forth the fruits of Spirit, to prove my thankfulness for the benefits received. I am confident that a faithful study of our text-book will heal all manner of disease, harmonize temperament, and give peace and rest.—MRS. ANNA VOCKEROTH, Santa Barbara, Cal.

On the afternoon of May 18, 1911, I was taken very ill with severe pains in the right side of the abdomen, which became so intense that I was compelled to go home. My wife and myself being Christian Scientists, she at once telephoned for a practitioner, who gave me treatment and remained with me several hours. On the 20th she remained all night, as during these two days and nights my distress had been very great. The following day my wife called in a physician for the purpose of diagnosis, and his report was that I had appendicitis and according to *materia medica* was in an extremely critical condition; the next day

Digitized by Google

he reported that peritonitis had developed. I kept steadily on with Christian Science treatment, taking no medicine whatsoever, and on the 24th I was able to sit up for several hours. On the 30th I took an automobile ride to a distant town, and on June 8 returned to business. Considering that I am seventy-one years of age, my recovery is not only remarkable, but very gratifying to myself and family. My desire is to prove my gratitude rather than tell it, thus to show that I really am grateful to God, also to Mrs. Eddy and to all who have so kindly helped me.

R. H. POTTER, Philadelphia, Pa.

Some time ago I was suffering greatly from what the physicians called an extreme nervous condition, with all its attendant ills. Indeed, it seemed to me I had almost all the ills that "flesh is heir to." My stomach was so affected that I could eat only certain kinds of food, taken in a limited quantity at regular intervals. I was filled with fear and could not sleep well. At least six doctors were employed, but I steadily grew worse. I read books on "faith-cure" and mental suggestion, etc., but was not helped. I then heard of Christian Science, and begged my mother to let me try it. With her consent I did so, and after one treatment the stomach trouble disappeared and I began to eat whatever was set before me. The treatment was continued for a time, and I read Science and Health and other Christian Science literature, with the result that I was perfectly healed,—I emerged from a gloomy sense of existence into a world of light and beauty.

Since that time I have been so well and happy that it is a matter of comment among my friends. Soon after coming into Christian Science my hands were badly chapped, but I overcame this condition by realizing for myself God's allness and the perfection of all that is real, although I was urged by members of my family and school friends to use material means. I am helped daily, and in every way, through my growing understanding of Christian Science. I attend the Sunday school and am deeply grateful for this opportunity to learn more of God, "who forgiveth all thine iniquities; who healeth all thy diseases."

PERLE HOPSON, Madison, Wis.

[Written for the *Sentinel.*]

CONSCIOUSNESS.

GRACE A. BOUGHTON-LEIGH.

LIFE knows no death!
In all the wondrous harmony
Of law is continuity—
Life never fails.
'Tis mortal man that seeks to find
Some cause by which he can unbind
The earthbound fetters of a mind
That owns decay.

Truth knows no lie!
By lifting thought above the earth
Into new spiritual birth
Truth reigns supreme.
'Tis human thought that would degrade
The universe that God has made
And find a false creation laid
Through mortal will.

Love knows no hate!
The sunshine of an inward peace
Brings to each heart a sure surcease
Of pain and woe.
Man needs but turn unto the light
To know God's kingdom is in sight
And Life is his in power and might
Forevermore.

FROM OUR EXCHANGES.

[*Continent.*]

The outstanding characteristic of the political campaign of the year 1912 is the sensitiveness of the electorate of the Republic to moral issues. The moral heights of a half century ago have been climbed again. The radical moral idea that the people must first of all do right for and by one another, no matter whether business prospers and parties win or not, begins to dominate once more the political thinking of the typical American. The potent note to command voters today, as the politicians have already come to recognize, is an appeal to their conceptions of fair play, just chances, and fearless loyalty to right. Platforms and stump speeches have not abandoned the old materialism wholly; there is still argument to attract the self-seeking. But above all this stands clear one significant fact: the party leaders of the present year are each and all counting for their hopes of victory on their ability to convince the people that their respective candidates represent the best expectation of cleaner, fairer, squarer, more wholesome life in the land.

This eagerness of today's politicians to strengthen themselves in those moral appeals that their predecessors spurned, is but a sign of the spirit which their sensitive ears discover in the heartbeat of popular sentiment. The current of public feeling today carries in solution a yet uncrystallized but a real and true longing that America shall be the home not only of the brave and free, but of the good, the noble, the helpful, and the unselfish. A leadership strong enough and sincere enough not to balk at any hill of difficulty—thorough enough, too, to get at the root of immoralities which it assails—is the absolutely necessary condition for realizing the power of righteousness in this mighty wave of moral intent now surging to flood among the American people.

[*Christian Work and Evangelist.*]

The coming into consciousness of those supreme conceptions, those holy aspirations for the more perfect realization of God and of His reign in the human, those flashes of light beyond that of this world which enable us to see with spiritual or prophetic vision, those purposes which take us with Christ into the sovereignty of the universe, are, I believe, to be explained as we make use of these powers of experiencing reality beyond the reach of the intellect. Our poor changing theological systems show that truth keeps coming as the years go rolling on, and the old intellectual explanations become the dead forms which once clothed the living truth as man could then explain at it. Growth has been in perception of the truth, not in the truth itself. God has not become righteous, merciful, forgiving, holy; man has outgrown his dim perception of God's nature, character, and methods, as man himself has grown in the ability to receive the perception of the truth.

[Dr. A. R. E. Wyant, reported in *Chicago* (Ill.) *Record-Herald.*]

It is most unfortunate for the church that ministers have so long added a burden to faith by teaching that pain and disease are expressions of the divine will for us. Our modern clergy have accepted the scientific medical view of sanitation, but many still hold illogically in their funeral sermons, prayers, and hymns to the traditional idea that sickness and suffering are according to the will of God for man. Even without the word of science, common sense as well as a rational interpretation of Scripture, should teach us that God is not the author of our troubles. He is against sin, disorder, weakness, pain, lack of self-control, and all those forces that weaken life. Furthermore, wrong conceptions of God and of His relations to His creatures depress the soul, overwhelm it with melancholy delusions, engender all sorts of functional nervous troubles, and hinder rather than help in bodily and mental illness.

[*British Congregationalist.*]

"I came to cast fire upon the earth,"—that is our Lord's mission still. He is in the world to start conflagrations and set things in a blaze—for there is many an institution and feature of our modern social life that has got to perish in his holy flame. If we are lovers of things as they are, there are elements in Christ's teaching which we can regard as nothing less than dangerous, revolutionary, incendiary. Take his teaching about wealth for illustration. It is revolutionary teaching. We have entered into a conspiracy of silence about it, or we try to destroy its force by pretending that he did not mean what he said. But it will not be ignored, and it is in vain we seek to explain it away. Wealth, said Jesus, is a peril; and when possessed, it is only a trust—to be used for the good of men and the glory of God. When Jesus gave utterance to those statements, he cast fire upon the earth. In the long run they are going to make impossible the extremes of wicked and wasteful wealth at one end of the social scale, and woful want at the other, which are the reproach of our civilization today.

[*Outlook.*]

Many people are troubled because the life of faith does not lie before their feet defined by sunshine; others doubt the reality of their surrender to the divine will because their emotions are not touched and life does not become instantly "one grand sweet song." This means generally that emotion is not the natural expression of their temperament. Religion is not a reality in a man's life until it takes hold of his will; and a man becomes a Christian, not when he says, "I feel" or "I believe," but when he says, "I will." For it is only as a man wills to make his belief a part of his life that he passes out of the region of intellectual assent into the region of vital religion.

[*Christian World.*]

We are a race of discoverers, and in an age of discoveries. The vast advances of the past are but the preparation for greater disclosures yet to come. The onward movement is irresistible, and will go on at an ever accelerating pace. Ill will it fare with the religion, the church, that is afraid of the coming knowledge; that builds its paper bulwarks against it. The only enduring faith is that which roots itself in fact; that allies itself with all that is known, and all that is yet to be known. And yet, let us remember, the growing light will only widen the circumference of the surrounding mystery.

[*Watchman.*]

Love ought to be the most powerful and effective motive in religion. It should produce loyalty, faithfulness, diligence, and elicit the utmost of human devotion and service. Whatever may be the earnestness, prayers, penances, pilgrimages, ritual performance, and deeds of charity promoted by the fear of judgment and perdition, love is superior to them in its results in the human heart and in the redemption of men. Love produces a free, glad, earnest, ready, constant service to Christ.

[*Universalist Leader.*]

Make it easy to do right, and men will not do it just because it is easy; but make a man want to do right, and nothing can hold him back from the doing of it. Build walls of laws about evil men, and they will grin at you over them: in proportion as the hearts of men are right do they need less laws. Here is a field for service, perhaps the field for the church in the specialization of work which now prevails. The only cure for outside dishonesty is truth in the inward parts.

[*Christian Advocate.*]

The elixir of life is not a physical compound; it is a spiritual possession. There was an old apostle who said something about "the power of an endless life." That, through Jesus Christ, every man may have.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Three new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"The Father's Business," containing five articles as follows: "The Abundance of God," "One Business," "The Closed Hand," "Christian Science in the Business Life," and "Truth is Power."

"The Law of Kindness," containing four articles and a poem, entitled as follows: "'Forgive, and ye shall be forgiven,'" "The Habit of Hating," "The Law of Kindness," "'Ye shall be as gods,'" and "Two Roses."

"Confidence and Supply," containing the five following articles: "'The Lord thy confidence,'" "Time and Healing," "'What hast thou in the house?'" "Constructive Work," "Giving and Receiving."

Another new pamphlet has just been published containing the lecture of William R. Rathvon, entitled "Christian Science: Its Results."

These pamphlets are now on sale; 32 pages and cover, at the prices of the regular pamphlets.

Catalogue No. 20, June, 1912, will be supplied to reading-rooms upon request. This catalogue contains complete lists of the works of Mary Baker Eddy published by Allison V. Stewart, and of all publications issued by the Society.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass, should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth street, Boston, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the Blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 70 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage.

For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy . . .	$ 05	$ 06	$ 07
Twenty-five copies .	1 00	1 15	1 30
Fifty copies	1 80	2 05	2 40
One hundred copies .	3 00	3 50	4 25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XII indicate the year 1912; XIII, 1913. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Announcement has been made by the directors of the port of Boston, Mass., that they have appropriated three million dollars for beginning the waterfront development. The present allotment from the nine million dollars available to the directors is to give access to the commonwealth's property off Jeffries point, and for such additional property or rights as may be found necessary for railroad tracks, connections, switching yards, freight yards, or rights of way extending from the state's property to the location of the Boston & Maine railroad in East Boston. The money will also be used for laying out, constructing, and grading highways, bridges, railroads, or other structures which may be necessary to establish railroad connections between any existing railroad and the state's property, or property which may later be secured adjacent thereto. The idea is to erect piers and wharves on this property and to do any dredging necessary.

The budget of New York city for 1913 is not likely to be much under two hundred million dollars. It was about one hundred and eighty-nine million dollars for this year. The budget committee of the board of estimate has decided to increase the salaries of first-grade (year) patrolmen from eight hundred to one thousand dollars a year, and that of second-grade patrolmen from nine hundred to one thousand dollars a year. The increase will be put into the new budget, affecting four hundred and twenty-eight first-grade men and five hundred and fifty-three second-grade men, and adding a total of one hundred and forty thousand nine hundred dollars to the budget. No decision has been reached by the committee yet as to the increase asked on behalf of the higher members of the department and for members of the fire department.

The public schools of New York city are face to face with one of the results of the equal pay law, which secures like salaries for men and women teachers. The board of education last week appointed as teachers in the elementary schools, three hundred and eighty-eight women and twenty-two men, and with these appointments the eligible list for men is exhausted. It is improbable that any more men teachers will be appointed very soon, for the waiting list shows six hundred and eighty-eight women and no men. Before the equal pay law went into effect a man teacher started at nine hundred dollars and went to twenty-one hundred and fifty dollars in twelve years; now he starts at seven hundred and twenty dollars and may reach fifteen hundred dollars after fifteen years.

The Young Men's Christian Association building of Providence, R. I., construction of which is under way, will be one of the most complete association buildings in the country. The structure alone will cost approximately four hundred thousand dollars, and the land cost nearly thirty-seven thousand dollars. The building is to be eleven stories high and will have two more floors below the street level. Its style of architecture is English, and instead of opening directly off the street it has its main entrance from a courtyard.

The lighthouse service of the United States costs about five million dollars a year. The greater part of this sum is used in caring for the lighting of the coasts.

International.

The final draft of the treaty of peace between Turkey and Italy was signed Oct. 18. As the Sultan of Turkey has issued a firman granting autonomy to the Arabs of Tripoli and Cyrenaica, the King of Italy has made public a decree according full amnesty to the inhabitants of those two provinces who have been guilty of any acts of hostility against the Italians. All prisoners and deported persons are to be released immediately. The decree assures the Mussulmans complete religious liberty with the right to continue to introduce the name of the Sultan in the public prayer. It announces that a representative of the Sultan, to be designated by him, will be recognized by the Italian government. The pious foundations will be respected as heretofore and there will be no interference with the relations of the Mussulmans with their religious chief, who will be known under the title of Cadi, and will be appointed by the Sheik-ul-Islam.

The first meeting of the German League for Promoting International Conciliation was held in Heidelberg recently. The object of the league is to promote an interest in and an understanding of the importance of establishing friendly relations between nations, especially respecting international rights. The league proposes to adopt the usual means for accomplishing this result, such as meetings, lectures, the distribution of pamphlets, and correspondence in the press. For the present the league will confine its activities to Germany, but the members hope later on to affiliate with an international organization. Representatives from similar organizations in other countries were present at the meetings of the league.

The commission appointed some time ago by the Paris municipality to study the best means of supplying Paris with a further supply of pure water have finished their investigations. The main object of the commission was to decide when and under what conditions an additional supply of one million cubic meters of water could be obtained. After visiting the valley of the Loire the commission are of the opinion that between Gien and Nevers it is quite possible to procure all the supply that Paris needs. Lyons, Geneva, Neuchâtel, and Zurich have also been visited, and many experiments made to test the quantity and quality of the water available for the use of Paris from those districts.

The board of investigation constituted under the combines investigation act in its report to the government made public last week finds that the United Shoe Machinery Company of Canada, the parent company of which has headquarters in Boston, U. S. A., is a combine, and that the clauses of its leases restricting the use of the leased machinery operate in restraint of trade. The board, however, in view of all the circumstances, recommends that the fine provided in such cases of one thousand dollars a day shall not come into effect for six months instead of at the end of ten days after the publication of the judgment.

Twenty-five million dollars is the estimated damage done by the typhoon which recently swept the Philippines. The storm extended over a wide area, touching Surigao in the south, Tacloban in the north, and crossing Leyte, Bohol, Cebu, Negros, and Panay. Five small coasting steamers were driven ashore and were wrecked and a hundred small sailing vessels were sunk or beached.

Industrial and Commercial.

The largest irrigation enterprise ever attempted in the San Juan basin, Col., has become a certainty through the signing of contracts for construction work. The project includes the irrigation of three hundred and fifty thousand acres in Montezuma county, at an expenditure of five million dollars. The system is to be known as the Dolores irrigation project. It consists of damming the Dolores river and creating a storage reservoir of approximately three hundred and fifty thousand acre feet capacity. This stored water, supplemented by the normal flow of the river over and above what is now used by the Montezuma system, and after allowance has been made for any possible future growth, will be carried through a short canal and the water turned upon the upper rim of a series of immense red land mesas, sloping to the southwest and forming an agricultural land unsurpassed in the state for diversified farming, fruit growing, and stock raising.

Three hundred miles of electric railways, connecting Edmonton with numerous towns, coal mines, gravel deposits, grain and dairy districts, brick, concrete, and other manufacturing plant in central Alberta, will be built by the Edmonton Interurban Railway Company, which has already invested more than ten million dollars in Canada. The first unit of the system from the city limits of Edmonton to St. Albert will be in operation by June, according to officials. Other lines projected from Edmonton are: To Beaver Lake and Tofield, forty miles; to Vegreville, sixty miles; to Lac Ste. Anne, fifty-six miles; to Namaye, twelve miles; to Mewassin, forty-five miles; to Pigeon Lake, forty miles; to Morinville via St. Albert, twenty-eight miles.

The Kettle Valley line in British Columbia has a survey party in the field locating the final lines for the section down the Coquahalla river valley from the summit of the Hope mountains to Hope, on the Fraser river, a distance of forty miles. This section will be used jointly by the Kettle Valley Company and the Great Northern. The cost of this work is estimated at one hundred thousand dollars a mile. The Fraser river will be bridged near Hope at a probable cost of seven hundred and fifty thousand dollars. There will be seventeen tunnels between Hope and the summit, and the grade as against eastbound traffic will for a portion of this distance be two and two tenths per cent, compensated on curves.

Latest returns from the Oregon potato crop indicate a total production of sixteen million bushels. The 1911 crop was seven million nine hundred and twenty thousand bushels. The increase this season is due both to increased acreage and to the greater yield per acre. Conservative estimates place the yield at an average of two hundred bushels per acre.

The apple crop of the United States for 1912 is of generous size, showing some increase over that of 1911, and a very substantial gain in the commercial orchard belt, the estimate being thirty-eight million three hundred thousand barrels.

The White Star Company announces that its new fifty-thousand-ton steamer will be named Britannic. It will have a complete inner skin and the bulkheads will be increased. It will be capable of floating with six compartments flooded.

An expert's recent estimate placed the mileage of the world's telephone wires at 29,566,000.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

HABIT OF GUESSING.

CLARENCE W. CHADWICK.

GUESSING is a characteristic of the mortal or carnal mind. The one divine intelligence or Mind alone knows all things. Mortal mind knows nothing that is absolutely real, perfect, or eternal. Its so-called knowing or knowledge is purely relative or temporal. It knows nothing of God, "for to be carnally minded is death;" hence a mortal's need of a Saviour to show him how to rid himself of mortal mind.

Christ Jesus came to show mankind how to be right-minded, how to get into touch with that which thinks and knows spiritually. It must be admitted that Jesus never advocated the popular theory of minds many, capable of thinking both good and evil. He never taught that brain is the seat of consciousness or intelligence. It is obvious that he had an entirely different view of the human economy from that entertained by mortals. He did not look into any temporal structure for volition, consciousness, intelligence, life, or mind. He possessed an understanding of Truth gained by no ancient or modern school of philosophy, and it was this understanding which enabled him to annul so-called material law and testimony. It was this understanding which antagonized and still continues to antagonize the materialistic and religious thought of professing Christians. If his understanding of the nothingness of matter was demonstrable and therefore correct, the question arises, Why should those who profess to love Christ, reject his teaching? The answer is plain, "The carnal mind is enmity against God," and "not subject to the law of God." With no real intelligence to think right, its only alternative is to guess or surmise as to the nature of both Spirit and matter.

This is what has been taking place down through the centuries, and it will continue just so long as humanity refuses to accept and to apply Jesus' teaching concerning cause and effect. Is it not a form of mental indolence which insists upon remaining in a state of ignorance concerning God, man, and the universe? And yet this is precisely what mankind is doing in refusing to accept the Christ-teaching. Men have imagined for centuries that they could believe their way into the kingdom of heaven, yet Christ Jesus advanced no such theory. The belief that heaven is a locality and that man has to die in order to reach it, is without support, although there are many who have fallen into this habit and who are very loath to be told anything to the contrary. The supposition that an immortal soul inhabits a mortal body and becomes disembodied after what is called death, belongs wholly to the realm of human speculation. There is no tangible proof of any such theory being true, while there is much to contradict it.

The belief that man is mortal, sick, and sinful, is founded solely upon sense testimony. God could not possibly convey any such information to His child. Hence the conclusion that the belief in mortality is only another product of the guessing habit. God never ordained it, therefore it is no part of the divine nature. Whoever knows anything of God knows that God never conveyed the thought of sickness to man. To believe in sickness, therefore, is to turn away from God and to accept the testimony of that which contradicts divine intelligence. Is such a course anything more than guessing or thinking at random? Nor does God cause man to think a thought of sin or evil. What is he doing, then, who thinks such a thought? Is he knowing, or is he simply supposing that sin is something? Unless evil is true, in other words, the offspring of truth, it is unthinkable and unknowable. Any so-called process of thinking, therefore, that permits, accepts, believes, or claims to know sin or evil as an actuality or entity, drops to the level of human surmising and guessing.

Every advance heavenward by the individual and by mankind at large indicates an improved order of thinking, characterized by less guessing and more knowing as the thought of evil diminishes and good is more and more acknowledged to be all in all. Christian Science is here to hasten "the coming of the day of God," good, when "the earth shall be full of the knowledge of the Lord, as the waters cover the sea." The healing that is so much in evidence today in Christian Science is the direct result of this "coming of the day of God" in the affections of men. Humanity is awakening from the day-dream of mortal existence to find that man is not under any law of "chance and change," not in bondage to five physical senses which would keep him forever guessing concerning his origin and destiny. Jesus possibly referred to these so-called senses when he said, "All that ever came before me are thieves and robbers," for certainly the evidence of material sense is what has obscured and will continue to obscure the coming of Christ, Truth, in all ages.

It is material sense which obstructs, disputes, and in manifold ways resists the natural and lawful spiritualization of human consciousness that is incumbent upon every human being before he can free himself from the unprogressive habit of guessing. It is absolutely impossible to guess one's way out of matter into Mind or Spirit. He cannot even guess or imagine himself well and happy. He must gain spiritual knowledge or understanding before he can become conscious of or realize man's spiritual nature and his unity with God. He must possess a working knowledge of the one divine Principle of being, which will mean to him the ever-present availability of omnipotent good to overcome any and every educated tendency or proneness to guess what life is and what it includes. It will enable him to lift thought above and out of a maze of supposition and uncertainty into the clear atmosphere of positive, conscious knowing which constitutes the kingdom of heaven on earth.

In Science, man is not a creature of habit. He is the embodiment of the eternal attributes of God, His own perfect image-likeness. He is never obliged or even tempted to guess at anything. He knows at all times, because he reflects the Mind that is God. Suffice it to say that he who believes what he sees through the material senses and sees only what he believes, is far from being the man to whom God gave dominion "over every living thing."

"MAGNIFY THE LORD."

LEON GREENBAUM.

MRS. EDDY has declared that "in Science, you can have no power opposed to God, and the physical senses must give up their false testimony. Your influence for good depends upon the weight you throw into the right scale. The good you do and embody gives you the only power obtainable. Evil is not power" (Science and Health, p. 102). The belief in personal evil *alias* an evil personality is therefore just as unscientific as the belief in personal good *alias* a good personality. Said the Master, "Why callest thou me good? there is none good but one, that is, God." Again, when in the wilderness, under the severest temptation that ever befell any one, Jesus refused to admit the reality of evil as either power or personality.

The belief in a person or a power apart from God, immediately separates the believer from God. Whatever separates man from his brother separates man from God, and whatever separates man from God separates man from his brother, that which separates always being a belief in the reality of the unreal. This attitude toward all evil must have been contemplated in the teaching of him who said, "When thou prayest, enter into thy closet, and . . . shut thy door;" especially since he left no directions for opening the door or coming out of the closet again, and the apostolic command is to pray without ceasing. The condition precedent to entrance into such a state of consciousness is an all-absorbing motive for absolute obedience to the commandments. As in ancient time, the demand for absolute obedience to the commandments is manifested to material sense as the fearful thunderings and lightnings on Sinai; and the tendency of faithless mortals, like the children of Israel of old, is to remove and stand afar off, to view the demand with awe.

"Thou shalt have no other gods [powers] before me. . . . Thou shalt not bow down thyself to them, nor serve them [the beliefs of evil as power]: for I the Lord thy God am a jealous God [absolute good], visiting the iniquity of the fathers upon the children unto the third and fourth generation of them that hate me." The iniquity of the fathers, the eating of the fruit of the tree of knowledge of both good and evil, is the false testimony of the physical senses,— the belief that discord is as real as harmony, that hate is as real as Love, that error is as real as Truth, that non-intelligence is as real as intelligence; these are the beliefs of that carnal mind which is enmity against God and which is the source of all unreality.

Christian Science repels and effects a mental analysis, wherein "there is nothing covered, that shall not be revealed; neither hid, that shall not be known." That truth overcomes error, wisdom overcomes ignorance, law overcomes lawlessness, virtue overcomes vice, are self-evident facts in the Science of being which speak for the sovereign power of divine Principle. That power which overcomes any supposititious unlikeness must be real, therefore truth is real, error is unreal, wisdom is real, ignorance is unreal, harmony is real, discord is unreal; love is real, hate is unreal; good is real, evil is unreal.

Any metaphysical process which weighs error in the scale of being as having a particle of reality or power as opposed to Truth, reverses the order of Science, its subtle tendency being to assign to matter (all error) the power and prerogative of Spirit. Love attracts, hate repels, good attracts, evil repels, harmony attracts, discord repels, purity attracts, impurity repels, intelligence attracts, non-intelligence repels, all of which proves the irresistible attraction of divine Love, and shows what Love will carry to completion its regenerative work. It also explains what Jesus meant when he said, "And I, if I be lifted up from the earth, will draw all men unto me."

Mrs. Eddy defines the Christ as "the divine manifestation of God which comes to the flesh to destroy incarnate error" (Science and Health, p. 583); it is that manifestation of Principle which comes to human sense in order to transform everything unlike itself. Thus we are enabled to understand what John meant when he wrote, "Now are we the sons of God, and it doth not yet appear what we shall be: but we know that, when he shall appear, we shall be like him; for we shall see him as he is." The human sense of being approaches the nearest to man created in the image and likeness of God when God's thoughts, demonstrable truth, are heard and allowed to govern. Spirit is a law to itself; and as consciousness ceases to conform to mortal beliefs and becomes transformed by its renewal in Spirit, it partakes in degree proportionate to the translation, of that quality and law of Spirit which recognizes no unlikeness, since it is impossible for something to recognize or be affected by nothing; and proves by the signs following that it is the absolute spiritual law which comforts the sorrowing and heals the sick. Divine Principle understood and obeyed is Life eternal. Principle being eternal, that life which reflects, expresses, and represents Principle, also manifests its infinite and omnipresent potency, indestructibility, and immortality.

WORK OF THE DAILY NEWSPAPER.

ALICE PILSBRY.

THE right work for the daily newspaper, in the holy politic, is educative and uplifting, and the press at large is slowly coming to a more general recognition of this fact. It has been claimed that the object of the daily paper is merely to reflect or give expression to public opinion, but is this strictly true? Has not the daily proved instead to have been an instrument used to mold public opinion? What other means of speaking to large numbers of people is so far-reaching as the daily paper? With its message it enters immediately into the current of human thought, either to pollute or purify. How many men or women arrive at a decision on a subject they are not fully conversant with only after they have gained the requisite information from their daily paper? And when public opinion trembles in the balance in some crisis, through what medium can it be so quickly be focused and guided? Through what but the daily newspaper? and to the extent that the paper lends itself to the truth or the error on the question at issue, does it become morally responsible for the outcome?

Upon the field of journalism where humanity is grappling, vainly endeavoring to untangle and understand the intricacies of mortal phenomena, *The Christian Science Monitor* appears as the pioneer of higher ideals which are destined to exert directly and indirectly an incalculable influence, and at this clarion call of the ages to clean thinking, we lift our eyes to the heights, knowing that the day of salvation is at hand. The *Monitor* in its every department is a newspaper in the best meaning of the term. Daily there passes before its readers the pageant of world events. It takes rank at once with the best in literary and school, because it gives clean, concise, and authentic information of "what is making," of politics, commerce, discoveries, inventions, of music, the drama, athletics, etc. Freed from daily contemplation of the petty and evil, and strengthened by a wide clear view of things constructive, men's thoughts are lifted, broadened, and gain poise, becoming, as a writer has said, "orderly, consecutive, systematic, lawful."

One can well believe that from a similar vantage ground of trained and elevated thought Abraham Lincoln dictatorially regarded the "silent little-fields" when [illegible] tous spiritual forces are unceasingly being manifested was fitted to "hear a word behind [him] saying, This is the way, walk ye in it." Are we, as citizens of this great country, living up to the high privilege and duty of applying our own thought daily, with clear discrimination and excluding all else? Are we fully appreciating our Master is saying, in words "the that runneth may read," and to what extent this affects our loved ones and all humanity?

THE CHURCH OF CHRIST, SCIENTIST.

KENNETH B. ELLIMAN.

THE name of the Christian Science church is a puzzle to many who do not understand its meaning. The present writer well remembers his first sight of the name, which happened to be one of the Christian Science churches of New York city. As he walked past the building, he pondered over it: " 'Church of Christ, Scientist'! Jesus a scientist! How could that be, when in Jesus' time there was practically no science such as we know?" his thought, naturally enough, reverting to the physics, astronomy, biology, etc., he had just been studying in college, and he finally concluded that the members of this strange church must be believers in hypnotism, who were trying to back up their belief by claiming that Jesus was some sort of a scientific hypnotist. Naturally his heart revolted from such a thought.

It so happened, however, that he was in desperate need of healing, and physical and mental suffering led him, very diffidently, to seek out a Christian Science practitioner. Of the wonderful healing and other benefits which he received as a result of his visit, it is not the object of the present article to tell, but during the more than ten years since that day he has come to see something of the meaning of this name, and to understand why the adjective "Scientist" in the title applies to the word "church," and why it was adopted to distinguish it from other Christian churches. Indeed, in the early days of the movement that part of the name was enclosed in parentheses, thus: "Church of Christ (Scientist)," appearing in this form in the *Christian Science Journals* published from 1885 to 1892.

In the light of the teachings of "Science and Health with Key to the Scriptures," the distinction between the personality of Jesus and the Christ-idea becomes plain, and Mrs. Eddy's statement that "Jesus of Nazareth was the most scientific man that ever trod the globe" (Science and Health, p. 313), no longer shocks, but seems perfectly natural. For is not science exact, demonstrable knowledge? And did not Jesus have and demonstrate the most exact knowledge of divine law? Jesus claimed no mind or power apart from God, whereas hypnotism rests on the belief in a mind apart from God, located in brain and nerves and having power in itself. This belief, being contrary to the truth of being, is unscientific,—mere superstition.

The Christian Science church is founded on the Christ, the true idea of God, which Jesus of Nazareth expressed. Christian Science recognizes Jesus as the Wayshower, the Son of God, but not as God. It rests on the foundation of one God only, one Mind or Spirit, as Jesus himself said. When one's belief in God progresses through faith or steadfastness to understanding, and he is able to prove, by the healing of sickness and sin spiritually, that his understanding is correct, then he may be said to have a demonstrable or scientific knowledge of God. This knowledge, and the Principle and rules for demonstrating it, are revealed in Christian Science, and surely the possessor of such knowledge may truly be called a Christian Scientist.

The early Christian church was at first merely a gathering together, or assembly, of believers in the same idea. Thus, when a number of individuals who had gained the above described scientific understanding of God and His Christ became associated together, what better name for their association could be suggested than the one chosen by the Discoverer of Christian Science, viz., Church of Christ, Scientist? Many who came to Christian Science for help had become tired of all religious creeds and forms, which they felt to be hindrances to true spirituality, and as they had associated the idea of church with ritualism and ceremony, they hesitated to ally themselves with the Christian Science church. But no one need have this fear, for the Church of Christ, Scientist, is based not upon creed or ritual, but upon demonstrable truth.

The human mind has, from long experience, become dependent on some outward form of worship, and in its simple service the Christian Science church answers this need, and opens an easy way out of form and ceremony into the freedom of the spiritual life. Paul's statement to the Corinthians, "Now I know in part," applies to all Christian Scientists, and to increase the understanding of those who already know something of this great truth, while offering an opportunity to others who wish to learn for the first time of it, the weekly reading in our churches of correlative passages from the Bible and Science and Health, together with reverential prayer and the singing of appropriate hymns, seems to be a present necessity.

Christian worship will probably retain some outward form "till we all come into the unity of the faith, and of the knowledge of the Son of God." When that happy day dawns the whole world will have realized Mrs. Eddy's definition of the spiritual church as "the structure of Truth and Love; whatever rests upon and proceeds from divine Principle" (Science and Health, p. 583).

SPIRITUAL PROGRESS.

MIRIAM ORMONDE SMALLWOOD.

THAT trite old paradox, "reaching after the unattainable," is subject-matter for moral reflection. In the natural course of human progress the right thinking individual either shows his relation to man's divine origin, or betrays the spiritual impulse within him by a desire to advance steadily, and one cannot advance from a given point without first having reached that step by a similar stage. No man ever appreciated to the full the good he had, without reaching greater good. It is in dissatisfaction with present blessings that danger lurks; for these are often the winding road leading by sure steps, though the human consciousness so often fails to realize it.

Spiritual or moral advance is born not of apathetic satisfaction with any kind of condition which may happen to exist, but of content—that mental harmony to which Paul refers when he says, "I have learned, in whatsoever state I am, therewith to be content." The very nature of content is its own recompense. Because man never stands still, he reflects eternally unfolding life; new beauty, higher ideals, are constantly awakening in him. A great writer says, "Dream delivers us to dream, and there is no end to the illusion." This is true of mortal existence, but with Truth as our guide we are constantly advancing, constantly rising from material concepts, which are indeed only dreams, into what is substantial, and reality is approached. We live on a higher plane, with thought freed from much of its shackling—thought taking heed to the admonishing of Spirit.

If, as Christian Science teaches, man coexists with God and reflects Him, man can no more stand still, he can no more abide in inaction than can God; as God's idea, he is eternally unfolding. St. John says, "It doth not yet appear what we shall be: but we know that, when he shall appear, we shall be like him." Humanity has not yet escaped from the bondage of mortal conditions, but men are like children on the threshold of infinite Life. Above the horizon of material vision the star of Truth has risen, and as the spiritual sense expands mortals are led out of the wilderness of doubt and belief into the promised land of Life and Love. Step by step they advance as do children by definite stages, "love, joy, peace, longsuffering, gentleness, goodness, faith" —"the fruit of Spirit"—being the ladder on which the ascent is made.

Christian Scientists are not unfamiliar with the fact that "the Sun of righteousness" seems sometimes to pass under clouds of mortal belief, and that during these experiences spiritual growth appears to stagnate for lack of the divine nourishment; but with the breaking away of mists and vapors and the reaching out again for the infinite support,

Digitized by Google

the sense of divine uplift is more exalted than before, and the deepened desire on the part of the spiritual consciousness is a strengthened hold on the divine inflow. Here we may glimpse the meaning of the words of the prophet Habakkuk, "Thou art of purer eyes than to behold evil, and canst not look on iniquity." The divine law of attraction is eternally operative. God is forever giving out and drawing to Himself His own kind and quality. The mortal dream is not of Him; but the spiritual longing He knows and satisfies. As Mrs. Eddy has said: "Man is the offspring and idea of the Supreme Being, whose law is perfect and infinite. In obedience to this law, man is forever unfolding the endless beatitudes of Being; for he is the image and likeness of infinite Life, Truth, and Love" (Miscellaneous Writings, p. 82).

Moreover, such is the inexhaustible and unswerving nature of Love that, like the prodigal son, we may squander its blessings, ignore its opportunities, defy its laws, and still it is ever ready to receive us. "Come unto me," is the eternal call, "and I will give you rest" the unfailing promise. But only as we come unto Him can we gain the promise, only as we abide in Him can He bestow it. Aspiration is the highway to elevation, and spiritual elevation gives rise to the highest conditions of which the human consciousness is capable. The reaching out on the part of man for the eternal good is unceasing, because that good is unlimited. Deeper and deeper it descends into his being, in greater and greater influxes as divine illumination opens the channel; and the farther away the prize seems, the nearer is he to the goal. For, as Browning says,

> A man's reach should exceed his grasp,
> Or what's a heaven for?

"GOD SO LOVED THE WORLD."

AVE GALBRAITH.

IT has frequently been remarked by those interested in the study of Christian Science, that it throws a wonderful search-light over old and well-loved texts and passages in the Bible, and thus makes it seem a very different book. Though it may have been pored over before, the spiritual aspect of it has remained more or less hidden, until thought was illumined to perceive it. Such an experience recently came to the writer as she was pondering the deep saying of Jesus as recorded in John's gospel, "God so loved the world, that he gave his only begotten Son, that whosoever believeth in him should not perish, but have everlasting life."

The old thought of this passage was of course that of a stern but just Father, who, in order to appease His wrath because of the sins of the people whom He Himself had made, required that His dearly loved and perfect Son should be sacrificed. The love for the world was entirely lost to our thought, in the wonder that such an extraordinary sacrifice should be either required or desired. Even after the writer had gained some knowledge of Christian Science, this text seemed to be a stumbling-block in the way of the understanding that God does not know the evil of the world which must be atoned for and blotted out. At length, however, the light dawned on her thought, as light always will if we realize that there is only one Mind which radiates infinite intelligence, and from which we may gather ever new increments of truth.

The spiritual meaning of the passage became clear in the realization that as "divine Love always has met and always will meet every human need" (Science and Health, p. 494), so through the ever-presence of that Love which knows only perfect being, at the exact time when the world was in some measure ready for it, the impersonal Christ came to the earth, through the pure consciousness of Mary and through the perfect thought of her sinless son, who demonstrated the Christ to those who could understand his words. Thus Christ, Truth, will ever continue to come to the awakened thought of men, to heal, purify, save, and make practical the at-one-ment with divine Love which the whole world needs.

Some years ago, another pure woman, having realized the need of mortals for a renewal of the teachings of the Master, attained a height of spirituality which enabled her to bring to light the real meaning of the immortal words, and renew the healing works of the lowly Nazarene, in this age. As the result of her illumination and life-work, men are being taught to look away from an anthropomorphic God, and a personal Saviour, to divine Principle—Life, Truth, Love—to deny materiality and the works of the flesh, and to bring the healing truth into practical redemptive touch with every-day life and business, so that every thought and doing shall be in obedience to Christ. Thus the wonderful prophecy of Isaiah is being fulfilled today: "Therefore the redeemed of the Lord shall return, and come with singing unto Zion: and everlasting joy shall be upon their head: they shall obtain gladness and joy; and sorrow and mourning shall flee away."

NORMALITY.

EDMUND K. GOLDSBOROUGH, JR.

IN Science and Health (p. 111) Mrs. Eddy writes: "The Science of God and man is no more supernatural than is the science of numbers," and the world is rapidly awakening to this verity. For centuries the beliefs of disease and death have seemingly held the world in bondage, and all because they have been looked upon as more or less unavoidable and natural, instead of unnatural and abnormal, yea, as absolute unrealities. Instead of living in the glorious light of Truth and Love, mankind have attempted to investigate the shadows, until shadows seemed real and the true sense of being was apparently inverted. Indeed, for generations, if through a righteous prayer disease vanished into its native nothingness, the cry would arise that a miracle had been performed, when in fact it was no more miraculous than it is miraculous when we correct a discordant tone in music with a harmonious one.

One can imagine the discord which would reign if musicians ignored the laws which govern harmony, and is it any wonder that chaos has seemed to exist for centuries when the Science of Mind has been so misunderstood! But, thanks be to the light of Love which has melted away the mists, we have awakened to the glorious fact that because God is Love, health is normal and good the sole reality. It would be impossible to conceive of a number being separated from its basic law, and likewise it is quite as impossible to conceive of man being separated from divine Principle when man is an eternal expression of that Principle, of Truth, Life, and Love. It then dawns upon the awakened thought that death is a mere negation, possessing no principle and being naught except the supposititious opposite of the life which God sustains. Almost twenty centuries ago the apostle John saw this so plainly that he wrote, "God is love; and he that dwelleth in love dwelleth in God, and God in him," thus showing how impossible it would be for Love's reflection to be separated from the Life that is Love. John also said, "There is no fear in love; but perfect love casteth out fear," fully realizing that there is no place in God's infinity for fear, and that a knowledge of this forever eliminated the false belief. Again in this age the same wondrous thought has dawned, leading the author of Science and Health to write in the inspired pages of our text-book, "Love is the liberator" (p. 225).

What is, then, our work? This: to disarm hate with love and dishonesty with truth, to supplant doubt with faith made perfect through works, and despair with hope born of a knowledge of life boundless and eternal; in short, to eliminate all evil through the frictionless channels of Love.

SELECTED ARTICLES.

[Frederick Dixon in *Evening Mail*, Newcastle, England.]

I really do not think that our critic need have written a further letter to point out that he and I do not agree on the subject of Christian Science, for, as far as I can see, that is all his letter amounts to. He says in it that he will deal with the fundamental assumption on which Christian Science metaphysics is based, and he goes on to do this by quoting the text, "What therefore God hath joined together, let not man put asunder." I gather from his letter that what God has joined together is mind and matter, and he says that I speak of them as if they were separate.

Now, first, to attribute any such meaning to that text is, to put it mildly, a quaint piece of exegesis, but it is not so quaint as his declaration that I have separated mind and matter. In letter after letter I have pointed out that Christian Science accepts the idealism of natural science to the full extent of the declaration that matter is the subjective condition of mortal mind. "*Mortal mind* and body," Mrs. Eddy writes, on page 499 of Science and Health, "combine as one." How on earth the gentleman makes that a separation of mind and matter, it is impossible to say. Where Christian Science differs from the idealism of natural science is in insisting that this mind, with its subjective condition, is nothing but the negation of divine Mind and its spiritual creation.

He now says that I have pointed out that the great idealistic thinkers have had the misfortune to differ from him. That is so. What he omits is that I was forced to do this because he gently insinuated that everybody who accepted the idealistic position was an ignoramus. I was pointing out that there were quite a lot of people, commonly called great thinkers, who fell under the ban of this critic's disapproval. Then he goes on to say that, on my own showing their teaching differs from Christian Science. Of course it does, but Christian Scientists do not write voluminous letters to the papers for the purpose of pointing out how ignorant they are for differing from them. Christian Scientists are quite content to go on endeavoring to demonstrate the truth they have seen, and to allow their neighbors to demonstrate their vision of the truth without interference.

As for what the critic says about the fire, it is a little difficult to know exactly what he thinks he has gained by his last point. According to philosophic idealism, the mind produces a subjective condition which is called matter. The laws through which that matter operates are commonly known as physical laws. For instance, the flame, the hand, and the burn are all subjective conditions of mind which are termed matter. When the flame and the hand come in contact, a certain mental operation takes place which is known as the operation of the physical law resulting in a burn. According to natural science idealism, matter is only a mental phenomenon, but for convenience it is described as matter. From the point of view of Christian Science, the law which is fulfilled by a burn is not a law at all. Anybody who knew enough of the truth which is to free the world from the false sense of law, could walk in the flames, as Shadrach, Meshach, and Abed-nego did; or on the water, as Jesus did. For the sake of convenience, however, a Christian Scientist uses the term physical law to indicate simply a false sense of law.

Finally, this critic says that Christian Science claims to be able to perform the miracles of Jesus, but that, notwithstanding its loud pretensions, Christian Science never attempts to perform any of them. Because everybody who has studied mathematics is unable to work out the most difficult problems of higher mathematics; because some of those problems have never been worked out by anybody, you might, on the critic's showing, say mathematics claims to be able to solve any mathematical problem, but notwithstanding its loud pretensions, mathematics never attempts to perform any of these things. If he would think a little more closely, he would not fall into mistakes of this description. Christian Science certainly can solve any problem, and that fact was proved by Jesus of Nazareth. No Christian Scientist, however, pretends, or ever has pretended for one moment, to be able to do this. What Christian Scientists do claim is to be able to do much more than they were able to before, and what Christian Scientists do say is that, in the exact proportion in which they destroy their own belief in sensuality and materiality, they gain the Mind of Christ, and in gaining the Mind of Christ, are able, as Jesus said they would be, to do the works he did.

[James D. Sherwood in *Houston* (Texas) *Chronicle*.]

In a recent issue there appears a communication from Prof. Irving Fisher, concerning health legislation, etc., in which the professor seems to express considerable satisfaction over what he regards as a defeat of the opponents of the Owen bill, which measure was intended to provide for the creation of a national department of health. Now that the Owen bill, after being amended with a view to meeting the objections of all opponents, has failed to pass, it might be thought by some that the opponents of the measure had not met with so much disappointment, after all; and if that be a fact, whereof has the professor an occasion for boasting?

While Christian Scientists believe that they have found a better way to health than that which is offered by the prevailing systems of medicine, and while they are able to show in their lives and experience the proof that appeals can be made to God in behalf of the sick as well as the sinful, they are not unmindful of the fact that many people are still seeking for a healing medicine. This being the case, Christian Scientists think that such persons as believe themselves dependent upon the use of drugs should be protected in obtaining pure drugs. Christian Scientists believe in pure food, pure air, and pure morals; and it is a sad mistake or a wilful misrepresentation that would lead any one to think otherwise. Christian Scientists have no quarrel with the physicians; on the contrary, they have only words of praise and encouragement for the efforts of the noble men and women who are devoting their time and energies to relieving the distress of suffering humanity. If the methods of the matter physicians differ from the purely metaphysical practise of Christian Science, the Christian Scientist is not found quarreling with the doctors; on the contrary, sad as it should seem in a Christian nation, the Christian Scientist is frequently compelled to defend his faith and his right to practise its teachings from the assaults of those openly making war upon the humble followers of the great Teacher, who required his students to heal the sick in proof of their claims to discipleship.

Christian Scientists do not oppose sanitation, pure water, health laws, or reasonable quarantine, which their enemies misrepresent them as doing. On the contrary, a Christian Scientist is a strong advocate of purity in every department of thought and activity. What they oppose is the tyranny of a medical monopoly which undertakes to punish all those who fail to agree with its dictates and who refuse to adopt its methods of practise. Christian Scientists have, however, no feeling of revenge against the doctors. They have no desire to interfere with the doctors' practise. They only ask to be permitted to work out their salvation according to their best understanding of God's requirements; and they freely grant the same privilege to others. The Christian Scientists also feel that they have a right to insist that, whenever the public press makes statements concerning Christian Science, the truth of the matter should be correctly stated.

Christian Science has passed "the experimental stage" of its progress. It is today known throughout the length and breadth of the earth as a practical, demonstrable proof of

Digitized by Google

the immanence and goodness of the loving Father-Mother God,—"who forgiveth all thine iniquities; who healeth all thy diseases." It is probable that more than a million individuals are today depending wholly upon Christian Science practise whenever they feel the need of help for mental or bodily ills, and their appeals are heard and rewarded by deliverance from sorrow, recovery from disease, and emancipation from the bondage of sinful practises. The purpose of Christian Science is to bless mankind, and that it is doing this is evidenced by the testimony of hundreds of thousands of men, women, and children who have been healed and brought up out of great tribulations.

[Lloyd B. Coate in *Dayton* (Ohio) *News.*]

In your report of the discussion at the Dayton Baptist association, reference is made to Christian Science, and the Rev. Dr. Bustard said so many good things that it seemed somewhat out of harmony with the rest of his remarks for him to speak disrespectfully of the body of Christians known as Christian Scientists. Christian Scientists heartily agree with him in saying that "all truth we teach must be backed by the lives we live. The world does not need definitions of religion, but it does ask for demonstrations of religion. We demand that every new theory be demonstrated before we accept it." This is precisely the reason why the Christian Science church has grown so rapidly. Its members have reached a demonstrable apprehension of the Master's teaching, one that helps them out of sickness and suffering as well as out of sin. The Christian Science church is founded upon Christian healing.

This critic is reported as having said of Christian Science and some other teachings, that "these cults are simply trying to invest ten dollars in religion, hoping to get a return of ten thousand dollars on their investment." The great Master, Jesus the Christ, said, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you." There are in Christian Science today quite a large number of people who have found health instead of sickness, happiness instead of sorrow and trouble, contentment instead of worry, an abiding faith in God instead of doubt and distrust, a love for the inspired word of the Bible instead of skepticism, a desire to put into practise the teachings of Christ instead of a theoretical acceptance, and an abiding consciousness of the truth of the Scripture, "The Lord is my shepherd; I shall not want," instead of fear that they will come to want and poverty. When we count our blessings, we must admit that Christian Science has brought us splendid returns for our investment; to wit, faith in God.

We agree with the critic that "the greatest power in the world is love, and that the gospel is built upon it." Because Christian Scientists believe this, they have no unkind word to speak against any other body of worshipers of the true and living God, whether they agree with them or not.

[William J. Bonnin in *Southport* (Eng.) *Visiter.*]

In the printed report of the Bishop of Liverpool's sermon to the Medical Congress, the preacher, after a preliminary bestowal of uncomplimentary epithets upon Christian Science, declared that it contained a grain of truth. The epithets, entirely unsupported as they were by any attempt to justify them, one need hardly trouble to controvert. People are growing less and less likely to be convinced by mere adjectives. When, however, such an authority attempts to explain the truth of Christian Science, a good crop of misconceptions may easily arise.

The power of the spirit "under certain conditions to operate on the body with remarkable physical results," which the bishop declared to constitute this grain of truth, is a crude and inadequate rendering of the grain of Christian Science teaching which a beginner is often able to assimilate with small effort. Unfortunately, instead of pressing on to discover the scientific truth underlying such a stupendous fact, there are those who are content to admit it and go no farther. Such a quest, however, leads to the very secret of health and happiness, and it is one which reveals Christianity to be a scientific plan of salvation for humanity from the evils that oppress it. The bishop would say that it lies in the province of medical science to make this investigation into "the range of spiritual power and the conditions under which it worked." Christian Science teaches that it is the duty of those who believe in the power of Spirit, to manifest that power. It teaches that religion and healing are not complementary, but that they are, and were forever proved by the words and works of Jesus to be, one, indissoluble and indiscerpible.

Christian Science declares that Christianity without healing cannot be true Christianity, because it lacks the very element that its Founder declared should characterize his religion. To mankind's cry as to what disease and evil are in the general economy of things, Christian Science shows the answer of Christianity to be that they are the manifestation or expression of ignorance of one's true being, the outcome of a false sense of existence, ignorance of Truth, of God. The destruction of this ignorance is true healing, and it is effected in the only possible way, by the knowledge of Truth. When one learns that the only righteousness is true thinking or spiritual understanding, a new light is thrown on the promise, "Unto you that fear my name shall the Sun of righteousness arise with healing in his wings."

[David Anderson in *Camberwell and Hawthorne* (Aus.) *Advertiser*]

A recent visiting missioner to Melbourne took occasion to make some platform remarks on Christian Science with ignorance of the subject explained but hardly justified. That the man in the street is now to some extent able to discriminate between the truth and error of the ordinary platitudes which are sometimes put forward in reference to Christian Science, was evidenced by a hearer who, though not a Christian Scientist, asked the preacher kindly to quote his authority for a statement made, a request which it is understood was not complied with. Critics should understand something of what they criticize, and they who do not understand Christian Science should not attempt to explain it. The truth of Christian Science is not a matter of opinion. It is capable of demonstration. Its proofs are the test of Christianity which Jesus demanded, "He that believeth on me, the works that I do shall he do also."

Never did a convert to Christ, and probably few if any adherents to sect or creed, become such through pulpit misrepresentation of the Christian faith of others; and the Christian Scientist finds no time to discuss or condemn the religious views of his neighbor. "To his own master he standeth or falleth." Christian Science is drawing the world's attention to the fact that Christianity has lost none of its primitive efficacy to heal the sick and sinful; and the world is daily becoming more interested to find that in Christian Science health and happiness, moral and physical well-being, have been attained by many who had been unable to find them elsewhere. Many who yesterday were uncompromising opponents of Christian Science, not dormant or hesitating in their efforts to pile obloquy and ridicule on Mrs. Eddy and her teachings, have today reached the point of admission that "there is something in Christian Science," that Christian Scientists have got hold of a genuine truth. Christian Science should be encouraged, not resisted, by all who have at heart the moral and physical welfare of the human race. Ridicule, abuse, and misrepresentation will never check its phenomenal advancement. It will continue to progress because it teaches a scientific or accurate and effective knowledge of God and His Christ, bringing health to the sick and comfort to the sorrowing.

and until they have something demonstrably better to offer in its place, militant missioners might well take to heart the good old advice of Gamaliel, and for the very excellent reason he adduced.

[W. C. Williams in *Baltimore* (Md.) *Star*.]

Dr. Harvey H. Wiley, in a recent address reported in the *Star*, accused Christian Scientists of opposing pure food measures. With due respect to this gentleman, we beg to say that the accusation is not founded on fact. Christian Scientists are advocates of purity in every respect; pure food, pure surroundings, pure thoughts, and pure lives; and that they are trying to attain thereto, naturally results in a continuous betterment of their condition. They are in favor of any means which will help to make pure food and pure everything more general. A notable example of their own effort in this direction is in their contribution to pure journalism, the publication of *The Christian Science Monitor*, which has already become a world newspaper.

The critic's further statement that "Christian Science may cure diseases that do not exist, but cannot cure any real disease," is another evidence of the way even big men will blind themselves to the facts. From the Christian Science standpoint the only real is the eternal, therefore all disease in that sense is unreal; but I should like to give a few facts regarding cures through Christian Science treatment of diseases that were as real as diseases can be, taken from an article by the editor of the *Broadway Magazine*, written after an investigation by him in New York, a few years ago, as to the healing power of Christian Science.

Records that were examined showed 13,876 cases treated by Christian Scientists in the state of New York. Of this number, 11,244 patients acknowledged definitely that they were either completely cured or permanently benefited by Christian Science, 4,895 of these having either been given up by physicians or despaired of receiving relief from medical treatment; the 2,632 cases remaining were still under treatment. Many cases of each of the following diseases were included in those healed: rheumatism, tuberculosis, stomach trouble, heart disease, rupture, tumors, Bright's disease, appendicitis, locomotor ataxia, cancer, asthma, pneumonia, blood-poisoning, cerebro-spinal meningitis, paralysis, diabetes, typhoid fever, epilepsy, membranous croup, insanity, paresis, and chronic bronchitis. The names of the physicians attending and diagnosing the cases, prior to treatment by Christian Science, included many of the most prominent surgeons and specialists in America, as well as in London, Paris, Berlin, Vienna, Göttingen, and Stockholm. The number averaged about five physicians to each case.

[Ezra W. Palmer in *Rocky Mountain News*, Denver, Col.]

A reverend critic has recently taken occasion to attack Christian Science in the newspapers. This writer almost invariably accompanies his misstatements regarding Christian Science by some reference to his previous affiliation with a Christian Science organization, apparently assuming that this gives him considerable license for belittling Christian Science. The asserted fact of his previous connection gives no dependable evidence of his present understanding of Christian Science. It will be remembered that Jesus had disciples who became offended at his teachings and "walked no more with him." The criticisms of Jesus by these former disciples would hardly be given credence by the Christian world today, because it is apparent to all sincere Christians that those who abandoned Jesus had no real understanding of his teachings. Christian Scientists have no time in which to assail the religious convictions of others, and they know that no man can obtain God's favor by so doing.

Considerable misapprehension of Christian Science is indicated when the critic asserts that Mrs. Eddy "was never satisfied with the progress of the church." What Mrs. Eddy did was to give to the world the Science of Christianity. She discerned that there is an exact Science of God and man, and that this exact knowing of spiritual things was the basis of the mighty works of Jesus and his disciples. To say that Mrs. Eddy was not satisfied with this glorious unfoldment of spiritual things, is to fail utterly to comprehend her life-motive. Furthermore, to assume that one can go beyond the Science of Christianity, as this critic does, is as impossible as to claim that he could go beyond, in a vision, the basic law of mathematics. There is only one Science of Christianity, even as there is only one science of mathematics, and this Science Mrs. Eddy gave to the world in a form adapted to modern thought and modern conditions.

The world has been slow to accept Mrs. Eddy's spiritual interpretation of the Bible. This slowness has been due to the human sense of resistance to spiritual things, and also to the fact that mankind has been accustomed for long generations to think in terms of materiality. Christian Scientists do not claim that they have gained the spiritual understanding which their great Exemplar, Christ Jesus, had. They know, however, that Mrs. Eddy gave to the world a correct interpretation of his teachings, as is shown again by the spiritual healing of sickness and sin through Christian Science. They rejoice in the progress already made, and look forward to the time when all mankind will be freed from the cruel bondage of sin, disease, and death through this right knowing of God. Understanding this true state of affairs, they are not inclined to take seriously the call of those who proclaim that there is some other way into the sheepfold.

[Albert E. Miller in *Journal of Education*, Boston, Mass.]

Those of your readers who are acquainted with the teaching of Christian Science, and doubtless they are many, will attest the fact that it is a "short cut" only in the sense that it follows from cause to effect in a way which is at once direct and effective; but to acquire a demonstrable knowledge of Christian Science requires earnest application as well as persistence and perseverance. In fact, it can be truly said that there is no system of education which follows out more completely the Scriptural admonition to follow line upon line and precept upon precept than does Christian Science.

[Written for the *Sentinel*.]

THE STILL SMALL VOICE.

A. DICKSON.

HARK! a voice of gentle sweetness
Whispers to the listening ear,
Bringing joy and peace and gladness,
Faith and hope instead of fear.
Shedding light where all was darkness,
Happiness where all was gloom,
Just a low sweet voice which murmurs,
I will lead you safely home.

Every one may hear its message—
King or beggar, high and low,
Soldiers 'mid the din of battle,
Sailors when the tempests blow,
To the man of business worries,
To the orphan left alone,
Comes the low sweet voice which murmurs,
I will lead you safely home.

Whose the voice that comes so sweetly,
Leaving peace along the way,
Healing all the broken-hearted,
Cheering each so tenderly?
'Tis the voice of Love that whispers
To the weary ones that roam:
Courage, I am with you alway;
I will lead you safely home.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"HE THAT BELIEVETH."

WITH the superficial observer, Christian Science and faith-healing are apt to be rated as one and the same, and it is for this reason that Christian Scientists are sometimes called upon to explain the difference between their practise and that which is ordinarily termed faith-cure. Many of those who ask for this explanation do so because they have been surprised to learn of the insistence by Christian Scientists that there is a difference. Investigation shows usually that these inquirers have assumed, in their judgment of Christian Science and its practise, one of two things, either that sin, sickness, and death are lawful, and of God's creation, and that Christian Scientists have a blind faith that God will set aside His own law and change His own regulation of the universe if His petitioners have sufficient faith and perseverance to bring about this result; or else that Christian Scientists simply ignore the claims of evil, and thus construct for themselves a fool's paradise which will eventually tumble about their ears.

The person who reads Science and Health with the intention of ascertaining what Mrs. Eddy's teachings are,—what Christian Science really is,—should have no difficulty in perceiving that these two prevalent, but ignorant, misconceptions of Christian Science are as far as possible from the real fact. On page 167 (lines 1 to 3) of Science and Health the author asks a question, the implied and inevitable answer to which must convince the reader that Christian Science is not faith-cure, but on the contrary is founded upon the immutability of God; that its practise is in demonstration of His unchanging law, that law of ever-present good which in its working cannot operate other than for harmony. This is unmistakably taught throughout Mrs. Eddy's writings.

As to the other misconception of Christian Science referred to, a careful study of Science and Health will show that simply to ignore the claims of evil is not to practise the Science Mrs. Eddy teaches, the Science which declares the unreality of all that is unlike good, and that evil is but a false seeming, "a liar, and the father of it," as the Master defined it; therefore it is not to be ignored, but cast out and destroyed, even as Jesus released the one so grievously tormented from the evil spirits which had seemingly taken possession of him.

Our whole human experience, in fact, is beset with the temptation to believe that life is in matter, and that evil is as real as good. Not only are we met with this temptation, but also with the temptation to believe that evil is good. The basis of this belief is fully elucidated in the references to mortal mind which are contained in Science and Health, and a study of these references, which number over three hundred and can readily be found with the aid of the Concordance, will show that the practise of Christian Science does not ignore the claims of evil, but exposes their falsity. The fifth chapter of Science and Health particularly elucidates the fallacy of these claims, which must be met and mastered on the basis of their nothingness, because whatever is apart from good, which evil certainly is, cannot really have any existence, despite its pretensions to place and power. The teachings of Science and Health do not in any wise give reality or power to these false claims; rather do they scientifically show their unreality and powerlessness, as, for instance, Mrs. Eddy's metaphysical interpretation of the one evil on page 584, lines 17 to 25 inclusive.

The failure, then, to distinguish between the faith which understands the reason for its confidence and that which accepts blindly, would seem to be the stumbling-block in the way of those who include Christian Science in their mistaken condemnation of all healing agencies apart from *materia medica*, and this notwithstanding Jesus' unequivocal declaration to one who sought his help for a loved son, that "all things are possible to him that believeth;" and his kindred statement: "He that believeth on me, the works that I do shall he do also." The blind *faith of that father* was distinctly of the relative order; he had *not* attained the degree of spiritual understanding which is comprised in absolute faith, that knowledge of God which enables one to work out his own salvation, albeit with fear and trembling. Christian Science teaches this absolute faith, and those who follow its precepts have learned its efficacy, have proved for themselves the truth of the opening statement of Science and Health: "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,"—that spiritual understanding of the omnipotence of infinite Mind, of unchanging good, which sees the claims of evil for the false pretenders they are and casts them out, that the harmony which is of God may have undisputed possession.

ARCHIBALD MCLELLAN.

"OUR ONLY PREACHERS."

ALL students of Christian Science are familiar with the words of the "explanatory note" found on page 4 of our *Quarterly*, and read at every Sunday service before the Lesson-Sermon begins. It commences with the statement: "The Bible and the Christian Science text-book are our only preachers." In the Manual of The Mother Church we read that "the correlative Biblical texts in the Lesson-Sermon shall extend from Genesis to Revelation" (Article XIV, Sect. 2), and it is hardly necessary to tell Christian Scientists that the inauguration of this form of service has brought about the most painstaking and thorough study of the Scriptures ever undertaken by any body of Christian people, the healing and reformatory effects of which cannot be overestimated. Nothing could be more touching than the testimonies which tell of sorrowful experiences, of long years of suffering, and, saddest of all, of waning faith in God because of failure to find in the Bible, as ordinarily interpreted, the way to Him. Then we are told of the great change,—the awakening to Life and light, the healing, and the opening up of the Word of God, which is no longer to them the letter that "killeth," but the spirit which "giveth life."

Those healed in Christian Science with few exceptions become students of its text-book, and devote daily a portion of the time once given to toil for "the meat which perisheth," to a search for "the living bread" which the Master declared would give life unto the world; nor do they seek in vain, for in Science and Health they have the "key" which opens up to them the rich treasures of the Word, and the better the student comes to know the Bible the more he loves it. Our revered Leader says, "The Scriptures are very sacred. Our aim must be to have them understood spiritually, for only by this understanding can truth be gained" (Science and Health, p. 547). Until this sense is gained the Bible appears to be full of contradictions, even the words of Christ Jesus if materially interpreted would appear to be so at times, for instance, when he said that not a jot or tittle should pass from the law till all was fulfilled. Then we find him citing certain portions of the law, and adding, "But I say unto you," etc., which to material sense would seem a denial of the law's authority, but when spiritually understood the words conveyed a demand so high that only through spiritual sense could humanity respond to it.

It should never be forgotten by students of the Lesson-Sermons that the purpose of these Lessons is to illuminate all human experience, to light the way, as it were, from sense to Soul, and to this end the entire Bible is brought into requisition—not alone those passages which are obvi-

Digitized by Google

ously in line with the teachings of Christian Science, but the whole record of human experience, because it serves to illustrate the struggles of mortals under the heavy burden of belief in materiality and in the asserted power of evil. Mrs. Eddy makes this clear on pages 501-502 of Science and Health, and if a student of the Lesson is ever in doubt as to the use of certain texts, he will find it very helpful to read these pages and note her statement that "the crude forms of human thought take on higher symbols and significations, when scientifically Christian views of the universe appear."

To those who are clinging to the material sense of the Scriptures, many passages are, to quote St. Paul, "the savor of death unto death," while to the more spiritually-minded they are "the savor of life unto life." In speaking of the spiritual illumination of the Bible to her sense, Mrs. Eddy once remarked, in a class, that she could say, "Upon the most uncomely parts He [God] hath bestowed the most 'abundant comeliness.'" Here, too, we may recall her words on page 267 of Science and Health, "By reversal, errors serve as waymarks to the one Mind;" and this all earnest students are proving daily, not alone in their study, but by their demonstration of the truth imbibed. Again she says (Miscellaneous Writings, p. 366), "The Scriptures give the key-note of Christian Science from Genesis to Revelation, and this is the prolonged tone: 'For the Lord He is God, and there is *none beside Him.*'" Who would turn away from the illumination thus offered?

ANNIE M. KNOTT.

SCIENCE AND DOGMATISM.

THE saying of a recent Christian writer, that "the only theology which is likely to last is one that admits a large degree of Christian agnosticism," may prove rather startling to some, since it seems to link faith and unbelief in a way which is altogether incongruous. All earnest truth-seekers, however, will agree in saying that as their apprehension of spiritual things has increased arithmetically, the field of unexplored and more or less indistinct vision has increased geometrically. They have consequently grown more reserved in the use of "I know," and less dogmatic respecting the facts of faith which they have not yet demonstrated. With increased thoughtfulness and receptivity they feel more keenly the sense of mystery, the vastness of Truth, and their mental attitude becomes more scientific.

St. Paul affirmed the inspiring fact, not that we know all, but that "we know in part," and Mrs. Eddy repeats the thought when she writes, "Christian Science must be accepted at this period by induction. We admit the whole, because a part is proved" (Science and Health, p. 461). The habit of speaking in a final decisive fashion concerning matters of which he really knows very little, if anything, is disastrous to one's own spiritual growth and to a helpful influence over others, and that Christian teachers should have become noted as representatives of this type of unreliability is unfortunate beyond words.

Positiveness should characterize Christian instruction, both because there is scientific ground for it and because naught else can satisfy the demands of inquiring thought, but the positiveness which has no foundation other than the traditions of human belief, is sure to experience a fall that will prove disturbing to the faith both of the teacher and the taught. Time was when the great majority accepted the dictum of ecclesiastical authority without question, and the thinking of many is still thus dominated, but the scientific spirit has gone out into all the earth, and the rule of superstition and fear is becoming more and more circumscribed. Hard-headed, unscientific dogmatism is losing its sway in Christian councils, and a fairer field for faith is being opened up.

Christian Science honors the scientific method, it is teaching mankind to distinguish between knowing and believing, and leading them to see that the habit of deluding one's self into the acceptance of unsubstantiated beliefs is an enslaving self-mesmerism. Christian Science neither indulges nor condones the agnosticism of the world, but it does recognize the fact that the skepticism which renders one alert to seductive fallacies is the handmaid of Science and essential to spiritual progress.

Christ Jesus insisted upon an immovable basis of thought and a logical adherence thereto. He was always articulating his statements with the unquestionable integrities of the divine nature, and it was in entire conformity with this spirit of the Master that the healing philosophy of Christian Science was apprehended. Of this Mrs. Eddy has said: "I knew the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration" (Science and Health, p. 109). Christian Science declares that in keeping with the Master's definite requirement the content of genuine faith may be and must be verified, and that it is the privilege of every aspiring heart thus to demonstrate his way, step by step, up to the sunlit heights of Truth.

JOHN B. WILLIS.

LECTURE IN THE MOTHER CHURCH.

The First Church of Christ, Scientist, in Boston, Mass., announces a free public lecture on Christian Science by Judge Clifford P. Smith, C.S.B., a member of the board of lectureship of The First Church of Christ, Scientist, in Boston, Mass., in the church edifice, Falmouth, Norway, and St. Paul streets, Back Bay, Boston, Friday evening, Nov. 8, 1912, at 8 o'clock. The public is cordially invited.

AMONG THE CHURCHES.

CURRENT NOTES.

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the new church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m.

MUNCIE, IND.—First Church of Christ, Scientist, of this city has become the owner of the property at the northeast corner of Liberty and Charles streets. The property was purchased for a consideration of thirty-five hundred dollars. The board of trustees of the church announce that the old building which now stands on the ground will be partly torn down and rearranged and remodeled into a church for temporary use, and that eventually a handsome new church building will be erected. The location is ideal, two squares from the post-office and in a quiet section of the residence part of the city. The lot is one hundred feet long and sixty-two and one half feet wide. The remodeled building will be ready for occupancy Nov. 1.—*Muncie Star.*

HEREFORD, TEXAS.—The Christian Scientists of this city met on Aug. 27 for the purpose of organizing a Christian Science society. Through the able assistance of a Christian Science practitioner of Canyon, Texas, the organization was completed with eighteen charter members.

Hereford Brand.

THE LECTURES.

MARSHALLTOWN, IOWA.

William R. Rathvon at his lecture in this city, at the New Odeon theater, on Christian Science, was introduced by Frank A. Moscrip, associate editor of the *Times-Republican*, whose remarks were in part as follows:—

The kinship of worship exists between all religions. With a multitude of creeds there is but one Christ; among a million beliefs there is but one aim—the elevation, spiritual and material, of humanity. The essential of all worthy religions is the relationship between the spirit of God and the spirit of man. It follows as action upon thought, that the underlying strength of all effort which has made men better and the race greater is spiritual. No religion not essentially spiritual is or has been an uplifting and elementary force in the betterment of mankind, and every religion spiritual in its character may claim its share in the marvelous development of man from barbarism to a level little lower than that of the angels. A religion which has a belief in God is one thing; that which holds a mighty and abiding faith in Him is another and greater. As intellect rises over the gross and material, so faith lifts itself above intellect. Every one knows things which the lips cannot utter, has understanding which cannot be expressed, feels much as truth which a mortal can neither fully realize nor comprehend, for life walks ever on the edge of mystery and faith is a torch to its feet. The fashion of the torch is of little concern, so that it gives forth light whereby dim paths may be trodden without fear and map a way to safety. That is the matter of real moment.

Let us covet truth. It is the light of the world. To each his opportunity to proclaim, and to all the right of personal judgment. The most basic liberty is that to believe and to utter according to conscience. It is balanced by a liberty as wise and as holy to accept or reject according to conscience. The truest test of the right of a religion to live is its effect upon those who profess and practise its tenets. Any religion or cult or belief justifies its existence and corroborates its divinity when it makes men better men and women better women; when it is an antidote for the poisons of anger and envy and hatred and evil passions. That which counsels kindness and teaches dependence upon God and concern for His commandments, is a force to be welcomed in a world where bitterness prevails overmuch and the contention between good and evil is continual.

So, as a communicant in another church and of variant belief in many ways, but holding in common a faith in God and trust in His power and the wisdom of His purposes, it is my pleasure and my welcome privilege to introduce the speaker to his audience.—*Correspondence.*

WAUKESHA, WIS.

Frank H. Leonard delivered a lecture on Christian Science at Atheneum hall. He was introduced by Judge C. E. Armin, who said in part,—

The world moves! Only a few centuries ago the wise men of that time, and those in power, compelled an advanced thinker to recant that statement, and yet there is no schoolboy now but admits and understands its truth. We all know now that the world moves, and we know, too, that the denizens upon its surface move, and that in the realms of progress and invention our time is outstripping all the past,—we have the telephone, the phonograph, the wireless telegraph. There is one peculiarity about this latest wonderful invention. The sending station flashes forth its message, which flies in all directions upon the wings of the wind. Over the heads of thousands it may pass, and they do not know that there is any message near them; but finally it comes in contact with a receiving instrument which is attuned to receive it, and it is received and read. So it is with all the new messages that come to mankind. They pass by and over many of us, and we do not know that they are there; but to the unhampered intellect that is attuned to receive a message, it is as an open book. We have with us tonight a gentleman with what, to many of us, is a new message.—*Correspondence.*

WALLA WALLA, WASH.

The lecture on Christian Science, delivered by Judge Clifford P. Smith at the Keylor Grand theater, attracted a large and appreciative audience. Edward C. Mills, attorney at law, introduced the speaker, and said in part,—

In order that there may be no misunderstanding, let me say that I know practically nothing of the theory or practise of Christian Science, but am here upon the invitation of one of your number to introduce the speaker of the evening and to hear what he has to say to us. We are told that Christian Science is based upon the words of the Bible, and that its basic or central thought is that there is a direct relation between God and man, and that a better understanding of that relation must inevitably result in a benefit to us. We know that its votaries believe that through Christian Science there can be brought about an amelioration of the conditions of mankind, and that through its practise there can be realized that condition of happiness which Pascal defined when he said that "happiness is neither within us wholly, nor without us; it is the union of ourselves with God." Any society or individual having this end in view, is certainly entitled to and should be given a full, free, and fair hearing, and it is my province and pleasure to introduce the speaker of the evening, who comes to you with full authority and as one who is master of his subject.—*Walla Walla Union.*

SANTA ANA, CAL.

The largest audience ever assembled at a Christian Science lecture in Santa Ana greeted Clarence C. Eaton at the Grand opera house. The lecturer was introduced by Dr. W. A. Flood, who said:—

Perhaps all here know of the closeness of Jesus to his heavenly Father, and all know that he must have worked in accord with a definite Principle, because of his wonderful works among men. We, too, if we would be free from all the ills of today, must come close to God, must know more of the divine nature as demonstrated by Jesus. Christian Science has come to us to make the way more clear to our blinded thought, and Mrs. Eddy, the Founder of Christian Science, among the many blessings she has given to mankind, provided for a board of lecturers, those qualified to tell the truth about Christian Science.—*Santa Ana Register.*

DECATUR, MICH.

Following are the introductory words in part of Arba N. Moulton, publisher of the *Decatur Republican*, who introduced Prof. Hermann S. Hering at his lecture on Christian Science:—

The message of Christian Science is one that gives assurance to the doubter, scientific deductions to the philosopher, reason to the agnostic, and hope and courage to those who seem to be burdened with more than their share of human afflictions. It is the message of Jesus, who said to his disciples and to the people of all the ages, "This is my commandment, That ye love one another, as I have loved you." Christian Science takes this message of Jesus, with all that it implies, and carries it on and on wherever human beings congregate or wander, seeking the light. It carries with it confidence born of clear understanding and certain knowledge; it carries security, peace, contentment, faith, and hope, with love; it brings not malice nor hate nor resentment, but

Digitized by Google

truth and honor and forgiveness. The rapid growth of Christian Science throughout the civilized world tells you more forcibly than any words I am capable of uttering, that as a subject it is well worth consideration and study.

Correspondence.

PORTLAND, ORE.

Under the auspices of First, Second, and Third Churches of Christ, Scientist, William D. McCrackan, M.A., delivered a lecture on Christian Science. He was introduced by Judge Clifford P. Smith, who said:—

I am an adherent of Christian Science, having passed through the stages of inquiry and investigation and become fully informed of its truth. If I had a particular friend whom I wished to interest in Christian Science, there are several points on which I should wish him to be informed, at least in a general way, and correctly: What it teaches with respect to God and man and their separateness from evil; what it possesses both for the individual and the whole human race, and finally what it has already accomplished. It has been my observation that when an open-minded man becomes reliably informed on these points, he is always sure to desire the benefits of Christian Science for himself and for the whole world.

I am not able to promise that the speaker of the evening will be able to cover fully these points within the space of time at his disposal, but he is thoroughly qualified to do so, and I anticipate with pleasure much that he will say which will be of great and lasting moment to those here tonight.

Correspondence.

MILFORD, N. H.

A lecture on Christian Science was delivered in the Town hall by Virgil O. Strickler. C. H. Knight introduced the speaker as follows:—

This is an age of investigation and seeking after the facts in regard to things. This is especially true regarding spiritual matters. There is a broadening of ideas, and coming together in thought, for the universal good, to find out what is truth. Jesus said, "Ye shall know the truth, and the truth shall make you free."

Less than fifty years ago an earnest seeker after truth gave to the world what is termed "Christian Science." Like most things of value, it had to pass through the stages of prejudice without investigation, ridicule, and persecution; but it has stood the test, and today there are hundreds of thousands of all classes and conditions of men, from the humblest laborer, workers in all kinds of business and the professions, to the profoundest thinkers and leaders of men all over the world, who gladly testify to its uplifting and healing power. This wonderful growth has not been accomplished by spectacular or special attraction features, but by the consecrated, consistent, earnest, happy lives of those who are its adherents, in their daily intercourse with their fellow men.—*Milford Cabinet.*

FORT EDWARD, N. Y.

A lecture on Christian Science was delivered at the Bradley opera house by the Rev. William P. McKenzie. He was introduced by Fred A. Davis, postmaster at Fort Edward, who said:—

To one who is seemingly without religious thought of any sort, Christian Science appeals as being of the common-sense kind, of practical every-day use. It may be applied at any time or place with the best of results; and to this I can personally testify. The promise of the Master some two thousand years ago, "He that believeth on me, the works that I do shall he do also," and his command to "heal the sick," are being fulfilled today through the understanding of Christian Science.—*Correspondence.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Amsterdam, N. Y.—Opera house, 8 p.m., Nov. 10.
Boston, Mass. (The Mother Church).—Church edifice, Falmouth, Norway, and St. Paul streets, Back Bay, 8 p.m., Nov. 8.
Bridgeport, Conn.—Universalist church, 8 p.m., Nov. 15.
Canajoharie, N. Y.—Wagner opera house, 3 p.m., Nov. 10.
Chelsea, Mass.—Town hall, Revere, 8 p.m., Nov. 12.
Chicago, Ill. (Seventh Church).—Church edifice, 5318 Kenmore avenue, 8 p.m., Nov. 14 and 15.
Dayton, Ohio (First and Second Churches).—Memorial hall, 8 p.m., Nov. 11.
Denison, Iowa.—Church edifice, 8 p.m., Nov. 12.
Freeport, Ill.—Masonic temple, 8:15 p.m., Nov. 15.
Fresno, Cal.—Barton opera house, 8:15 p.m., Nov. 12.
Halifax, Nova Scotia.—Masonic hall, 8 p.m., Nov. 15.
Hyde Park, Mass.—French's opera house, 8 p.m., Nov. 12.
Jackson, Mich.—Atheneum theater, 8 p.m., Nov. 14.
Jamestown, N. Y.—Unitarian church, corner East 2d and Chandler streets, 8 p.m., Nov. 11.
London, England (First Church).—Queen's hall, Langham place, 8:30 p.m., Nov. 22.
London, Putney, England.—Wandsworth town hall, Wandsworth, S. W., 8:30 p.m., Nov. 21.
Long Beach, Cal.—Long Beach auditorium, 8 p.m., Nov. 14.
Louisville, Ky.—Macauley's theater, 8 p.m., Nov. 10.
Marion, Ohio.—Court house, court room, 8 p.m., Nov. 14.
Marshall, Mich.—Church edifice, 109 Mansion street, 8 p.m., Nov. 12.
Milwaukee, Wis. (Third Church).—Milwaukee auditorium, main hall, 8:15 p.m., Nov. 14.
Minneapolis, Minn. (Sixth Church).—Auditorium, 8 p.m., Nov. 15.
Newark, N. J. (Second Church).—Shubert theater, Broad street, opposite Central avenue, 3:30 p.m., Nov. 10.
Newark, Ohio.—The Auditorium, 8 p.m., Nov. 12.
New Haven, Conn.—Hyperion theater, 3:30 p.m., Nov. 10.
New Rochelle, N. Y.—Loew's theater, 3:30 p.m., Nov. 10.
New York, N. Y. (Second Church).—Church edifice, Central Park, West, at 68th street, 8 p.m., Nov. 11.
Norwich, Conn.—Universalist church, Broadway, 3 p.m., Nov. 10.
Oakland, Cal. (Second Church).—Idora Park theater, 8 p.m., Nov. 11.
Orange, N. J.—Church edifice, Cleveland street, near Main, 8 p.m., Nov. 11.
Palo Alto, Cal.—The armory, 8 p.m., Nov. 10.
Pasadena, Cal.—Church edifice, Oakland avenue, 8 p.m., Nov. 15.
Peoria, Ill.—Mohammed temple, 207 North Monroe street, 8 p.m., Nov. 7.
St. Louis, Mo. (Third Church).—Church edifice, 3524 Russell avenue, 8 p.m., Nov. 15.
Salina, Kan.—The Palace theater, 3 p.m., Nov. 10.
San Francisco, Cal. (Second Church).—Dreamland rink, 3 p.m., Nov. 10.
Schenectady, N. Y.—Van Curler opera house, 8 p.m., Nov. 10.
Sevenoaks, Kent, England, Club hall, 8 p.m., Nov. 23.
Sterling, Ill.—Academy of Music, 8:15 p.m., Nov. 12.
Stillwater, Okla.—Grand opera house, 2:30 p.m., Nov. 10.
Stroud, Okla.—Opera house, 7:30 p.m., Nov. 15.
Troy, N. Y.—Music hall, 3:30 p.m., Nov. 10.
Truro, Nova Scotia.—Academy hall, Prince street, 8:15 p.m., Nov. 14.
Waltham, Mass. (Auspices First Church, Lexington).—Asbury temple, 8 p.m., Nov. 7.
Westmount, Province of Quebec.—Victoria hall, 8:15 p.m., Nov. 12.
Winchester, Mass.—Town hall, 8 p.m., Nov. 11.

TESTIMONIES OF HEALING.

It will be remembered that several years ago much appeared in the press in regard to Mrs. Eddy which was very startling. I had no counter information, but I refused to believe that these things written against her could be true. I wanted the truth, and I wanted to know that these reports were false, but I knew no Christian Scientists, I had never seen a copy of Science and Health, and did not even know that there was a Christian Science church here. I therefore went to the Congressional library and sent in a slip for Science and Health. I was surprised to have the book brought to me, not by one of the boys who usually do this work, but by one of the older men, who seldom leave their desks. Giving me the book, he said, "I will ask that when you leave the room you will please not leave this book on the desk, but hand it to me." This was so unusual, and I looked so surprised, that he said, "I ask this because this copy is one of the first editions, and is worth seventy-five dollars." I almost refused to take the book under these conditions, but the great desire to know for myself about Mrs. Eddy prevailed, and thanking him for the book, I took it and began to read.

As I now look back, I realize that in a few moments I had become quite unconscious of my surroundings. In two hours the print seemed to blur, and I took off my glasses and rubbed my eyes; but this was no improvement, so I again took off the glasses, for I could not read with them on. A voice then spoke to my inner consciousness, bidding me destroy the glasses. Destroy my glasses, without which I could not read or write a word? Too often in the twelve years that I had worn them had I been handicapped and delayed in my daily work through their being misplaced or broken. How could I destroy them? Besides, they had cost a great deal, and how could I throw that money away? All this flashed through my thought in an instant, but the voice again bade me burn my bridges. So impressed was I by this spiritual admonition, and so suddenly was I freed from all fear and doubt, that I put a "Reserved" slip in the book, left it at the main desk as requested, and walked out to the end of one of the long corridors. Here, with a swift glance around, I dashed my glasses on the marble floor, and left them lying there—gold bows and all—while I returned most happily to the reading-room and to the book. I read on for two hours more, and then went home. Not a doubt rose to trouble me. I was so glad,—so happy, so filled with this flood of wondrous light,—so humbly glad that God had put it into my heart to seek out the truth. How plain now seemed my intuition that those charges against Mrs. Eddy were absolutely without foundation! I felt that my acquaintance with a mind so pure, so exalted, was a gift, a priceless gift. All my life I had searched and searched for just such satisfying truth as I found in Science and Health. I took up my work, which had always necessitated the constant use of glasses, and never since have I felt the slightest need of them.

This was my introduction to Christian Science. For more than thirty years I had been the victim of a peculiarly baffling form of stomach trouble. Physicians did not help me, drugs did not help me. I had tried all sorts of baths, dieting, fasting, exercise, etc., until one day I realized that, look where I would, I could see absolutely no help. Everything I had ever heard of had been tried, only to fail. I turned to Christian Science, but I knew no practitioner. Then I found a list of names in the telephone book, and called them up, one after the other, until I found one at home. I was given an immediate appointment, as I was feeling very sick, and never shall fade from my mind the memory of the dear woman who met me so cordially and listened with loving attention as I briefly explained how desperately ill I was and almost in utter despair. I then sank back in the big chair and closed my eyes. The practitioner spoke only a few words, but a mantle of peace seemed to envelop my tortured sense as the moments of silence slipped softly by. My self-control and a measure of strength returned to me, and I left the office comforted.

The trouble was overcome in a few treatments, and I left for the mountains with absolutely none of the paraphernalia I had never before been without. Once when I was there I was about to ask for absent treatment, but that "still small voice" assured me that I need not fear, and the need for treatment vanished. Since then I have had absolutely no return of the trouble. I eat and drink what I wish and my general health is excellent. I am now a member of our church; I have had class instruction, and have met successfully the attacks of error which have from time to time presented themselves. I wish, oh, so earnestly, that this testimony of God's gracious kindness to me, and of the wondrous depth and beauty and effectiveness of Christian Science, might carry conviction to some heart burdened and hopeless as was mine, and lead such a one to seek the truth in Christian Science.—E. A. WHITNEY, Washington, D. C.

I was always sick from infancy, my earliest recollection being of a recovery from illness, when I was assisted to walk about the room by a brother and a sister. This disease, a form of rheumatism, held on to me until the age of thirty-two, and each attack seemed more severe until there came a time when it seemed that every joint was in a vise and it was said I could not live. *Materia medica* and the surgeon's knife could do no more, as the medicine taken had lost all effect other than to paralyze me from my hips down, with enlarged joints and smaller joints set, and my memory was nearly gone.

While in this condition Christian Science was brought to my attention many times, but was always ignored as useless. In business I prospered and fell several times, until I found myself at last homeless and penniless in the great city of Chicago. In this condition, and still ignoring Christian Science, I made a break for liberty, and from being an architect, I went on the road. Again I fell sick, this time in a remote southern sawmill camp. It was in July, and a physician pronounced my sickness appendicitis. After one week spent under the influence of an opiate the usual verdict was given. Then a craving for Christian Science prompted me to write for help, and instantly I had strength to pencil a letter to a practitioner, a thousand miles away in the North, asking for treatment. In five days the answer came, bidding me remember that I was God's child, and this did sound good to me. I fell into a deep, peaceful sleep, and upon awakening, after some hours, what a change in all about me! It seemed as if I, too, saw a new heaven and new earth. I was well, and went back to my work the same afternoon.

I at once sent for a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and it seemed as if I could not wait for it. When it came, I fairly devoured its contents, since which time my memory has completely returned. Instead of being able to work barely three hours a day, I am now frequently on duty for twenty-six hours at a time, in charge of large crews of men. I enjoy perfect health and could write pages setting forth various experiences, such as crushed hands, broken bones, so-called "tobacco heart," etc., which were healed by scientific Christianity. I am many times asked if I could ever retrograde into the old material thought, and I answer with a vigorous "No." Thanks be to God, also endless gratitude to Mrs. Eddy, who discovered the real meaning of the Bible and gave us the Key to it so that even a child can understand and demonstrate its teachings.

JOS. N. EMMONS, New Orleans, La.

I have long delayed the privilege and duty of adding my testimony to the blessing that Christian Science has been in my household. It is difficult to realize the greatness of

Digitized by Google

the mission of our dear Leader, Mrs. Eddy, and how wonderful it is that the world has taken time to listen to her message and investigate Christian Science. Our eyes were first opened to this truth by the healing of my brother, who had been a sufferer from what is called "rose-cold and hay-fever" for at least eighteen years. His cure seemed too good to be true, for we thought he would never be healed, as he had never experienced any relief from medicine. I read Science and Health to him, though I did not at first do it willingly; but I felt it a duty, as his sight had been very imperfect from birth, although it is much improved at this writing. To tell of the wonderful healings in our home, and those outside whom we have been able to help, is our keenest, purest joy.

One experience I will never forget was my first demonstration in Christian Science. Now, when I think of it, it seems so natural to go to God, and how good it is to be sure that He hears! My baby niece, whom I have cared for all her life (as her mother passed out before she could walk, and before we came to understand that God is so good), was subject to frequent attacks of biliousness, fever, etc. Our family doctor agreed that they were growing more severe every time the trouble came on. One Sunday afternoon she was taken ill, and we were all much distressed about it, for she had had a very severe attack only a few weeks before. The doctor said that if he could not soon reduce the fever, he should consider it very serious. I spoke of Christian Science, but the baby's father did not reply. He was patient all the afternoon and early part of the evening, during which time we had endeavored to get a practitioner by telephone, but could not get into communication with any one. The fever seemed to be getting worse all the time, and how I did pray, and read, and cry to God, for He seemed so far off.

At half-past eight the child's father went to the doctor's office for medicine, and how we did improve our time while he was gone! When he came back, he prepared a dose of medicine and asked the child to take it, but as soon as her lips touched the glass, she fell back on her pillow, declaring that she was getting better till her papa tried to make her take the medicine. Strange to say, he did not compel her to take it, but set about working in Christian Science, as the child wished us to read more out of Science and Health. We did this till twelve that night, then all retired, as with one accord. The two or three who had gathered together in Christ's name had been heard, their prayers had been answered. All slept until daylight, but as soon as I awoke I remembered our experience, and, thank God, our baby was healed! She said so herself, and indeed it was true. She asked for breakfast, which she ate with a relish, and her father praised God with the rest of the family.

In my ignorance I had wondered why God was so far off, but in the end Christian Science showed me that He was omnipresent, omniscient, and omnipotent. Our family are five in number, and all look to divine Truth to overcome every form of error. May our lives attest our gratefulness for Christian Science.

MISS CAMILLE ROSE WILL, Canton, Ohio.

It is with a sense of gratitude to God for what Christian Science has done for my family and myself, that I offer this testimony of healing. In the fall of 1908 my little girl, then six years of age, became very ill with what proved to be a serious case of throat trouble. After treating the child for a week myself, the conditions became so alarming that I decided to bring her to San Antonio. My husband and I set out to find a practitioner, and divine Love led us to the home of one who gave the little girl treatment. Immediately the child asked for something to eat (up to this time she had seemed almost unable to swallow and had no appetite), and we spent the rest of the day pleasantly. That was the last of the trouble, and not only was she helped in this way but since this experience she has been less self-willed and more loving.

The following spring my husband suffered intensely from an attack of rheumatism, which for three years had held him in bondage for months at a time. He had the kind and sympathetic care of a physician, who recommended a change of climate, after every other material means failed even to relieve him. We came to Texas from North Carolina, and the change seemed beneficial, but he was warned not to go east of San Antonio. He did so, however, and the old trouble returned with accelerated force. My husband then requested me to write to a Christian Science practitioner, and this I did at once. The practitioner began treatment Monday night, and by Wednesday my husband was perfectly free. He has had no return of the disease, although he has spent the greater part of the past fourteen months in other states.

In August of 1910 a baby was born to us under Christian Science treatment. A practitioner gave me absent treatment, and the child was born within thirty minutes from the time the midwife entered the house. I had had two children born under *materia medica*, and the midwife predicted the same troubles which I had experienced on the previous occasions; but these were promptly met with and overcome by Christian Science. The child was born on Saturday, and I had dinner with the family on Sunday; in fact, I did not spend a single day in bed. The child and I are both in perfect health, which fact is undeniably due to the help received in Christian Science.

MRS. M. M. YOUNG, San Antonio, Texas.

I have long desired to tell what comfort and help Christian Science has brought to myself and family. I was very skeptical, and slow to accept my sister's advice and try the treatment for my little daughter, who was declared to have tubercular disease of the lungs, four reputable physicians having examined her and stated their opinion that it would take at least a year's time to heal the child; but when we accepted Christian Science treatment for her, she was completely healed in three weeks. One of the doctors who had previously examined her, declared he could not find the spot which was said to have been affected. This was about twelve years ago, and she never has had a return of the trouble.

I was very happy over the recovery, but laid it away on a shelf, so to speak, for future use, not realizing that Truth is an ever-present help in every time of need. We went through troubles of all kinds, even losing a baby boy, before we were ready to open our hearts to the truth. Six years after my daughter's healing, she seemed to be in an alarming condition, and when Christian Science was again recommended to me, I hailed it with joy. Again it met the need, so that in two weeks all were congratulating us on the improved appearance of the girl; and this time we were sufficiently grateful to want to know more and to investigate its teachings for ourselves. Since then the truth has been our only remedy.

I myself had suffered for twenty years with rheumatic trouble, which had kept me in bed three weeks at a time, but Christian Science has healed me. On one occasion, when the severity of the pain had caused a paralyzed condition of the leg, a Christian Science practitioner was called, and in a few moments I was so relieved that I got up perfectly well. Many minor troubles have also been overcome, proving that when we keep our thoughts right, good is always victorious. Formerly, in trying to be economical, I was constantly anxious regarding supply, fearing lack always; but now, with the assurance that God always meets our needs, the old worries are forgotten, and every day I thank God for all the blessings that have come to us with

Christian Science, and pray that I may be shown the way to walk closer with Him.

We owe endless gratitude to Mrs. Eddy for the understanding of Truth gained through Science and Health. Christian Science certainly does open the door, and enables us to see how we can bring the truth into our daily activity along all lines. It gives one the inspiration which the right understanding of God always brings when sincerity and honest desire prompt the seeker.

MARION V. BRADLEY, Wauwatosa, Wis.

I send this testimony in loving gratitude for what Christian Science has done for me. As a child I was far from strong and extremely nervous, and as I grew to womanhood repeated attacks of illness left me discouraged and despondent. Physicians said I had not a sound organ in my body; my nerves became so shattered that I would often lose control of my limbs, and I suffered constantly with my eyes. After trying everything in the way of material remedies, I came West, hoping that change of climate would relieve me. I seemed to gain for a while, only to be thrown back by a siege of liver-trouble, enlarged spleen, etc., which left me, if possible, more discouraged than ever. I tried to bear my suffering patiently, as I had been taught to believe that it was God's will; but the time came when I rebelled. I however lived on, still hoping that I might find a God of love instead of the one who seemed so unjust, and these hopes were fully realized when, four or five years ago, I took up the study of Christian Science. In two months I laid off glasses which I had worn for ten years, and which physicians had told me I would always have to wear. One by one my ailments have disappeared, and I am now well and happy, although I had never spent a winter in my life without severe colds and earaches until I learned of this blessed truth.

A short time ago, our little daughter of nearly three years was struck on the forehead with a piece of iron, which made a bad gash. I heard her cry out, but as soon as I could get to her and remind her of the nearness of God, she stopped crying at once and the bleeding ceased. Three days later I removed a piece of plaster which we had put on after pressing the wound together, and found that it had healed perfectly, only a very small trace of the injury being visible, and that rapidly disappeared. I am also grateful for the quick healing of a badly injured shoulder.

We are grateful indeed to God, also to Mrs. Eddy for a religion which even the children can understand. Our blessings could not be numbered, and our only hope is to manifest our gratitude in our daily living.

AGNES MCILRATH BENNETT, Covina, Cal.

I first heard of Christian Science over twenty-one years ago, at which time an aunt, who is a Christian Scientist, came to visit us. She found me ill and unable to work, but after a few treatments in Christian Science I went to work on a farm in Iowa, but soon got a position in Colorado as a drug clerk, where I stayed about four years. In all this time I met only one Christian Scientist, and as I had but little understanding of the truth, my gain seemed to be rather slow. I always felt, however, that the seed had been sown, and after returning to Minnesota I joined a branch church, united with The Mother Church, and took class instruction.

I then went to California, and while there I contracted what was said to be a malignant disease, which affected the head and caused me terrible suffering. After I had given Christian Science a fair trial, I did not doubt its power for a moment, as I experienced perfect healing from this malady. After returning to the East, I passed through some trials, mental and physical, but by a diligent study of the Bible and Science and Health I found that material law is null and void before the might of God's law. I saw then that divine law must be spiritual, and by demonstrating it for myself I also came to see that loss is gain. All these ills were overcome mainly through study of the Bible and our text-book, with some help from other Scientists. I have thereby come to understand better the psalmist's words: "He maketh me to lie down in green pastures: he leadeth me beside the still waters."

WINFIELD S. STOCKMAN, Cresco, Iowa.

With a grateful heart I acknowledge the multiplied blessings which I have received through Christian Science, but to express this fully is well-nigh impossible. I was healed of an abnormal growth after five eminent physicians had stated that nothing but an operation could possibly save my life, and the last physician asserted that I had but one chance out of a hundred to live after undergoing the operation.

I had heard Christian Science mentioned several times, and decided that I would give it a trial rather than undergo the operation. A practitioner was accordingly called, and in less than one week I was able to go to the practitioner's office. Before this I had been for nine months under the care of different physicians, and was continually growing worse. I have also been healed of many minor ailments, among them the effect of a severe fall on the ice, which was overcome almost instantly. For years I was troubled with a bowel difficulty, of which I have been completely healed.

For all these blessings I am indeed thankful to God, and I am also grateful to our revered Leader, Mrs. Eddy, who has made this Science demonstrable.

MRS. CHRISTINA ERLER, Chicago, Ill.

Before coming to Christian Science all I had known had been suffering, pain, hope deferred, ambition disappointed, and an unsatisfied longing to know that to which I could find no answer. I listened to what people said, read books, went to Sunday school, later joined a church, attended the services Sunday after Sunday, hoping each time I would hear that "something" which would satisfy. The preaching was all intended to be and to do good, but it did not answer my questions or tell me what I wished to know. Suffering in body year after year, all manner of material remedies were tried; but I was "nothing bettered, but rather grew worse," physically and financially, as is said in the Bible of the woman who "had suffered many things of many physicians."

I was somehow impressed that through religion help could be gained, if but the one right word might be said. Emerson says that if one will only listen, he will have all his questions answered, for the answer is before the question. Then I listened more attentively, and one day a friend said, "There is help outside of medicine. Come and try it." Promptly I accepted the invitation, and the door into the Father's house stood wide open. Father-Mother, heaven, home,—all were found. I was healed of all belief in disease; and the manifestation of it, which had seemed a torment for so long, disappeared. This gladdening gleam of the true idea of God has never been dimmed, but grew brighter and brighter with every experience. In "Science and Health with Key to the Scriptures" by Mrs. Eddy there was nothing lacking to satisfy all my questioning, for through my study of this book I learned the facts of existence: what good is, and what is good; and what man is as God made him; what evil is, and is not, and how to dispose of it as a seeming.

There is nothing more for which to "want." I now know that Truth alone is Mind, and Mind is Truth; and the salvation from all evil is in denying it any place in thought, any power, any time, or existence anywhere; therefore it has no temptation in it to turn one from knowing the truth which alone can satisfy. Christian Science has taught me that in the Father's house all things are governed orderly, harmoniously, changelessly; His flock are fed in green pas-

Digitized by Google

tures, beside still waters; there are no wars, no misunderstandings, no misinterpretations,—"nothing that worketh or maketh a lie." I have also learned that all of God's ideas express His character, and that the statements of truth, when iterated and reiterated in the human thought or consciousness, lift this consciousness into purer desires and actions, and joy is the reward always. Jesus said, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you." Mrs. Eddy says in Science and Health (p. 261), "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts." All who learn and live Christian Science as Mrs. Eddy teaches the subject in Science and Health, may be helped, and be helpful at all times, lacking nothing, for she has put into words everything that they can express in explanation of divine Mind and His ideas.

MISS CLARA SHEPARD, Sioux City, Iowa.

The first proof which I had that Christian Science is the Christ-way of healing disease, and that "the Lord's hand is not shortened, that it cannot save; neither his ear heavy, that it cannot hear," came to me about two years ago. One of my fingers had caused me great pain; in fact, I had suffered from it for years, and physicians told me that there was no relief, as the trouble was due to an injured nerve, and that the pain would remain even if the finger should be amputated.

A neighbor who was a Christian Scientist then offered to help me, and I accepted her help. The pain shortly disappeared, and I have been free from it ever since. This experience led me to believe that other diseases from which I was suffering could be healed. For years I had been subject to attacks of acute stomach trouble, which produced fainting spells and would come on without warning. I had tried physicians of different schools, and a number of remedies, but with no relief. I was also troubled with a bowel disorder and with what the doctors called a disease of the bladder. In addition, I was severely ruptured, and neither allopathic nor homeopathic doctors had helped me, though I was operated upon five times. My eyes had been weak since childhood, so that for a number of years I had been obliged to wear glasses constantly, and I never knew what it was to be free from headaches. I also suffered from extreme nervousness.

It now seems almost impossible to believe that I am the same person who was carrying around this load of misery two years ago. After the proof which I had in the healing of my finger, I went to a Christian Science practitioner, under whose treatment I began to improve at once, and in six months' time my diseased condition was changed to one of health, so that I am now perfectly well. While the healing work was going on, I did what I could to help myself, by declaring the truth, as found in the Bible and Science and Health, and I still continue to make these declarations. Because I have learned to know the truth, the truth has made me free, even as the Master promised.

MRS. ROSE L. SPARKS, Landover, Md.

In gratitude to God, and with the sincere hope that it may help some one else, I send this testimony of healing. I became interested in Christian Science eight years ago. I had been a great sufferer from stomach trouble for five years, but through the study of "Science and Health with Key to the Scriptures" by our dear Leader, Mrs. Eddy, I was completely healed before I had read the book through. Since gaining some understanding of Christian Science, I have had many beautiful proofs of the power of Truth, and am very thankful for the physical healing, but more so for the spiritual awakening which came through the wonderful revelation of this great truth that makes men free.

MRS. FLORA SMITH, Tipton, Ind.

FROM OUR EXCHANGES.

[*Advance.*]

Turning to the Messiah, what do we find? A teacher addressing himself to the professional religionists of the day, to priests, rabbis, and scribes? No, but a Son of man speaking to the common people of the day. The men of learning and the leaders and rulers were his critics. He did not try to make his doctrines square with their views, or ask them for authority or approval; but to the multitude, with all its wants, sicknesses, miseries, and unutterable longings, he looked for that understanding which interprets the highest and deepest meanings. And "the common people heard him gladly." They felt the strange thrill, the penetrating power of his message. To them he was a revelation of God and of their own hearts. He taught them "as one having authority," and not as the scribes and Pharisees. Christ was the Great Commoner. He headed the multitude. He spoke to it and spoke for it. All its bruises, blind eyes, and deaf ears, all its agonies and strivings, all its hunger and hope, all its manhood and womanhood and sweet-faced babyhood appealed to him, and he answered it in words and doctrines which are imperishable. They live, not because they are written on a sacred page or are guarded in precious archives, but because they are woven into the fiber of our being. "Heaven and earth shall pass away, but my words shall not pass away."

Are not the conditions much the same today? We look for new light. Whence will it come? Where will it lodge? Who will seize it, interpret it, and cleave to it? Will the critic? Will the learned man? Will the fortunate man, lifted above the multitude, out of want and sore trial, into the sunshine and ease of luxury? We want better things. How will they come? Who will plant the seed, water it with tears, bless it with prayers, and watch the tender plant with an agony of solicitude? Will the man at the front, who is satisfied with things as they are now?

[*Christian World.*]

The real argument for religion all through is an unspoken argument. The one condemnable heterodoxy is a heterodoxy of life. So long as we are not doing God's will, we shall have no doctrine of Him that is worth propagating. The church that is manned with people of Christ's temper, whenever we get it, will be the one that will know and use his power to save, and that whatever its speculative views. It is by the unspoken argument that Christianity is being steadily purified of all its incongruous and foreign adhesions. Time, the silent one, is continually disproving the falsities that have crept into its system and weakened its influence. Time, in saying nothing, says so much. By its sheer movement it has disproved the early notion of an immediate second advent and world end. The same movement has been the death-blow to so many confident prophets and prophecies.

And the silent earth, in opening its secrets, has in like manner disposed of the cosmogonies and wrongly drawn world schemes which formed so large a part of the early church belief. That process will continue until religion, standing simply for its own essential truth and life, divested of all that science and criticism can assail, will wield over the whole field of affairs, with unrestricted sweep, its one irresistible weapon, "the sword of the Spirit."

[*Christian Register.*]

If Jesus gets the world, we have to give up our commercial greed, our legislative selfishness, our waste of property in preparation for war. Our standing armies must go, and our naval preparations must be placed on the Jeffersonian basis. We believe in Jesus Christ, not as an impossible ideal, but as a thoroughly possible human leader. Out of

Digitized by Google

the clash and struggle we have absolute faith that the Christ-him who began his mission with "peace on earth." We inherited a vast amount of preparation for this problem, a problem that came almost to the solving at more points than one in human evolution. Never, however, has the world seemed as hopeful as at the present, and never has it been prepared as it now is to declare peace for all the world and good will for all men. Shall it do this? Can we safely trust the better instincts of civilization? Are the half-dozen leading nations sufficiently cleared of their savage instincts for fighting to make arbitrament of national disputes possible?

That the reply has not been made before this is no wonder, but it is a wonder that in such a time as ours the decision should not be quick and determined. We have learned already to do our trading over race lines; we are recognizing our common brotherhood in religious faith; why not beat our swords into sickles and proclaim Jesus our leader? Ignorance is being enlightened, bigotry is being broadened, and prejudice is getting the worst of it. This dear old world of ours was surely not made for a battle-field, but for a harvest feast.

[*Western Christian Advocate.*]

Everywhere throughout the civilized world there seems to be the same spirit of unrest. In one aspect this is alarming and discouraging. We seem to be upon the very edge of a volcano's crater, with the eruption ready to take place at almost any time. It cannot be successfully shown that the unrest is due entirely to conditions of poverty. There is much discontent, not because the working man is starving, but because he feels he is not getting his fair share of the increasing prosperity in which all lands are participating. In another consideration, this unrest is one of the by-products of Christianity itself. By education, religious evangelization, humanitarian efforts, and the wide distribution of moral ideas and principles, the common people have raised their standards of thinking and living, and they have rightly persuaded themselves that the state was formed for the welfare of all and not for the advantage of the few. They are therefore demanding the abolition of all special privileges, and insisting on impartial justice and equitable dealings with all classes on the part of the government. This demand is neither demagogic nor revolutionary, but simply in the line of progress and rational development. It is not larger balances in our banks, or assets in our insurance companies, or capital of great corporations that we are in special need of just now. We want and must have a better basis for life, with fuller opportunities, with a democracy free to expand to its utmost limit of American manhood, and that is what America is certainly expecting and planning for.

[*Christian Advocate.*]

There is one scientific method of securing a mighty outpouring of spiritual power. It has been known to men for many centuries. It was formulated in the name of God by a man called Malachi, and it is thus expressed: "Bring ye all the tithes into the storehouse, that there may be meat in mine house, and prove me now herewith, saith the Lord of hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it."

There is much in that prescription besides a demand for money, though its financial implications are by no means to be disregarded. The tithes include such a consecration of time, talent, and energy as many half-hearted Christians are hesitant to surrender. They involve an amount of prayer and self-humiliation which will tax the patience and nervous force of the most spiritually-minded persons. Nevertheless, the things required will bring the thing desired, and we earnestly commend Malachi's admonition to the ecclesiastical rain-makers.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Five new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"Environment and Opportunity," containing five articles as follows: "Greater than Circumstances," "Why Grow Old?" "Limitation," "Problem of the Hickory Tree," "Songs in the Night."

"Birthright and Dominion," containing four articles and two poems as follows: "Inalienable Rights," "Mental Self-Knowledge," "Love's Bounty," "Demand and Supply," "Humility," "Unity."

"The Father's Business," containing five articles as follows: "The Abundance of God," "One Business," "The Closed Hand," "Christian Science in the Business Life," "Truth is Power."

"The Law of Kindness," containing four articles and a poem, entitled as follows: "'Forgive, and ye shall be forgiven,'" "The Habit of Hating," "The Law of Kindness," "'Ye shall be as gods,'" "Two Roses."

"Confidence and Supply," containing the five following articles: "'The Lord thy confidence,'" "Time and Healing," "'What hast thou in the house?'" "Constructive Work," "Giving and Receiving."

Another new pamphlet has just been published containing the lecture of William R. Rathvon, entitled "Christian Science: Its Results."

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass, should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth street, Boston, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science Text-book "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $1; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book); single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 70 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage.

For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy . . .	$ .05	$ .06	$ .07
Twenty-five copies .	1.00	1.15	1.30
Fifty copies	1.80	2.05	2.40
One hundred copies .	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XII indicate the year 1912; XIII, 1913. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

The United States navy last week opened the new wireless station at Arlington, Va. It will keep every ship of the United States navy and every insular possession within instant communication with the capital. The radius of the new plant will be about three thousand miles when it is in working order. Communication with the Pacific coast will be attempted only at night for the present, but throughout the day the secretary of the navy, at his desk in Washington, will be within instantaneous communication with Key West, Guantanamo, Colon, the naval coaling stations, the winter maneuver grounds, and all Atlantic stations. When the plant is working perfectly and the chain of stations is completed, Washington will be in touch with Hawaii, Samoa, Guam, the Philippines. It cost about one million dollars.

An exhibition of Swedish industrial art, planned to be the most complete seen in this country since the world's fair in 1893, reaching a valuation close to five hundred thousand dollars, will be held at the club house of the Svenska Klubben, Chicago, Nov. 1 to 20. The undertaking, which has for its purpose only to show Americans how far advanced Sweden is in the industrial arts, is the work primarily of a few prominent Chicagoans who are members of the Swedish club. A further object is the encouragement of progress in the arts by the Swedes both here and abroad. The exhibit will be free to the public.

For the support of their postal service the people of the United States next year will pay $283,805,760. Nearly ten million dollars will be required to put into effect the postal legislation enacted this year. It is estimated that seven million two hundred and forty thousand dollars will be needed for parcels post system; one million three hundred and fifty thousand dollars to meet the conditions required under the new eight-hour law; seven hundred and fifty thousand dollars to provide for reclassification of railway mail clerks, and one hundred and fifty thousand dollars to establish the new village free delivery service.

The Swedish delegate to the recent international congress of chambers of commerce at Boston, Mass., and director of the Swedish export commission, is in California for the purpose of arranging for the official exhibit of the Swedish government to the Panama exposition in San Francisco in 1915.

Thirty-two states have notified Secretary Knox of their ratification of the proposed income tax amendment to the federal constitution, and four have notified the state department of their rejection. To become effective thirty-six states—three fourths of those in the Union—must ratify.

The Consolidated Rendering Company and its officers have been indicted by the federal grand jury in the United States district court before Judge Morton at Boston, Mass., on the charge of maintaining a combination in restraint of trade.

The state of Kansas owns at Pratt what is said to be the largest fish hatchery in the world. It consists of eighty-three ponds in which the fish are separated according to size, and extends over sixty-five acres.

President Taft delivered an address at the dedication of the Polish College at Cambridge Springs, Pa., last week.

International.

Messrs. Dent & Co., publishers of the successful "Everyman's Library," are about to give some of the benefit of that success to the world in the shape of a new paper, to be called *Everyman*. It will be different from the usual weekly newspaper, and while it will be of the same caliber as the sixpenny papers, it will be sold for one penny. It will endeavor to give its readers ethical articles of the best type procurable, from the best writers, and it will, at the same time, give them views and reviews, not only of modern literature, but of the great classics of the past.

At the annual meeting of the Prisoners' Aid Society, Sydney, N. S. W., some remarkable figures were given by the minister for justice. He said: "Within the last few years the government has closed twenty-six prisons in the state for the reason that there were no prisoners to fill them. In 1825, when there was less than one million in New South Wales, there were over twenty-five hundred persons in the gaols; now, with a population of one million six hundred thousand, there are less than half the number of people in prisons that there was in 1825."

The government of Queensland, Australia, has decided to open to selection a further area of two hundred and twenty-five thousand six hundred and sixty-nine acres, cut into one hundred and ten portions. These include agricultural selections in the Brisbane, Dalby, Bundaberg, and Nanango districts, and grazing selections in the Cloncurry and Thargomindah districts. The government is also giving notice to resume for closer settlement five hundred and twenty thousand nine hundred and twenty acres in various pastoral holdings.

The world's distance record for a flight in a free balloon has probably been broken by the Picardie of France, which started from Stuttgart, Germany, last week and landed at Riasan, east of Moscow, Russia, covering an unofficial distance of 1,354 miles. The previous record, also held in France, is 1,211 miles, and was made by Emile Dubonnet.

With the signing of the Moroccan treaty at Paris last week disappears the last vestige of Moroccan independence. All of Africa now, with the two exceptions of Abyssinia and Liberia, are directly under the control of one or another of the European powers.

Industrial and Commercial.

A national steel works to supply rails for the government railways of New South Wales, Australia, is being seriously considered by the cabinet as a result of difficulty which the government has encountered in buying rails at what it considered a fair price. The charge is made that an international pool is trying to force the market, threatening delay in building the great transcontinental railway now under construction from Perth to Adelaide. The government originally placed an order with a Japanese firm, but the order has not been filled and manipulation has been blamed for the failure. A majority of the government is believed to favor a national steel works, despite the huge expense and delay involved.

The destruction of birds costs the United States in food losses approximately four hundred and twenty million one hundred thousand dollars a year, according to the committee on wild life protection of the national conservation congress. Farmers and fruit growers will be urged to consider the damage to agriculture in insect pests that could be avoided by the protection of bird life. Likewise, those in the cities will be confronted with the alleged contribution to the "high cost of living" by the destruction of crops.

Direct through connection between the railroads to the north and those to the south of Boston by tunnel under the harbor serving the industrial sections in South Boston, Dorchester, East Boston, Chelsea, Everett, and Malden and the steamship terminals, thereby constituting a belt line and materially reducing or eliminating the present high expense of transfer, switch or terminal charges is planned at a cost of fifty million dollars by the Massachusetts harbor and land commission.

Probably the quantity of apples unloaded in New York during October has approximated an average of eighteen thousand barrels per day, including western box apples. Through their national and state organizations leading apple dealers are conducting a campaign, the purpose of which is to inform the general public of the abundance of apples and the fact that retail distributors should supply them at such prices as practically to put them within the reach of everybody.

It is reported that the Boston, Revere Beach, & Lynn railroad proposes to install storage battery cars on its service next December. They are to be operated in trains of three cars. Each car will have two trucks with two ten-horse-power motors attached to each truck, and each train will be operated by one motorman. Experiments in other parts of the country have demonstrated that beach trains can be operated cheaper by storage battery than by steam.

The total length of wiring for telephones in Delhi, India, will run to as much as seventeen hundred miles, but only ninety-six miles of this will be carried on posts, as it is desired to disfigure the new city as little as possible with overhead wires. The remainder of the wiring will be carried in twelve and one half miles of underground cables, the latter in some cases containing as many as three hundred and six conductors.

The total acreage of all land belonging to producing mines in 1909 was 24,210,000 acres. The greater part of this land was mineral and oil land, but there were 1,139,000 acres of timberland and 1,662,000 acres of other land. This includes land which had not been surveyed and whose mineral resources were still unknown, as well as some land used for building and other purposes.

The number of persons engaged in the industries in the United States which include the operation of mines, quarries, and wells, as returned for Dec. 15, 1909, or nearest representative day, was 1,130,332, of whom 93.5 per cent were wage earners, 4.3 per cent were proprietors or officials, and 2.2 per cent were clerks.

Cotton grown in the United States constitutes about seventy per cent of the entire consumption of the world. Of the 1911 crop there were ginned in the United States upward of sixteen million bales of five hundred pounds each. At current prices the value of the year's crop is over a billion dollars.

Sixty-four million bushels is the extent of this year's crop of wheat, barley, and oats in the province of Alberta, Canada.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

GOOD AND EVIL.

BLANCHE HERSEY HOGUE.

POPULAR theology argues that "freedom of the will" is a great blessing to mankind: that God has allowed man freedom to choose between good and evil, in order that he shall grow morally strong; that the plan and purpose of God for man is a succession of such choosings, coupled with certain conditions of creedal belief, until enough evil shall have been overcome to entitle man to a future heaven. Now, admitting that this continuing selection of good and rejection of evil is the present process of moral growth, it can yet be seen that mortals have this to do only because they believe they started wrong and are in a bog of evil out of which they must climb. To reckon with evil as an entity in God's universe is to forget that God and His good creation are the only facts of existence; it is to adopt a premise based upon the evil itself. A pure premise, setting forth God as good and God as All, throws an entirely different light upon the whole subject.

To this vexed question of good and evil Christian Science brings the classification of evil established by Christ Jesus in his words and in his ministry. Jesus said of evil, personified as "the devil," that "he is a liar, and the father of it." And just wherein a lie or a liar can be useful to God or to man it is difficult to say. All Scriptural teaching urges us to denounce and to renounce evil; nowhere are we told that God maintains evil that we may reject it. Thinking of ourselves as mortal, born into evil, surrounded by it and having to overcome it, we have blindly said that God made it or God permits it. Yet, if the Scriptures warn us against doing evil that good may come, why charge God with maintaining evil that good may come? The entire supposition theorizes a God who for certain purposes sustains evil, and this point of view prevails with us because we at present reckon with evil and have found through human reason no other way to account for it. Christian Science brings to us, however, a reason higher than the human; a spiritual logic which pierces the argument of evil. In its light we see that God never made evil for us to sharpen our morality upon, but rather made man spiritual and superior to evil. And discerning this, seeing the distinction between man in God's likeness and the materiality which falsely calls itself man, the belief in evil, the love for it, the fear of it, and the defense of it, can begin logically to disappear that spiritual manhood may appear.

Looking at this question from the divine point of view, where can God find evil? If we accept Scriptural teaching concerning God, we know He is good. Then surely He can find no evil within Himself. Again, He is everywhere present. Then He can find none elsewhere, for there is no place, no entity outside His thought-processes. "But," argue the material senses, "evil is here." So these same senses argue that the sun circles over and over a flat earth; yet we have ceased to believe them on this latter point. Science in the field of astronomy corrects the sense testimony concerning the sun and the earth, and Science in the field of religion is doing just the same thing concerning this far more vital question of good and evil.

According to the Science of Christianity, God knows no more about evil than light knows about darkness. God is found to be not an immense person looking down upon a humanity both good and bad, but the one great good, infinite, everywhere present divine Mind, that cannot think or know anything unlike His own perfection. Man and the universe as seen by this divine Mind and held as ideas in this Mind are wholly spiritual and good and eternal. This leaves the whole paraphernalia of matter and evil a dream of the human mind, and as unknown to divine Mind as your neighbor's dream, for instance, is unknown to you. You cannot fancy yourself entering your neighbor's dream and introducing evil there that he might grow by overcoming it. You would waken him if you wished to put him right. In like manner the law of God pierces the dream of human right and wrong belief, and calls thought awake to the spiritual facts of existence. In this awakening evil is of course rejected; and can be, when it is seen to have neither substance nor authority from God. This mental process is far different, however, from a struggle against evil believed to be placed here by God.

Perhaps a faulty philosophy has argued also that evil sharpens, by contrast, our appreciation of good. But holding still to our same comparison and admitting that there may seem a moment of relief in escaping from an unhappy dream, could we not after all enjoy our waking experiences just as much if there were no dreams? Does any normal, happily conditioned person keep recalling his dreams to quicken his happiness through the day? So good can be enjoyed without evil to offset it. We need no acquaintance with hell to make heaven happy. The actual enjoyment of good comes in experiencing good, not in remembering suffering; and in the last analysis it is in the activities of good after evil has been forgotten, that we find the purity and peace we seek.

"Freedom of the will," then, resolves itself into limitation of understanding; for so long as we see evil to choose and it looks to us good enough to choose, we are not understanding the all-satisfying nature of good—not knowing God. Indeed, the belief in a human will that can choose good or evil implies a separate mind from God and a mind that can resist God. According to Christian Science the personal will must be laid off that divine will may be known as governing us. This is illustrated, perhaps, by the experience of a student of Christian Science who was one day coughing and listening to the mental suggestion, "Don't use will-power to stop it." Suddenly thought awakened to see that human will itself was doing the coughing, in defiance of that divine will which says "Peace, be still," to every evil thing. Human will, logically, could not heal its own discord, neither could it manifest error when the divine will prevailed. This right discrimination subordinated the entire suggestion to the wholly good will of God and instantly dismissed the trouble.

So, because of its own nature, human will has no capacity

Copyright, 1912, by The Christian Science Publishing Society.

Digitized by Google

to choose good or scientifically to discard evil. Right desire chooses good and abandons evil, and right desire is a spiritual intuition born of God. It resists evil through great mental conflict, sometimes, but its strength need never be mistaken for the effort of personal will. Right desire in its unfoldment with each individual silences human will by choosing the will of God and the way of God in everything, and this disposes of the theological and psychological study of the human will. Christian Science maintains that the mortal will does not know enough to choose good, but must disappear as right desire chooses good and lifts the sense out of evil. So it remains that there is no freedom of the human will, in the course of salvation, but an annihilation of the will—of all wilfulness—that the Christ-mind may appear.

In discussing good and evil, however, there must be no failure to recognize the difference between the absolute and the relative. Christian Science does not say evil is at present non-existent to us as mortals, nor that evil can under any circumstances be called good. Christian Science teaches that evil is non-existent to God—a wholly different proposition; and that all is good because whatever is not good is neither permanent nor eternal. Picture what the divine consciousness would be if it embraced every evil thought and deed of one evil mortal. Then multiply the evil in one debased human experience by thousands, yes, millions, and think of God as conscious of it all! Divine Mind surely would be immeasurably more impure than any one of the worst of men, could such monstrous knowledge belong to Him, and how could He offer refuge from evil in His divine thought-processes, were He so filled with the contemplation of evil?

Starting from the right premise, the process of salvation is simple. God has no consciousness of evil; then, as we let the thoughts which emanate from God fill our thought-processes, we cease regarding evil, cease believing, fearing, liking, or otherwise thinking or doing evil. And little by little, discarding a bad habit here, resisting a temptation there, refusing mental house-room to the ungodly suggestion from anywhere, whether within or without, we shall rise to see as God sees, and evil because it is unknown to God will become unknown to us. In the absolute, evil exists not at all: the goodness of God is all in all. Relatively the dream of evil endures so long as mortals dream it, and it is as real and tenacious to them as they let it be, even though God knows it not at all. The first lesson of Christian Science is this discrimination: that evil appears only to human sense and that as men adopt immortal thinking evil will disappear; it must disappear, since immortal thought-processes are as unconscious of it as light is free from darkness, and as destructive to it, also, as is light to every lurking shadow.

Concerning this question of good and evil, then, to God, good, there is no evil. To spiritual man, the image and likeness of God, there is no evil. And to humanity here upon earth today there will be no evil proportionately as the likeness of God appears in our thinking. This is practical salvation. It begins upon the human side, as theology has always taught us, with the individual conviction of sin, repentance, reformation. Mrs. Eddy's unsparing exposure in the text-book of Christian Science of human carnality, her analysis of temptation, her illumined grasp of the exaltation which follows sin cast out, all combine to leave no doubt upon this point. Indeed, he who tries to begin otherwise than through repentance must begin again. But the basis and impulse of salvation, that which acts upon human thought to bring it to repentance and good works, is wholly divine; and from that divine point of view there is no evil. Herein is our hope, that when human thought is exalted to everything godlike, there will be no evil remaining to us.

So it is revealed by the Science of Christianity, that no will nor capacity to choose evil has ever been bestowed by God upon man; and that when belief in evil passes, the boast of evil shall cease. "When the last mortal fault is destroyed," Mrs. Eddy writes on page 292 of Science and Health, "then the final trump will sound which will end the battle of Truth with error and mortality; 'but of that day and hour knoweth no man.' Here prophecy pauses." We can, however, rejoice meanwhile in knowing that man has no will to choose evil; and that right desire, growing in freedom and greatness, can earn God's answer to its calling and lead thought into His good sunlight where evil cannot live at all.

"PUT OFF"—"PUT ON."

J. MORLEY WYARD.

In various parts of the Scripture, the act of putting off and putting on is employed symbolically to impress with graphic distinctness many lessons respecting purity of life and conduct,—putting off "the old man" of sin, putting on "the new man" of righteousness; putting off the foolishness of childhood, putting on the full vigor of Christian manhood; putting off materiality with its selfishness and its failures, putting on spirituality with its selflessness and its triumphs; putting off mortality and corruption, putting on immortality and incorruption.

Hiding away from the wrath of the Pharaoh during forty long years of exile and isolation and weariness, in the lone fastnesses of Horeb, far down in the historic peninsula of Sinai, where he kept the sheep of his father-in-law, there came to Moses that memorable day when he received his divine commission as the deliverer of his own people from the bondage of the Pharaoh. Drawing near to the bush which burned with fire but was not consumed, he heard the command: "Put off thy shoes from off thy feet, for the place whereon thou standest is holy ground." Obedient to the heavenly vision, Moses put off the mortal and material thought which had so long kept him in bondage to fear, and put on the new spiritual view or sense of things which qualified him to become the leader and judge of the chosen people during the forty years of their subsequent wandering. When the prodigal of the parable got ready to put off the riotous living and the quickly sequent famine and swine and husks, he found that the father whose love he had grieved and outraged stood ready to put on him the robe and the ring and the shoes, and to restore him to his once unappreciated sonship.

In the epistles of Paul this putting off and putting on is a favorite figure, which he frequently uses to inculcate the most searching instruction. "The carnal mind is enmity against God," he says to the Romans, "for it is not subject to the law of God, neither indeed can be." And he enjoins the Colossians and the Ephesians that they put off the "carnal mind"—the mortal mind—the "old man, which is corrupt according to the deceitful lusts." The black catalogue of the characteristics of the "old man" is here and there repeated, which sums up the misery and the shame, the suffering and the sorrow, the costliness and the unprofitableness, of indulgence in these "lusts." "Put on therefore, as the elect of God, holy and beloved, bowels of mercies, kindness, humbleness of mind, meekness, longsuffering; forbearing one another. . . . And above all these things put on charity, which is the bond of perfectness." "Put on the new man, which is renewed in knowledge after the image of him that created him." As if to make his meaning still more plain, he says: "Put ye on the Lord Jesus Christ;" and again, "If any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new." "Though our outward man perish, yet the inward man is renewed day by day."

When closing his admonitory and stimulating letter to the saints at Ephesus, he earnestly enjoins a putting on which is to have no antithetic putting off: "Put on the whole armor of God, that ye may be able to stand against the wiles

Digitized by Google

of the devil. For we wrestle not against flesh and blood, but against principalities, and powers, against the rulers of the darkness of this world, against spiritual wickedness in high places." Then he tells of truth for the girdle, righteousness for the breastplate, the gospel of peace for sandals, the shield of faith to ward off every fiery dart, salvation for the head, —these all for defense; and then the sword of the Spirit, the only adequate weapon of attack against the powers of evil, with all prayer and supplication and watching, to insure an enrolment in the ranks of world-conquerors and an eternal crowning.

It is the glory of Christian Science that it proclaims a whole gospel, a full salvation; that it meets in an understandable and practical way the every-day needs of a very needy world. To all who are bearing the sometimes intolerable burden of physical ills it says: "Put off" the weariness and the weakness, the sickness and the suffering, the fear and the torment, which have no rightful place in the experience of the children of God; and "put on" healing, health, hope, happiness, and heaven, which are the proper birthright of even the least of God's little ones. Isaiah sings: "Put on thy strength, O Zion; put on thy beautiful garments, O Jerusalem. . . . Shake thyself from the dust; . . . O captive daughter of Zion."

This is indeed the key-note of the teaching of Christian Science, inculcated in Science and Health and in Mrs. Eddy's other writings, that the real man, the spiritual man, the immortal man, is not a "dust-man," but is made in the image and likeness of God and has no lower origin. The putting off and putting on clearly indicate that we are not to sit down idly in a dream-world of mortal illusion, expecting to have mighty changes wrought in us and in our circumstances, without the cooperation of our steadfast purpose, earnest effort, and persistent study and labor. The injunctions would not have been so strenuously and repeatedly urged, were it not in our power to comply with them; not in our own strength and wisdom, indeed, but through the divine illumination which comes to us through an understanding of the truth, which is always available for us. The responsibility is thus laid upon us to work out our own salvation with fear and trembling; remembering it is God which worketh in us "to will and to do of his good pleasure."

'MINISTRY OF RECONCILIATION."

FLORENCE E. B. DONALDSON.

FROM the first moment that Christian Science comes into our lives, we necessarily begin to serve God in the dawn of a new understanding. In doing so we find that this service to our Maker is greatly to be desired above every other, being, as St. Paul describes it, in his second epistle to the Corinthians, the "ministry of reconciliation." Christian Science throws a wonderful light on the meaning of these words. Mrs. Eddy writes: "The atonement of Christ reconciles man to God, not God to man; for the divine Principle of Christ is God, and how can God propitiate Himself? . . . Love and Truth are not at war with God's image and likeness" (Science and Health, p. 19).

These lines lift our thought to a higher comprehension of man's relation to God. Many a familiar Scriptural phrase comes home to us with a new significance, and words which had seemed to have no special message for us before, are anon shining in their own light. We may be very honest and very sincere in our striving after good, but we travel a long way, and often become wearied with fruitless toil, before we even begin to realize that we cannot take our material beliefs with us. One by one we learn to drop them on the road; by slow degrees, willingly it may be, or perforce at the compelling touch of Truth. Following the footsteps of the Master, we would enter the sanctuary of Spirit, and well for us when we hear the voice of Truth. Thus to hear is necessarily to obey. However brief the moment of communion with Spirit, in it we have seen much. The task before us may seem utterly beyond our powers, but we have been strengthened and encouraged to perform it.

When first seeking the way in Christian Science, it is seldom indeed that the would-be worker in the realm of the real understands that all the work he is called upon to do must first be done in his own consciousness. He has nothing to do with the problems of others in the way he has hitherto believed. He learns in Christian Science that God is All-in-all, and as soon as we give up our condemning contemplation of the error which seems to be in, all around, and about us, we are making good progress in the task which God demands of each one of us, namely, to clear out of our own individual consciousness every thought that is unlike Love, the divine Principle of our being. However hopeless the task may seem to be at first, and our preliminary glance within anything but encouraging, we have nevertheless been aroused to a sense of the great need. In proportion to our honesty and our sincerity, we will go straight for the first unlovely thought which is uncovered to us, and with earnest endeavor and resolute persistence strive to uproot and eject it, however strong a hold it may seem to have.

God is "a very present help" to all who call upon Him. As we grow in the understanding of Christian Science, we see how necessarily we must be unfailing in our readiness to help others. "Love is reflected in love" (Science and Health, p. 17), and the Science of Christ demands of us that this reflected light of Love shall shine so clearly that all with whom we come in contact may benefit by it. Man, the image and likeness of God, is, like his Maker, of purer eyes than to behold iniquity. Through Christian Science alone are we able to separate the chaff from the wheat, to see as real only that which manifests something of the infinite Love, the immutable good, the one Mind. All praise, and honor, and glory be to God, that He has sent us "the Spirit of truth," as promised by Christ Jesus, and revealed to us through our beloved Leader, and that God needs not to be reconciled to His offspring, but that our "ministry of reconciliation" is to bring our own every thought and act into reconciliation with the divine Principle of our being. As error is uncovered to us in our own thought, in that of others, or in things around us, we must see clearly the falsity of its claim and know it for nothingness.

When the children of Israel seemed to be perishing in the wilderness for lack of water, and rose in rebellious accusation against their devoted guide Moses, he and Aaron prayed instantly to God for them. The realization of omnipresent good came once again to this faithful servant of the most High, but some sense of anger at the ingratitude of the Israelites seems to have clouded his thought, so that he evidently held the error as real, thereby acknowledging the claim of this sin of ingratitude to be something, when he of all men should have known its nothingness. Had not his understanding of infinite Love as infinite protection enabled him, by causing water to flow from the rock, to demonstrate to their material sense that the fountain of living water is always at hand, and should he not have known that the works of Love must be wrought in Love's own way? with the prayer of loving-kindness and self-immolation which afterward enabled Christ Jesus to achieve his great victory over death and the grave: "Father, forgive them; for they know not what they do."

How unbounded should be our joy and gratitude that the service demanded of us is thus wholly and unreservedly in the demonstration of good. The real man, as the expression of God's being, can never be a channel for aught but good, and we know that if we follow the call of Truth, whenever and wherever it may lead us, we shall at last reach that heavenly city, the new Jerusalem, where all is good and where nothing can enter that defileth or maketh a lie. To

Digitized by Google

this end we must work on unremittingly, not spasmodically nor falteringly, but, with the sense of our high mission always before us, with the badge of humility on our foreheads and songs of praise in our hearts, prove our reconciliation with divine Truth and Love.

TRUE TEMPLES.

H. G. MARCARIAN.

AN experience which the writer had some time ago yielded a great lesson, and has encouraged him to study Christian Science more and more, in order to be worthy to be known as a Christian Scientist. Early in the morning of a bright day, in company with several newspaper reporters and photographers, I was sailing down Boston harbor, and during our conversation with the captain of the revenue cutter which bore us, he asked me what paper I represented. I told him that I was the photographer for *The Christian Science Monitor*. He then asked me if the *Monitor* was really self-supporting. I said to him that if the *Monitor* did not support itself, it would not be in existence. "Besides this," I added, "the *Monitor* is not only existing, but is also increasing its circulation every day."

My interviewer thought that every Christian Scientist would naturally deem it his duty to support the *Monitor* as a valued possession, and therefore would subscribe to it. Then he added: "I really admire your people, and I must tell you why. I have traveled all over the country and have seen most parts of the world, but have never seen another people who stand by their religion as do the adherents of Christian Science." He added that he was especially impressed, while in a very small town of the middle West, when told that all the religious bodies there (and he named five or six of them) were struggling to keep their congregations together, and also to meet their financial obligations; and the worst of it all was that every church edifice in the town was burdened by heavy mortgages. "But," he went on, "only a few years ago there came a Christian Science family and settled down, and within a very short time the interest in Christian Science grew so rapidly that its adherents have recently built a beautiful church of their own, and that without a cent of mortgage on it." He then told me that all the Christian Scientists he had ever met were sincere, upright, honest, and happy people.

From that time on I have been striving more than ever to understand the Principle of Christian Science, and by constant study of the Bible and Mrs. Eddy's commentary thereon, "Science and Health with Key to the Scriptures," I am realizing that Christian Scientists are indeed happy and contented, not because they are able to erect beautiful churches, but because they are blessed in being able to assist their fellow men, in time of trouble and distress, by leading them into the understanding of divine Life, Truth, and Love. If, by so doing, they succeed in bringing happiness and joy into the lives of others, they glorify God and rejoice. They can but realize, also, how circumspectly they ought to live, in view of the splendor of the ideal for which they stand and the legitimate expectation of the world that they will practise what they preach.

Every Christian Scientist deems it both a privilege and a duty to aid in building living temples within human hearts, by purifying and uplifting the thoughts of all, by healing the sick and reforming the sinner, and by helping to make them glad recipients of the truth. They well know that God, Spirit, does not dwell in temples "made with hands," but in the hearts of the meek and lowly. Thus does every true Christian Scientist strive to practise the teaching of our Master, remembering his words: "Blessed are the pure in heart: for they shall see God." Thus also do they prove the true meaning of St. Paul's saying: "Know ye not that ye are the temple of God, and that the Spirit of God dwelleth in you?"

The statements of my interviewer reminded me also of the words of our Leader: "Today there is hardly a city, village, or hamlet, in which are not to be found living witnesses and monuments to the virtue and power of Truth, as applied through this Christian system of healing disease" (Science and Health, p. 149). Surely every Christian Scientist should keep constantly in mind the words of our blessed Master: "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."

"BLESSED ARE THE POOR IN SPIRIT."

WILLIAM LEANDER POST.

IN the fourth chapter of the second book of Kings, Elisha is recorded as being importuned for aid by a poor woman whose husband was dead and whose creditors were about to seize her two sons "to be bondmen" in payment of the debt which otherwise she could not pay from her scanty store. Instead of calling down riches from heaven to meet her material needs, Elisha makes her extremity the opportunity for revealing to her the highest law of supply. He ascertains the extent of her possessions to be a pot of oil, and thereupon directs her, "Go, borrow thee vessels abroad of all thy neighbors, even empty vessels; borrow not a few," and to pour out of her little pot of oil into these vessels, until all have been filled. Here are demands calculated to test faith; here is an occasion for strict obedience. Such requirements often come thus united to us all, and when trustingly obeyed bring rich reward, as in this instance, where we are told that the supply of oil only ceased when all the vessels were filled.

The spiritual application of the deep significance of this occurrence elucidates most helpfully the first beatitude: "Blessed are the poor in spirit: for theirs is the kingdom of heaven." The "poor in spirit" are they whose thoughts are unselfed sufficiently to reveal to them the inadequacy of material means and methods to meet their needs, and who, possessing only so small an amount of "heavenly inspiration" (a term used as one of the definitions for oil in the Glossary to Science and Health, p. 592) that they are convicted of their poverty, become beggars, petitioners for a fuller measure of the divine qualities. Pouring out their available understanding, obediently complying with the demands of Truth, they are able to fill many empty vessels, and they too learn that the supply never ceases so long as there is a demand.

Thus we come to see that it requires only growth in grace to demonstrate fully this great fact, how truly "blessed are the poor in spirit: for theirs is the kingdom of heaven;" *i.e.*, they have entered into possession of "the reign of harmony in divine Science; the realm of unerring, eternal, and omnipotent Mind; the atmosphere of Spirit, where Soul is supreme" (Science and Health, p. 590).

[Written for the *Sentinel*.]

REST.

EDITH L. PERKINS.

LIE still, little child, on thy mother's breast;
Her arms are about thee, and thou canst rest
Secure in her love, which knoweth best.

O rest, troubled heart, as the years go by,
Quiet thy fears, mourn not, nor sigh;
Love claimeth thee, and Love is nigh!

Love knoweth thy need, and heareth thy call;
Love keepeth thee,—thou canst not fall,
Love's tender watch is over all.

SELECTED ARTICLES.

[Frederick Dixon in *Essex County Standard*, Colchester, England.]

The account of Christian Science given in the sermon printed in your paper is calculated to cause more astonishment to a Christian Scientist than to any one else. The statement that a Christian Science practitioner reduces a patient to a dreamy condition, and then works upon him by the repetition of a formula, is not merely the very antithesis of the truth, it is sheer imagination. Mental suggestion, no matter by whom employed, or to what end used, is vicious in its application and its results. It saps the subject's normal mental power, reduces him to subjection to another human will, and is therefore never employed for good; and so, whether intentionally or not, it is always the servant of evil.

In one form or another, suggestion is as old as the human mind, and though it has run the full gamut of the nomenclature of evil, whether as magic or witchcraft, exorcism or divining, necromancy or astrology, the method at work has always been some form of mental suggestion, based on the belief in the dual powers of good and evil. For this reason the writer of the Jehovistic document of Genesis wrote of it as the fruit of the tree of the knowledge of good and evil, the eating of which culminated in death, and for this reason Christ Jesus spoke of it as a house divided against a house, unable to stand.

Jesus, however, went farther than this. He pointed out that so-called healing through suggestion was casting out evil through evil, and so could only end in evil; whereas true spiritual healing lay in casting out the belief of evil through the knowledge of the omnipotence of good. In order to heal in this way, it is necessary to show the patient how to drive the belief in disease from the human consciousness, by the effort to attain the Mind which was in Christ Jesus; and how utterly impossible it is to acquire that Mind by mental suggestion from a mentality fully persuaded of the reality of sin, disease, and death, any one can surely understand.

Christian Science heals by teaching that the knowledge of the truth which is to make the world free is a knowledge that the only absolute reality is the spiritual, and that the so-called knowledge which regards the relative material phenomena as real, is simply ignorance of the truth. Jesus said that God is Spirit. It is obvious, therefore, that the image and likeness of Spirit is spiritual and not material, and consequently that man made in the image and likeness of God is spiritual and not material. If, then, our clerical critic is right in declaring that all physical bodies are real, in an absolute sense, God must have made material duplicates of the image and likeness of Spirit, which is absurd. Jesus said, "The flesh profiteth nothing," and Paul declared that those who were in the flesh could not please God, so that, according to the critic, God must have made, not only His own image and likeness in the spiritual sphere, but He must also have made His own image and likeness in the "material sphere;" and this last image and likeness He must have made not merely profitless, but displeasing to Him. Surely a remarkable work for an omnipotent creator!

The teaching of the unreality of matter is nothing new. It has been accepted as absolutely scientific by half the greatest thinkers of the world, and numbers of them Christians. It is merely what is known as idealism, in distinction from materialism, and amounts to this, that instead of mind being a force inherent in matter, matter is a subjective condition of mind. This theory, which in its modern form had a bishop for its progenitor, logically results in pure pantheism, in its attempt to escape from materialism, when the mind producing the material phenomenon is regarded as real.

It is here, therefore, that Mrs. Eddy, rejecting the idealism of natural science, accepted the idealism of Christ Jesus, who said: "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit;" and insisted that matter was merely the relative human misconception of the absolute spiritual reality. Had Mrs. Eddy stopped here, she would merely have added one more theory to the tale of human speculation. She recognized, however, that Jesus had not merely preached a new gospel, he had made it practical by scientific demonstration in his miracles, or object-lessons. She accepted, consequently, as every student of the Bible is bound to, the responsibility of scientific demonstration, that the only proof which any man can give that the gospel preached by him is the gospel of Christ, is the performance in some measure of the works which were done by Jesus the Christ and demanded by him. "Faith without works is dead."

[Jno. M. Dean in *News Scimitar*, Memphis, Tenn.]

Jesus said, "I am not come to destroy, but to fulfil," and then proceeded to destroy sin and sickness, thus giving an object-lesson of their unreality, well knowing the impossibility as well as the undesirability of destroying any part of God's creation, which alone is true or real. How can an absolute reality be destroyed? Such a result is unthinkable, and the force of logic drives us to the conclusion that reality is permanent, while its counterfeit unreality is alone destructible. "Whatsoever God doeth, it shall be forever," and on page 186 in Science and Health Mrs. Eddy says, "If evil is as real as good, evil is also as immortal." God "made all that was made" and pronounced it good, hence evil in any form is only a false belief evolved by mortal man, and thus unreal.

We must remember, however, that counterfeits often seem very real until proven otherwise, and that sin and sickness must receive sufficient recognition in order to expose their counterfeit nature and thus destroy their seeming power. So long as mankind gives even a semblance of power to sin, so long will they be sinners, and it thus becomes true that "all [mortals] have sinned" and are sinners; and yet in the same chapter quoted by our critic, at the seventh verse, we find that "if we walk in the light, as he is in the light, . . . the blood of Jesus Christ, his Son, cleanseth us from all sin." This is in line with the command of the Master himself, "Be ye therefore perfect," and while no one of us has yet more than started in this direction, we refuse to believe that he perpetrated a fraud upon humanity by commanding the doing of impossibilities, despite a seeming remoteness fathered by a human sense of limitations.

The critic's quotation of the statement of Jesus, "They that are whole have no need of the physician, but they that are sick," is rendered in substantially the same way in Matthew ix:12, and is immediately followed by the words, "But go ye and learn what that meaneth." This is timely advice to the present critic and to all others who are presumptuous enough to use this as Scriptural endorsement of pills and plasters. The word "physician" in this text is merely a general descriptive term used for the convenience of his hearers, and purely as an illustration by the "great Physician," who never employed or recommended material remedies of any kind and whose vocabulary knew no such word as "failure." He did the works of his Father (Spirit) by purely spiritual methods, and those who rush in to use his words or deeds to bolster up an opposing theory are welcome to the extremely doubtful comfort of such an argument.

[Frank H. Bell in *Mahanoy City* (Pa.) *Record*.]

In reading the published criticism on a Christian Science lecture recently delivered in your city, I am impressed with the extent to which one's statements may be misjudged and misinterpreted by a critic whose motive in attending is not to be informed, but to gather material for disputation. The attempted interruptions at the lecture, and the incorrect public statements as to what the lecturer said, lead me to believe

Digitized by Google

that some persons were present in a state of mind not in accord with the spirit of courtesy and good will in which our Christian Scientist friends in Mahanoy City provided out of their individual means this lecture, and invited all who wished to hear, though obviously not to be heard.

Our critic need not be disturbed over the lecturer's designation of God as "a principle," because no such designation was given. Where the word Principle is applied to God in Christian Science it is without the article "a," and it is used in such a sense as this, the first definition of the word in the Standard dictionary: "A source or cause from which a thing proceeds; a permanent or fundamental cause." Those only who would deny that God is creator could object to the word Principle as applied to Deity. Christian Science employs other terms to indicate the nature of God, such as Life, Truth, Love. In all authorized Christian Science literature these terms when used as synonyms for God are capitalized, to make clear their meaning.

The Bible says God is Love, and nobody thinks of associating the term as thus employed with things to which the world sometimes refers as love. This will illustrate the unfairness of trying to make it appear that Christian Science confounds Deity with a mere theory. And so, when Christian Science refers to God as Mind, the intent is to convey the idea of infinite and perfect intelligence, and is not likening Deity to the human mind or brain. The lecturer made all this so clear that any effort to garble his meaning is without excuse.

The critic seems to consider Christian Science as presumptuous in attempting to explain the Scriptures. Yet he essays to do this very thing every week in his pulpit. If one chooses to write one's interpretations into a book instead of voicing them in a sermon, wherein is the essential difference? We have no desire to argue with the critic wherever he states Christian Science correctly. For instance, the proposition that God is not the author of evil, does not create sin, torture His children, nor condemn them to death, is so self-evidently right that no man's opinion to the contrary is capable of stemming the tide of enlightened understanding. When, however, our friend undertakes to give out the impression that Christian Science is contending for the immortality of the material body, he needs to be corrected. That which really constitutes the man does not die. All forms of Christianity, and of religions generally, teach that the passing of the fleshly elements is not the annihilation of man, which is likewise the teaching of Christian Science on the subject.

We are sure that nothing in the lecture justified unkindly reference to the inability of the lecturer to manifest fully the requirements of the Founder of Christianity. "He that believeth on me, the works that I do shall he do also." One who had fully qualified to this test of Christianity might be in a position to make comparisons with those who have only partially attained, but scarcely one who has not even considered it worth while to try. If the critic were to preach a sermon on the text, "Be ye therefore perfect, even as your Father which is in heaven is perfect," urging his hearers to strive to bring out more of good in their lives, what would he think of one who should question the consistency of his discourse because the preacher was not himself perfect?

Christian Science teaches that an important part of Christian work is the healing of the sick through the cleansing processes of spiritual regeneration, and it holds up the example of the master Christian in justification of its position. Jesus said that those who believed on him, understood him, would be able to do the works he did. Christian Scientists believe he spoke the truth, and they find, as their understanding increases, they are able to do more and more of these good works of healing. They have no quarrel with those who prefer drugs, but for themselves they are sure they have found something better, and in the light of their experience they are not disturbed by the fact that somebody else believes drugs to have been prescribed from heaven itself. People are entitled to their own beliefs, but not to misrepresent the beliefs of others.

The important thing about Christian Science is that it is turning the attention of earnest, thinking men and women away from empty creeds and dogmatic theology by demonstrating to them that real Christianity is a practical religion that may be not merely believed, but may be understood and lived; that it is capable of saving mankind here and now, and from the sin and suffering which are no part of the divine plan. All who have given it a fair trial bear out these assertions, and their numbers are increasing the world over.

[George A. Law in *New Haven* (Conn.) *Register*.]

From the communication published in a recent issue of your paper Prof. Irving Fisher appears still to be concerned because Christian Scientists do not favor a national health bureau or department of health. Inasmuch as Christian Science has for its standard high ideals, and Christian Scientists thoroughly believe in pure food, pure air, pure water, etc., this critic attempts to show that they cannot consistently take an opposing position relative to this so-called health legislation. Furthermore, irrespective of the fact that much has already been said upon this subject, he seems to fail to appreciate the Christian Scientists' view-point, since he reiterates that Christian Scientists "attack health laws."

A Christian Scientist stands in the same relation to this proposed legislation that hundreds of thousands of believers in medical freedom do who may be of various other religious faiths. The basis for the opposition is entirely at variance with the representations of our critic. Those who are opposed to this legislation conscientiously believe that it would enable one school of medical practitioners to dominate and control other schools of healing, and result in forcing upon others the opinions and views of this one school. In opposing such a measure the Christian Scientist considers he is merely exercising that inherent right which he enjoys in common with all good citizens, to object to the passage of a law granting to one interest a special privilege, though it is claimed to be for the public good.

Those who are not in favor of extending the power of the health service claim that there is no good reason for so doing, that already there is sufficient authority to conduct the work, from the handling of the problem of polluted streams to the matter of teaching the screening of houses against flies and mosquitoes, with which Professor Fisher seems greatly concerned. The opponents of the proposed legislation point out that the treating of physical ills is still in its experimental stage, no system having as yet reached the point where it can consistently ask for governmental endorsement. The effect of health service would be to limit the experimental and research work to that which accords only with the school of medicine to which the doctors in authority belong. It can be at once appreciated that this would give to this school the benefit of the assistance of the public treasury and also a position of dominance which would act as a hindrance and obstruction to the progress and development of other systems of healing. If one school of medicine can ask for federal aid, why not others?

Professor Fisher said that "Christian Science can do practically nothing" for "bad teeth, adenoids, curved spines, etc." He also stated, "I have personally a number of warm friends who are Christian Scientists." Nevertheless it does not appear that this friendship has resulted in his learning much that is accurate relative to Christian Science, otherwise he would know that Christian Science has healed and is repeatedly healing such conditions. And furthermore, if his conception of Christian Science were in any way reliable, he would also know that its practise does not include, as he states, the use of "the power of mental suggestion." In the Preface of the text-book of Christian Science, "Science and Health with Key to the Scriptures." Mrs. Eddy says: "The

Digitized by Google

physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness and disappear as naturally and as necessarily as darkness gives place to light and sin to reformation. Now, as then, these mighty works are not supernatural, but supremely natural."

Christian Science is based upon a knowledge of God, the facts or truth about God and His laws, spiritual law, His creation, including man and man's relation to God. Jesus, the Founder of Christianity, Mrs. Eddy in Science and Health (p. 313) declares, was "the most scientific man that ever trod the globe." Jesus taught this knowledge, these facts, truths regarding God, for he was the great exponent of spiritual law. He also demonstrated this knowledge in the healing of disease and sin, and in raising the dead through the operation of spiritual (God's) law. Inasmuch as to be Christian is to emulate Jesus, and so to do is to be governed by spiritual law, which pertains to facts, truths concerning God, wherein can science be eliminated from religion? It thus becomes perfectly plain that to be Christian, Christianity must be science, and science to be science must be Christian.

Christian Scientists in opposing this proposed so-called "health legislation" are not, as our critic claims, opposing the doctors. Christian Scientists recognize that those individuals who rely upon drugs for healing have a right to expect no interference in the enjoyment of such rights from believers in other differing schools of medicine or systems of healing. It is also recognized that so long as the dependency upon drugs exists, the noble, conscientious, self-sacrificing physician who faithfully labors for the alleviation of human suffering will be needed, and fortunately such doctors are largely in the majority. The opposition is to the purpose and methods represented by the class of doctors who are working to gain an unfair advantage in asking to be granted the special privilege of acting as custodians of the public health. Medical freedom is as sacred as religious freedom, and the government can no more establish that which in effect would be state medicine, than it can establish a state church.

[Mary B. Thompson in *Los Angeles* (Cal.) *Tribune*.]

Dr. Hoyt's remarks anent vaccination are amusing. I do not know where he got his information about Japan, and I am inclined to think that his memory has failed him sadly. The following facts are from the director of the sanitary bureau at Tokio: In 1872 a law was passed making vaccination compulsory. In 1885 another more stringent law followed, which provided for revaccination every five to seven years. This was rigidly enforced, yet the figures show that smallpox continued to rage and with a fatality of twenty-five per cent, which was greater than in prevaccination days. In 1896 the Japanese Parliament, under the astute guidance of the medical profession, who were doubtless greatly encouraged by this progress, passed another law, which made revaccination compulsory every five years. And the Japanese, having no silly antivaccinationists among them, submitted meekly. This continued in force till 1908, when the worst epidemic of recent times occurred, with a case fatality of thirty per cent. I agree with Dr. Hoyt that Japan is a "boomerang," but I differ from him as to which side it hits.

[William J. Bonnin in *Manchester* (England) *Guardian*.]

You report the president of the Lancashire and Cheshire Association of Baptist Churches as saying at Oldham that Christian Science attracted by being incomprehensible. May I be permitted to say that the exact opposite is the case? It is just because of its power to call up in the individual a new understanding of those things which he has hitherto been led to regard as incomprehensible mysteries, and the ability with which it provides him to prove for himself that hand in hand with the development of that understanding there comes a mental, moral, and physical betterment, that Christian Science makes so wide an appeal. For as "the excellency of knowledge is that wisdom giveth life to them that have it," so, conversely, the demerit of want of knowledge is that ignorance takes the forms, to our human consciousness, of sin and sickness and death.

[Charles M. Howe in *St. Joseph* (Mo.) *Gazette*.]

I wish to correct an erroneous impression contained in the article in a recent issue of your paper, in regard to a criminal who, the article says, has embraced Christian Science and thereby "hopes to cheat the electric chair," etc. Christian Science cannot be employed in any such way to defeat the ends of justice. If he or any others have such an opinion, they are greatly mistaken, as Christian Science does not in any sense countenance or condone wrong-doing. The Scripture tells us of those who say: "Let us do evil, that good may come," that their punishment is just. In Science and Health, Mrs. Eddy says: "Evil which obtains in the bodily senses, but which the heart condemns, has no foundation; but if evil is uncondemned, it is undenied and nurtured. Under such circumstances, to say there is no evil, is an evil in itself" (p. 448). Those who have a superficial concept of Christian Science, and are prejudiced against it, might say that they can do anything and escape punishment, but this is just the opposite of the true idea. Christian Science teaches that they who sin must suffer, and that it is right that they should. It is not true that Christian Science teaches there is no hell for the sinner. If this young man had earlier embraced Christian Science it would have saved him from crime. In any event, it would have led him to repentance and reformation, as judgment and justice are two of the most prominent statutes, and Christian Science does not cover up sin and iniquity, but brings it to light and destroys it. Mrs. Eddy says: "A sinner can receive no encouragement from the fact that Science demonstrates the unreality of evil, for the sinner would make a reality of sin,—would make that real which is unreal, and thus heap up 'wrath against the day of wrath.' He is joining in a conspiracy against himself,—against his own awakening to the awful unreality by which he has been deceived. Only those who repent of sin and forsake the unreal, can fully understand the unreality of evil" (Science and Health, p. 339).

[Johnston D. Spiers in *Vancouver* (B. C.) *Province*.]

In a recent issue appeared a sermon by a clergyman on the occasion of the opening of the new Chalmers church, in which he alludes disparagingly to Christian Science. We are somewhat surprised to find that a man of such standing should use such inelegant language in regard to a religion which is very dear to the hearts of many of his neighbors, and it seems to express but little of the spirit of the Master. Christian Scientists are sincere in their efforts to follow Christ as he commanded, but they believe that it is their duty to heal the sick as well as to preach the gospel. Many are Christian Scientists today who failed to find a demonstrable truth in the church which they formerly attended.

The iron fetters which matter welds,
Are the weight of our low desire,
But the golden links of the chain of Mind
Are forged in God's cleansing fire.
And His anvil clangs in chords of love,
While freedom hovers with peace above.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

FAITH AND WORKS.

It has been said that the more healing work there is done by Christian Scientists, the greater will be the growth of the movement and the greater will be the consequent benefit conferred upon humanity. This would seem to be a satisfactory answer to a question which is frequently asked by those who have become impatient of what seems to them the slowness of growth in the branch churches or societies of which they are members. Past experience has repeatedly proven that genuine and healthy growth of the Christian Science cause has been due to the fact that this movement is not one of words alone, but rather one of works; that its preaching has not been the sum total of what it has to offer to needy humanity, but that it has been ready as well with its practical demonstrations of the healing and saving power of Truth,—the works which justified the faith.

The one great and important thing, therefore, to be done by Christian Scientists, in order most effectually to help their local churches to grow and prosper, is to demonstrate the fact that Christian Science is based upon divine Principle; that its teachings can be proved to be true, and that the sick and sinful are healed and saved through the practise of its "divine beatitudes" (Science and Health, p. 446). Mrs. Eddy has said that in order to "progress most rapidly in the understanding of Christian Science," it is necessary that one should "study thoroughly the letter and imbibe the spirit;" and not only this, but one must "adhere to the divine Principle of Christian Science and follow the behests of God" (Science and Health, p. 495). Obedience to this loving counsel leads inevitably to the healing of the sick and the regeneration of the sinful. It leads also to that righteousness which Mrs. Eddy exhorted her followers to attain when she wrote, "Beloved Christian Scientists, keep your minds so filled with Truth and Love, that sin, disease, and death cannot enter them" (*Sentinel,* July 7, 1906).

Upon this platform the growth, not only of the branch churches, but also of individual usefulness, is safely founded. As the church services, the lectures, the distribution of literature, and the other orderly lines of prescribed endeavor are conducted upon this high plane, extraneous means for popularizing Christian Science are soon found to be not only unnecessary but futile. It is through the healing works wrought in demonstration of its teachings that Christian Science has become the world movement that it is today, for go where we may, there are the same conditions which touched with compassion the Saviour of mankind, and the need for the healing truth he taught and demonstrated still calls for that consecrated effort which of old responded to the appeal, "Come over into Macedonia and help us." It must not be forgotten that every one of the Christian Science churches which today are such a tremendously potent force in the religious welfare of the world, had its beginning in the healing work accomplished by some faithful student of our Leader's writings, and that because the healing thus wrought appealed to other needy ones, the circle inevitably widened, until the natural and legitimate result was a strong and steadily growing church.

Long ago the Master said to his disciples, as he sent them forth on their world mission: "Freely ye have received, freely give," and this is the message for each loyal Christian Scientist today. Surely, gratitude to God for the truth again made available to a needy world through the life-work of our revered Leader, the truth which has given us health instead of sickness, joy in place of sorrow, peace where once was discord, abundance where lack had prevailed, should prompt us to share with others the blessings we have so abundantly received; and the church wherein gratitude is the dominant spirit is laying wide and deep the foundations, not only for the material structure of today, but for the "building of God, an house not made with hands, eternal in the heavens."

ARCHIBALD MCLELLAN.

THE LITTLE AND THE LARGE.

NOTHING is more distorting to judgment, more despoiling in the long run to happiness of heart, than the habit of looking at things from a petty point of view. In the experience of the average man, ignorance, selfishness, and fear join hands to induce him to be governed by the little things rather than the large. How often in every-day life do men disclose their absorption in some passing satisfaction, some bauble of gain, to a degree that makes them quite forgetful of civic, humanitarian, or Christian interests,—the fulfilment of their duty to their state, their neighbor, and their God.

And what is true of these is true of all. The things of material sense, even at their best, the most coveted places, possessions, and pleasures,—how well we know their relative nothingness, and yet how universally does the conscious or unconscious desire for them darken spiritual vision, while illustrating the utter folly of devotion to the inconsequential. The fact is that nothing worth while can be accomplished, no duty can be well done, and no abiding joy can be gained, unless the larger interests are constantly kept in view. Indeed, the serviceability of genuine good-will always resides in the fact that one is ready to sacrifice the good opinion of those about him rather than be untrue to their highest welfare. The mother who is seeking ever to please her child, who fails to think of him ever in the light of his higher nature, mission, and destiny,—such a mother is not even a friend to her child, much less his best friend, and she is sure to meet with disappointments and sorrow of heart, because she has substituted the little worth for the large.

All this gives significance to the fact that Christian Science inculcates the habit of always maintaining our loyalty to the larger view. Our estimate of human relations, situations, values, and events must always be determined by regard for the truth of being, and since this truth is basic, ideal, and unvarying, we have in it the "sure word of prophecy," the anchorage of faith, and the abiding occasion for joy. The vision of God and His universe, the infinite compass of Truth,—this is the background of all of Christ Jesus' teaching, and he was never forgetful of it for one moment. This gave him his poise, and here too we must follow him if we would escape the enslavement and the sorrows which pertain to a dwarfed sense.

This recognition of the larger spiritual fact is made manifest in the enthusiasm which Christian Scientists express with respect to the Christian Science movement. To illustrate, those who have been privileged to winter amid the orange groves of the lower Mississippi will always remember how the river grew upon them in impressiveness, how the unvarying steadiness and mighty momentum of its advance spoke ever for the continuity and irresistibility of law. Sometimes its surface waters would be seemingly retarded by an adverse wind, and here and there some projection of the bank cradled an eddy in which the current was apparently thrown into confusion and retreat, but the great ocean-bound stream moved on its way with that undisturbed dignity which told of its breadth and depth and of the vastness of the force within and behind it.

In all this it is a fitting symbol of the cause of Christian Science. The winds of prejudice may locally affect its surface, and the projections of ignorance which it must needs pass by may, in this field or that, seem to impede the movement's divinely destined advance, but to lose our

Digitized by Google

courage or our joy in the presence of such an incidental situation would give evidence that we had been dominated by a triviality while in the presence of the world's supreme event.

Right conclusions respecting the triumph of the Christ-idea are based in Christian Science on demonstrable verities, and in so far as these are apprehended and clung to, they will render us superior to the phenomena of mortal sense; our eyes will be fixed on the hills of God, whence cometh our strength and our unfailing joy.

JOHN B. WILLIS.

"EVERLASTING GOSPEL."

IN the fourteenth chapter of Revelation we read of an angel who was sent forth to proclaim the everlasting gospel to "every nation, and kindred, and tongue, and people"—none being unprovided for by divine Love and wisdom. It is interesting to note that these angels who announced to men the divine will, did so with "a loud voice," and yet no one could claim that these voices were ever heard by mortal ears, although the beloved John not only heard but transcribed their messages, so far as it was possible to translate the terms of Spirit into human language. John tells of an outpouring of melody from the mighty host of the redeemed, those who were the "firstfruits unto God" from among men, and he says that no one could learn that song but those who had gained the spotless purity of the divine idea called the Lamb,—those in whose mouth was no guile, and who were "without fault before the throne of God."

At the same time that we read of this everlasting gospel, or message of divine Love, we are told in startling terms of the fiery destruction of error and its every manifestation, and some earnest students of the Scriptures are troubled over what to them seem to be contradictions in the divine nature,—the tenderness toward the good, and what is characterized as fierce wrath toward wrong-doing and wrong-doers. This Scripture is, however, made wonderfully clear by our revered Leader, who tells us John was so exalted that "he became conscious of the spiritual facts of being" (Science and Health, p. 574); and when this consciousness comes to us, we shall no longer be troubled, but will understand her further statement that "the sum total of human misery, represented by the seven angelic vials full of seven plagues, has full compensation in the law of Love."

The old Greeks had possibly a glimpse of this everlasting truth when they pictured the steeds of the morning driving irresistibly before them all the dark shadows of the night. If, in our belief, we were for a moment to endow these shadows with intelligence and reason, we could easily imagine that they suffered when they were being crushed out of existence by the victorious hosts of the skies; but men of this practical age would smile at the fancy, and yet hold to the delusion that humanity can suffer in the process of error's destruction, and this because of the deeper delusion that wrong thinking and wrong doing bring even momentary pleasure, a morbid belief which Christian Science uncovers and dispels by its declarations of divine law.

As we learn in Christian Science, sin and misery are inseparable companions, yet neither possesses life or reality, having no place in the divine consciousness; and, conversely, goodness and happiness are twin brothers, the offspring of infinite Mind, who knows and cherishes all His own ideas, in whatever nation, kindred, or people they may be found. Goodness leads to more goodness because true goodness is one with intelligence, and this goodness brings more happiness, health, strength, in brief, wholeness, and we come to welcome the process which separates truth from error, whether this activity goes on in our own consciousness or in that of others—even those dearest to us.

We surely desire to have the mark of the beast effaced, even though it be "with the sweat of agony" (Science and Health, p. 327), and we may be absolutely certain that our heavenly Father will never hurt us, will never cease to be Love, hence loving at every step of our journey from sense to Soul. It is also well to remember that our real selfhood, God's idea, cannot suffer, and that our effort must be to "put off" the false belief in a material selfhood unlike God, that it may be said of us also, "Here are they that keep the commandments of God, and the faith of Jesus."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

WELLINGTON, NEW ZEALAND.—Bliss Knapp, a member of the board of lectureship of The First Church of Christ, Scientist, Boston, U. S. A., The Mother Church of the denomination, on his way round the world on a lecture tour, reached Wellington from Auckland on Tuesday afternoon, Sept. 3, and went south by steamer the next day.

Mr. Knapp told a *New Zealand Times* representative yesterday that his tour was the outcome of a decision by the board of lectureship that one of its members should go round the world every year, visiting all the churches of the denomination that might invite his presence. He left Boston, their headquarters, on June 9 last, and sailed from San Francisco a week later. At the first stop, Honolulu, he found a strong group of Christian Scientists with a regular congregation of about one hundred. Vigorous groups of Scientists were also found at his succeeding stopping-places—Yokohama, Kobe, Shanghai, Hongkong, Manila, Townsville, Brisbane, and Sydney. At each place he delivered lectures to large audiences. At Sydney, where he lectured twice, he had an audience of fifteen hundred in the city and one of six hundred and fifty in a suburban hall. Last Sunday he was in Auckland and attended the services of the group there, and on Monday he left for Wellington. On Friday night he was to lecture for the Scientists in Christchurch, after which he would take ship for Australia, going via Bluff. He was to lecture at Melbourne and Ballarat, and then he would pay a farewell visit to Sydney before catching a steamer for Europe. After lecturing in various Continental countries and in England, he would return to America, and reach Boston, he hoped, in January.

New Zealand Times.

BELOIT, WIS.—Christian Scientists of Beloit feel they have made an advance step in establishing a reading-room in the down-town business district, as it is much more centrally located than was the old one. The greatly increased sale of literature proves it to have been a move in the right direction. Close upon this demonstration, the way appeared for the opening of a rest-room at the local fair. This room was attractive and exceedingly well patronized, and about fifteen hundred copies of the *Sentinel, Journal,* and daily *Monitor* were distributed.—*Correspondence.*

COLUMBUS, OHIO.—Last Sunday afternoon (Sept. 22) the distribution committee held its first service in the Columbus workhouse. This is the first Christian Science service ever held in any of our penal institutions. The deepest attention and interest were given the entire service, and the literature with which we had provided ourselves was eagerly received. It is our plan to continue services at this place, and it is needless to say that our hearts were filled with gratitude for this opportunity of giving to our brothers the message of hope which Christian Science brings.—*Correspondence.*

SPOKANE, WASH.—The Christian Scientists had a nicely furnished tent at the Spokane interstate fair. A great deal of Christian Science literature was given to visitors and a great many questions about Christian Science were answered.—*Correspondence.*

THE LECTURES.

MELBOURNE, AUSTRALIA.

Henry Gyles Turner, retired bank manager, introduced Bliss Knapp, who lectured on Christian Science to a representative audience of fifteen hundred people in the Melbourne town hall. In the course of his remarks Mr. Turner said that he would not attempt to say anything about the subject of the lecture. His duty was simply to introduce the lecturer, and for his benefit he would like to say something about the character of a Melbourne audience. As one who had the experience of a whole generation, and who had attended scores of lectures on political, social, literary, and scientific subjects, he had no hesitation in saying that a Melbourne audience was always willing to listen, and listen attentively, except perhaps when the address was one of dogmatic assertiveness or such as raised sectarian feeling. He had no doubt the lecturer would tell them all they wished to know, but if they did not hear enough, or if they did not quite agree with what they heard, he might tell them they would receive a welcome at the Sunday or Wednesday night meetings of the Christian Science church in the Athenæum hall. They were not present at a revival meeting. There would be no emotional speaking, but they would hear from the lecturer a plain statement of the truth which had brought health and happiness to a large number of people all over the globe.—*Correspondence.*

TRINIDAD, COL.

At the lecture on Christian Science delivered in Elks' hall under the auspices of the local Christian Science society by William R. Rathvon, he was introduced by Judge R. R. Ross, who said:—

The world has been and is now and always will be looking forward to the time, the means, the way, when, where, and how the burdens, the trials, the sorrows, of this life can be overcome; when and how men can enjoy on this earth some of the looked for and hoped for joys and pleasures of the heaven beyond. Within the last few years, a society or church has sprung into existence, whose membership has increased in a way that is phenomenal, considering the length of time it has existed. Although not a member myself, I have read and heard a great deal about it. They claim to have had revealed to them the way to earthly joy, peace, health, and happiness, and their life-work is to teach that to others. Cases have come under my own personal observation where I know their teaching has been of almost untold benefit, and I have been and am now very anxious to learn more about it.—*Correspondence.*

NEEDHAM, MASS.

A large and interested audience was present at the annual lecture on Christian Science by Virgil O. Strickler in the Town hall. The lecturer was introduced by George M. Clough, who said:—

It is highly probable that there are those here who may not know just why these lectures are given. Perhaps some one has desired to know about Christian Science and has been freely informed by one who was mistaken. Such things sometimes occur in other walks of life. That these erroneous impressions might be corrected, and that the life-work and purpose of Mrs. Eddy, the Discoverer of Christian Science, and Founder of the movement, might be correctly understood, are some of the reasons, at least, why the Leader of this movement deemed it wise to establish a board of lectureship. Before one is elected to this board, he must have proved his understanding of Christian Science by healing the sick and reclaiming the sinner, to a degree at least, as did the Galilean Teacher, nineteen hundred years ago. These gentlemen have been called from professorships in college, the bench and bar, from the ranks of clergy and physicians, as well as from that great field, the business world. They speak authoritatively on the subject and with unbounded love for all mankind.—*Needham Chronicle.*

OAKLAND, CAL.

A lecture on Christian Science was given before a large audience at Brooklyn Masonic Temple by Francis J. Fluno, M.D., of this city. The lecturer was introduced by Charles A. Michener, first reader of Fourth Church of Christ, Scientist, of Oakland, under whose auspices the lecture was given. Mr. Michener said:—

When Moses cast down his rod and saw it become a serpent, fear was uppermost in his thought; but when at the divine command he put forth his hand and took hold of it, the serpent became a rod and harmless. So we today take up and handle the thought of error, and find it as harmless as the rod of Moses. This experience of Moses prepared the way for the prophets who followed, until Isaiah, so clear in his vision, prophesied the coming of the Messiah. This idea was fostered and kept alive in the thought of the Jews by the later prophets, who taught and demonstrated the power of the most High as illustrated by the three men in the fiery furnace and Daniel in the lions' den; followed later in the leading of the wise men by the star of Truth to the manger where lay the greatest gift, the purest emblem of infinite Love, the child Jesus whose teachings were to revolutionize the world.

In the after centuries, the Master's admonitions to heal the sick and raise the dead were unheeded, although his coming forth from the tomb after the crucifixion was the culmination of his life-work, a perfect demonstration of the truth taught today in Christian Science. Yet the naming and giving of this Science of healing were left for a woman, Mrs. Eddy, the messenger to this age, through whose purity and consecration to God this book, "Science and Health with Key to the Scriptures," was brought forth, and through its study the children of Israel are still being led out of the wilderness of human wo.—*Oakland Tribune.*

ASHLAND, ORE.

A lecture on Christian Science, delivered by Frank H. Leonard in Elks Temple, was listened to by an attentive audience of three hundred. The lecturer was introduced by David F. Fox, who said in part,—

Christian Science is undoubtedly less understood, and has met with more adverse criticism through ignorance or prejudice, than any other religion since the days of Wesleyism. But we must not lose sight of the fact that even a large majority of the hundreds of thousands who are Christian Scientists today, had nothing but unkind things to say of it, until they learned what Christian Science is. Perhaps this was but natural, for human nature, or mortal mind so called, is ever prone to pass judgment upon matters, favorable or unfavorable, of which it is entirely ignorant.

Correspondence.

PHILADELPHIA, PA.

Under the auspices of Second Church Prof. Hermann S. Hering lectured on Christian Science to two large audiences at the Germantown theater. He was introduced by Frank Percival Lloyd, who said:—

Less than fifty years ago there was just one Christian Scientist. How well that one Scientist performed her part of the task of evangelizing the world is evidenced by the fact that today, in every civilized country, there are just such splendid audiences as this, eagerly waiting for the message of Christian Science. That Christian Science is a divine revelation few would care to go on record as doubting, for did not Jesus say, "By their fruits ye shall know them"? and surely the fruits of Christian Science are not

Digitized by Google

lacking. We are gathered here to learn more about this Science, more about this religion of Love, this teaching which speaks effectually to sickness and sin, even as did the great Teacher when he said to the troubled waters, "Peace, be still." Jesus healed sin and disease by one and the same method. He ignored completely man-made, mortal law and relied absolutely upon the unchanging, unalterable law of God. When near his final demonstration he said to his disciples, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."—*Correspondence.*

WEEPING WATER, NEB.

William D. McCrackan, M.A., lectured on the subject of Christian Science at the Philpot opera house to an appreciative audience. Troy Davis in introducing the speaker said in part,—

Christian Science is awakening the interest and attention of the world, not so much for what it claims to do as for what it does. Through its ministrations thousands of people are being raised from beds of pain and suffering; from sorrow and from sins of every form to lives of health, happiness, and usefulness. Christian Science gives us a provable understanding of God; it does not teach us that God is afar off, that we may possibly know Him at some uncertain future time, but that God is ever present with us, that He is available to us every hour and moment of our lives.—*Weeping Water Republican.*

EVANSVILLE, IND.

Virgil O. Strickler, at a lecture on Christian Science, was introduced by Judge J. W. Wartman, who said in part,—

The higher realities of life are revealed to us through different *media.* God speaks to men in all languages, and by all manner of signs. God reveals Himself to men in the splendors of creation, in the hidden forces and marvels of nature. He speaks to the heart and conscience of men, and the devout and religious soul, illuminated by faith, mounts up to heights of understanding such as Moses must have experienced on Horeb when he heard the words, "The place whereon thou standest is holy ground."

That revelation of God to men of His character, as manifested in His Son Jesus of Nazareth, is as a Father. It was Christ Jesus who taught us to say "Our Father which art in heaven." Happy are we when with unwavering faith we can realize and feel God is in deed and truth our Father, and that His providential care is ever around and about us. This revelation of God as a Father demands our unwavering faith and love, and the true believer can rest assured that in every condition in life God will verify the declaration of His Son. Who shall define love? God is Love. As we abide in Love, and our souls are illumined with faith, all the worry, anxiety, and distracting care of this world vanish.—*Correspondence.*

FORT DODGE, IOWA.

William R. Rathvon, who lectured on Christian Science at the armory, was introduced by Attorney E. E. Cavanaugh, who said:—

Centuries ago it was promised by Christ Jesus that there should come to all mankind "another Comforter." The great Teacher walked with men and taught them, but they took kindly neither to his teaching nor to his mission here. Jesus came that there might be made possible a way for all to reach perfection. His efforts were directed toward the obliteration of error and the establishment of the truth, and this mission was left for other generations to interpret. Perfection can come only when the truth is found. All the endeavors of the true scientist, philosopher, or student, unless directed in the way of truth, will come to nothing. The value of the searcher for truth can only be known by men when efforts have been made in the hope of bettering their condition.

One has recently been with us who has made an effort to find out the truth about right living, and the proper preparation for the eternity that awaits us. Her effort has been directed toward the inauguration of truth, purity, and harmony—a worthy pursuit. Mrs. Eddy has given us in Science and Health a wonderful work as a literary production, and as an incentive to the study of the Bible there is none that compares with its influence. She has established a great religious movement, and through the Comforter this world has been made a better place to live in. In the work that she has left to us one finds nothing but the good, the true, and the beautiful.—*Correspondence.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Baltimore, Md. (First and Second Churches).—Lyric, Mount Royal plaza, near both depots, 3:30 p.m., Nov. 17.
Bangor, Maine.—City hall, 8 p.m., Nov. 18.
Belfast, Ireland.—Ulster Minor hall, 8 p.m., Dec. 2.
Binghamton, N. Y.—Monday Afternoon Clubhouse, 8 p.m., Nov. 18.
Birmingham, England.—Birmingham town hall, 8 p.m., Nov. 26.
Brooklyn, N. Y. (First Church).—Church edifice, New York avenue, corner Dean street, 8 p.m., Nov. 21 and 22.
Champaign, Ill. (First Church).—Illinois theater, Urbana, 3 p.m., Nov. 17.
Danbury, Conn.—Universalist church, 3 p.m., Nov. 17.
Dubuque, Iowa.—Church edifice, Ninth and Bluff streets, 8 p.m., Nov. 19.
Easton, Pa.—Heptasoph hall, Spring Garden street, 8 p.m., Nov. 12.
East St. Louis, Ill.—Church edifice, Washington avenue and Summit place, 3 p.m., Nov. 17.
El Paso, Texas.—El Paso theater, 8 p.m., Nov. 21.
Fairfield, Iowa.—Fairfield armory, Nov. 18.
Frankfort, Ind.—Blinn theater, 8 p.m., Nov. 18.
Harrogate, Yorks, England.—The "Kursaal," 8 p.m., Nov. 28.
Horton, Kan.—Colonial theater, Front street, 8:15 p.m., Nov. 19.
London, England (Third Church).—Church edifice, Curzon street, W., 8:30 p.m., Nov. 25.
Los Angeles, Cal. (Churches and Society).—
  Third Church edifice, 734 South Hope street, 8 p.m., Nov. 16.
  Shrine auditorium, Jefferson street, near Main, 3 p.m., Nov. 17.
  Wilcox hall, Hollywood, corner Hollywood boulevard and Cahuenga avenue, 8 p.m., Nov. 18.
  Elks hall, San Pedro, corner Palos Verdes and Seventh streets, 8 p.m., Nov. 19.
Malden, Mass.—8 p.m., Nov. 22.
Nashua, N. H.—Odd Fellows hall, corner Main and Temple streets, 8 p.m., Nov. 21.
Nebraska City, Neb.—Church edifice, 8 p.m., Nov. 19.
Norfolk, Va.—American theater, 3:30 p.m., Nov. 17.
Norwalk, Conn.—Town assembly hall, 8 p.m., Nov. 19.
Rockland, Maine.—Church edifice, Cedar and Brewster streets, 8 p.m., Nov. 19.
Shawnee, Okla.—Becker theater, 8 p.m., Nov. 21.
Sheffield, Yorks, England.—Montgomery hall, Surrey street, 3 p.m., Nov. 17.
South Pasadena, Cal.—Jacobs hall, Mission street, 8 p.m., Nov. 17.
St. John, New Brunswick.—Opera house, 3 p.m., Nov. 17.
Utica, N. Y.—Majestic theater, 3:30 p.m., Nov. 17.
Vincennes, Ind.—Knox county court house, 2:30 p.m., Nov. 17.

TESTIMONIES OF HEALING.

While living in Chicago, near Christmas, 1906, a skin disease broke out on my feet. I used some local applications for a few days, but as a change for the worse quickly set in, I went to see a doctor, who examined me and said it was a case of metallic poisoning in its worst form. He asked what business I worked at, and I told him I had been in the brass business for over twenty-four years. His comment was that no one could stand it as long as I had done. Instead of getting better I grew worse; my hands became as bad as my feet, and the suffering was so great that I often had to cry, like a child.

In February, 1907, a friend of my wife came to our house one evening and asked me why, if doctors could do nothing for me, I did not try Christian Science. I did not even answer that good woman, as my wife had been healed in Christian Science of an illness of over seven years' standing, and even then I was against it, as I could not believe any one had the power to heal the sick as Christ Jesus did. I therefore kept on in the old way, suffering and trying different doctors, until July, 1907, when I discarded all drugs and asked the friend who had offered me Christian Science to get some one to help me, and she did. To tell the truth, often in my suffering and pain I had recalled her words; so I did try Christian Science, and with six treatments I was healed not only of the poisoning, but of other ills. I had used glasses, as my eyes had given out, and I also had a rectal trouble for five years. I could not hear with my right ear, and every spring and fall I had a cold. My sense of fear is, however, gone, and I have not had anything in that line for the last four years.

One year after I was healed in Christian Science the tobacco habit left me, and never since have I had a desire for tobacco. My eyes were healed from the time the practitioner had explained to me what God and man are as understood in Christian Science. We had "Science and Health with Key to the Scriptures" in the house for years, but I never wanted to know what was in it, until God opened my eyes. I then started to read it to find out what it was that had healed me, and today I know it was God. Since then, through the understanding I got in studying Christian Science, I have been able to help myself and others, and in trying to follow this teaching I have learned that God is our protector, as this is proved to me daily. I have been in two street-car accidents where many people were injured, but I was saved except that I had two fingers badly hurt. A doctor was going to amputate one finger the next day, but I refused his services and got a Christian Science practitioner to help me. The pain stopped, I never lost a minute's sleep, and one week later my fingers were healed.

A year ago a gentleman who was sick came to me. He had been told that I was healed in Christian Science and he wanted to know what it was, so I explained to him what God and Christian Science are, as well as I knew how. In a little while the man got up, saying, "I am healed, and never in my life did any one tell me how good God is as you have done." The man was well educated, but he did not know how to free himself from the belief that evil has power until I explained to him that God is all-power and that evil or devil is not power; that God never made evil or a devil.

Recently I met a friend who had known the condition I was in before I came to Science. He was so surprised to see the changes for good in me that he said there must be something in Christian Science, otherwise I could not look as well as I do. I am still in the brass business, and am healthier and feel better than I ever did. I am indeed grateful to God for the healing and spiritual understanding which I got through studying Christian Science. I am also thankful to Mrs. Eddy for giving us the truth.

PETER THINNES, Detroit, Mich.

I add my testimony to that of my husband as an expression of heartfelt gratitude to God, also to Mrs. Eddy, for our many blessings. It is thirteen years since I was healed of extreme nervous illness of over seven years' standing, after we had tried the best doctors we could get in Milwaukee, Wis., where we lived at that time. I can testify that God as our protector has kept me well ever since, although I had to struggle hard for years, as my husband did not want to hear about going to a church and would not even let me go to the Christian Science meetings. Finally, when he was sick, a number of years after my healing, and *materia medica* could do no more for him, he turned to God and found help in Christian Science. Since then we attend the services together most regularly. Words cannot express my gratitude for what Christian Science has done for me.

MRS. KATE THINNES, Detroit, Mich.

In 1906 my condition was diagnosed as a serious affection of the nervous system, and it is well known what that implies. This was after different physicians and nerve specialists had been patiently and hopefully tried for years, only to be found wanting. Then in a Carnegie library in a strange city I found a *Christian Science Journal*, and before I finished reading it I sent for a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, which I have been studying ever since. The disease gradually faded away into its native nothingness, but there were times when its seeming tenacity was remarkable. At such times, however, treatment was applied for and the mental stress was overcome.

The nothingness, the powerlessness of any threatening evil is daily becoming more obvious to me, and I have even been helped to a clearer vision of spiritual reality by realizing that there is no vacuum in divine Love. (See Science and Health, p. 266.) Pondering this over, I perceived as never before that evil cannot exist, unless there were a vacuum in divine Love, and such is inconceivable. To those who have helped me in all ways, the editors, contributors, and writers of testimonies in the Christian Science periodicals, above all to our Leader, whose immeasurable devotion to humanity made our promised freedom an actual dominion, I feel a joyful and ever increasing sense of gratitude.

D. B. MACDONALD, Toronto, Ontario.

My first investigation of Christian Science was more in the form of a jest than otherwise, a friend saying she would visit a practitioner if I would; but after five minutes' conversation with the practitioner I saw that my opinion of Christian Science was entirely wrong, that there was nothing in it savoring of superstition or that is uncanny. I took one week's treatment for chronic bowel trouble, and was speedily healed. This was about seven years ago, and I have never had a recurrence of the trouble. I immediately saw that a well body meant a pure mental attitude, and I had quite a struggle to maintain it. Being a minister's daughter and having always taken an active part in all church work, I immediately saw that all this really meant nothing to me except in a social way. I had always been filled with envy, fear, and dark forebodings of all sorts, and now to have it revealed to me that happiness meant to be right spiritually instead of being at the head of some social function, was quite a change.

It took me almost a year to understand just how to make this change of thought, and I am still striving to love my neighbor as myself and to know that my neighbor means all mankind. I have also been healed of a nervous irritation of the eyes. On the occasion of a fall down a stairway which resulted in serious injury to the ligaments of my foot, the trouble was overcome in one absent treatment. In another case, through a fall on a highly polished floor I injured my hip; but this, too, was overcome in a week's treatment.

Digitized by Google

Harmony has been revealed where all seemed inharmonious. I have not only been helped physically and spiritually, but I have been shown how to realize the abundant supply of everything that God has for all of His children. If I can help any one by answering any questions, I will gladly do it.

JENNY DENNY, Indianapolis, Ind.

My little boy was taken one morning with an attack of earache, but went to school. I went there about eleven o'clock, and as he had been crying I took him home, and treated him in Christian Science; but the pain became so severe shortly, that I felt I must have help, so I called a practitioner and asked her to treat him. The pain, however, kept on, and in an hour or less I called her again. Soon he was asleep and slept till half past six, only rousing up a little now and then. He had no more severe pain and rested well that night. The day following he slept most of the time, complaining occasionally of earache, and the side of his neck and all around the ear was still painful and very stiff. I kept the practitioner informed, and she continued to treat the boy. The next day there was no pain, but he did not hear much, if any, through that ear. The following day a slight pain preceded the passing of a clot of blood through the throat, and in two or three days more his hearing was perfect and he was well. He had lost his hearing, found it again, and was back to school in less than a week, and with only about an hour's pain after we called for treatment in Christian Science.

MRS. AMY N. WILSON, Denver, Col.

I desire to express my love for the cause of Christian Science, and for the many benefits I have received through the understanding of this teaching I am most grateful. It was about twelve years ago that this subject first interested me; a short time after that it appealed to my thought when I saw the benefit my mother had received mentally and physically through its healing power. From that moment I never doubted the power of God to heal the sick, if we turn to Him alone. It was not, however, until about eight years ago that I saw Christian Science was exactly what I wanted and needed more than anything else, and not until then did I make any direct effort to know more of its teaching.

It was partly through the beautiful lives of its adherents that I was thus inspired, and partly because I realized how very remote was the understanding I needed to live the Christian life I desired, which I knew was possible only through a greater understanding of the power of God to govern us aright, and which understanding I saw it was possible to obtain only through the teachings of Christian Science. I was then a member of an orthodox church, but all interest in that body had left me, although I tried hard to live a Christian life. In my efforts to progress in the understanding of Christian Science, I have encountered many serious obstacles. A great sacrifice had to be made in the beginning, but it was counted as worth while, though criticism of my actions seemed to linger for a long time and was very hard to overcome. In conversation with a student of Christian Science I received a comforting reassurance of the power of God to guide and protect all who turn to Him alone for protection, and I was so overjoyed with this light which came to me, that I was completely lifted from the despondent state of thought which had governed me. Very shortly after this I had the proof of God's loving protection and care when I was very near to great danger, for which I returned thanks to God and prayer for more understanding.

At the time I began to study the text-book I was burdened with many serious problems. There were demands upon me of such a character that I was much distressed at times, and many conditions of sinful sense and discord to be overcome, but through the understanding of the truths of Christian Science I have been able to overcome much, and am being helped daily. The way has been very dark at times, and my progress has been slow in gaining the understanding I desire; but the effort to know more of this truth, while clinging fast to the light already received, has removed the obstacles from my pathway, and it is with a heart full of gratitude that I give this testimony to the *Sentinel* for the many blessings I have received through the truth as revealed in the Christian Science text-book, even though my understanding is meager at the present time. God has protected and guided me through many trying ordeals which, without the understanding of God and man's relation to Him, gained through Christian Science, I could not have endured at all. I have been healed of many physical ills that have appeared during the past few years, such as contagious diseases, very severe headaches, also sudden attacks of violent colds which have been very subtle in entering thought; and I am exceedingly grateful that I have been able to overcome evil with good on many occasions, through the realization of the power of God, good. I have been able in a slight measure to help others out of the darkness of materialism to which they have been in bondage, for which I am very thankful, and my desire is to live a life worthy of the many blessings I have already received through Christian Science and to be worthy to be known as a Christian Scientist.

MARGARET V. PEARMAN, Omaha, Neb.

For a long time I have felt that it was my duty to give my testimony regarding the many benefits which I have received through Christian Science. For at least thirty years I was troubled with a bowel difficulty for which I had tried about everything that any one would suggest, but I received no benefit from any material source.

As a last resort I turned to Christian Science and took several treatments, but thinking I was not getting along as well as I ought, I told the practitioner that the physical results were not very satisfactory. She said it was not for me to judge, but that I should leave it entirely with God; that God would care for me, if I trusted Him implicitly. While on the car, as I was returning home, I thought over my case and saw plainly wherein I had made a grave mistake. I had been watching my bodily condition closely and critically, but I now began to see the truth, and knew that the truth would cure me. It was sixteen weeks, however, before I realized the healing, and it was not the physical healing which seemed so wonderful to me as the perfect manner in which I was cared for. During all that time I had no fever, no headache, and no bloating, but was perfectly normal in every respect. I ate the same amount of food, and did as I had always done, except that I used no material remedy of any kind.

I also had catarrh for over thirty years, and this left me at this time, as well as other ailments. I am very thankful to God for my healing, and also grateful to Mrs. Eddy for showing us how and where to look for the truth and to know that God is an ever-present help.

H. D. TENNY, Chagrin Falls, Ohio.

I can truthfully testify to what Christian Science has done for me. In the fall of 1910 I was taken with a severe cold, which seemed to settle on my lungs and later developed into serious pulmonary trouble. The cough was terrible and I suffered great pain, and for three and a half months was in a very bad condition.

I had previously had results from Christian Science treatment, and again I turned to divine Love for help. The healing did not come so rapidly this time, but through the patient work of a practitioner I was led out of darkness into the light of Truth and restored to good health. The cough has entirely disappeared and I am doing more work than for several years, which is proof enough to me that God is Love and all-power.—MRS. L. COX, Los Angeles, Cal.

[Translated from the German.]

Since childhood I had suffered with a throat difficulty which would often manifest itself in a malignant form with all the attending symptoms, such as high fever, etc. I consulted various physicians, among them one of high authority in Berlin. I had also resorted to baths and other methods of cure; but all to no avail. While undergoing an especially violent attack of the trouble, I heard of Christian Science, and applied for help. With ten treatments I was freed of the disease, and a chronic catarrh of the throat has also disappeared since then. I shall never forget the sense of peace and trust which I now feel, as compared with my experience while under medical treatment, which only heaped fear, doubt, and worry upon me; and I am deeply grateful for this proof of the healing power of Truth.

I would also like to tell of the healing of my horse. The animal was unable to get up, and judging by its heavy groans suffered greatly. With the thought in mind that God's protection extends to all His creatures, as Jesus declared, I applied for help to a Christian Science practitioner. For three weeks the animal seemed to be worse, yet we had faith and refrained from using material means. In the fourth week it showed indication of wanting to get up, was helped to do so, went to the trough, ate, and was restored.

During the past ten years I have also been enabled through Christian Science to eliminate many inharmonious conditions in my business, and have found that when I tried to think rightly of my fellow beings, everything has been led to a good end. I am deeply grateful to God, and also feel greatly indebted to Mrs. Eddy.

RICHARD LISCHKA, Berlin-Rixdorf, Germany.

Christian Science has meant more to me than anything in my whole life. It came to me at a time when I needed it spiritually, mentally, physically, and morally. Spiritually, because I needed to be awakened to a full realization of my deepest need; and mentally, because I had spent most of my time trying to think out some way to find peace, through either the pathway of cherished ambitions or material possessions. Neither satisfied, and Christian Science found me at the brink of suicide, absolutely without hope of happiness and with a sense of utter despondency. Physically, I needed it because of headaches to which I had been subject since childhood and which many times lasted from two to four weeks. I also had an ungovernable temper and a morose and unhappy disposition. Besides all this I had worn glasses for nearly fifteen years, putting them on in the morning and not removing them until I retired. Morally, Christian Science came to me when I needed it more than anything else in my whole life, and it saved me.

I had always enjoyed reading books which seemed worth while, and at my mother's earnest solicitation I began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. I did not do this with any thought of looking for help, but read the book merely out of curiosity and because it occupied hours which otherwise would have been as burdensome as the past days and weeks had been. I do not remember experiencing any change while reading Science and Health; I was too absorbed in it to think of myself; but I could not leave it alone, and when it was finished I was a new creature, for "the former things" of which the apostle Paul writes had "passed away." I had found God! though I never even knew I needed Him until I studied Christian Science. I had heard it preached that we should be unselfish, kind, good, patient, loving; that we should have more faith in God and should trust Him more, should live our religion every day, but until I came into Christian Science I never knew how to do any one of those things, and not until then did I have the least desire to read the Bible. Now my mind was at rest, and I was changed from a cynical, pessimistic, discouraged, and selfish girl into a happy, contented one; life was worth living, and I was at peace, something which had never been known to me up to that time.

The spiritual light which dawned on my consciousness and drove all the clouds away was like the breaking forth of sunshine after a terrific storm, for surely no one's consciousness had more tumult in it than had mine. It was as though God had set His approval on a desire of many years to live a Christian life, and I felt such a sense of gratitude and love when the realization of my freedom from the old life dawned upon me, that I was overwhelmed with joy, and I felt that I had indeed touched the hem of Christ's garment. At last I knew how to live, at last I knew something of the peace that "passeth all understanding," and at last I knew how to gain an understanding of the Bible. I was spiritually awakened! My mother and I began to read the Lesson-Sermons, and at the end of ten months my glasses were laid aside and have not been worn since, which is over three years ago.

Christian Science has also entered into the very minutiæ of my affairs from the business standpoint. Hatred, injustice, and jealousy have disappeared into their native nothingness. I can truthfully say that not a single problem which has presented itself in the past four years has been left unsolved. Christian Science has met every one, whether physical, moral, or financial. My heart is too full of thanks to be expressed in words, and its one desire is that my life may attest my gratitude.

HARRIET M. WILLIS, Brooklyn, N. Y.

The gratitude one has for the expression of divine Love given us in Christian Science, is best shown by a truthful, patient, and just endeavor to do unto others as we would that they should do unto us. To work for that Mind to be in us "which was also in Christ Jesus," is to labor for one's daily bread, and this will furnish an unfailing supply. In the light of this new-old understanding of God as infinite and omnipotent good, Mind, Life, Truth, Love, which Christian Science has brought in a measure to my consciousness, there has been an overcoming to a certain degree of an irritable, impatient, and fault-finding disposition, which proves that in the absolute knowledge of good there is all power.

Words alone fail to express my thankfulness for the physical healing, although it was not the primary cause of my interest in Christian Science. Benefits have come to me according to the promise: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." Through a realization of the one Mind numerous physical disturbances (one of long standing) have been overcome, which recalls Mrs. Eddy's statement that "an acknowledgment of the perfection of the infinite Unseen confers a power nothing else can" (Unity of Good, p. 7).

MABEL I. TAYLOR, Somerville, Mass.

I had been in an isolated place for many months. The novelty of camp life five thousand feet above the sea-level, with the Rocky mountains in sight, had tempted me to separate myself temporarily from former associations and surroundings, a little girl nine years old being my only companion. While perfect health was realized, interest in the experience was unflagging, but one day I was taken with an alarming condition of the bowels, which continued for weeks, growing first better and then worse. Absent treatment in Christian Science failed to remove the trouble, though I was wonderfully sustained and felt calm and confident; but the time came when I felt I could not attend to the duties of camp life another day. I decided to pack my trunk and go to Denver, the nearest large city, that I might avail myself of present treatment and the care that from a human standpoint seemed absolutely necessary.

As I started to pack my trunk, the thought came to me,

Digitized by Google

clearer than ever before, "All that you can find of Love anywhere, is right here." I walked to the door and looked out across the lonely expanse of country. There appeared no chance of my human need being met there, and I was too weak to make any further effort to help myself, while the packing of the trunk and the trip to Denver seemed impossible; but slowly over the hill came a covered carriage in which were two ladies, one of whom I had met before, the other a stranger. To make a long and beautiful story short, the stranger was a Christian Scientist who had been away on a trip, and having just returned to the country, had driven out to see me.

After I had talked with her a little while, I asked her if she would spend the night with me. "Oh," she said, "I came with the intention of taking you home with me." And this sister who appeared in the wilderness in the hour of my greatest need, got my supper for me and helped me pack my bag, then took me home with her and cared for me two weeks; but better than the care, she had such a clear understanding of Christian Science that through her awakening treatment I was completely healed of the bowel trouble in a few days.—GERTRUDE SMITH, Santa Rosa, N. Mex.

With a sense of gratitude I desire to testify to the power of Truth as revealed through Christian Science in healing the sick and destroying error. This was manifested at the birth of our last child. I had two children born under *materia medica,* and many inharmonious conditions prevailed on both occasions, leaving me quite a physical wreck and requiring an operation. I was told that with the birth of another child the same conditions would be manifested, but right here I wish to state that Christian Science alone met my every need. The birth was normal in every respect, and I was up the next day and dressed myself. I stayed in my room for four days on account of the surrounding thought, but felt perfectly well and have been ever since. I was able to attend to my household duties in less than a week. The dear baby is indeed a manifestation of the power of Love, and is always well, and for this great blessing I am truly grateful.

By living closer to God, and striving to be obedient to our Church Manual, I hope to express my love and reverence for God's law. I am thankful to Mrs. Eddy for the revealed truth of Christian Science, and grateful for the help given me in treatment. I truly appreciate our priceless publications, which bring peace and comfort to them "which do hunger and thirst after righteousness."

MRS. CARRIE M. HENRY, Monroe, La.

[Written for the *Sentinel.*]

THE PRIZE.

STELLA E. SAXTON.

I KNOW it waits for me,
  Exquisite thing:
  High, high I climb,
My steps ne'er faltering,
  So dear the prize,
Hid in a crevice there,
  A pale, soft star,
Dropped from the Alpine skies—
Fair bloom of edelweiss!

I know it waits for me,
  A cherished thing:
  High I must climb,
Nor heed the buffeting,
  So dear the prize!
To hear the words, "Well done,
  Thou faithful one!"
To know the joy that lies
In heavenly harmonies!

FROM OUR EXCHANGES.

[Bishop McCormick in *Churchman.*]

It is said that the church is always on the side of capital; that she is monarchial and aristocratic in her organization; that she is chiefly interested in maintaining the *status quo;* that she interferes with discontent and progress by teaching patience and submission; that she is other-worldly and remote, aloof from modern affairs, out of step with science and civilization, and but lukewarmly concerned with the betterment of social and industrial conditions. Laboring men do not hesitate to declare that the church cares more for the one sheep safe in her fold than for the ninety and nine in the wilderness; that she emphasizes individual salvation and the individual conscience, and cares little for social salvation and the social conscience; that she lives only to preserve herself; to narcotize her members and to maintain her paid ministers in positions of ease and influence; that she stands not for the golden rule, but for the rule of gold; that though she calls herself the church of Christ, she has lost the simplicity of Christ, the democracy of Christ, the loving-kindness of Christ, and, above all, the justice and the righteous indignation of Christ.

If any of the counts in this terrible indictment are true, and just in so far as any of them are true, every Christian must bow his head in shame. It is a frightful calamity not only to labor, but to the world, if the sad face of the Saviour of mankind upon the cross sees only this after the passion of two thousand years. And, certainly, if these charges are even partly true, self-respecting labor may be pardoned if it considers its interests to be dissimilar and divergent from those of the church.

[*Standard.*]

Whatever other reasons there may be, however, for the decrease in church attendance, it seems clear that the removal of emphasis from the church as an essential factor in the work of the kingdom of God, has had not a little to do with the change that has taken place. For some years, now, most of us have been busy in making it clear that salvation does not hinge upon ecclesiastical relationship, and that it is possible to serve the cause of Christ without using the church as a medium of expression. We have laid stress upon the immediacy of relationship between the believer and his Lord, something which always needs emphasis, and have measurably neglected to set forth the necessity for cooperative effort for the extension of the kingdom of God. In our desire to promote the essential unity of all the followers of Jesus Christ, we have, perhaps unconsciously to ourselves, conveyed the impression that the world would get along very well without Christian organizations of any kind. Those of us who believe and teach that Jesus did not organize a church may have been understood as holding that the organized church is unnecessary. It is high time to open a campaign on behalf of the church; to undertake the task of making it clear that life must organize some form of expression. The first thing to be done is not so much to convince people of the importance of any particular form of church organization, as to put beyond question the necessity for organization.

[*Christian World.*]

Today, while the individual conscience revolts at murder, and while in every church in Christendom the command is constantly read, "Thou shalt not kill," the business of killing is regarded as one of the most honorable professions, and a large part of our science is devoted to producing the most wholesale and devilish means of slaughter. The world will, doubtless, in the end, outgrow this custom. The time will come when, in the words of M. Lévi Bruhl, "Our civilization, in some aspects, will doubtless seem as repulsive to our descendants of the fiftieth century as that of Dahomey

Digitized by Google

seems to us." At present we tolerate it because we are used to it. Truly we are a slow-going race. One might despair of its future were it not for the thought of God's infinite patience, and for the other thought that custom, so imperious as it seems, is itself under a law by which it too moves, and moves upward.

[*Advance.*]

The Holy Spirit gives power to believe truth above and beyond human reason, the faith that surmounts all difficulties, the ability to stand and do Christian work in one's place in spite of all attacks, and a triumphant outlook upon life. Here is the power that made the early preachers of Christ so marvelously successful. It may seem old-fashioned, but no new fashion can displace it without displacing the way to religious success. If the churches cannot be spiritually-minded, they cannot succeed. If the ministry cannot put itself in a receptive attitude toward the power from on high, there can be no real progress or upbuilding of God's kingdom. The work done will be superficial, the result unsatisfactory, if not bitterly disappointing. We may talk much, plan much, organize much, but the real question is, Can we be spiritually-minded enough to be a religious power?

[*Continent.*]

The thing done by our best endeavors must seem insignificant compared with the vast deal to be done. But if it is as much as God has asked of us, it is enough. The rest may be left with Him. It may be the tiniest of flames that we have kindled, but God can make it burn to a mighty fire. It is His part to care for and achieve the whole result—not ours. Only to see a little bit of the great consummation already begun—that suffices, if only one has the Master's faith. So to live and labor, unresting and yet unhasting, is to learn the poise made in the Master's soul by his vision of the Father's purpose in him and the Father's power in the sure and ordered universe.

[*Christian Work and Evangelist.*]

If we are sons of God, let us live the eternal life now, in the midst of time. We are brothers of the risen Lord; therefore we may rise now into the resurrection life, and order all our doings on the heavenly plane. The practise of immortality on earth is the issue of the doctrine since Christ came. The writings of Paul are all aglow with this call to present resurrection because the promise is upon us in Christ Jesus. One searches in vain for this compelling truth in all the literature of the endless life before that Easter morn in the garden.

[*Christian Register.*]

Only now and then are we permitted to stand on the heights, where we may look before and after and estimate influences and results. Enough for us if we have light sufficient for each day's needs, and an invincible faith that the final victory shall be worth all the failures that led to it. Failure at the worst is only relative. To the man who has once learned to control his own inner kingdom, there need come no sense of defeat in outward circumstance. To the true, brave soul there can come no real defeat. The stars in their courses fight for him, and the laws of the universe are on his side.

[*Christian Intelligencer.*]

Every community needs men filled with the spirit of Christ, fired with his love, imbued with his sacrifice, and impelled by his passion for souls. More important than being busy here and there, is the matter of personally realizing "the measure of the stature of the fulness of Christ." The apostle Paul won converts everywhere, and so may we if to us, as to him, to live is Christ. The change we need is not one of place, but of heart.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Five new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"Environment and Opportunity," containing five articles as follows: "Greater than Circumstances," "Why Grow Old?" "Limitation," "Problem of the Hickory Tree," "Songs in the Night."

"Birthright and Dominion," containing four articles and two poems as follows: "Inalienable Rights," "Mental Self-Knowledge," "Love's Bounty," "Demand and Supply," "Humility," "Unity."

"The Father's Business," containing five articles as follows: "The Abundance of God," "One Business," "The Closed Hand," "Christian Science in the Business Life," "Truth is Power."

"The Law of Kindness," containing four articles and a poem, entitled as follows: "'Forgive, and ye shall be forgiven,'" "The Habit of Hating," "The Law of Kindness," "'Ye shall be as gods,'" "Two Roses."

"Confidence and Supply," containing the five following articles: "'The Lord thy confidence,'" "Time and Healing," "'What hast thou in the house?'" "Constructive Work," "Giving and Receiving."

Another new pamphlet has just been published containing the lecture of William R. Rathvon, entitled "Christian Science: Its Results."

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass, should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth street, Boston, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the Blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 91 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 29 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

ITEMS OF INTEREST.

National.

Revolutionary changes in procedure in equity cases in federal courts throughout the United States are effected in revised rules promulgated last week by the supreme court of the United States. The object is to reduce the cost of litigation and to eliminate delays. Among new rules of procedure is one prohibiting the issue of preliminary injunctions without notice to the opposite party, and also restricting issues of temporary restraining orders. Chief Justice White explaining the rules from the bench grouped the reforms under four or five heads. One was in regard to the exercise of power by the federal courts in equitable matters. Another was described as being designed primarily to remove all unnecessary steps in modes of pleading and to bring the parties quickly to the issue. Another was described as being a restriction in the modes of taking testimony, particularly in patent and copyright cases. "The whole intention has been," said the chief justice, "to bring the taking of testimony down to a more simplified and inexpensive method." Another reform was illustrated by the statement that the new rules as a general thing provide for trial by the court, instead of a reference of the suit to a referee to take the testimony and report back to the court. The new rules would make it possible for the appellate court not to reverse suits merely because of errors not prejudicial. They will go into effect Feb. 1, 1913.

The Society of American Indians, organized to advance the American Indians in every way possible, has decided to open headquarters in Washington. This was decided at the second conference of the society at Columbus, Ohio, which was attended by representatives of practically every tribe in the United States, and at which a permanent organization was effected. The objects of the society are: first, to promote and cooperate with all efforts looking to the advancement of the Indian in enlightenment which leaves him free as a man to develop; second, to provide through open conferences the means of a free discussion on all subjects bearing on the welfare of the race; third, to present the true history of the race, to preserve its records, and to emulate its distinguishing virtues; fourth, to promote citizenship and to obtain the rights thereof; fifth, to establish a legal department to investigate Indian problems and to recommend and to obtain remedies; sixth, to exercise the right to oppose any movement that may be detrimental to the race; to provide a bureau of information, including publicity and statistics.

In the United States district court at Hartford, Conn., the Buckeye Powder Company of Peoria, Ill., has filed a bill of complaint against the Hazard Powder Company, as one of the branches of the DuPont Powder Company, for violations of the Sherman law, in which damages of $1,110,057.82 are claimed. The defendants are charged with creating a monopoly in the manufacture and sale of certain kinds of powder. One of the material allegations is that the powder trust employed men to enter the Buckeye factory and obtain knowledge of the secrets of the company. There is an additional claim for punitive damages of half a million dollars.

At a meeting of the directors of the port of Boston the contract for dredging at Commonwealth pier to a depth of forty feet and the approaches to a depth of thirty-five feet was awarded. This is the first step in preparing the terminal for the use of the Hamburg-American line, which will inaugurate a new service in that port next year.

Alaska seal herds, under the protection offered by the existing international agreement prohibiting pelagic sealing, has shown an increase from 27,723 in 1911 to 215,738 in 1912, according to the 1912 census report made by the bureau of fisheries.

International.

It is announced by the *Norddeutsche Allgemeine Zeitung* that when the Reichstag again meets, a bill will be introduced by the government with a view to preventing the Standard Oil Company securing a monopoly of the German petroleum market. A German company is to be formed, with a capital subscribed partly by large financial concerns and partly by the public, on which a monopoly of the wholesale trade in petroleum for illuminating purposes will be conferred. The company will also run its own tank steamers and will purchase in America from the Standard Oil Company and its rivals. Steps will be taken to prevent the shares falling into foreign hands and to prevent the company from exploiting the monopoly for its own profit. A legal maximum price will be fixed, and if it is exceeded the company's profits will be limited to the current rate of interest in Germany. There will be no limits to the company's profits on sales below the maximum, but four fifths of such profits must be paid over to the government and will be devoted to social objects. The operations of the company will be under the direct control of the government through the chancellor, and the appointment of the directors will be subject to his approval.

The working of the minimum wage act in the South Wales coal field area is still the cause of discontent among the miners. The question of the inclusion or the exclusion of certain classes of workmen from the provisions of the minimum wage act is a constant source of irritation to the men.

Now that Italy has acquired a north African province, it is not improbable that the Italian government will consider reviving the old title of emperor, which was borne by the Cæsars.

Industrial and Commercial.

A large reinforced concrete dam is being built across the Colorado river at Marble Falls, Texas, for the purpose of forming a water storage reservoir to operate a large hydro-electric plant. The construction of another dam across the Colorado river, twenty-five miles above Austin, is also projected. The latter dam will be one hundred and fifty feet high and eighteen hundred and twenty feet long. It will be located at what is known as Lohman narrows, and will form a reservoir that will extend up the river for forty-seven miles. It will hold approximately thirty-seven and a half billion cubic feet of water. The purpose is to provide initial power for what is said will be the largest hydro-electric plant in the Southwest. It is stated that approximately one hundred thousand horse-power will be available. Power transmission lines will be constructed from the hydro-electric plant to cities and towns within a radius of one hundred and fifty miles. The cost of the dam and power plant which the Alexander syndicate is promoting will be more than a million and a half dollars.

At a meeting of the directors of the Boston Chamber of Commerce authority was granted, as requested, to the governing board of the retail trade board to form a corporation to be composed of retail merchants in Boston, for the purpose of enforcing the laws in reference to fraudulent advertising. The advantages of this form of organization are that in case of countersuits for damages the liability of the individual members of the corporation who purchase one share each and make other donations according to their interest and ability would be almost nothing, and the company would be provided with sufficient funds from the subscriptions and donations to carry forward the work properly.

The discovery has been made by M. Bethenod of a wireless system without sparks. The main advantage in this is that the neighboring posts are not so likely to interfere with one another's communications. Machines which produce directly regular and continuous vibrations can obviously be tuned up to one another with a far greater facility than those which produce the less regular and jerking vibrations given off by a series of sparks, and also with this system a considerable amount of intermediary machinery will not be required.

The Pennsylvania Railroad Company has arranged to give any employee in the service a course in electrical engineering free of charge. Many employees have announced their intention of availing themselves of the opportunity to learn the method by which the greater number of passenger trains on railroads will be operated in a few years. Electrical engines are meeting with so much success on the eastern lines of the Pennsylvania railroad that its lines west will shortly be made ready for a gradual change from steam to electrical power for passenger traffic.

One of the great silver mining companies at Broken Hill, New South Wales, the Broken Hill Proprietary Company, proposes to embark on the manufacture of iron and steel from extensive lodes of iron ore which have been found on the company's property in the state. The officials of the company state that to estimate the total quantity of ore at sight the figures would run into millions of tons, even to one hundred feet of depth, and it would take generations to work it out. It is believed to be the most extensive iron ore deposit in the world.

Agricultural demonstration in the territory that extends north and south for two hundred and fifty miles and east and west for one hundred and seventy-five miles, embracing what was originally known as the Llano Estacado, or Staked Plains of Texas, has shown that practically all of the area is suited for the profitable growing of many kinds of crops. In a group of counties in the more northern portion of the Plains country, as it is now commonly called, there was raised this year approximately nine million bushels of wheat.

The great seven million dollar dam project across the Medina river, Texas, which is being financed by the Pearson interests, will be completed early in February, and next year sixty thousand acres of land there will be put under irrigation. The dam will be completed in time to store much of the winter flood water. The Medina dam is the greatest private project ever undertaken in the South, and one of the largest in the United States. It has been financed almost entirely by British capital.

According to figures compiled by the state bureau of vital statistics, $1,966,000 was lost in New Jersey in the last year through strikes. The total number of days lost was 1,004,000, and 32,000 persons were affected by the ninety-seven strikes.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THANKSGIVING DAY.

BY THE PRESIDENT OF THE UNITED STATES:
A PROCLAMATION:

A God-fearing nation, like ours, owes it to its inborn and sincere sense of moral duty to testify its devout gratitude to the All Giver for the countless benefits it has enjoyed. For many years it has been customary at the close of the year for the national executive to call upon his fellow countrymen to offer praise and thanks to God for the manifold blessings vouchsafed to them in the past and to unite in the earnest suppliance for their continuance.

The year now drawing to a close has been notably favorable to our fortunate land. At peace within and without, free from the perturbations and calamity that have afflicted other peoples; rich in harvests so abundant and industries so productive that the overflow of our prosperity has advantaged the whole world; strong in the steadfast conservation of the heritage of self-government bequeathed to us by the wisdom of our fathers, and firm in the resolve to transmit that heritage unimpaired, but rather improved by good use, to our children and our children's children, for all time to come, the people of this country have abounding cause for continued gratitude.

Wherefore, I, William Howard Taft, President of the United States of America, in pursuance of long-established usage and in response to the wish of the American people, invite my countrymen, wheresoever they may sojourn, to join on Thursday, the twenty-eighth day of this month of November, in appropriate ascription of praise and thanks to God for the good gifts that have been our portion and in humble prayer that His great mercies toward us may endure.

In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this seventh day of November, in this year of our Lord one thousand nine hundred and twelve, and of the independence of the United States of America one hundred and thirty-seven.

By the President:

(Signed) WILLIAM H. TAFT.

ALVEY A. ADEE, *Acting Secretary of State.*

LOVING INTELLIGENCE.

WILLIAM D. MC CRACKAN, M.A.

THE term intelligence, as frequently used, is apt to leave an impression of coldness. It is too often assumed that to manifest intelligence means to manifest merely a keen, calculating sagacity which is wholly of the head and knows nothing of the heart. When the student learns that God who is Mind is also infinite Love, and that love is absolutely essential to real intelligence, he quickly perceives that Christian Science is teaching him the meaning of loving intelligence.

Thus the sufferer who is told that God is Mind is not presented with a cold, barren fact, but his consciousness is really opened to a living truth, palpitating with joy and bliss. The Pharisee, hampered by pride of intellect, must be taught the lesson that a little child can manifest more real intelligence and more true wisdom than he. The child Jesus at the age of twelve astonished the doctors, the learned men in the temple, by his understanding and answers; and so the picture of Jesus, "sitting in the midst of the doctors," has throughout the centuries strongly appealed to artists of every Christian nation as an illustration of the might of childlike wisdom. As Jesus grew to manhood and entered into his public ministry, he rejoiced that the Father had revealed unto babes the things which were hid from the wise and prudent. His unlearned followers proved his teachings to be demonstrable by their acts of healing. His Christianity was not appreciated by the quality of thought calling itself worldly wise, but by the child thought represented in his humble followers. Chorazin, Bethsaida, and Capernaum, names used by him to represent arrogant and unreceptive states of thought, could not perceive the glory of his untrammeled vision concerning God and man.

No more can the would-be critic of today, bound by materialistic superstitions, understand the teaching and the works of Christian Science. Mrs. Eddy very justly refers to "the tangled barbarisms of learning" (Science and Health, p. 195). The tyranny, the ruthless and unscrupulous bondage of the belief of life in matter, with its attendant train of fears,—all this results from the idolatrous worship of a so-called material mind divorced from God. The human mind, caught and held fast in "the tangled barbarisms of learning," is in no condition to express an intelligent opinion concerning Christian Science. It does not know enough of Truth to weigh justly the evidence in behalf of the works of Christian Science. It is incapable of appreciating the gift of infinite bounty offered by Christian Science to the weary and world-worn. It has not yet become disgusted with its own emptiness or felt the hunger for the bread of life. Christian Science heals the sick. For nearly half a century this fact has been before the world, and multitudes gladly witness to their own healing by its means. In trying to dispute this evidence of the power of Spirit, the tangled and barbaric mortal sense displays its ignorance. Yet it may be helpful to all concerned to notice the particular error into which it falls.

A very slight acquaintance with such criticism as is occasionally voiced concerning Christian Science practise, shows that it is based on the assumption that material medicine is a fixed science. But no one knows more clearly or is more ready to acknowledge that material medicine is experimental and not fixed, than are the practitioners of that science themselves. Underlying this form of criticism, one will always find the entirely unwarranted assumption that those who resort to material medicine are choosing life, while those who resort to the power of God to heal are courting death. The resort to prayer for the healing of sickness as well as sin, expressly enjoined by Jesus upon his followers, —upon "them that believe,"—is even described as an act of suicide, and the spiritual understanding that disease and death are not of divine procurement is stamped as a form of mental obsession. From this it is argued that man has

Copyright, 1912, by The Christian Science Publishing Society.

Digitized by Google

no legal right to resort to God for healing, because forsooth (in the critics' opinion) this would mean throwing away his life. This line of argument is wholly unchristian; indeed, it is antichristian.

A further erroneous assumption is that he who resorts to God instead of material remedies, is standing idly by and doing nothing to check and destroy the disease. As a matter of fact the practitioner of Christian Science feels that he is using the strongest curative agent there is, namely, the divine Mind, and his non-use of material remedies is not due to any special objection to the remedies themselves, but to their impotence and powerlessness really to heal. Any attempt to restrain a man from turning to the help which he considers best, would mean to force him to resort to that which he distrusts and disapproves. The right of the individual to select his own medical attendant, as well as his right to pray, are incontestable. To deny these rights and by process of law forbid man to exercise them, would bring about the stagnation and eventual disappearance of all healing and of all religion. The safeguarding of these rights is essential to man's health and happiness, to his mental, moral, and physical salvation.

The suggestion is sometimes made that nature heals many diseases, unaided by any practitioner, and that in such cases the only use of a practitioner is to guard the patient against complications. Now the prevention of complications is one of the striking effects of the practise of Christian Science. The maintenance of harmony and of normal conditions is a characteristic effect of Christian Science practise, and often quickly brings to a close diseases which are supposed to run a wearisome course or in which complications are expected and dreaded.

Any attempt to declare that Christian Science practitioners should be held amenable to a penalty should they lose a case, would in all fairness make it necessary to prosecute and convict daily the thousands of practitioners of material medicine who would be held responsible for the hundreds of thousands who die the world over under their ministrations. Now what are the facts in regard to Christian Science practise? Is it true that people are throwing away their lives by reason of its teachings? Is it true that when they follow the Master's express command to "heal the sick" they are laboring under an obsession? Is it true that they are idly standing by and letting people die? Is it wrong for them to accept payment for their services, when everybody else in every walk of life and every occupation does the same, from those occupying the highest offices in the land to those in the simplest menial occupations?

The fact is that by reason of Christian Science multitudes are alive today who would have been dead without it. The fact is that obedience to the Master's commands constitutes a test of true Christianity and cannot by any form of reasoning be called an obsession. The fact is that the Christian Science practitioner, through the prayer of faith which James assures us shall save the sick as well as the sinning, is reflecting to his patient the greatest power there is; yea, omnipotence itself, the divine Love and the eternal Life which is God. The practitioner who devotes his time and energies to the healing work, if not permitted to receive just compensation for the services thus rendered, must either forego his beneficent labors for mankind or himself become a subject for charity.

Christian Scientists have no desire to interfere in any way with the practitioner of material medicine, or to prevent any one who desires material medicine from resorting to it. It would seem, therefore, that they are not in any way unreasonable in asking their would-be critics to exercise loving intelligence, to have that Mind "which was also in Christ Jesus," to be willing to apply to the consideration of the works of Christian Science the same spirit of patient investigation which every true scientist manifests in the presence of a new discovery.

CHANGELESS LOVE.

LUCY HAYS EASTMAN.

THE stationary appearance of rock-bodied mountains points beyond the fleeting objects of time to the things of eternity. Evening shadows may play about the stolid walls of lofty peaks, hidden springs overflow their cragged confines into foaming falls, and winter's avalanches plunge headlong with their mass of unlodged objects; but year after year, to the outward eye, the mountains stand unmoved and unchanged save, perchance, for the different mantles thrown over them by the season's fancy. In the midst of human variableness, hope and faith behold these statues of constancy and take courage; yet both, if they would live, must soar still higher and reach beyond all outward testimony until they rest upon "the evidence of things not seen," since chemistry teaches that matter is in a state of continual change, and that the substance of every mountain is undergoing constant mutation, despite all evidence to the contrary.

Immersed in these theories and blind to everything but the outward, materialism declares immortality a question and life a problem incapable of solution. Out of such darkness only the exquisite commingling of reason and the teachable faith of a little child can lead into the light of that spiritual understanding which reveals the changeless substance of divine Love, and pleads with mankind, as did the apostle Paul, to look, "not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal." God has never been seen by physical sense, nor has He ever been known except through the medium of thought or the spiritual senses of man. Thus it is not strange if, in searching for permanency of being, we turn away from matter's fleeting shadows to the supersensible realm of Mind and perceive therein spiritual Love, immovably fixed as Principle and idea. (See Retrospection and Introspection, p. 89.) Do we not always find the unchanging two times two are four within? and would we not pitifully stumble in ignorance if our knowledge of numbers were confined to their symbolical figures, whose manifestation is always at the mercy of an eraser?

Since God is Love, there is found within the infinite precincts "no variableness, neither shadow of turning," for Love is "the same yesterday, and today, and forever." Though unseen to material sense, this Love is omnipresent and indivisible, hence all that goes to make up the true reflection of Love must be forever permanent. Its elements, essence, substance, and energies remain eternally intact. Love's adhesion and cohesion are found in pure Mind, and so Love can amalgamate with nothing unlike its own nature. This precludes the possibility that the elements of Truth and Love can ever be converted into their opposites. Blessing the whole universe with the beauty of holiness, Love's attributes, manifested in the justice which is forever just, the mercy that is forever merciful, perpetually fulfil the purposes of Love.

Moreover, even the transitional qualities of human love, expressed in compassion, meekness, and kindliness (see Science and Health, p. 115), are transitory only from a relative standpoint, for back of them, in the absolute, lies their unalterable substance, whether or no capricious mortals manifest them today and their opposites tomorrow. When confronted by the vagaries of human nature, perfect Love, unmoved, continues to remain Love, and in so doing destroys all that is unlike itself, even as heat by remaining heat makes warm whatever is cold within its reach, and thus destroys its opposite elements. Spiritual Love is as far removed from the inconstant moods of personal attachment as substance is from shadow. No estrangement, emulation, or deceit enters its confines. Constant in its systematic, law-abiding intelligence of perfection, Love is as unshaken by the storms of malice and jealousy as are the mountain-peaks when

Digitized by Google

enveloped by low-hanging clouds that roll themselves tier upon tier and press massively against these steadfast walls of nature.

Immutable Love is the creator of all, and its creation expresses the permanency of its Maker, for "Love's work and Love must fit." Thus man, who is the image of Love, is forever unchanged in nature and substance. Perpetually under Love's government, he naturally and necessarily fulfils its law, and is incapable of responding to the beck and call of the vacillating moods produced by emotionalism and personal attraction. How then can it even be thought that man has fallen from his high estate? Since his being is in God, the elements of love are embodied in man's thought in such mental substance as *joy*, wisdom, peace, humility, etc. Furthermore, harmony being the essence of this substance, it is a constituent part of man's consciousness, and can no more fluctuate than the qualities which express divinity can come and go.

Because there is but one God, there is but one Love, and this Love is divine, not human. It is known only through such reflection as is seen in "the tender, unselfish deed done in secret; . . . the self-forgetful heart that overflows; . . . the gentle hand opening the door that turns toward want and wo" (Miscellaneous Writings, p. 250). Such reflection is not possible to the human mind until the mortal sense of love is laid upon the altar. Being based upon matter and dependent for witness upon "the outward appearance" to which we must not look for righteous judgment, a material sense of love is necessarily temporal, changing, full of idiosyncrasies, and hence not love at all. Indeed, in its abandonment such perversion of love ripens into hatred and revenge. Were the true sense of love to mingle with this darkness, it would annul the law of mortal belief and make clear the apodictic statement of our Master, "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit."

Looking to mortals for a satisfying affection, the hungering heart will remain hungry, even as the materialist is still unsatisfied so long as he believes decaying matter to be substantial. To the degree that mortals believe the results of love are seen in both joy and grief, harmony and discord, will they contiue to "misrepresent and miscall affection; they make it what it is not, and doubt what it is" (Miscellaneous Writings, p. 250). A selfish, mortal sense of love enslaves the human affections and steals away their permanency. It is only through the Christly at-one-ment with divine Love that freedom is regained, and such at-one-ment is seldom attained unless, as Paul tells us, we have "crucified the flesh with the affections and lusts" thereof. Well may we rejoice, then, in the loneliness of every solitary hour, in the betrayal of friends or the slander of enemies, since the anguish of such experiences sunders earthly fetters and brings us the baptism of heavenly love. The purification of this baptism is the healing balm for every bleeding heart, as it dries the tears of loss and reveals the smile of God.

Our Lord and Master, who was the human presentation of divine Love, most marvelously exemplified its changeless nature when, with a malefactor on either side of him, and a mocking, jeering mob calling to him to come down from the cross, he cried, "Father, forgive them; for they know not what they do;" and again, on the eve of his ascension, when he blessed the friends who had so cruelly deserted him in the hour of trial. In this age the omnipotence of the same Love has been rediscovered, and its omnipotence demonstrated, by our beloved Leader, Mrs. Eddy, who declared anew that God is Love, and who proved her faith in this statement by her abiding love for all mankind. Through her teachings the great truth has been made plain to human comprehension that, since God made everything and made it good, He did not make aught that is impure, selfish, or variable; hence these errors are unreal, and Love reigns supreme. Clad in the armor of such understanding, though it be ours to face the jaws of hate and stand in the furnace of affliction, and "though the earth be removed, and though the mountains be carried into the midst of the sea," yet can we remain undismayed, the while we joyously sing with the poet:

> In heavenly love abiding,
> No change my heart shall fear:
> And safe is such confiding,
> For nothing changes here.

GIVING AND RECEIVING.

RAYMOND CHURCHILL.

OUR Wednesday evening meetings are always pervaded by such a spirit of genuine helpfulness and good will that we often recall the words of our hymn:—

> In atmosphere of Love divine,
> We live, and move, and breathe,

and realize that here, at least, is one place where we can with perfect assurance and safety, as in the glow of sunny spring weather, open wide the doors and windows of the heart. Our thought is so uplifted that, like the prophet of old, we sometimes feel, upon going home, as though the very ground we had trod upon was holy.

There are none who appreciate in so great a measure as Christian Scientists the eternal truth that it is more blessed to give than to receive, and in our testimony meeting is presented a grand opportunity for free and joyful giving. We give of our treasures of truth with the desire of helping others, and in return we ourselves are blessed, are given to in "good measure, pressed down, and shaken together, and running over." We feel, indeed, that we are being given a foretaste of the joys of complete overcoming, and say with Paul, "Blessed be God, even the Father of our Lord Jesus Christ, the Father of mercies, and the God of all comfort; who comforteth us in all our tribulation, that we may be able to comfort them which are in any trouble, by the comfort wherewith we ourselves are comforted of God."

In a small church or society, it is necessary that the few who compose its membership be always ready to give unsparingly of their good things at these meetings, if the stranger who is within the gates is to feel that he has been received with true Christian hospitality and treated as an honored guest. If all came with this intention, what rich feasts to him their testimonies would be!

As far as the writer is concerned, it used to be a difficult demonstration for him to speak in public. Being diffident by nature,—or perhaps habit would be a better word, since we are prone to hold nature, so called, responsible for many errors which we allow to grow upon us by habit,—he would let a sense of fear throttle any attempts he might wish to make to express his feelings, and when the time came when he knew he must speak if he were to take any part in the meeting at all, he could feel his heart thump like one of the trip-hammers in the factory where he worked. The experience was helpful in one way, at least, inasmuch as it proved to him very conclusively the disastrous effects of fear and all wrong mental conditions on the body. He is, however, glad to say that this fear has been overcome.

Some people seem to think that the inclination to say little is of itself a virtue, but there is a vast difference between the disposition to absorb and not give out, which we often find linked with timidity and self-distrust, and the gracious modesty of him who said, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven." Whenever there comes from above a feeling, an idea, a thought, or an experience which has helped us, and in turn might make another a little happier, it is our blessed privilege and duty to pass it on, to share it, for we know that the truth which has blessed one has not thereby exhausted its power to help others as well. We should never forget that, as the image or reflection of God, it is our business always, everywhere and under all circumstances, to express His goodness, just as it is the

Digitized by Google

function of sunshine to reflect the sun, and that nothing can hinder our Father's will. Where there is a true feeling of gratitude to give forth, we need not worry about words to express it. Of themselves, words are unimportant, and to the writer's mind it would be more genuine oratory for some poor, uneducated foreigner to speak one brief sentence in broken English, words that were born of love and gratitude, than for one versed in all the learning of the ages to make a cold, pulseless speech. Our revered Leader has said in "Miscellaneous Writings" (p. 262) that "whenever the heart speaks, however simple the words, its language is always acceptable to those who have hearts."

Some refrain from giving at the Wednesday evening meetings because they think they have nothing to give. Surely there must come to every one every day at least one uplifting thought wherewith he might comfort another. We should remember that divine Love gives freely and impartially to all, and it has been the experience of the writer that when he gives even a little, he always receives more. We find nothing more true in Christian Science than that our receiving is in proportion to the spirit of our giving, and as the poor widow cheerfully gave her all, which was indeed little, only two mites, and received from the Master the commendation that she had given more than all the rest, so we should never hesitate to give because our offering seems small.

It was because the unprofitable servant hid from the sight of others the one talent he had, in the fear that it might be lost, that he was condemned and his talent taken away and given to others; and this was a good illustration of the truth that "unto every one that hath [uses for good] shall be given, and he shall have abundance: but from him that hath not shall be taken away even that which he hath." In the same way that the selfish hoarding of money would create a panic in the financial world, and affect all the people, the attempt to keep to ourselves the good which comes to us in Christian Science and not share it with others, would soon cause a famine of spiritual realization. As we so often sing, in the words of Trench,—

> For we must share, if we would keep
> That blessing from above:
> Ceasing to give, we cease to have,
> Such is the law of love.

SERVICE.

G. LEONARD MC NEILL.

WHEN we are awakened to some appreciation of what Christian Science means to the world, there is born in our consciousness an earnest desire to serve our fellow men in the highest possible way, by bringing to them this message of good cheer, this practical religion which heals sickness and sin through the only right method—the removal of the false beliefs which cause suffering and wrong-doing. As this desire to help mankind rid themselves of the burden under which they are laboring increases in intensity, we are filled with a great longing to drop our present work and to become directly and actively engaged in what we consider to be the healing and reformatory work of Christian Science. This desire is commendable, but in this as in all other matters it is necessary for us to realize that God's will is done and that we are to serve Him in whatever capacity divine Love and wisdom dictates, resting confidently in the knowledge that as we are obedient and faithful in performing those tasks which lie right before us, doing all to the glory of God, we shall be fitting ourselves for greater responsibilities and greater service.

The world has urgent need of all who have gained an understanding of Truth; each has his place to fill and such service to perform as will best advance his growth and enable him to do his part in bringing to human consciousness the blessings of the kingdom of heaven, which is here and now. No matter where our daily work may take us, no matter how menial may appear our daily tasks, we can apply to these tasks our highest understanding of divine Principle, putting into practise what we are learning, and in this way we shall become engaged in the practise of Christian Science, and need have no fear but that greater opportunities for service will be afforded us as we become fitted to meet their attendant responsibilities.

BELIEF IN SIN.

ADA JANE MILLER.

IN Science and Health we read: "The belief in sin is punished so long as the belief lasts" (p. 497). These words from the tenets of our church have an added meaning as we take them fully into consciousness. Not only must the one who sins suffer, since this is divine law, but also he who believes that some one has sinned,—that sin exists as a reality, a subject for discussion.

Jesus gave the one rule for us to follow when some one has been deceived by a subtle argument that there is any good apart from God, infinite good. "What is that to thee?" Jesus said, "follow thou me." If we dwell upon the thought that some one has sinned, we experience the discord which results from belief in sin, and we regain our peace, our harmony of thought, only as we see the claim of sin for what it is,—a belief in a power apart from God,—whether the argument is presented to our own consciousness or whether it finds lodgment in our neighbor's thought, and we accept the argument in regard to him.

The words of Christ Jesus respecting Lazarus, "Loose him, and let him go," may mean to us: Loose him from the bondage of false belief; loose him by doing to him as you would have him do to you; loose him by denying the seeming, no matter what its guise, and affirming the truth of man's being. Only in this way, whether the belief of sin is in our own consciousness or in our thought of another, is there freedom, because belief in sin is inevitably followed by that punishment which is the keenest of all—a sense of separation from God. We maintain, consciously, our at-one-ment with the Father in proportion as thought is filled with that love which Paul defines as without dissimulation; the love that vaunteth not itself; the love that thinketh no evil, and recognizes as real only that which is an emanation from God.

[Written for the *Sentinel.*]

LOVE IS ALL.

CHARLES C. SANDELIN.

TAKE courage, thou that failest; Love ne'er fails!
In thy extremity, Love's hand avails.
Turn then thy thought from matter, that it may
In Spirit find repose: thy burdens lay,
And see them not nor fear them, till they fade—
To e'en thy mortal sense become a shade.
Canst thou in Love a single sorrow find?
(Inharmony knows not harmonious Mind)
But in Love's presence peace forever glows:
Who knoweth Love, he gladness ever knows;
Rest then thy heart within Love's sweet embrace,
Seek thou Love's image, seek Love's tender face;
In sweet communion joys eternal thou
Shalt see and taste, aye, know of heaven now;
Nor rest thy hope in dim eternity:
Thy bliss is here and now and e'er shall be.

. . . . . .

In Love is comfort when all comforts fail,
In Love is strength when error would prevail;
To Love to flee when all our bulwarks fall,
In Love to calmly know that Love is All.

SELECTED ARTICLES.

[Frederick Dixon in *Weymouth Telegram*, Weymouth, England.]

The reply of "Nemo" to my last letter is written in a tone which makes it a pleasure to reply to him. There is, however, at the very beginning of his letter a passage which puzzles me. He quotes from my last letter a sentence, not one word of which, if he will forgive me for saying so, appears in it. It is not even a paraphrase of what I wrote. I never said that he had modesty enough not to say he had found Science and Health easy to understand. I simply said, in so many words, that what was easy to one person was difficult to another, and *vice versa*, and this he himself admirably illustrates in the three books he names.

To the student of constitutional history, Hallam's book is particularly interesting and valuable, if only on account of what Macaulay once termed his "icy impartiality;" Motley's "United Netherlands" would, I should have imagined, have proved to most people an extraordinarily interesting book; but with regard to Thiers, the question is somewhat different. It is only fair to judge it in the French original, certainly not in any translation anybody chooses to have made of it. This, as a matter of fact, is the exact point I made in my letter on the subject of the fourth gospel. I was alluding specifically to the Greek text, and if the critic will refer to what Renan wrote on the subject, he will understand exactly what I mean. The authorized version which he quotes, is the result of a process of evolution, beginning with Wyclif, and passing through Tyndal and Coverdale to the King James version. More than eighty per cent of it, to be exact, is Tyndal. Possibly the Greek text is itself a translation of an Aramaic original. No man knows, but the haunting rhythm which the critic quotes is most emphatically Tyndal and not the apostle. It is precisely because generations of translators have sacrificed the scientific phraseology of the Greek to the rhythm of their own versions, that the exact scholars of our own time are being forced to make this clear.

Take the very first example given by your correspondent. The famous fourteenth verse of the first chapter, commencing, "And the Word was made flesh." The rhythm of the authorized version may be perfect, but the construction of the passage has been described by a famous scholar as "irregular, consisting of a main clause broken by a parenthesis, which records the observation of the fact." The mysticism of the original (I use the word in its historical sense) has given rise to centuries of controversy of the most envenomed description, which a scientific understanding of the text, though it would incidentally have involved a disregard of rhythm, would have avoided. The failure to get the science of the fourth gospel clear has meant the Arian controversy, the futile arguments of the *Homoousians* and the *Homoiousians*, and long centuries of persecution, blazing up in the fires of Smithfield and the *autos da fé* of Lima and Valparaiso.

The next example given by this critic is, perhaps, even more unfortunate. It is taken from the first verse of the fourteenth chapter, the chapter which begins, "Let not your heart be troubled." The rhythm admittedly is perfect, but one of the greatest critics in the church has written of the second clause, "The original words are ambiguous and can be interpreted, as indeed they have been interpreted, in four ways." As for the succeeding verse, which contains the well-known passage, "In my Father's house are many mansions," I have a strong suspicion that if it had been translated a little more literally, the phraseology might have been a little less beautiful, but the depth of meaning a great deal more clear.

The fourth example completes, in the most comprehensive way, the tenor of my original argument. It is taken from the story of the raising of Lazarus, and is that exquisite passage which begins, "I am the resurrection, and the life." It is quite certain that it is impossible to understand the real meaning of this passage unless the full meaning of the entire text is understood. The writer's peculiar use of the definite article, "the life," not merely "life," combined with the phrase, "though he were dead," which is literally "even if he die," is capable of only one explanation. "I [the Christ] am [not hereafter, but now] the resurrection, and the life: he that believeth in me [not 'believeth me,' two very different things in the Johannine vocabulary], though he were dead, yet shall he live [shall live on, even through the change men called death, not come to life again later on]. And whosoever liveth and believeth in me shall never die [as in the case of Enoch, Moses, and Elijah]. Believest thou this? [Do you accept this teaching?]" Is not Mrs. Eddy's own statement, so often quoted, on page 43 of "Unity of Good," the exact corollary of this: "I have by no means spoken of myself, I *cannot* speak of myself as 'sufficient for these things.' I insist only upon the fact, as it exists in divine Science, that man dies not, and on the words of the Master in support of this verity,—words which can never 'pass away till all be fulfilled.'"

I do not know whether the critic would still care to argue that the text of the fourth gospel is very simple and that of Science and Health complicated, on the ground that the rhythm of the authorized version, which is not the original, "sets the human soul agog with possibilities and expectations." It is not the rhythm of certain sixteenth and seventeenth century writers which fires the expectations. It is the metaphysical reasoning of the Greek text itself, devoid of rhythm, just as is the metaphysical reasoning of Science and Health, which is inspiring the Christian Science movement today. One devotee of rhythm, Renan, holds up his hands over the Greek of the fourth gospel, and thunders out his denunciation; another, Froude, rages, like the heathen, against metaphysics. You can get rhythm, the perfection of rhythm, in Renan's "*Vie*" or Froude's "History," but it will not teach you to heal the sick, and yet the fourth gospel itself declares, "He that believeth on me, the works that I do shall he do also."

A great thinker of the last century, fully as appreciative of the magic of words as Renan or Froude, put the matter a little differently, in one of those luminous and delightfully humorous illustrations in which he was wont to indulge. The fish of immortal memory, he said, which fell out of the frying-pan into the fire, was not more unfortunate than the man who seeks sanctuary from philosophical persecution within the walls of the observatory or of the laboratory. Metaphysics, in plain English, cannot be separated from science. It is Mrs. Eddy's metaphysical interpretation of the Bible in the Christian Science commentary, "Science and Health with Key to the Scriptures," which is making it possible to repeat again today the miracles or object-lessons of the scientific theology of Jesus of Nazareth, described in the Greek text of the epistles as the full, exact, or scientific knowledge of God, and so of Truth. "I knew," Mrs. Eddy writes on page 109 of Science and Health, "the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration."

The writer of the fourth gospel describes Jesus as saying, "Ye shall know the truth, and the truth shall make you free," but in this passage, as elsewhere, he draws a clear line between the truth, or the absolute, and mere truth, the relative human sense of truth. A great bishop of Durham, writing of this distinction, with reference to this very saying of Jesus, says, "The freedom of the individual is perfect conformity to the actual—to that which is;" and later, writing of Jesus' reply to Pilate, that he was born to "bear witness unto the truth," and Pilate's cynical interrogation, "What is truth?" he describes "the truth" as the "absolute reality," and "truth" as not concerned with the absolute, but purely

Digitized by Google

with the human sense of a particular case. Now, to bring this out in the translation would have necessitated spoiling the rhythm of the authorized version, in the way that John incurred the wrath of Renan, but it would have brought out the metaphysical meaning of the text, without which a true understanding of it is impossible. It is because Mrs. Eddy has grasped to the full the metaphysical meaning of the fourth gospel that I wrote that, for the purpose of my illustration, I would compare Mrs. Eddy's method rather with that of the fourth gospel than with that of the synoptists. Now that I have explained more definitely, I think the critic will perceive that he need not be troubled by the comparison.

One further example must suffice; it is John's use of the word "see." One of the greatest Johannine scholars of modern days has brought this out in the most interesting way. He shows that the evangelist, by a careful use of separate Greek words, draws a distinction between beholding with the eye and seeing spiritually. The word signifying spiritual perception is used in such passages as, "Hereafter ye shall see heaven open, and the angels of God ascending and descending upon the Son of man;" and again, "Thou shouldest see the glory of God." There are, however, two passages in particular in which the metaphysical meaning of the text is brought out with extraordinary clearness. The first is in the sixteenth chapter, "A little while, and ye shall not see me: and again, a little while, and ye shall see me, because I go to the Father." Here the transition from one verb to the other is made with startling suddenness, so as to put the meaning beyond question: A little while, and ye shall not physically see me, Jesus of Nazareth; and a little while and ye shall see spiritually the Christ, because I go to the Father.

The second passage is, perhaps, even more interesting. It is the description of the resurrection morning, when Mary, Peter, and John came to the sepulcher. First comes Mary, and notes that the stone is removed; then John, who runs to the tomb, glances in, and notes something which Mary has not noted; after him comes Peter, who enters the sepulcher, and beholds the napkin; and then finally John enters, and he sees spiritually and believes. The man who first saw spiritually the risen Christ was the man whose knowledge of the absolute, of the allness of Spirit and the nothingness of matter, defied the living death of Patmos.

To go into the question of the unreality of matter in this letter is impossible, but I have, I trust, shown the critic that it is the Science and not the rhythm of the gospels which constitutes the knowledge of Truth which is to free the world.

[Charles E. Jarvis in *Los Angeles* (Cal.) *Examiner*.]

Our reverend critic loses sight, or else is not aware, of the fact that Christian Science is based fundamentally and absolutely upon the Bible and the teachings of Jesus Christ, who demonstrated by his works his knowledge of the power of divine Principle to destroy sin and pain, and who commanded his followers not only to do likewise, but "greater works than these." Christian Science is essentially a religion, and while many of its adherents have first had their attention drawn to it through the healing of pain and disease, that phase of its teaching is but incidental to the far more important condition, that of spiritual regeneration, which follows the study of the Bible in the light of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. It is hardly necessary to add that those who have experienced the destruction of sin and discord from their lives are most profoundly grateful.

Christian Science, therefore, becomes a genuine and gratifying means to salvation here and now, and in the degree in which we apprehend the fact that the kingdom of heaven is not a place afar off, but a state of consciousness, a condition of mind, we are released from the bondage of our former beliefs and are freed from our pains and sorrows and fears, and this realization brings with it the joy of true living and the "peace of God, which passeth all understanding."

When our critic classes Christian Science with theosophy and spiritualism, he again displays a lack of knowledge of the subject, for the truth of the matter is that Christian Science is the very antithesis of both of these beliefs, and in her book "Science and Health with Key to the Scriptures," Mrs. Eddy has differentiated so clearly between Christian Science and these beliefs that there is no excuse for confounding them.

As to the time-worn inference that Christian Scientists deny the existence of pain and sin, allow me to quote from the text-book above referred to as follows: "Sickness is neither imaginary nor unreal.—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction" (p. 460). Mrs. Eddy has pointed us to a way out of sickness, and of sin as well, and countless thousands have proved that the steps of this way lead to health, happiness, and freedom. Her followers are endeavoring to show by their lives the gratitude they feel for the good that has come into those lives through this teaching, and they are striving to follow in the footsteps of him who gave us the golden rule.

[E. M. Ramsay in *Montrose* (Scot.) *Standard*.]

Since very serious misconceptions prevail as to the methods employed by Christian Science, I hope you will find space for the following correction. Christian Science teaches that there is but one Mind, the divine intelligence, reflected or manifested by whatever is true in the thought of man or beast; it shows that the opposite belief that each one of us possesses a mind of his own is untrue and dangerous. If indeed each man possessed a mind of his own, there would be no possibility of heaven, and the race would be doomed to annihilation from the ceaseless friction of mind on mind. In considering the science of arithmetic, we see clearly the uselessness and absurdity of personal opinion; the student strives to find out what is true, and willingly subordinates his opinions and guesses to the truth which he sees. So the student of Christian Science is striving to divest himself of personal wishes and opinions, that he may learn what is true and yield it joyful obedience.

Let us suppose that the beginner in Christian Science is confronted with the problem of an enemy. A man has injured him, treats him unjustly, pursues him with hatred, stands in the way of his progress in life. What should the student do? How should he deal with the man? The first step he must take is to see clearly that there is in reality but one Mind; that consequently there are not two minds opposed to one another, however much this may seem to be the case. It is not enough, however, to see this theoretically, he must go deeper and begin to cast out of his own thought that which is unlike God. In examining his heart he sees how strong a hold on him fear has taken. What is this fear? Disbelief in the omnipotence of God, good, a belief that injustice, cruelty, hatred, though entirely opposed to God, yet possess some of the divine attributes, are powerful, enduring, and successful. Then, looking once more into his heart, he recognizes resentment, and sees that by answering injustice with resentment, he is himself keeping up the belief in an evil power, adding to its seeming strength. Perhaps he finds that he cannot get rid of this fear and resentment; they are too deeply rooted. Then let him turn to the beatitudes, and pray earnestly for meekness, purity, mercifulness, and he will find a new sense of power coming to him, a clearer sense of God's presence, a new, beautiful sense of tenderness taking the place once filled by fear and resentment. From this truer, higher point of view, he begins to see the injustice, cruelty, and hatred which once appeared to form a man, as apart from man, as false beliefs, false gods, as powerless lies. Since God is good and is infinite,

Digitized by Google

good must be infinite. There can be no place for injustice, cruelty, and hatred in infinite good, nor can there be anything real outside of infinity.

This work, faithfully done and patiently continued, will bring results which would once have seemed miraculous. The student finds that the difficulties which have surrounded him were of his own making, or to speak more accurately, of his own acceptance; he finds that as he becomes more obedient to God, he becomes free from the tyranny of men; as his understanding of infinite Love increases, his sense of difficulty, of failure, grows less; by becoming a better Christian, he becomes a more useful and successful man. In this way the student of Christian Science defends himself from evil, is lifted out of bondage by the love of God, is enabled to return good for evil, and perchance may save his brother. "The weapons of our warfare are not carnal," the apostle Paul writes, "but mighty through God to the pulling down of strong holds."

[Ezra W. Palmer in *Denver* (Col.) *Republican.*]

Our critic asserts he has a "higher vision." It would seem therefore that one of the first uses of this "higher vision" would be to avoid the misrepresentation of the religious convictions of other people. "Thou shalt not bear false witness" is a command of the Decalogue, as equally binding upon believers in the Bible now as it was in the time of Moses. Christian Science does not "shadow the majesty of God." Christian Science gives all glory to God and takes nothing from His majesty and power. Nor does Christian Science "ignore the greatness of Jesus Christ," as the critic avers. Feb. 1, 1895, in reply to an inquiry from the *New York Herald,* Mrs. Eddy stated in part as follows: "There was, is, and never can be but one God, one Christ, one Jesus of Nazareth." [See Pulpit and Press, p. 74.] Mrs. Eddy had the most profound reverence for Christ Jesus. She ever patterned her life after his, and admonished her students to follow their Leader "only so far as she follows Christ" (Message, 1901, p. 34).

Christian Science is not a mental philosophy, as this critic further erroneously asserts. It is a religion pure and simple, giving a scientific knowledge of God, man, and the spiritual universe. It does not make gods of men, as this speaker declared, but teaches that spiritual man is the child of God. The gentleman complains that Christian Science "does not lift up to God," which merely shows that he does not understand the teachings of Christian Science. The verdict of innumerable earnest and sincere students of Christian Science is that it does uplift thought to God, and inspires men with love for Him.

This critic attempts to cast a slur on Christian Scientists by insinuating that they read Science and Health to the exclusion of the Bible. That Christian Scientists are earnest, sincere students of the Bible, and that they regard Science and Health as a commentary on the Bible, is so well known that it would seem hardly necessary to refute misrepresentations so utterly foreign to the facts. The gentleman declares that he received great help in Christian Science, that he found there the relief he sought; nevertheless, the spectacle is now presented of his denouncing the very source of his relief from tormenting ills. It will be remembered that many were healed by Jesus who never returned to give thanks, but this is no indication that Jesus did not heal in the right way.

The critic vaguely quotes Mrs. Eddy in support of his contention that there is a greater power than she or her followers have seen. He does not make clear what this power is, whether it is of God or of man. None of Mrs. Eddy's authorized writings gives authority for such vague implications, and these statements are directly contrary to the spirit of her teachings and writings. He implies that there is a distinction between Bible healing and Christian Science healing. He does not make clear what he thinks this distinction is, and he would probably find it difficult to do so, since no such distinction exists. Christian Science simply follows the Christ-method of healing both sickness and sin.

[William J. Bonnin in *Manchester* (Eng.) *Courier.*]

Your contributor "Cecilia," in the illustrated section, referred to Christian Science as dealing in romance and make-believe, but it would be almost impossible to make a more erroneous or misleading statement. The essence of Christian Science teaching may be said to be that in the measure we understand the truth delivered to the world by the Founder of Christianity, we shall demonstrate the saving power of that truth. Thus the demonstrability of the goodness of God and truth is insisted upon, and the daily demonstrations of the omnipotence of good which Christian Science brings to pass, are so many proofs that evil, or that which denies that omnipotence, is not of itself a reality or power; that it has no place in the one all-knowing Mind; that its supposed existence is only permitted through the fallibility of human concepts, and that it is, therefore, in its true nature a deception, a negation, verily a make-believe.

[Warwick A. Tyler in *Salt Lake* (Utah) *Herald-Republican.*]

Christian Science is not hypnotism, nor is it "a conglomeration of remedies for every imaginable ill," as would appear from an interview reported in a recent issue. Christian Science today is but carrying on the work of bringing the knowledge of Truth (God) to all mankind; and as each and every individual comes to know the truth concerning anything, he is freed from all errors in regard to that thing.

That Christian Scientists are learning to know God and the truth concerning all creation, is abundantly being proved today by their innumerable fruits in the shape of healing all manner of disease and sin, showing that the application of the knowledge of God concerning His creation frees mankind from all error. Christian Science is not a "conglomeration of remedies," it is Christ Jesus' specific remedy for every human ill.

[John M. Dean in *Commercial Appeal,* Memphis, Tenn.]

In this day and time there can be but little excuse for confusing Christian Science with the many forms of "drugless healing" which are constantly springing up. The great difficulty lies in the fact that those not well informed, or who approach the subject carelessly, regard Christian Science as a mere system of drug abstinence, when this is only a very small part of the teaching of Mrs. Eddy, and is but the natural outcome of a strictly spiritual teaching. Christian Science comes to heal and does heal every form of sin and sickness, and thus its adherents find no use for *materia medica,* but the non-use of *materia medica* is far from being confined to them or even to people of a religious way of thinking. Christian Science is, if you please, a system of right thinking which leads to an absolute knowledge of God and His relation to man and the universe. Being science, it is necessarily exact in its premises and conclusions and admits of no blind faith or haphazard methods. Fleeting chance and change have no part in the Christianity of the Bible, and it should not be thought strange that Christian Scientists contend for a working knowledge of God fully as accurate and demonstrable as that of any of the so-called material sciences.

Bubbles we earn with a whole soul's tasking:
'Tis heaven alone that is given away,
'Tis only God may be had for the asking.

LOWELL.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"IN EVERY THING GIVE THANKS."

In this issue of the *Sentinel* we publish the proclamation of the President of the United States, naming Thursday, Nov. 28, as the annual day of thanksgiving. This observation of a day when all should return thanks to God for the blessings received throughout the year, is the outgrowth of that deep trust in Him, and love of Him, which nearly three centuries ago inspired brave and devout men and women to set sail for the new world, in the hope that they might there find "freedom to worship God."

This national custom of setting apart a day for the special observance of public thanksgiving and praise to God, comes down to us from these Pilgrims of the seventeenth century, who in the midst of the hardships and dangers of their new home forgot not to give public thanks to the giver of all good when with the coming of the ensuing autumn a bounteous harvest reassured them against the scarcity of provisions which had attended their first winter in the new land. From New England the custom has extended throughout North America; not, however, in the purity of its religious aspect, but, like some other commemorative days whose original significance has been forgotten, more as a holiday of general recreation. Whereas it was formerly the custom for all churches to observe the day with largely attended services, now many churches are not opened at all, and even those where a service is held are but lightly attended.

Just what is the reason for this decadence we shall not attempt to explain here, but simply note, as an exception to the general rule, the churches of the Christian Science denomination which are springing up all over the world. In these churches the congregations assembled on Thanksgiving day are much the same in numbers as those assembled each Sunday and Wednesday, and the services held on this holiday are simple and spontaneous outpourings of gratitude for blessings received. No doubt Mrs. Eddy, in making these services a part of the regular order of worship in the Christian Science churches, intended not only to check the material trend of present-day religion, but also to encourage the spirit of fellowship, hospitality, and benevolence which bore so significant a part in the first New England Thanksgiving day. These qualities are indeed inseparable from true gratitude, and should likewise be inseparable from the outward manifestations of Christianity.

A typical incident of such hospitality on the part of our Leader was recently related by one who was of her household for a time at Pleasant View. It seems that a neighbor and his family had been away from their home for several months, and returned on the day before Thanksgiving. Upon noticing that the house was open Mrs. Eddy made inquiry as to whether the family had returned, or some one was in the house without authority. Upon being informed that the family had returned that day, she immediately became solicitous for their comfort and said, "They will not have anything for their Thanksgiving dinner! What can we do for them?" When some one remarked that in all probability the family had made provision for dinner, Mrs. Eddy said, "We do not dare take any chances upon that; it would never do for people not to have a good dinner on Thanksgiving day, and how could they have a Thanksgiving dinner when they have just returned to a house which has been closed up for months? I wonder what we have that we could send them." She then gave instructions to send to these neighbors everything necessary for the preparation of an old-fashioned Thanksgiving dinner.

Such was Mrs. Eddy's interpretation of the spirit of this oldtime custom, her exemplification of the gratitude to God which is "much more than a verbal expression of thanks" (Science and Health, p. 3); and this simple, spontaneous act of neighborly kindness was typical of the love for her fellow men which ever found its greatest happiness in service to others, in meeting not alone their temporal needs, but lightening for them, whether rich or poor in this world's goods, the burden of sorrow, sickness, and sin. If as Christian Scientists we too faithfully do our part, each day and all the days, to throw off for ourselves and others the fetters with which error would bind us, soon there will dawn for mankind that glad Thanksgiving day when the listening ear shall hear that "louder song, sweeter than has ever before reached high heaven," rising "clearer and nearer to the great heart of Christ; for the accuser is not there, and Love sends forth her primal and everlasting strain" (Science and Health, p. 568).

ARCHIBALD MCLELLAN.

IDEAS AND SYMBOLS.

It sometimes happens that when a student of Christian Science places emphasis upon the spiritual sense of a passage of Scripture, the listener concludes that he therefore denies or ignores the literal sense of the statement in question. To do this would, however, be to ignore Mrs. Eddy's teaching on the subject of Scriptural interpretation. She says, "The divine Science taught in the original language of the Bible came through inspiration, and needs inspiration to be understood" (Science and Health, p. 319). This being admitted, we may well pause and take off our shoes before venturing to express an opinion as to any passage of Scripture. On page 320 we read: "The most distinguished theologians in Europe and America agree that the Scriptures have both a spiritual and literal meaning;" to which is added the statement that "the one important interpretation of Scripture is the spiritual." We must not, however, lose sight of the fact that in Science infinite Mind is represented by "its infinite manifestation" (p. 468).

In the tenth chapter of his first epistle to the Corinthians Paul presents the experiences of his forefathers in the wilderness in a metaphorical sense when he says that "they drank of that spiritual Rock that followed them: and that Rock was Christ." This should not, however, be taken as a denial of the literal correctness of the history of the Hebrews as given in Exodus, to which reference is often made in the New Testament. It will, however, be observed that Paul subordinates the literal sense to the spiritual, and makes the outward manifestation of the rock symbolize the spiritual idea, for the literal rock did not follow the people in their journeyings, but the real Rock, the Christ-idea, was ever with them, though this was too often forgotten, even as it is today.

Another example of symbolic presentation of the truth is found in the epistle to the Galatians, where we are told in a somewhat abrupt way that the story of Abraham's two sons is "an allegory," a statement which might be taken as a denial of the fact that these sons, Ishmael and Isaac, had ever had a place in human history. It is, however, certain that Paul had no intention of teaching any such thing, but he saw the necessity for wresting the spiritual lesson from every circumstance, and to do this effectively the material sense must give place to the spiritual fact, of which the outward circumstance is at most but a symbol. It is true that material sense rebels against the acceptance of the spiritual fact, and for this reason denies the healing done in Christian Science. By this logic, all the wonderful works of the Master might be denied,—the feeding of the multitudes, the stilling of the storm, the healing of "all manner of sickness and all manner of disease," and his own glorious overcoming of death and the grave.

Here we must remember that most of the so-called liberal

Digitized by Google

thinkers stop far short of the spiritual idea in all these cases, and deny that Jesus ever actually did any of these things, because material law would render such demonstrations impossible. Christian Science, however, denies the authority of material law, and maintains that man is spiritual and governed by spiritual law. On the divine side the evidence is spiritual harmony, changeless and eternal, but to our present human sense the need is to have harmony restored, it may be by the disappearance of some dread sign of disease, and the process is no mere "allegory," as the word is generally understood, but is the working out of our salvation from the spiritual fact that God "worketh in [us] both to will and to do of his good pleasure." The neophyte craves a sign, the more advanced student reaches out for the spiritual idea and its manifestation, and thus he realizes the wholeness or holiness, without which no one can see God.

ANNIE M. KNOTT.

"ANOINTED OF GOD."

IN his last long heart-to-heart talk with his disciples, Jesus said to them, "Ye have not chosen me, but I have chosen you, and ordained you, that ye should go and bring forth fruit, : . . that whatsoever ye shall ask of the Father in my name, he may give it you." In these pregnant words the Master both outlined and initiated the reign of true individualism, that ideal democracy in which every man is to find his freedom, his quickening, and his efficiency. He is instructed what to do, and he is given assurance of the divine sustenance and support in the doing.

With the Jew, the chosen one had been looked upon as the rare one, the "anointed of God." Endowed with "the Spirit of the Lord," he was to rule in wisdom and lead with might. The term was strongly flavored with the oriental sense of distinction, of exclusiveness and exaltation, so that it brought to Jewish thought only the heroes of their history. Hence, in calling all his followers to the exercise of his own prerogatives and powers, Jesus instituted a new order which spoke as had no other event for the dignity and the privilege not of the few, but of all mankind. He expressed his own responsiveness to this divine order when in his native Nazareth he found in the Scriptures the place where it was written: "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor: he hath sent me to heal the broken-hearted." Having closed the book, he said to his neighbors about him, "This day is this scripture fulfilled in your ears," thus daringly identifying himself before men with the divinely royal figure prophetically portrayed by Isaiah, and accepting the responsibility for humanity's spiritual leadership. And now, in these last moments with his nearest followers, he was speaking to each of them and to the spiritually aspiring of all time, in the spirit of the 45th Psalm, "Thou lovest righteousness, and hatest wickedness: therefore God, thy God, hath anointed thee with the oil of gladness."

This personal call and appeal of the Master, this divine authorization, enduement, and commission, is voiced anew in Christian Science, and men are realizing that it bases and cements the democracy of good. It is that recognition of our spiritual selfhood, capacity, and obligation which impels one, in the hush of humility, to repeat those wondrous words, "He hath anointed me to preach the gospel to the poor; he hath sent me to heal the broken-hearted," and to let them frame his thought of life and duty anew. This is the greatest, most inspiring experience that can come to any man. Said one recently, "If you will but tell me what to do, I can go at it with enthusiasm; I am an inspired man and my success is assured." This is the need of all, an awakening to their place and privilege, as "the sons of God," to the possibility of spiritual sovereignty, achieved through what they know of God, what they are in Truth; and this need is being met through Christian Science in that correction of consciousness, that anointing of God, which is for each individual the appearing of Christ, our Saviour, "who hath abolished death, and hath brought life and immortality to light through the gospel."

This appearing of Truth is always an immaculate conception; it is not of merit, but of grace for the redemption of human sense and the glory of God. From the divine side it is the gift of God, from the human it is that progressive illumination in which spiritual desire, or "prayer" as Mrs. Eddy names it (Science and Health, p. 1), becomes the first witness to the divine presence. This is followed by that holy uplifted thought, that spiritual realization, which disarms and dispels the falsities of mortal sense, and thus, in demonstration over sickness and sin, verifies the divinity of the word which it has been given us to apprehend and to declare in Christian Science.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

SAN FRANCISCO, CAL.—Responsive to the urgent need for larger quarters to accommodate the steadily increasing congregation, Fourth Church of Christ, Scientist, in San Francisco, Cal., has leased the beautiful new Native Sons hall, with a seating capacity of twelve hundred, located at 430 Mason street, in which they will hold their first Sunday service on the 22d instant. Ever since the organization of Fourth Church in March last, Elks hall, where its services have heretofore been held, has been crowded to overflowing, particularly on Wednesday evenings, and finally the need for more spacious quarters became so imperative that advantage was taken of the opportunity to secure this hall, which is nearing completion, and which has a seating capacity of almost double that of the former place of meeting.

The step it was found necessary to take in renting these quarters has proved conclusively the real need of a downtown church in San Francisco, where the conditions may be said to be somewhat peculiar in that this section, which is apartment house and hotel district, is a thickly populated one. It is safe to say that this demonstration of the city's requirements insures the establishment of a permanent downtown congregation as a feature of the history of our cause in this community.—*Correspondence.*

HUDSON FALLS, N. Y.—The Christian Science church of this village, in furtherance of its plan for securing a church home, has recently purchased a house and lot. The lot, which is about sixty-six by one hundred and twenty feet, is very nicely located on Maple street, one of the principal thoroughfares of the village, about five minutes' walk from its center, and is easily accessible from all points. The house, which is a large one, will be remodeled and made very convenient for the Sunday services and Wednesday evening meetings, also for a reading-room. It will be ready for occupancy about Oct. 1, and will very nicely meet the needs of the church for the present. Since its organization three years ago, this church has had a steady though not rapid growth.—*Correspondence.*

WELLINGTON, KAN.—The little frame building which for years served as a church edifice for the Christian Scientists has at last been moved from the corner of Jefferson avenue and Seventh street, having given way to a larger brick one. It is planned to make a small park out of the ground at the rear of the church.—*Wellington Journal.*

MOOSE JAW, SASKATCHEWAN.—The contract for the first Christian Science hall in Saskatchewan has been let in this city and the work is proceeding apace. Our hearts are full of thankfulness to God, and of gratitude to our Leader for the general advancement of freedom and happiness it has been our lot to experience and to witness.—*Correspondence.*

THE LECTURES.

MAHANOY CITY, PA.

Before a large and deeply interested audience Virgil O. Strickler delivered at the First Baptist church the first Christian Science lecture ever given in this city. The lecture was under the auspices of the local Christian Science society, and the speaker was introduced by J. Heaton Kirchner, editor of the *Mahanoy Tribune*, who said in part,—

I have been asked to introduce the speaker of the evening, and it is with great pleasure that I do so; and because I am a member of another church, I consider the request an honor. I am not here to say what I believe or what I do not believe, but on behalf of the Christian Science society of Mahanoy City I extend to you a sincere welcome to this their first public lecture. To those present who have been lifted out of doubt or grief or have been physically healed through this doctrine, it is not new. To those who have not received any such benefits it is intended to give a logical and rational explanation of life and its perplexities; and I am glad for the occasion which brings us together this evening, because I believe that from whatever religious faith we come, we should be liberal enough to come together as friends who should know each other better.—*Correspondence.*

LONGMONT, COL.

William R. Rathvon delivered a lecture on Christian Science in Dickens opera house. He was introduced by Grant E. Halderman, attorney-at-law, who said:—

Unfortunately for me, I do not happen to belong to the religious society, Christian Science, nor do I understand much of its teachings and beliefs. From a rather perfunctory observation, however, I can truthfully state that I have for that belief the highest regard and the most profound respect. In the course of that observation I have noticed, too, that, generally speaking, the communicants of the Christian Science church are composed of those members of society in the respective communities where there is a church organization, who are endowed with a degree of intelligence and intellectuality greatly above the average intelligence of the community. It is a matter of no concern to you, however, what I may or may not believe with reference to the Christian Science religion. Suffice it to say that in the last decade it has made most wonderful progress in its development, and growth in its membership, and this fact alone speaks volumes.—*Correspondence.*

MARSHFIELD, ORE.

Frank H. Leonard delivered a lecture on Christian Science in the Masonic opera house to an interested audience. Miss Nellie A. Montgomery, the first reader, formerly principal of the high school, in introducing Mr. Leonard said in part,—

What is truth? The question of the ages is still the profoundest question confronting mankind. Philosophers have sought the answer in the realm of metaphysics. Scientists have delved deep into the earth, have studied physical phenomena, have utilized the microscope to give the eye a keener vision in their quest. Philanthropists are seeking the truth that shall bring healing to the economic and social conditions that result in despair and suffering. Through Christian Science, Mrs. Eddy has turned the microscope of Spirit on these problems, revealing God, good, as the only creator of man and the universe, hence as the only intelligence, the only Mind.

Jesus of Nazareth, centuries ago, annulled every material law with the spiritual law. He healed the sick, reformed the sinner, raised the dead. The students of Christian Science are proving Christ, Truth, to be still with us, that divine idea which today repeats the new-old message, "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the broken-hearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised."—*Coos Bay Times.*

BALLARAT, AUSTRALIA.

An interested and very attentive audience assembled in the City lecture hall, Ballarat, to hear a lecture on Christian Science by Bliss Knapp. In introducing the lecturer, David Anderson, committee on publication for the Melbourne church, said they were there by invitation of First Church of Christ, Scientist, Ballarat, to hear an authoritative address on Christian Science by a qualified exponent, a member of the board of lectureship of the Christian Science Mother Church, The First Church of Christ, Scientist, in Boston, Mass. They had not come to be proselytized and no efforts in this direction would be made. Whatever there might be in the address of comfort to the sin-stricken, the sick, and the sad, they would hear no emotional appeal and nothing savoring of denominational aggrandizement. But it was a simple fact that, in considerably under half a century, Christian Science had become a world-known religion. It had met with opposition during its incipiency, and even now, though in a constantly lessening degree, it was misunderstood and misrepresented; and it was chiefly by way of dispelling some of the more common misconceptions on which these misunderstandings rested, that these lectures had been instituted.

Australians were sometimes spoken of as a people of somewhat marked sporting proclivities, but Australians always liked to play fairly, and he had no need to appeal to a Ballarat audience for a fair and dispassionate hearing of the lecture. Australians had, however, a more marked and an altogether undeniable characteristic. They had always a hearty handshake for the accredited stranger; and because Mr. Knapp was a stranger, and from the country with which their bonds of kipship and of common interest had of quite recent years been more firmly welded than ever before, he asked them to give the lecturer a real Australian, a hearty Ballarat greeting.—*Correspondence.*

OAKLAND, CAL.

A crowded house greeted Francis J. Fluno, M.D., at the Macdonough theater to hear his lecture on Christian Science, given under the auspices of First Church of Christ, Scientist. The lecturer was introduced by S. B. Reynolds, first reader of First Church, who said:—

It has been believed and taught for more than nineteen hundred years that the immediate disciples of our Master were divinely favored persons, who possessed and exercised a power not needed in this day and age, and whose privilege it was to enjoy many blessings that the Christian of today may not and cannot enjoy. It is the mission of Christian Science to correct these false views, to show that what made one a disciple nineteen centuries ago makes him one today, enjoying the very same privileges and possessing the very same power, according to his fitness to receive it. Less than half a century ago, Mrs. Eddy discovered and gave to the world an understanding of that law and its unchanging Principle, which is ever active, ever present, ever operative, and of which Solomon said: "I know that, whatsoever God doeth, it shall be forever: nothing can be put to it, nor any thing taken from it."

No one can help being amazed beyond description, who will consider for a single moment the valiant courage, the untiring devotion, the ceaseless vigilance of that lone woman who for years endured the scoffs and jeers of practically

Digitized by Google

the whole world. And for what? Not for the aggrandizement of self, but that all mankind might learn how to be free from the bondage of material sense. Who dares to say that she was not God's messenger, and that she knew she was giving to the world that same truth which Jesus taught and practised and commanded his followers to practise? Surely, we may say of her that "wheresoever this gospel shall be preached in the whole world, there shall also this, that this woman hath done, be told for a memorial of her."—*Oakland Tribune.*

BERLIN, ONTARIO.

First Church of Christ, Scientist, was well filled by an attentive audience which had assembled to hear an authoritative exposition on the subject of Christian Science by William D. McCrackan, M.A. S. J. Williams introduced the speaker, and said in part,—

Over forty years ago Mrs. Eddy, the Discoverer and Founder of Christian Science, gave to the world the textbook "Science and Health with Key to the Scriptures,"—a book whose mission was to restore to the world the practise of the teachings of Jesus. Christian Science touches every phase of human life, spiritual, moral, social, financial, and physical, and by its touch transforms. Myself and many others in this audience can testify to benefits received. We can also say we know that any one who studies this book honestly and lives up to its teaching will be made free. They will also be able to say they have found "the peace of God, which passeth all understanding."

The gentleman who is to address us this evening has come to tell us what Christian Science is, and what it is not, and to remove misconception and misunderstanding about its teachings.—*Berlin News Record.*

FORT COLLINS, COL.

Prof. Hermann S. Hering lectured on Christian Science at the Majestic theater to a large and attentive audience. He was introduced by Dr. I. E. Newsome, who said in part,—

During the last few days we have seen much in the newspapers regarding the return of Christ. I trust you will not be startled if I tell you that the Christ is with us continually. The dark ages of creed and dogma are passing away, and we are beginning to see with a clear vision that the Christ-life is not one to be preached of and wondered at, but one to be lived and practised. It has often been said that Christianity is impractical in the business world, and yet it is in business as well as in other lines that the spirit of Christ is so rapidly returning to the world. Men of large affairs are using the fundamentals of Christianity in their business as never before. We have with us today a representative of the church which has been the strongest advocate of actually living and acting as did Christ Jesus when he was here in the flesh.—*Correspondence.*

TOLEDO, OHIO.

A lecture on Christian Science was delivered by Virgil O. Strickler in Valentine theater before an audience of nearly twelve hundred people. He was introduced by William L. Rowland, first reader, who said:—

When the Roman governor of Judea ascended the throne of judgment on the morning of the crucifixion, he saw before him the world's most notable prisoner. Jesus' accusers stood without the judgment-hall, clamoring for the life of him who had said, "I am come that they might have life, and that they might have it more abundantly;" and who, in reply to Pilate's question, "Art thou a king then?" answered, "Thou sayest that I am a king. To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth. Every one that is of the truth heareth my voice." This reply wrung from Pilate's lips that momentous question, "What is truth?" Blinded by ignorance, prejudice, and fear, he failed to recognize the answer to his question in the person of the humble Nazarene who stood before him,—that representative of Christ, Truth.

Anxious, inquiring thought has been repeating Pilate's question from that time to this, and is still giving expression to its desire for a knowledge of the truth which makes men free. Multitudes have received a satisfactory answer to this question through the understanding of Christian Science as given to the world by Mrs. Eddy, and the purpose of this gathering tonight is to listen to a lecture on this subject.

Correspondence.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Alameda, Cal.—Unitarian church, Grand street near Santa Clara avenue, 8 p.m., Nov. 26.
Asbury Park, N. J.—Library hall, First and Grand avenues, 8 p.m., Nov. 19.
Ashland, Ky.—Ashland theater, 8 p.m., Nov. 28.
Bay City, Mich.—Masonic temple, 8 p.m., Nov. 25.
Beaumont, Texas.—Woman's Reading club, 8:15 p.m., Nov. 26.
Boulder, Col.—Curran opera house, 8 p.m., Nov. 29.
Brantford, Ontario.—Grand opera house, 8:15 p.m., Nov. 26.
Carthage, Mo.—High school auditorium, 8 p.m., Nov. 25.
Cincinnati, Ohio (First Church).—Emery auditorium, 8:15 p.m., Nov. 29.
Clarksburg, W. Va.—Monday evening, Nov. 18.
Connersville, Ind.—Vaudette theater, 3:30 p.m., Nov. 24.
Darlington, Durham, England.—Mechanics hall, 8 p.m., Dec. 5.
Dublin, Ireland.—35 Molesworth street, 8 p.m., Dec. 3.
Edinburgh, Scotland.—Synod hall, 8 p.m., Dec. 7.
Everett, Mass. (auspices Malden Church).—Whittier hall, 8 p.m., Nov. 22.
Flushing, N. Y.—League building, Sanford avenue, 3 p.m., Nov. 24.
Fort Worth, Texas.—Byers opera house, 3 p.m., Nov. 24.
Frankfort, Ky.—Farmers Bank building, 8 p.m., Nov. 19.
Fremont, Ohio.—Colonial hall, over Colonial bank, Front street, 8 p.m., Nov. 26.
Galena, Kan.—Midway theater, 8 p.m., Nov. 26.
Greenville, Mich.—Grange theater, 7:30 p.m., Nov. 29.
Greenville, Ohio.—Henry St. Clair Memorial hall, 3 p.m., Nov. 28.
Houston, Texas.—Beach auditorium, 8 p.m., Nov. 25.
Jackson, Miss.—Century theater, evening, Nov. 29.
Kansas City, Mo. (Second Church).—Church edifice, 31st street and Troost avenue, 8 p.m., Nov. 21 and 22.
Lima, Ohio.—Nov. 25.
Lincoln, Ill.—Opera house, 7:30 p.m., Nov. 26.
Liverpool, England.—Picton lecture hall, William Brown street, 3:15 p.m., Dec. 1.
Lowell, Mass.—Lowell opera house, 3 p.m., Nov. 24.
McKeesport, Pa.—White's new theater, 3 p.m., Nov. 24.
Mobile, Ala.—Battle House auditorium, 8 p.m., Nov. 21.
Newcastle-on-Tyne, England.—Grand assembly rooms, Banas Bridge, 8 p.m., Dec. 9.
Otsego, Mich.—Edsell's opera house, 8 p.m., Nov. 26.
San Jose, Cal.—Victory theater, 8 p.m., Nov. 25.
Springfield, Mo.—Sanders theater, Walnut street, 3 p.m., Nov. 24.
Terre Haute, Ind.—Zorah temple, 639 Mulberry street, 8 p.m., Nov. 28.
Victor, Col.—First Church of Christ, Scientist, 8 p.m., Nov. 28.
Worcester, Mass.—Worcester theater, 3:30 p.m., Nov. 24.

TESTIMONIES OF HEALING.

Mrs. Eddy tells us in Science and Health (p. 67) that "grace and Truth are potent beyond all other means and methods." I desire to testify to a wonderful proof which I had of the truth of this statement. In October, 1909, while traveling, our six-year-old daughter was infected by a disease which it is considered difficult to heal under *materia medica*. We were in Ohio when the slow fever which ushered in the malady appeared, and there we had two well-recommended physicians, both of whom did what they could, though without making a correct diagnosis of the case. At the end of two heart-breaking weeks I took my pathetic-looking baby home to Washington, D. C., where our family physician (assisted by the best of surgeons and three specialists) named the disease and gave me such slight hope as he could. Three weeks more of patient nursing and doctoring proved the futility of material means, which were accomplishing nothing except daily to weaken and make more nervous what seemed the wreck of our once healthy, joyous child.

Meanwhile, as I had a slight understanding of Christian Science and had seen proofs of its healing efficacy, and as I was in a fair way to become a nervous wreck myself through nursing and witnessing the sufferings of my little one, I applied to a practitioner for help for my own sleeplessness, etc. One treatment was all I needed to place my thought and trust upon Spirit, God, so at the end of the five weeks of pain and sorrow, when as a family we were united in our desire and purpose to give God His opportunity, we turned to divine Truth for help and sent for the same practitioner. I can never forget that first visit to our home of a Christian Scientist. She found my little girl lying in her bed, with no desire to be elsewhere. How earnestly she talked to us both of God's love and ever-presence, and taught my little daughter to repeat a line from the 46th Psalm, "Be still, and know that I am God." After she had explained this passage in its spiritual import, she remarked that the child would no doubt get up that afternoon (this was about two o'clock), and added that we were both to come to her the next day. As her home was seven long blocks away, I smiled at what seemed absurd; but I acquiesced, just because she appeared so confident.

Sure enough, as soon as we were alone my little girl insisted on getting up, and helped as best she could at dressing herself. Then she said she was hungry, and only a mother can realize how I flew to prepare the food which she desired (as the practitioner had said she could eat anything she relished), and how, tear-blinded, I watched her eat heartily. My eyes and heart were kept busy the next day, too, when she arose in the morning, and did indeed take the walk to the practitioner's home with me. And when this dear lady said that she could come by herself the next day, the little face lighted up in response; and when she eagerly replied, "Yes, I'll come on my skates," my gratitude was too deep for anything but tears. A slight manifestation of the disease continued for ten days, though the child felt and acted as one perfectly, joyously well. At the end of this time I realized that I had been holding to a material desire of which I was making a god, and it dawned upon me that it is indeed true that "carnal beliefs defraud us. They make man an involuntary hypocrite,—producing evil when he would create good, forming deformity when he would outline grace and beauty, injuring those whom he would bless" (Science and Health, p. 263). When this was clear to me, I at once let Truth destroy my false belief, and left the case to God, to Life and Love. The next morning every symptom of the disease had disappeared, never to return; thus breaking every material law relative to this disease.

This taught me the necessity for work in my own consciousness, and so I set about the study and practise of divine Science. Though beset with difficulties, the way has been constantly broadening, and never for an instant have I had a desire to go back to my old beliefs and what I once thought was faith and prayer. Since this satisfying proof of the potency of grace and Truth, we have employed no other method of healing and have never enjoyed such immunity from the ills which seem to beset a growing family. Our two children go gladly to the Christian Science Sunday school and are growing "in grace, and in the knowledge of our Lord and Saviour Jesus Christ." We are all more deeply thankful than words can express to God, who is All-in-all; to Christ Jesus, the Wayshower; also to our revered Leader. My desire is that every thought and act may testify to my humble appreciation, and that I may pay my debt of love by passing on the lessons which I am learning to others, who may be weary wanderers as was I, and who desire to undertake the journey from sense to Soul.

MRS. LAURA BLANDFORD JENNINGS, Washington, D. C.

It is with a sense of gratitude deeper than words can express, that I relate my healing in Christian Science. My illness was of fifty years' duration, with short intervals of relief gained from some new application. My complaints were severe,—stomach, uterine, and bladder troubles. I was subject also to very painful attacks of rectal trouble, during which I would have to be lifted in and out of bed. I had such a fear of eating anything, that when invited out to dinner I would take a crust of brown bread with me. Nearly all known remedies of which we heard were resorted to, including hygiene, electricity, mineral waters, change of climate, and surgical operation. My last illness culminated in sixteen weeks of starvation, the last ten of which were spent in a hospital. The latter part of this term I was given a small quantity of liquid food once in twenty hours, and at times I would feel so famished that I would crawl to the door and beg some one to call the nurse to bring me food or I would die. It was believed by all that I would soon pass away.

I had known of Christian Science, but only to ridicule it. My husband had been a minister in an orthodox church, and from childhood I too had worked earnestly in the various departments of the church. While in the hospital, one of the patients, seeing my helpless condition, told me of some one who had been healed in Christian Science, and advised me to see a practitioner. I consented very reluctantly, more out of curiosity than anything else, and when the practitioner called, I proceeded to resist and abuse Christian Science with all the strength I could summon. As I think of it, I was very insulting, and the practitioner went away, saying that I was not yet ready for Christian Science, but that I would be—and she was right! About two weeks later she called again, and this time I was ready. I no longer resisted the truth, but accepted gladly all that was offered me.

In that one treatment I was healed, absolutely healed, of all my ailments. I arose, and called for a supper of solid food with no doubt as to my ability to digest it, and ate it with comfort and peace. The next morning I asked to eat at the table with the other guests. Permission was granted, and for the first time in sixteen weeks I saw the dining-room. I ate everything that was placed before me, and who can ever know the gratitude and joy I felt at being a well woman! The authorities of the hospital did not understand my healing, and believing I had but a short time to live, gratified what seemed to them "dying whims." For dinner the nurse asked me what I wanted, and I said I would have some of everything the others had. The tray she brought me was taken back nearly emptied. Although it was the month of June, my limbs were wrapped in flannel, hot irons were at my feet, hot cloths were on my stomach, and cold cloths on my head (which was sore on account of electrical sponges previously placed upon it), but these were all removed after my treatment in Christian Science. Three

Digitized by Google

plasters also were taken off, and a few days later I returned to my home.

I had worn glasses over thirty years, one pair for the street and another for reading and sewing. After experiencing the above healing, the thought of wearing glasses troubled me, and one day I determined to get along without street glasses. Shortly after this my reading glasses were broken, and as we were quite a distance from an oculist, I felt greatly disappointed when the thought of not being able to read came to me; but almost immediately I thought, How do I know that I cannot read? A daily paper lay on the floor near by, and on picking it up I found to my great joy that I could read—after having worn glasses for thirty years! My healing took place seventeen years ago, and since then I have been able to read, write, and sew without the use of glasses. I can truly say with the psalmist: "The Lord will give strength unto his people; the Lord will bless his people with peace."—ADELINE ROBERTS, Chicago, Ill.

It is over seven years since I became interested in Christian Science, and for the many blessings it has brought into my life I wish to express my deep gratitude. I have been healed of a number of physical ailments, such as acute attacks of cold and catarrh, also of tubercular disease. While under treatment for the last named ill, the characteristic symptoms and swellings disappeared in less than a week. These healings have fully convinced me of the efficacy and healing power of divine Truth, and that Christian Science is a most practical religion.

The spiritual uplifting and regeneration is, however, more wonderful to me than the physical healing. It has helped me to a higher plane of thought, so that, in the words of Paul, "forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus." Mrs. Eddy's definition of church, as given in the Glossary of Science and Health, has always appealed to me. There we read that the church "is the structure of Truth and Love; whatever rests upon and proceeds from divine Principle" (p. 583). I now see that true worship consists in having the right concept and understanding of God.

Fear has been banished from my life, for I know that God "hath not given us the spirit of fear; but of power, and of love, and of a sound mind."

F. FREMONT BURNHAM, Milwaukee, Wis.

[Translated from the German.]

In 1906 I first heard of Christian Science through dear friends who knew of our continuous struggle with sickness. At first I was reluctant to consider the subject, but a few months later, conditions having grown particularly distressing, I asked for several copies of *Der Herold der Christian Science*, and later went to Berlin in order to know more of this helpful teaching. I returned from my trip in a happy and joyous frame of mind, with a sense of absolute certainty that God would help us, and I may say that our condition improved from that moment on. I myself had been under medical treatment almost constantly for eight years, and had gone through many seemingly serious attacks of illness. After this, however, the symptoms of disease which now and then tried to manifest themselves, were always quickly met, partly through my own understanding of Christian Science, partly through the help of dear Christian Scientists.

Today I may say with a heart full of gratitude that I have neither had a physician nor used any medicine since 1906. In view of the many proofs of Truth's healing power in our family, I must refrain from stating them in detail, though I would like to mention briefly two instances which occurred in the case of our children. One of them having been taken with whooping-cough a few years ago, I immediately applied for absent treatment, and in three weeks' time the child was completely healed. There was not the slightest symptom of weakness apparent, although this is supposed to be the usual after effect of the disease; on the contrary, the child was stronger than before. The physician whom we had to call in, owing to the police regulations, predicted that the twin sister would surely be taken ill, having been exposed to the same contagion. I therefore requested treatment to be taken up in Christian Science for the other child also, with the result that she remained safe and sound. The second case was one of seemingly serious inflammation of the throat. On the third day this child was able to go to school, whereas the period of recovery under *materia medica* in similar cases formerly had been of longer duration.

When my thought reverts to the time prior to our acquaintance with the teachings of Christian Science, to those years full of sorrow and sickness with, to sense, no hope of improvement whatever, I feel that I cannot be grateful enough for the gift which has come to us from God, through Mrs. Eddy's book, "Science and Health with Key to the Scriptures," for we are now indeed awaking to the recognition of the fact that God is Love, and that His will is that all men should be helped and healed.

FRAU ELLA WARNS, Wandsbek b. Hamburg, Germany.

Two years ago, while I was out one afternoon, the maid who took care of my children came after me, very much frightened, and told me that the little boy had cut his hand very severely while playing with the lawn-mower. I went home as quickly as possible, to find that the little fellow had been taken to a doctor's office near by. When I reached the office the doctor met me at the door and told me how badly two of the fingers were cut. He said he had done nothing at all, but had been waiting for me, as he knew I was a Christian Scientist and he did not want to do anything until I had told him. The dear baby (only three years old) was terribly frightened, and held up the injured hand to me. I was anxious to quiet him, and forgetting the doctor, I took him in my arms, declaring the truth. I then asked the doctor to tie the hand up and let me take the child home; but he looked anxious and told me that the fingers were in a dreadful state and must be amputated, as they were cut through the bone. This I told him would not have to be done, but he said that if they did grow together they would give much trouble, as the lawn-mower was rusty and the wounds were full of dirt.

I wanted to be alone with the child, and on reaching my house I went into the parlor, closed the doors, and gave orders that under no consideration was any one to come in. I then commenced to declare God's presence and power, and repeated the Lord's Prayer with its spiritual interpretation as given in Science and Health (p. 16), especially the first two lines. In a few minutes the child stopped crying and put his arms around my neck, and a few minutes later I laid him on a couch in the adjoining room and went on an errand. When I returned he was, to my surprise, out in the yard playing with the other children, and he slept well all night. He never from that time complained of his fingers, and used his hand in playing. The next day I took the child over to the physician, and requested him to clean the wounds and place the fingers so that they would grow together. The doctor said that it was a pleasure to have a child who was not the least afraid of him, as he sat perfectly still while the wounds were being dressed. I knew that not one of Mind's ideas can be lost, and this gave me courage to work for the manifestation, to human sense, of the child's hand as perfect. The fingers healed rapidly, without any trouble at all, and the hand is as perfect as before the accident, except for a slight mark on one finger, and that is disappearing, in spite of medical laws so called.

This demonstration of the power of God in Christian Science was watched by many people. I had not lived in the neighborhood long, and the people had a very erroneous

Digitized by Google

opinion of Christian Science. This, however, has been entirely destroyed. Before this experience the neighbors were not friendly to me, would not even allow their children to play with mine, but before I moved into another part of the town I knew that every one loved me and that their thought of Christian Science had changed, as they were most kind and friendly and asked many questions. One family sent a little girl who was very nervous to a friend of mine (a teacher) because she was a Christian Scientist, and, as the mother expressed it, "The influence of having the child with a Christian Scientist would be beneficial;" and this proved to be true. As our beloved Leader has taught us, and has so fully exemplified by her life, Love always is "the master of hate" (Science and Health, p. 44).

MRS. ETHEL S. ACKLEY, Palo Alto, Cal.

[Translated from the German.]

About two years ago we became acquainted with the teachings of Christian Science at a time when I was in a pitiful condition, an eruption of the skin extending almost over my whole body and causing me much suffering. I had consulted several physicians, but the remedies which they prescribed brought very little relief. I then turned to Christian Science and asked a practitioner for treatment, which she at once gave me; besides this, I attended the services. In three months' time the eruption had disappeared.

Soon after, our fourteen-year-old daughter was taken ill with acute lung trouble, and in our excitement we consulted a physician, whose verdict left us but little hope. Knowing that in this case our heavenly Father alone could help, we did not get the medicine which the physician had prescribed, but called in the Christian Science practitioner, the result being that the fever soon abated, which caused the physician to be greatly astonished. Four weeks later our daughter had recovered her health completely, and she is today a very strong girl. We have also experienced deliverance from error through Christian Science in several minor instances. Our sixteen-year-old son, who was very delicate and suffered with a rheumatic affection of the joints, has been completely freed of these troubles, and our seven-year-old boy was freed from an obstinate throat trouble. For all the good which we have experienced through Christian Science we wish to express our heartfelt gratitude to God.

CARL WUNDENBERG, Hannover, Germany.

After scoffing at Christian Science, I finally accepted treatment for a chronic form of rheumatism. Even then my faith was not all it should be, until I was healed of asthma of seventeen years' standing, which I had been told by a physician would develop into tubercular disease in less than a year. Some time later, while entering the subway, I injured my ankle, and it was found on examination that the ligaments had been torn. I had to be carried into the train, and in less than five minutes my foot was so swollen that it was crowded entirely out of my low shoe and became badly discolored. My friends insisted upon an X-ray examination, feeling sure that the injury was even more severe than it appeared; but I asked for the privilege of remaining quiet and having treatment in Christian Science. This was given me, and the healing of the sense of pain was instantaneous, so that I was immediately able to walk. In one week the swelling had entirely gone, and in ten days the discoloration disappeared. To the witnesses of this accident and my condition, this speedy healing seemed incredible.

The physical healing is, however, the least of the blessings I have received. Through this great truth I have been able to overcome the sense of hatred, revenge, domestic infelicities, limitation, and above all, to acquire that peace "which passeth all understanding." I give this testimony with a heart full of gratitude to Mrs. Eddy for Science and Health, which is truly a "Key to the Scriptures."

MRS. W. H. HECKMANN, New York, N. Y.

It has certainly been proven to me many times, since I became interested in Christian Science, that God is Love; and I have had many beautiful demonstrations of the power of this great truth, as given to us by Mrs. Eddy in "Science and Health with Key to the Scriptures." Not long ago I awoke one morning with a very distressing condition of the throat; in fact, the pain and soreness seemed more than I could endure. There are no Christian Scientists here, and as I am living alone, several miles from town, I had no one at that time by whom I could send a telegram to a practitioner; but before many minutes had elapsed, these words, which I had previously read in *The Christian Science Journal*, came to me: "The law of divine Love is the law of destruction to its so-called opposite." I held to this thought, and I truly felt the power of infinite Love. Within an hour I was able to eat my breakfast, and in the afternoon all soreness disappeared. I was completely healed.

Christian Science helps me every day and every hour, and since coming out here from Chicago, nearly two years ago, my only companions have been and are the Bible and Science and Health. I am very thankful to God for Christian Science, and also grateful to our Leader, Mrs. Eddy.

MRS. SADE BERRY, Ross, N. Dak.

I wish to acknowledge the many blessings which I have received in Christian Science. After many doctors had said that my case was incurable, I turned as a last resort to divine Truth and was healed of what was called "Bright's disease" in its worst form. I had also a form of paralysis and had been walking with crutches for six months, but after the first present treatment in Christian Science I was able to lay them aside. I walked to the barn, free from pain, and have never used the crutches since. Many other ailments were overcome, such as severe headaches, which I had had as long as I can remember, also the tobacco habit, intemperance, and the use of profane language.

At one time I opposed Christian Science very bitterly; so much so, in fact, that I followed a practitioner out into the road and ridiculed it to her, but all this opposition to the truth was overcome after the first present treatment. I cannot find words to express my gratitude and admiration for our beloved Leader, Mrs. Eddy, who has given to the world so much comfort, and shown us how to make it a better world, as God means it to be. I had formed a habit of severely criticizing my neighbors, and it was hard to find good in any one save myself, but this also has been overcome by making the Bible and Science and Health my daily study.

From being a follower of atheistical teachings I am now a humble follower of the world's redeemer, and study his teachings as illumined by Christian Science. While I am very grateful for the physical healing, I find that the spiritual uplifting does the greater work. It means that knowledge of God which insures the peace that "passeth all understanding."—WILL SEDWICK, Lebanon, Ind.

I give this testimony with the hope it will bring courage to many who are past all earthly help, as I was twenty years ago when I began the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and was healed by putting its teachings into practise as well as I could understand them. Quite recently I was able to lay aside crutches that I had used a year and a half on account of a paralytic affection. Besides this, heart trouble, asthma, neuralgia, and many other ailments disappeared, and I was soon able to help others, although deafness which came on when I was sixteen years old has not yet been overcome. I am over sixty-five years old, am a member of The Mother Church, and have had the privilege of class instruction. I am very thankful to God for sending so grand and noble a teacher as Mrs. Eddy has proven herself to be, and for the many blessings received through Christian Science.

MRS. OCTAVIA L. MOORE, Kensett, Iowa.

Digitized by Google

With a heart full of thankfulness to God, and of gratitude to our revered Leader, Mrs. Eddy, I wish to add my testimony to the many others which have appeared in the *Sentinel* and *Journal*. It was over three years ago that I came to Boston from Australia to learn more of this glorious truth which heals and saves, and I had the privilege of attending services in The Mother Church for seven months; then for two years I lived in a small town in Manitoba, Canada.

During the winter of 1910-1911 I had a very severe attack of rheumatic fever, and my husband declared that I could not get over it without medical aid. I told him that he could send for a doctor if he wished, but that my only trust was in God, and that I had written to a Christian Science practitioner to help me. Time went on, and the doctor did not come, but I was getting my help in Christian Science. As the practitioner lived over ninety miles away, he could not get down to see me very often, but he paid me two visits, and the rest was absent treatment. On his first visit I slept at night, for the first time in several weeks. After the second visit I found that I could get out of my bed and walk across the room.

Soon after this I went to stay with some Christian Science friends, and when I got back I heard it was reported that I was a cripple and would be for the rest of my life; so the next day I walked down-town to prove to the people that I was perfectly well. They were astonished, and asked what my medicine had been, and I was glad enough to tell. I am grateful now for the experiences which I went through while there, although at times I seemed to be almost overwhelmed. I am deeply grateful, too, for the healing, and to those who gave me encouragement and help during the time I was so ill. I also give thanks for the Christian Science literature, which brings to one and all a daily feast of good things. My prayer is that I may ever be found loyal, and worthy of the name Christian Scientist.

VICTORIA M. GRACE, Boston, Mass.

[Written for the *Sentinel*.]

MESSAGE OF THE BELLS.*

ELIZABETH EARL JONES.

NIGHT is gone, and with the dawning,
Filtering through the mists of gray,
Sound these heralds of the morning,
Ringing blessings on the day:
"Rise, give thanks," resounds the warning;
"Praise the Lord!" they seem to say.

Then, when cares of noon would bind us,—
Lest we miss the heavenly way,—
Deep-toned melodies remind us:
"God is with thee, watch and pray!"
Self nor fear nor sin can blind us
To the duties of the day.

Rest comes with departing daylight,
Glory streams from setting sun;
And the harmony at twilight
Ends a day of work well done,
Or reminds us through the long night,
There is still a race to run.

Angels of His presence ever,
They are with us day and night;
And their voices, ceasing never,—
Chastening wrong, proclaiming right,—
Over time and creeds forever,
Cheer the lovers of the light.

*The bells in the tower of The Mother Church ring a refrain from Handel known as the "Westminster Chime" at the hours of 9 a.m., 12 m., and 6 p.m.

FROM OUR EXCHANGES.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth*.]

Difficult though it be, to make clear what I mean, I insist that the real could not be anything else than the ideal, for it is at once the infinite source and the perfect satisfaction of everything that every soul can possibly aspire to. It may be more and greater—doubtless is vastly more and greater—than the highest we have ever yet glimpsed; but it cannot be less, for it is all. Reality can be no other than this, from whatever standpoint we contemplate it. And wrong and wretchedness can find no place in it, for the simple reason that wrong and wretchedness are experiences which imply inability to get at and draw upon ample reserves of life and power; wrong and wretchedness would instantly vanish if we could all manage to do that. And, when I tell you that if we could only get out and up to reality this is what we should find, I might as well add that it is exactly what we are in process of doing. Step by step and bit by bit we are working our way upward toward a state of spiritual consciousness which will put us at one with reality, which is only another way of saying at one with God. "Ye shall know the truth," said Jesus, "and the truth shall make you free." This is what our present earthly discipline is for; it is that we may understand the nature of the reality to which we all belong and from which we have never been separated for a moment, the illusions of sense notwithstanding. We make mistakes, choose false turnings, trip and fall in the mire of materiality, but in the end we shall get home to what we essentially are. There is a "Light, which lighteth every man that cometh into the world," the light of the Christ eternal, a light that ever shines even when the darkness comprehends it not. To follow that light is to tread the pathway that leads to the eternal glory.

[*Christian World*.]

As Charles Booth has shown, there are districts in London—districts below the poverty line—where the religious appeal meets with practically no response. We have created there an atmosphere in which the soul cannot breathe. Is it not something of an impertinence for us to proclaim the laws of God's kingdom in regions whose conditions show, on the part of us who permit them, a flat disobedience to the plainest of them?

The church, for its own salvation, as well as for that of the world, is bound to work for a social reformation as an integral part of the spiritual one. Its preachers, if they are to lead the movement of our time, must more and more be prophets. The great precursors of Christianity, the Micahs, the Isaiahs, were Israel's most spiritual men. But they never, in their message, stopped with the spiritual. There is surprisingly little in their exhortations about a distant, invisible world. They were emphatically this-world men. The kingdom of God to them meant a kingdom here and now, a kingdom in which man should be right with himself and right with his neighbor. To secure this they were content to endure the obloquy which attaches to the social reformer. They were exceedingly unpopular with the hireling priest, with the landgrabber, with the idle rich. And religion today, if it is to solve the problems of the time, if it is to lead the coming movement, will have to be as brave as it was then.

[*Christian Intelligencer*.]

Men must learn that they cannot despise God's law and obey the laws of men; that they cannot be irreverent to the King of kings and reverential toward their earthly rulers; that they cannot burlesque and ridicule men in public life and at the same time seriously follow their advice and their guidance; that they cannot make light of crime and sin and folly and yet stand in awe of committing such wrongs themselves. In a word, our people must remember that external prosperity, an appearance of luxury, and material advance

Digitized by Google

without the solid support of the immaterial—that is, of moral and spiritual and intellectual realities—is but a huge and gaudy bubble that bursts under the first pin-prick of real strain and stress. As the prophet Amos warned the people of his day, so should our generation be warned that to "lie on beds of ivory and to eat the lambs out of the flock and the calves out of the stall" may seem to be the highest development of national prosperity, but is in truth the evidence of national corruption, unless the luxury is tempered by charity and the prosperity is attained through righteousness.

[*Universalist Leader.*]

The contemporaries of Jesus lacked the perspective of history, without which no great leader or great movement can possibly be understood. Doubtless the associates of Jesus understood and interpreted him as well as we should have understood or have interpreted him. Perhaps they understood him as well as our generation would if he should appear among us. Certainly it requires a spiritual insight which is seldom found among any large number of men to understand a great leader at any time. Before we criticize his age for rejecting Jesus, we should be quite sure that our age would accept him. Before we are too severe in our judgment of those who have so blunderingly misinterpreted him during the intervening centuries, we should be persuaded very thoroughly that we would have made less blunders than they have made. Much of our criticism of the mistakes of Christendom in the interpretation of Jesus is born of our own intellectual conceit.

[*British Congregationalist.*]

We are in a state of transition, and many of the old landmarks are disappearing. This is true in the religious as well as in the material world, and it is, or should be, the chief function of the religious journalism of this, as of past times, to see to it that with the disappearance of the old landmarks there is no corresponding obliteration of essential truth or of the higher ideals. Modern thought, modern aspirations, and modern endeavors to meet human needs, may be along a new road. Let us see to it that the way is kept clean, and that the feet of those who tread along it are not mired by the way.

[*Christian Advocate.*]

While Jesus was the friend of law and order, he gave his approval to no specific form of government. Any style of national organization may claim him which embodies and expresses his teaching. He vested the authority of government in a source not always acknowledged by man. He did not believe that it was the inherent right of monarchs or of the people. He would have found as much fault with the French revolutionists as with their monarchical oppressors. According to his conception, no right to government rests anywhere save in the will of God.

[*Christian Work and Evangelist.*]

Spiritual forces alone can purify politics, prevent revolution by producing reform, lift men above party into brotherhood, and produce that general elevation of national and social life we so much desire. Christ is the captain of our salvation—the Christ in man. Men must hear him as he voices his imperative laws of unselfishness and brotherhood in the listening depths of their souls. Men must follow him if they would be emancipated from the thraldom of self and realize that social salvation for which their age groans and travails.

[*Advance.*]

We all want to see things move, and the religious unrest of the day is largely due to a feeling that the success of our efforts along lines of Christian work is not so great as it ought to be. It is by no means a bad sign when men begin seriously to ask themselves, Why are we not doing more and better spiritual work? It is apathy and indifference which are to be dreaded.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Five new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"Environment and Opportunity," containing five articles as follows: "Greater than Circumstances," "Why Grow Old?" "Limitation," "Problem of the Hickory Tree," "Songs in the Night."

"Birthright and Dominion," containing four articles and two poems as follows: "Inalienable Rights," "Mental Self-Knowledge," "Love's Bounty," "Demand and Supply," "Humility," "Unity."

"The Father's Business," containing five articles as follows: "The Abundance of God," "One Business," "The Closed Hand," "Christian Science in the Business Life," "Truth is Power."

"The Law of Kindness," containing four articles and a poem, entitled as follows: "'Forgive, and ye shall be forgiven,'" "The Habit of Hating," "The Law of Kindness," "'Ye shall be as gods,'" "Two Roses."

"Confidence and Supply," containing the five following articles: "'The Lord thy confidence,'" "Time and Healing," "'What hast thou in the house?'" "Constructive Work," "Giving and Receiving."

Another new pamphlet has just been published containing the lecture of William R. Rathvon, entitled "Christian Science: Its Results."

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass, should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth street, Boston, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage.

For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy . . .	$ 05	$ 06	$ 07
Twenty-five copies .	1 05	1 15	1 30
Fifty copies	1 80	2 05	2 40
One hundred copies .	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XII indicate the year 1912; XIII, 1913. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

ITEMS OF INTEREST.

National.

President Taft has issued a proclamation fixing the rates that the foreign shipping of the world shall pay for passage through the Panama canal. The provisions of the proclamation are as follows:—

First, on merchant vessels carrying passengers or cargo, one dollar and twenty cents per net vessel ton—each hundred cubic feet—of actual earning capacity; second, on vessels in ballast without passengers or cargo forty per cent less than the rate of tolls for vessels with passengers or cargo; third, upon naval vessels, other than transports, colliers, hospital ships, and supply ships, fifty cents per displacement ton; fourth, upon army and navy transports, colliers, hospital ships, and supply ships, one dollar and twenty cents per net ton, the vessels to be measured by the same rules as are employed in determining the net tonnage of merchant vessels. The secretary of war will prepare and prescribe such rules for the measurement of vessels and such regulations as may be necessary and proper to carry this proclamation into full force and effect.

The plan has recently been revived of continuing the original Washington street of Boston, which now runs as far south as Providence, R. I., from the New Hampshire line, north of Lowell, through Massachusetts and Rhode Island and across the Connecticut border to New London. If the plan is carried out, Washington street will be approximately one hundred and fifty miles long, one of the longest thoroughfares under a single name in the world, and a very effective memorial to the name and fame of the father of this country.

The secretary of the Amateur Athletic Union and chairman of the New York City recreation commission will shortly present to the New York board of estimate plans for a stadium which he proposes to have erected in Central Park, where all kinds of athletic contests may be held. He will ask for an appropriation of five million dollars for the structure, which would be a duplicate of the white marble stadium in Athens.

Delegates to the thirty-second convention of the Farmers' National Congress, which met in New Orleans last week, discussed a proposal for the merger of all agricultural associations under the name of the United States Country Life Association. The advantages of a merger were urged by Assistant Secretary Hays of the department of agriculture, and he suggested the American Grange, the Farmers' National Congress, the Southern Cotton Growers' Association, and the Farmers' Union for membership.

Determined effort to push as near to conclusion as possible all the pending antitrust prosecutions of the Taft administration before President-elect Wilson and his attorney-general take the oath of office on March 4, is being made by the department of justice.

The total amount to be collected by the commonwealth of Massachusetts this year in the form of taxes on corporations will be greater than ever before, the exact figure being $1,205,319.62.

Messages have been exchanged by the navy wireless station on Point Loma, Cal., and the big new navy station at Arlington, Va., approximately thirty-five hundred miles across country.

A device has been invented by which it is possible to make for automatic piano players permanent records of the pianistic interpretations and mannerisms of the great pianists.

Statistics of subway travel in New York city for the twelve months ended June 30 show that 302,973,856 passengers were carried.

James Bryce of Great Britain, ambassador to the United States, has resigned his post.

International.

In support of a spirited speech made in the Brazilian Congress by Deputy Calogeras against the concession granted to a British syndicate—the Amazon Land and Colonization Company—by the state of Para, covering an area of no less than sixty thousand square kilometers—twice the area of Belgium—the metropolitan press comes out with earnest warnings against such concessions, which, it is pointed out, have been multiplying of late. The policy is denounced as leading to the establishment of footholds of foreign domination.

The British government was beaten last week by twenty-six votes on the financial amendment of Sir Frederick Banbury to the home rule bill. Mr. Asquith at once moved the adjournment of the House to consider the government's position. When the House again convened there was so much disorder over the question of rescinding the amendment that the speaker adjourned the body from the 14th to the 18th.

Officials of the Grand Trunk Pacific Railway Company say that the ocean-to-ocean system will be completed some time next year. Forty-five hundred men are at work on the divisions west of Edmonton, and seventeen hundred are employed on the eastern divisions.

The vested interests of great landlords in South St. Pancras, London, are being attacked by the Progressives. It was stated that land which in 1776 was rented at five thousand pounds is now rented at two million one hundred thousand pounds.

The Canadian Pacific railway is to build a terminal passenger station in Vancouver, B. C., which will cost about one million dollars.

The British government has accepted the offer of the Malay states to provide a cruiser costing twelve million dollars.

Industrial and Commercial.

One thousand apple growers of the Pacific Northwest, together with orchard by-product manufacturers, railway traffic managers, and bankers, held a conference in Spokane, Wash., last week and endeavored to solve a number of pressing problems affecting the apple industry, particularly the question of distribution of the fast increasing apple crop, and the matter of profitable utilization of orchard by-products. Regarding the conference, W. T. Day, chairman of the Apple Show board of trustees, said, "Cooperation between growers, bankers, by-product manufacturers, and railroad officials is vital to the success of the apple industry. It is established beyond doubt that we can raise large quantities of first-class apples in the Pacific Northwest, but we must get them to the average consumer at a price which he can afford to pay. It is to secure cooperation and to devise a marketing plan that this conference has been called. The system must be on such a basis that the apples will go where needed, and without so great a difference between the price paid by the consumer and that received by the grower."

Imports of cocoa into the United States in the calendar year will approximate one hundred and fifty million pounds, against fifty-seven million pounds ten years ago. The value of tropical and subtropical products which entered continental United States in the fiscal year 1912 was $750,000,000, against $335,000,000 in 1900. Of this grand total over one half was foodstuffs, sugar alone amounting in value to practically $200,000,000; coffee, over $100,000,000; fruits and nuts, $50,000,000; tea, $18,000,000; cacao and chocolate, $16,500,000; olive oil, $6,500,000; spices, $6,000,000; and rice, nearly $5,000,000. Of the manufacturers' material imported, india rubber amounted to practically $100,000,000; raw silk, $70,000,000; tobacco, $45,000,000; fibers, $34,000,000; cotton, $22,000,000; vegetable oils, $20,000,000; gums, $11,000,000; and cork and manufactures thereof, $5,500,000.

Commissioner Tomkins, of the department of docks and ferries of New York city, has been working to find a suitable solution of the pier problem. His recommendation is to straighten the pier head line from the Battery to the Chelsea piers, so that it will go out to meet the extended piers of the White Star Line, and also to make two nine-hundred-foot piers by cutting into the land at the point where the West Washington market is at present. Another scheme is to run the piers obliquely instead of at right angles to the shore line. This would make it possible to build piers ten hundred and fifty feet long in the neighborhood of Desbrosses street.

The New York, New Haven & Hartford Railroad Company is about to make a second investigation of the matter of reclaiming the many miles of salt meadows along the Connecticut shore of Long Island sound. The first investigation was conducted by the New England Lines Industrial Bureau at Boston, but the results indicated that the scheme would be a difficult one to put through, because of the chemical constituents of the soils of these salt meadows and also because their owners have not yet been brought to see the benefits of such a plan sufficiently to insure their cooperation in draining them.

The Michigan State Horticultural Society, at its forty-second annual meeting at Grand Rapids last week, considered the question of low prices, which have been the rule this season for all kinds of fruit, making it obvious that methods must be changed or risk still weaker markets and more reduced prices. Much time was allowed to this problem and especial attention given by experts who reviewed the situation and explained how the matter is being met elsewhere.

The enormous sum of $4,171,134,000 represents the farm value on Nov. 1 of the United States crops of corn, hay, wheat, oats, potatoes, barley, flaxseed, rye, and buckwheat. With the value of the growing cotton crop and the crops of tobacco, rice, and apples, the aggregate value of these principal farm products will mount well beyond five billion dollars.

Rich deposits of alluvial tin ore have been found in a new district in the northeastern part of Tasmania, to the south of the known tin deposits near Ringarooma. The wash is twenty feet and over in depth, and contains up to two and one half pounds of tin ore to the cubic yard.

Twenty million pounds of butter were sent out of European Russia in the first three months of 1912. It was valued at $4,859,000.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"A SOUND MIND."

IRVING C. TOMLINSON, M.A.

STUDENTS of the Scriptures will be helped in their problems, as they study the words of Paul as found in his second epistle to Timothy: "God hath not given us the spirit of fear; but of power, and of love, and of a sound mind." Throughout Mrs. Eddy's writings, God is presented as the one perfect Mind. In Science and Health (p. 143) she says, "Mind is the grand creator;" then she bids us "give to Mind the glory, honor, dominion, and power everlastingly due its holy name." Apropos of a "sound mind," Max Müller writes: "As far as we can trace back the footsteps of man, even on the lowest strata of history, we see that the divine gift of a sound and sober intellect belongs to him from the very first; and the idea of a humanity emerging slowly from the depths of an animal brutality can never be maintained again."

Students of Christian Science learn as one of their first lessons that God's gift to His children is an intelligence which is reliable and which should rule. God's man has nothing whatever to do with nervous temperament or nervous exhaustion, since God's every gift to His children is perfect. Christian Science is of great help in showing that divine Mind is the only communicator to man, that diseases are not of God's creating and that He never pronounced them good. Being the outcome of false material sense, they have and should have no lordship over man. This teaching makes it very plain that mankind should at all times manifest self-control, affection, moderation, and kindliness toward all. Mortal mind does great injury in excusing irritability, impatience, eccentricity, and a so-called hasty temper, by ascribing these faults to what it is pleased to name a nervous temperament. To see God, good, reflected by others will tend to make us loving with those who might else annoy and trouble us; and this spiritual insight will aid in putting an end to complaining and rebellious thoughts. If given power in mortal belief, evil of any kind, committed by any one, can but result in harm; therefore the demand of Christian Science that one establish himself in love and truth, is imperative upon all its followers.

The Bible affirms: "Great peace have they which love thy law: and nothing shall offend them." A certain cure, then, for so-called nerves and nervousness is love of and hence obedience to God's law and the resultant peace it brings. Lack of self-control or of patience must be due to the absence of that unchanging Love which steadies and heals. The reflection of this Love causes us to manifest gentleness, meekness, and understanding in our conduct with others. Channing wrote: "No power in society, no hardships in your condition can depress you, keep you down, in knowledge, power, virtue, influence, but by your own consent."

It is said of the apostle John that in his old age his constant message to the early church was, "Little children, love one another." Thus spake this beloved disciple who was so dear to the Master, and whose wonderful writings have made known to us the heart of the Christ. Let us therefore seek to have and manifest his spirit, thus leading those about us to commend Christian Science because they perceive that we are true to its message of love. As each child of the one Father seeks to know Him better and draws closer to Him, this fact must needs establish that loving comradeship which doubtless existed as an ideal in John's mind when he gave utterance to the words already quoted. Let us know for ourselves that there is no reality whatever in any condition which would imply the domination of the individual by brain or nerves. Let us know that divine Mind only can govern us, and that its messages must needs bring happiness, quietness, and strength as we respond to them. The law of Love is supreme, able to give instant deliverance from evil of every sort. Then let us seek to apply that law so faithfully that we shall be better fitted to receive fuller revelations of its power. How true are the words of the psalmist concerning man, that God has given him dominion, —has "put all things under his feet;" and how surely, if we accept and utilize this dominion of "power, and of love, and of a sound mind," will peace and harmony reign within us.

SPIRITUAL INTERPRETATION.

ROBERT O. CAMPBELL.

OCCASIONALLY, people holding to the religious beliefs of the congregations commonly called orthodox, criticize Christian Scientists because of their interpretation of Scriptural passages. In some instances they challenge the right of the Scientist to the use of any interpretation which differs from their own concept of what is correct. Others, also, who read the Bible literally, contend against the giving of any spiritual meaning to the Scriptures, for the reason, as they say, that there is no authorized interpretation: that there is no unchanging code by which all Scriptural references may be judged, whereby the meaning can be proven capable of standing the test of universality as applied both to time and to persons. In the experience of the writer, the lawfulness of spiritual interpretation was made apparent in a manner sufficiently simple to beget strong faith in its being correct, although its application was understood only in part.

From childhood to the age of fourteen years, my thought of religious subjects had been shaped largely by the instruction commonly given in Christian Sunday schools. At the latter period, contact at frequent intervals with one who was an admirer of the writings of a well-known agnostic, and later some personal consideration of the same articles, almost completely annulled the faith gleaned from earlier instruction. For a number of years afterward, doubt of the divinity of the Scriptures held sway, until it seemed there was scarcely anything to which one could pin his faith. While others apparently found solace during stress of grief and trouble in the hopeful assurance of the Bible, they seemed very little better off than those who had no faith, because they were unable to escape the suffering common to humanity. This condition of thought continued for several years, church services were seldom attended, and less and less attention was paid to religious matters.

These years of agnosticism came to a close with an attack of illness. After suffering mental and physical distress for a number of months, during which medical help was sought and proven of no avail, an appeal was made for Christian Science healing. This appeal was answered by my being restored to a state of health superior to that experienced for several years, and with the improved health came an illumination of thought which made the study of spiritual guidance of absorbing interest. Study along this line has been continuous since then, and as the truth taught in the Christian Science text-book was unfolded in consciousness, there also came the experience with Scriptural interpretation previously mentioned.

During boyhood days the sense of loyalty expressed in the book of Ruth was an admired ideal. So prominently was this virtue presented, that other ideas were dimly perceived, and the book was held in thought as presenting a high type of that quality. Some time after this, when the orderly study of the Scriptures with the aid of the Christian Science text-book was begun, the long-neglected book of Ruth was again taken up for pleasurable reading, when to my surprise it was found filled with passages which appealed to me as beautiful expressions of love, obedience, and humility. These ideas were then just as apparent as the idea of loyalty had formerly been, and my consciousness was awakened to appreciate the lawfulness and consequently the universality of the interpretation made possible by the revelation of the Christ-teaching given by our beloved Leader, Mrs. Eddy. Another might have been able to glean more largely of these spiritual ideas, and later, with more understanding, my own study would possibly have been more profitable, but their interpretation even at that time supplied my need, thus showing that the spiritual illumination was individual.

As the months go by, time takes not away any of my appreciation or of my growth in the understanding of the demonstrable Christ-ideal, but clearer apprehension of Truth and the unfolding of new views, make enjoyable my progress in this knowledge. The loyalty shown by Ruth to Naomi, loyalty evidently inspired by a higher understanding of "the Lord God of Israel," enables the Christian Scientist consistently to echo her memorable words, "Intreat me not to leave thee, or to return from following after thee: for whither thou goest, I will go; and where thou lodgest, I will lodge: thy people shall be my people, and thy God my God."

"SAVED BY HOPE."

LOUISA E. BELL.

TODAY, as of old, mankind seek salvation from the ills which oppress them. All wish to be saved, be it from want, wo, sickness, sin, or death; and though the way is shown throughout the Scriptures, there are still very many who are vainly longing, yet bravely striving to be on the right road. In his epistle to the Romans, St. Paul tells us that "we are saved by hope;" so it would seem the difficulty has been that we have not known what to hope in, what to hope for, or have possibly not realized the meaning of the word "hope." In the same epistle we are told that "now it is high time to awake out of sleep: for now is our salvation nearer than when we believed."

"Hope," in Webster, is defined as "desire accompanied with expectation of obtaining what is desired." Here we may ask ourselves, Have we hoped, and continued to hope for good, always expecting to receive it? or have we merely wished for a cessation of pain, trouble, and worry, without doing our part and clearing our consciousness of wrong thinking, thus preparing thought for the inflow of good? Then, not experiencing the unearned good, have we become impatient and discouraged, forgetting how frequently we may find hope and patience working side by side and mentioned together in the Bible? Again, have we waited "rejoicing in hope"? The prophet Isaiah gives an example of this, and of his confidence in God, in the words, "It shall be said in that day, Lo, this is our God; we have waited for him, and he will save us: this is the Lord; we have waited for him, we will be glad and rejoice in his salvation."

We have needed the help to see our way,—to awake out of sleep; and that need is already met by divine Love through the teaching of Christian Science, as set forth in "Science and Health with Key to the Scriptures" by Mrs. Eddy. A faithful study of this book, bringing the power of Truth and Love within human comprehension and practise, so illuminates the Bible that we are now able to understand what formerly had little meaning for many of us. On page 40 of Science and Health, Mrs. Eddy tells us that "in order to enter into the kingdom, the anchor of hope must be cast beyond the veil of matter into the Shekinah into which Jesus has passed before us. . . . Like our Master, we must depart from material sense into the spiritual sense of being."

Here the way is made clear to us, and Christian Science teaches that on our journey from sense to Soul we, like the children of Israel, are not making that journey alone and without help, but are divinely guided through the Red sea and led through the wilderness, witnessing many demonstrations of spiritual power over material limitations and obstructions, until the promised land is reached. Thus encouraged, let us hope more, expect more; meanwhile gratefully acknowledging the help we have experienced by being ready to give an answer to every man that asketh a reason of the hope that is in us.

THANKSGIVING FOR THE *MONITOR*.

ALBERT E. MILLER.

CHRISTIAN SCIENTISTS have become so accustomed to the hourly giving of thanks for the innumerable blessings constantly unfolding in their lives, that in conforming to the general practise of allotting a certain day for the enjoyment of a season of thanksgiving, they very naturally recall not only the accumulated blessings of the year, but many reasons for special thankfulness at this time. One of this faith, therefore, can but remember with gratitude that among the many blessings Mrs. Eddy has bestowed upon mankind, not the least is her beneficent act in discerning the world's need of a better class of daily newspaper, and devising *The Christian Science Monitor*, which had its first issue at this season four years ago, as the proponent of this new order of journalistic achievement.

That which contributes to the welfare and happiness of mankind in a substantial and enduring way, deserves the support of all right-thinking people, and that which is related to or based upon truth, invariably blesses all with whom it has to do. As Shakespeare has so well said of the quality of mercy, that

> It is twice blest;
> It blesses him that gives and him that takes,

so it is with Christian Scientists as custodians, if they may be termed such, of this journalistic endeavor. Not only have they reason to feel grateful for the opportunity thus offered them to share in this benefaction to the human race, but it is theirs to realize that this opportunity is a rare privilege, inasmuch as it has in turn been the means of making them not only benefactors, but chief beneficiaries as well.

Considering journalism in its broadest aspect, there is one point frequently overlooked by those who contribute to the making of newspapers. Paul gave emphasis to this when he said, quoting the words of the prophet, "How beautiful are the feet of them that preach the gospel of peace, and bring glad tidings of good things!" There is a strong tendency, oftentimes, on the part of the average journalist, to emphasize the distressful side of human activities, to the exclusion of much achievement in the line of human betterment, the result being that readers of daily papers are likely

Digitized by Google

to infer that good is largely absent from the activities of the hour, and that evil is invariably found to be dominating the events considered worth recording, when the reverse of this erroneous point of view is the true one.

Mrs. Eddy was deeply impressed with the effect upon public thought of this daily purveyance to morbid tastes, and in April, 1883, through the pioneer Christian Science publication, *The Christian Science Journal,* she voiced her protest in these words: "Looking over the newspapers of the day, one naturally reflects that it is dangerous to live, so loaded with disease seems the very air. These descriptions carry fears to many minds, to be depicted in some future time upon the body. A periodical of our own will counteract to some extent this public nuisance; for through our paper, at the price at which we shall issue it, we shall be able to reach many homes with healing, purifying thought" (Miscellaneous Writings, p. 7). Mrs. Eddy waited twenty-five years for the culmination of her hope in the issuance of a daily newspaper, but of the good accomplished in the intervening years through the message of salvation from sickness and sin carried into thousands of homes by the *Journal,* and later through the weekly issue of the *Sentinel,* there is no need to speak here. In the four years since its inception the *Monitor* has likewise wielded an influence for good that has won for it an enviable distinction not only among Christian Scientists but with the general reading public.

In Philippians Paul reminds us to think on those things which are true, honest, just, pure, lovely, and of good report. To be consistent with our expressed desire, as Christian Scientists, to be lifted out of the "house of bondage," out of evil, we must give heed to the apostle's admonition to "think on these things;" and to the man or woman who is seeking to keep good uppermost in thought, *The Christian Science Monitor,* a newspaper whose avowed policy as established by Mrs. Eddy is "to injure no man, but to bless all mankind," is valuable. This course is also in accord with her loving advice: "Keep your minds so filled with Truth and Love that sin, disease, and death cannot enter them" (Pamphlet, What Our Leader Says).

It is inevitable that all shall finally come to the recognition that creation is perfect. It is the duty, then, of each one to recognize for himself this perfect creation, in order that its benefits may be utilized in every-day life, and the *Monitor* is a practical aid in this direction. Surely one is less apt to reach the recognition of God's perfection by being constantly reminded of the fictitious imperfections of mortal mind which are exploited at such great length in many of the daily papers, than by the constant reminder which the *Monitor* gives of the ascendency of good. In summing up our blessings, then, we may well give our daily newspaper a prominent place on the list of those things for which we have reason to be truly grateful.

THE COMING OF CHRIST.

S. F. SWANTEES, M.D.

In some of the German provinces, many years ago, a legend was cherished that each year, to some home, the home best prepared for him, the Christ-child would come on Christmas-eve and would sup with the family and give to its members the benediction of his presence. So, as the Christmas season drew near, every home was thoroughly cleaned, every nook and corner was investigated and made presentable, "for who knows," the mother or father would say, "but that the Christ-child will come to our home this year."

This legend comes to my thought frequently when I think of the Christ-idea as expressed in Christian Science. When Jesus was born in Bethlehem, all the world seemed to say that there was no room for him, as was the case with the inn—no room in human thought for the Christ-idea. The Romans and Pharisees were quite certain that nothing could enter their domain without acknowledging their supremacy, but in spite of the general opposition to the truth there were some hearts ready to receive the Christ. There was Mary, there were the shepherds, the wise men, and some others whose thought was ready for the Christ-idea, and to them it appeared—and there was no power to hinder its appearance to the prepared thought, for Truth was and today is omnipotent. How is the thought prepared? By following the advice given in one of the hymns by Mrs. Eddy, which we often sing: "Cleanse the foul senses within" (Poems, p. 75).

When demonstrations seem slow, when it seems as if we were holding to the truth in vain, it is comforting to remember that when the thought is thoroughly prepared for the Christ-idea, the divine idea will surely appear, and nothing, absolutely nothing, can hinder this appearing. In Revelation we read: "Behold, I stand at the door, and knock: if any man hear my voice, and open the door, I will come in to him, and will sup with him, and he with me." When Christ, Truth, sups with us, our demonstration is made, for "when Christ, who is our life, shall appear, then shall ye also appear with him in glory."

GROWTH MADE POSSIBLE.

EVELYN DEPEW MILLER.

In my window stands a fern of unusual beauty. Some time ago it occurred to me that this plant, though symmetrical and thrifty, was not making any growth. Upon examination I discovered that it was "seeding." As the chief province of a fern when used for decorative purposes is beauty and not propagation, I decided to cut back the fronds which were producing spores. My intention wavered when I found that the spores appeared on the largest and finest fronds, the removal of which would seriously mar the appearance of the plant. I, however, adhered to my first decision and pruned the plant relentlessly, so that, as compared with its former appearance, it did present a sorry sight when the pruning was completed. Soon, however, evidences of rapid growth became apparent; the old fronds became larger, new ones appeared, the green took on a livelier hue, and the whole plant seemed to have imbibed new life. This growth has continued until the fern is now more beautiful than at any time before its pruning.

This experience has been to me an illustration of the growth of the individual in Christian Science, and the analogy is apparent. While living under material conditions and obeying the behests of mortal mind, one's life may manifest symmetry and harmony to a certain degree—to such a degree, even, that both he and his friends are satisfied with it. But let Christian Science come into this individual's experience, and at first he may be overwhelmed with the sacrifices that seem to be demanded. Our text-book says, "Few understand or adhere to Jesus' divine precepts for living and healing. Why? Because his precepts require the disciple to cut off the right hand and pluck out the right eye, —that is, to cast aside even the most cherished beliefs and practises, to leave all for Christ" (Science and Health, p. 141). But let the disciple adhere to "Jesus' divine precepts for living and healing;" let him "cut off the right hand;" let him "pluck out the right eye;" let him set aside his "most cherished beliefs and practises;" and what is the result?

At first life may look empty and bereft, as did the fern after its pruning. Then comes the rehabilitation, and the disciple awakes to find that he has sacrificed nothing but worthless encumbrances. He had been gradually accumulating traits of character and habits of thought and life which were checking his further growth. This accumulation had been imperceptible to the casual observer—even to himself; but the searching rays of Truth brought it to light, and in separating himself from them the disciple not only loses

Digitized by Google

the obstacles to his further growth, but gains new sources of strength and new opportunities for development. As he advances in understanding, he manifests a more harmonious and symmetrical development in every relation of life. His health is restored, his daily work is performed with more ability and despatch, his business becomes more successful, his social qualities grow more pleasing because more genuine. His mental horizon widens. In short, he begins to see spiritual realities.

But one asks, "Does Christian Science then demand sacrifices of its followers?" and we answer, "Has one made a sacrifice when he removes from a dingy little old house into a light, commodious residence equipped with all modern improvements?" The poet Holmes says:—

> Leave thy low-vaulted past!
> Let each new temple, nobler than the last,
> Shut thee from heaven with a dome more vast,
> Till thou at length art free,
> Leaving thine outgrown shell by life's unresting sea.

Mrs. Eddy has frankly and lovingly pointed the way. Let her followers go forward, not with hesitation or regret because of some seeming material sacrifice required, but with bounding footsteps, zealous for the cause, courageous for the conflict, and grateful for the light which illumines the pathway.

TRUE GIVING.

RAE AULDRIDGE.

WHAT a deep meaning the word "giving" has to a Christian Scientist! When we stop to compare our present concept of giving with that which we entertained before studying Christian Science, deep gratitude should fill every heart for the example our Leader has set before us, and her untiring efforts to awaken humanity to the necessity of true giving. It seems an easy matter to satisfy one's conscience by contributing liberally to the financial support of our church, and feeling that our duty ends there. We cannot of course deny that financial aid is a necessary factor, but we do know it is only a step in the right direction.

One and all we have a duty to perform in respect to our Wednesday evening meetings, especially in the smaller churches and societies. It has frequently been remarked among Christian Scientists that it is not possible to give a testimony every Wednesday evening. The writer has often pondered over these remarks, and wondered what one's duty really is along this line of giving. Mrs. Eddy says: "Giving does not impoverish us in the service of our Maker, neither does withholding enrich us" (Science and Health, p. 79). Surely when the opportunity presents itself, one should consider it a great privilege rather than a duty to express gratitude for the manifold blessings which come to every earnest Christian Scientist. A lesson on giving can be learned from our *Sentinel*, which comes regularly every week, and as regularly do we find the carefully prepared editorials given to us for our spiritual food and guidance.

It makes no difference where we are or what our surrounding conditions may seem to be, we always have an opportunity to give of ourselves in some way. It may be only a smile or a kind word, but if we respond cheerfully and lovingly we will soon awaken to the fact that these very acts are stepping-stones to higher duties and opportunities. It is imperative, moreover, that every Christian Science student give a portion of his time each day to the earnest study of the Bible and Science and Health. As divine Love gradually unfolds to our consciousness the true understanding of God, and of man as His perfect reflection, a deep sense of gratitude and humility fills the heart, for then we recognize the call of our Master to be about our Father's business.

When at the temple gate the lame man asked alms of Peter and John, Peter said: "Silver and gold have I none; but such as I have give I thee," and he straightway commanded the man to rise up and walk. No one can doubt the keen appreciation of the lame man for this gift of healing bestowed upon him, for the passage continues: "He leaping up stood, and walked, and entered with them into the temple, walking, and leaping, and praising God."

What person has not at some time presented a friend with a gift, and on noting the appreciation manifested on the countenance of the friend really gained the greater happiness in having been the giver. How much more will it mean to us when we can turn from material gifts and help to feed the hungering multitude with the "bread of life" so necessary to their spiritual existence, thus obeying Christ Jesus' command: "Feed my sheep."

THE READING-ROOM.

MAE JUNE SMITH.

MORE and more Christian Scientists are coming to see how wise was the provision of our dear Leader, Mrs. Eddy, in establishing the reading-room as an adjunct to the work of all Christian Science churches. Its very atmosphere is permeated with purity, and there one has the great privilege of reading or purchasing the authorized literature of Christian Science, and through the application of its teachings is enabled to obtain and retain this sense of purity which is so closely allied to the healing.

For more than three months in succession, I have been a daily visitor at the Christian Science reading-room in a large city, and have rejoiced at seeing the great benefit it affords to all who desire it, from the laborer to the banker, from the busy toiler in the world's great mart to the person of leisure. Christian Science knows no distinction, but blesses all, and the presence in the reading-room day after day of familiar faces, furnishes the proof of their appreciation of its beneficent effect.

The wisdom and kindness of the one in charge is another blessing. She gives to all comers a cheery greeting, a kindly word of encouragement, and is a veritable ray of sunshine to the weary and heavy-laden seekers for rest and peace. I have been healed of many ills in this "my home," as I love to call it, for to the traveler it offers the protection of a home, a veritable place of refuge where Love heals and comforts the weary. Like The Mother Church, it has a larger part in benefiting the world than many at present understand; but Isaiah's words, which tell of "sure dwellings" and "quiet resting places," point to its purpose.

[Written for the *Sentinel*.]

ONE FOLD AND SHEPHERD.

MAUDE J. SULLIVAN.

O YE who abide in the fold's cheery shelter,
Protected and fed, snug and safe from the cold,
List ye to the sweet loving voice of the shepherd:
"And others I have, which are not of this fold."

Despise not the straying—perhaps in the darkness
And howling of storms they have wandered in vain,
And erring, mistaken, now blindly are striving
To traverse the path to the sheepfold again.

Perchance, O the pity! some hireling shepherd,
Unheeding, uncaring, has led them afar,
Then left them to wander through paths that are thorny,
Where pitfalls and snares of the wilderness are.

Perchance, to some lambkin alone in the darkness,
A voice, seeming sweet in the gloom, sounded near,
Mistaking the shepherd, he sought but to follow,—
Poor, lost little least one, aquiver with fear.

Some time, from the darkness and depths of the fallen,
The least and the greatest shall answer Truth's call,
And know 'tis their shepherd, and gladly will follow
His voice to the fold: "They shall know me"—yes, all.

SELECTED ARTICLES.

[Frederick Dixon in *Chelsea Mail*, London, England.]

The statement that Mrs. Eddy was once a "spiritual medium" is absolutely devoid of any foundation at all. It is simply a piece of gossip, which has been picked up from certain sources which would no doubt like people to believe it, and passed round, absolutely without inquiry; and the writer of the letter to the *Mail* will fail to find any evidence whatever in support of it. Mrs. Eddy was an essentially experimental scientist. Brought up in the strict orthodoxy of a Calvinistic household, she gradually began to shake herself free from these fetters. The reading of the Bible made it clear to her, from the first, that the healing of sickness was not only not confined to a certain number of people, in a certain age, but was as much a command to Christians in every age as was the healing of sin. From first to last, the demand put forward by Jesus was that his followers should preach the gospel and heal the sick.

In due course Mrs. Eddy studied homeopathy. As she did this, she found that the healing was not dependent upon the drug, but was largely in proportion to the elimination of it. From this she drew her conclusion that healing was never dependent on material action, but always on some mental action. It was about this time that she heard of Mr. Quimby and became interested in the healing work he was doing, and this was perhaps an inevitable step in the process of experimental science in which she was engaged, but it was only a step. Gradually she began to perceive that the healing accomplished in this way was effected through the action of the human mind, and as such was not only liable to the grossest abuses but was absolutely incapable of permanence.

Jesus of Nazareth himself, she came to realize, had pointed out this very fact, when, accused by the Jews of healing through Beelzebub, that is to say, by the art of the exorcists of the day, he had pointed out that a house divided against a house was incapable of standing. That was merely his way of stating, in the metaphorical manner of the East, that a belief that good and evil are equal powers, is not a mental condition which can destroy the power of evil. The writer of the Jehovistic manuscript of the book of Genesis had pointed out that the eating of the fruit of the tree of the knowledge of good and evil ultimated in death. Jesus of Nazareth, face to face with the accusation that he healed by means of the exorcism practised commonly in Palestine, turned on the Pharisees with the demand by whom their children, the exorcists, cast out devils, and then went on to show that a house divided against a house, a mind believing in good and evil, could not stand, since, as he said elsewhere, it was impossible to gather grapes of thorns or figs of thistles.

He did not, however, stop with this. He went on to show what true Christian healing was, that is to say, the casting out of devils through the Spirit of God. Christian healing never has come and never will come to any one through suggestion from a mind torn by material passions and imbued with the belief in good and evil. It comes, as Jesus said, by means of the Spirit of God; in other words, in the exact proportion in which a man lets go his belief in materiality and evil, and gains instead the Mind that was in Christ Jesus. Evil is not real and is not power, no matter how real or how powerful it may seem to the human senses. It is, as Jesus himself said, a lie, and the only reality or power a lie ever seems to have or to manifest is dependent on its remaining unexposed.

"Ye shall know the truth," Jesus said, "and the truth shall make you free." In the words of one of the very greatest English churchmen and scholars who ever lived, this truth is the knowledge of the absolute, of that which actually is, in a word, the knowledge of the spiritual; and in proportion as this knowledge of the spiritual and the absolute is gained, a man finds that he has been deceived by his relative belief in the material, and learning the truth, is freed from the effects of the lie.

This may begin to make clear to your readers something which the writer of the letter has not begun to get a glimpse of, and that is the teaching of the unreality of evil, and consequently of sorrow and sickness and sin. Christian Science does not say that sickness and sin are not real to the human senses. It says, on the contrary, that to these senses they seem terribly real, but this does not make them the absolute truth. If Christian Scientists did not realize that sickness and sin were something to be overcome, they would not be engaged in endeavoring to follow out the command of Jesus to preach the gospel and to heal the sick. If, on the other hand, they believed them to be real, they would know them to be God-sent, and so indestructible, and they would never be guilty of the futility of attempting to destroy something which God had made.

This, though the writer of the letter does not seem to have a suspicion of it, was the very point upon which the Gnostics differed from the early Christians. He speaks of the eastern philosophy of Gnosticism, as if there was anything less eastern about Gnosticism than about primitive Christianity. The dilemma which the Gnostics propounded to the early church was the demand to account for the imprisonment of spirit in matter, and of the creation of evil by an entirely good God. That dilemma remained absolutely unanswered until Mrs. Eddy explained, in Science and Health, exactly what Jesus had explained two thousand years previously, which was that the whole of the belief in evil, no matter in what form it manifested itself, was no part of the divine creation, but was the mere negation of the omnipresence of divine Mind. That was the real problem of Gnosticism, a problem never answered by the so-called orthodox church, and unanswerable today except in Christian Science. If evil is a reality, where did it come from? The Bible says distinctly that God made all that was made, and made it good. If evil were real, then it would be one of the things which God made, and which God made good, which is an absurdity. The alternative is that it had an independent creator, in which case God did not make all that was made, and is not the only creator. No amount of ingenuity will succeed in avoiding this simple difficulty. It is, once more, the dilemma which Gnosticism put to the early church, and your contributor would have been very much wiser if he had left Gnosticism out of the question altogether.

Finally, to say that Christian Science leaves all that Christianity values out of its teaching, is frankly absurd. Christian Science insists that the whole of Jesus' teaching shall be accepted. He taught absolutely and emphatically, and in a way which can never be disputed, that the healing of sickness constituted Christianity as much as the healing of sin. As a matter of fact, one is inseparable from the other, and that is why he said to the scribes, speaking of the man sick of the palsy, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" There is no escaping from the directness of the divine command, "He that believeth on me, the works that I do shall he do also." No one can deny that these works were, to an enormous extent, works of physical healing, and the proof which Jesus demanded is the only proof a man can give today that the gospel which he preaches is the gospel which Jesus taught, and that proof is the ability to do the works which Jesus did.

This is the teaching of Christian Science. It is the teaching which is spreading Christian Science today all over the globe, and the critics of Christian Science will find their criticism more effective when, instead of objecting to Christian Scientists' acceptance of the simple meaning of Jesus' words, they give mankind a greater hope, a more effectual prayer, and a completer understanding of the truth which is to make the world free.

[Olcott Haskell in *San Jose* (Cal.) *Mercury.*]

Our critic lays the foundation for his argument by stating, "The laws of nature are the expressions of the will of God." Mrs. Eddy says: "In one sense God is identical with nature, but this nature is spiritual and is not expressed in matter" (Science and Health, p. 119). It is probable that our friend has not considered where his assumption inevitably leads. God's laws certainly do not dispense disease and destruction, and to assume that they do is to become involved in just such unthinkable hypotheses as have turned many a good man away from the thought of such a monstrous concept of God; whereas, if God were understood as divine Principle, as infinite good, and if His laws were understood as promoting life and harmony, men would regard God correctly and would recognize Him as the protecting Father, and as the author of "every good gift."

No Christian Scientist would advocate that a man should trust God without obeying His law. In fact, an intelligent trust involves an understanding of God and obedience to His will. Jesus followed perfectly the will of his Father, yet he never obeyed a "law" of sin or of sickness. He proved that God's law rightly interpreted saves from all evil, and that sickness is neither sent by God nor produced by His laws. The Bible affords no warrant for rashness, or for attempting that which one is not able to accomplish, yet it also affords no excuse for yielding either to sin or to sickness. Christian Scientists do not ignore present human conditions, but they comply with them as far as necessary, until progress enables them to obtain results in a better way. The lives of the constantly increasing number of successful Christian Scientists afford ample proof of this. If our critic refuses to accept the Scriptural evidence of divine healing, it may be that he is not prepared to accept more modern evidence; yet many physicians frankly acknowledge the successful healings of Christian Science.

In my previous article I quoted from a government report in which Professor Fisher, chairman of the committee of one hundred, states: "There was no reason why it [the profession] should have lost hundreds of thousands of patients to Christian Science except that these patients were for the most part benefited, and greatly benefited, by Christian Science after having received no benefit, often injury, from the profession." Some years ago, in the case of The People *vs.* Merrill Reed *et al.*, heard in Los Angeles, twenty witnesses were placed on the stand and testified to the healing they had received through Christian Science. These witnesses were people well known in the community, and their testimony, given under oath, was subject to cross-examination. The cases healed ranged from tuberculosis and sciatic rheumatism to a deformed foot, spinal trouble, and insanity. In our own state of California there are nearly one hundred cities and towns where public meetings are held every Wednesday evening, to which visitors are welcome, and where may be heard and seen direct evidence that Christian Science heals all sorts and conditions of men, restoring them morally as well as physically.

Can it be that in the face of such evidence our critic would have all this good work stopped unless every Bible student and every practitioner through prayer could first show that he had attended a medical college or could pass an examination in *materia medica?* Or when he remembers that those of his own profession habitually charge fees, collectible by law, does he object to the reasonable charges made by Christian Science practitioners for their services? And can such objection have any weight in view of the fact that, as Professor Fisher says, many of the patients have been "greatly benefited by Christian Science after having received no benefit, often injury from the profession"?

Our critic cheerfully offers to "lay low" diphtheria bacteria with a "well-given" dose or two of diphtheria antitoxin, but he quite overlooks the fact that this latest application of modern "preventive medicine" is in itself a serious menace to health and life. In Chicago three years ago last winter antitoxin was made compulsory for all diphtheria cases and contacts; nevertheless, one of the mid-winter weekly bulletins of the health department showed a diphtheria mortality thirty-three per cent greater than for the same period of the previous winter when the use of antitoxin was optional. A medical magazine published in St. Louis gives a list of the morbid symptoms said to follow the injection of antitoxin and other such serums into the blood, and expresses the opinion that such patients never recover their original normal condition. A few years ago in the city of St. Louis more than ten children died within a week from the effects of antitoxin administered to them by physicians. These children, so the record showed, did not have diphtheria at all, but the antitoxin was given to them as "preventive medicine." It did indeed prevent them from having diphtheria, but it cost them their lives. Was this "scientific medicine" "the application of God's laws"?

Our critic ridicules the thought that to cultivate fear of disease in the minds of children and adults could lead to harmful results; but many writers of prominence differ with the doctor on this point. The *San Francisco Star* of Feb. 12, 1912, commended Mayor Rolph for his words of caution to those planting pictures of the ravages of tuberculosis in the minds of school-children. Dr. P. L. Myer of Toledo, in an article published in the journal of the American Medical Association in 1906, says: "Had we not better hedge a little before the great lay mind grasps the fact that they were frightened into panicky laws and restrictions over will-o'-the-wisp possibilities and not probabilities or actualities. With all the wonderful strides of our science in a hundred years we still have the public as abjectly cowed today, before the omnipotent hosts of bacteria, as it was by the evil spirits and ghosts and witches of a past century." More recently this same journal of the American Medical Association published an article which states that "an insane terror of infection may make life very miserable without appreciably lengthening or strengthening it." This article closes the discussion by stating that the aseptic Eden, which seems to be the ideal of the germophobes, is unattainable.

Our critic three times repeats his demand for "regulation of the practise of the art by law," and he expresses wonder that so many good people object to legislation which would impose greater restrictions than those already in force. These people do not object to proper restrictions for the practise of surgery and medicine, but surgery and medicine do not by any means occupy the entire field of "the healing art." Can it be that our critic has failed to see that the logical effect of such "regulation" as he advocates, if inaugurated or administered by physicians of the "regular" or allopathic school, would be to suppress every other method of healing?

If medicine were truly scientific and if its practise had invariably proved successful, the matter might be regarded differently, but honest and experienced physicians are the first to admit that modern medicine is not a science.

[David Anderson in *Melbourne* (Australia) *Herald.*]

Premising that all of Christian Science is found in the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, the writer disclaims all authority or desire for discussion of the subject, either academic or polemic; but he is grateful for the opportunities which are given by an impartial press to correct such misconceptions and misrepresentations of Christian Science as are sometimes placed before the public, and he can assure a recent inquirer that there are really a number of scientific men who believe Jesus' statement regarding prayer which is recorded in St. Matthew xxi, and whose concept of prayer has been formed from the chapter under that heading found in Science and Health.

Christian Scientists do not believe that prayer controls anything, but they do believe that God, infinite Spirit, con-

Digitized by Google

trols everything in the universe of His creation. In times of contagious epidemic, as at all other times, they are law-abiding citizens, obeying constitutional authority, and conforming to statute laws and municipal regulations just like their neighbors, although they do regard many of the so-called "laws of health" as merely laws of belief. Christian Science inculcates all that stands for purity. The purest and best in the material approach most nearly to the spiritual, and so Christian Science demands cleanliness of body and mind, mental as well as material sanitation; the clean thoughts that precede and eventuate in clean deeds and clean bodies.

[John H. Wheeler in *Kansas City* (Mo.) *Star*.]

A discussion as to the nature of hell appeals to mankind in proportion to their ethical mood to receive it, but the essential premise upon which to search for a truthful conclusion concerning it must first include a sympathetic and faith-lighted conception of God and His infinite kingdom of heaven, in order to comprehend understandingly the negative or converse nature of this claim of evil which is commonly styled hell, for its whole pretense, place, and power is the very antipode of God and His creation, even as Jesus said: "A liar, and the father of it."

The Pharisees once asked Jesus "when the kingdom of God should come." The deep unrest of sin and its full measure of human wretchedness in mortal life impelled them to demand of the great prophet his views on this mooted question. The reply was: "The kingdom of God cometh not with observation: neither shall they say, Lo here! or, lo there! for, behold, the kingdom of God is within you." And one is forced to conclude that the spiritual culture which is gained through self-abnegation alone reveals this inner heaven, while "an evil man out of the evil treasure of his heart bringeth forth that which is evil;" and this, in turn, is the essence of hell, seen daily in every walk of mortal experience.

Jesus once narrated how a Pharisee and a publican went up into the temple to pray. Their differing methods presented a striking contrast, and served to reveal the awakened germ of genuine goodness in the self-condemned consciousness of the contrite sinner who, as he stood afar off and "would not lift up so much as his eyes unto heaven," said: "God be merciful to me a sinner;" while the unrepentant and austere self-righteous Pharisee's prayer seemed a parody on humility. Christian Science teaches that we make our own heaven through righteous thought and living during our mortal experience, or else we perpetuate our own hell through sinful thought and action.

Again, heaven ever stands as the true or permanent nature of God's character and infinite presence; to gain it one must be "pure in heart," for such only shall see God, said our Saviour. All who have thus attained will daily think and act from motives wholly in keeping with their pure heart's ideal. This is a foretaste of heaven and a corresponding destruction of the illusively sinful or human sense of life, rightly named hell, which can only bring upon its victims great mental confusion or anguish. Holy Writ declares God to be everywhere present, which presence is heaven, harmony, and the unchanging bliss of immortality. The presence of evil, be it consciously or unconsciously entertained, and one be in sympathy with it, only perpetuates a mortal sense of life and all of the tragedy we call hell.

Christ Jesus came as a light unto this world of sin, and in so doing he encountered the bad mental realm of humanity until its multitudes crucified him. He did the work necessary for him to do in order to prove by example that if his pure mentality and sinless career were adopted in the sin-sick world, it would insure a new state of being, and this change would constitute in itself the destruction of hell for all individuals concerned. In the translation of the Bible from the original text four words, *sheol, hades, gehenna, and tartaros* are used interchangeably, to show that the evil mentality or sinful condition of mortals is always hell in its degree, while sin's bondage of human weakness is but the temporary and unreal opposite of spiritual being, which only vanishes before the truth of God's word, for Paul declared that "at the name of Jesus every knee should bow, . . . every tongue should confess that Jesus Christ is Lord;" and thus death and hell shall be eventually swallowed up in the victory of pure thinking.

The only hell possible in human experience lies in the delay we allow, pending the new birth and the transformation of our human nature into the divine. Mrs. Eddy wrote thus: "Think of this inheritance! Heaven right here, where angels are as men, clothed more lightly, and men as angels who, burdened for an hour, spring into liberty, and the good they would do, that they do, and the evil they would not do, that they do not" (Miscellaneous Writings, p. 251). Jesus taught: "If a man keep my saying, he shall never see death," the culmination of sin. St. John the divine wrote: "And I heard a voice from heaven saying unto me, Write, Blessed are the dead which die in the Lord from henceforth: . . . that they may rest from their labors; and their works do follow them." Conclusively, then, Paul's admonition, "Let this mind be in you which was also in Christ Jesus," involves the destruction of all pretense to a false belief by the understanding of ever-present Love.

[Frank Bell in *Williamsport* (Pa.) *Sun*.]

The presumption of one who undertook, as quoted in a recent issue, to stigmatize Christian Science as unchristian, is equaled only by the degree of ignorance displayed in the attempt to classify it with such utterly dissimilar things as Mormonism, spiritualism, and Brahminism.

Those who reject what they consider Christian Science to be, are entitled to respect in their opinions, but the day has gone by when the subject may be dismissed in any such offhand disregard of the facts as in the instance above noted. Christian Science is as unlike the beliefs mentioned in connection with it as it is unlike any system that would attempt to define Christianity in terms of profession rather than of practise.

Christianity was founded by one who never asked a follower to subscribe to the theories of "the ancient and historic church," but instead laid down the rule, "He that believeth on me, the works that I do shall he do also." These works certainly included the healing of the sick by purely spiritual means. Scholastic theology has tried for centuries to improve on that all-comprehensive definition of a Christian, but the failure of the attempt to substitute words for deeds was never more widely discerned than today, when the general trend of thought is toward requiring every doctrine to prove itself.

[Written for the *Sentinel*.]

LOVE EVER NEAR.

GEORGE W. COLE.

My child, I give thee life and health,
  Thou art My constant care;
I fill thy days with treasured wealth,
  With thee, My goodness share.

Doubt not My presence, though unseen,
  Nor think Me else than near;
Though earth-born clouds may roll between,
  The day seem dark and drear;

For e'er about, and round thee still,
  The light of Love doth glow;
E'en all creation doth it fill,
  With never-ebbing flow!

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

NOT MORTAL, BUT IMMORTAL MIND.

Most of us can remember the time when for a physician to admit that Christian Science had healed any one of any disease was an unheard-of thing. This period was followed by one in which it was somewhat grudgingly admitted that Christian Science might and possibly did cure nervous or "imaginary" diseases, and to this second period succeeded a third, in which even those diseases which are believed to be more deeply seated than the nervous and imaginary kind were acknowledged to have been healed. In this latter period the tendency to credit these cases of healing to the use of hypnotism has been quite marked, and one of the latest evidences of this is a statement in the address delivered by an English physician a short time ago, as reported in the *Stoke Newington Recorder*.

It is true that this gentleman did not call the method which he supposed was employed hypnotism, but rather "the influence of the mind upon the body." This, however, is simply a detail, because it is quite evident from the context that he was talking, not about immortal divine Mind, synonymous with God as used in Christian Science, but about that changing finite sense which Paul called the carnal mind and which Mrs. Eddy has defined as mortal mind. Even with this misapprehension of Christian Science in his thought, it is of interest to note that this physician was not in the least backward in giving credit to Christian Science for its healing work.

We quote from the *Recorder's* report of his address as follows: "But the doctors were coming to see that the Christian Scientists had got hold of an important part of the truth, in proof of which there were cases, too numerous to be denied, where doctors' methods had failed and Christian Science had actually cured the patient." He also cited the healing of a case of locomotor ataxia which had come into his own experience, and "in the face of cases like that, apparently incurable in many instances," he said, "it was of no use to say the thing was a fraud." This statement from a physician of admitted standing in his profession adds one more to the already long list of medical men who have become impressed with the efficacy of Christian Science through being brought into direct contact with its work, and not a few of them to the extent that they have embraced its teachings.

It would appear, therefore, that in time this cumulative evidence would do away with whatever merit there has seemed to be in the allegation that reported cures through Christian Science are unreliable because of the lack of technical knowledge on the part of the practitioner through whose understanding of the truth the patient is healed of some particular disease, and this notwithstanding the fact that in the majority of cases the sufferer failed to find relief at the hands of the physicians who had previously both diagnosed his ailments and prescribed for them. It is a fair inference that the diagnosis of the case of locomotor ataxia referred to by this physician had been made by himself, and if such is the fact, his opinion should not only carry weight with his medical brethren, but his frank admission that this supposedly incurable disease had been healed by Christian Science treatment should tend to silence the assertion that Christian Science practitioners ought to be debarred from the healing work because of their inability to pass an examination before a medical board.

The time came in Jesus' ministry when some of those who stood by, unable to deny his healing works, would have ascribed them to the supposed power of Beelzebub, a charge promptly refuted by that unanswerable argument, "By whom do your sons cast them out?" The critics of this generation try to explain the workings of Christian Science on the basis of faith-cure, will-power, or mental suggestion, but Christian Scientists have demonstrated in innumerable instances that they have got hold not only of a part of the truth, as the doctor admitted, but the whole of it, since the "finger of God" by which the Master cast out devils and healed the sick has again been proved available through the discovery by Mrs. Eddy that the power of the divine Mind by which Jesus declared they that believed in him should do the works that he did, has lost none of its efficacy. Moreover, her admonition to her followers to "rise in the conscious strength of the spirit of Truth to overthrow the plea of mortal mind, *alias* matter, against the supremacy of Spirit" (Science and Health, p. 390), leaves no doubt that the basic Principle of Christian Science is not mortal, but immortal Mind.

ARCHIBALD MCLELLAN.

"THINK ON THESE THINGS."

The Christian life has two aspects which can never be dissociated, namely, right thinking and right doing. St. James emphasizes the importance of the latter in that familiar passage which closes with, "Even so faith, if it hath not works, is dead, being alone;" while St. Paul speaks for the significance of our mentality to life when he counsels the Philippians that if there be any true, honest, just, pure, and lovely things, "any virtue or any praise," they should "think on these things." As a whole, professed Christians devote far more attention to the correction of their conduct than to the purification of their thought, and in this they make the fundamental mistake of seeking to remedy effects while leaving their cause undisturbed.

Christian Science brings one a clearer apprehension of the vast and vital implications of the proverb which saith that as one "thinketh in his heart, so is he," a proverb which Christ Jesus elucidated when he pronounced upon the pharisaical hypocrisy that was zealous regarding the cleanliness of the outside of the cup, while indifferent to its foulness within. Most Christian people have the feeling that they must be wholesome both within and without, but in its teaching that Mind is the only agent, that all force is mental, and that health is to be gained through the spiritualization of thought, Christian Science at once gives needed outline and definiteness to this conviction. Moreover, it leads its students to seek for right-mindedness not only that they may be good, but that they may do good. They see that God rules and must ever rule in and through the Christ-consciousness, and that the realization and mental declaration of divine truth may indeed move mountains.

The true Christian ministry is thought of more and more as a mental service, and it becomes large and enlarging for the Christian Scientist as the possibility of the removal of every asserted limit to the power of right thought is made manifest through demonstration. As the young Nazarene worked at his bench he was ever thinking great thoughts for his fellow men, thinking true thoughts for Truth, and thus he laid the foundations of that kingdom of thinkers for God and the right, of which we have been made citizens through Christian Science. There is no sweeter consciousness for the sunset hour, no softer pillow for one's head at night, than the remembrance that during all the day he has not only been saying and doing kindly things and helpful, but that he has been thinking right about every person and event it has brought him, been reckoning every experience with respect to its spiritual value, been seeing for every person his better selfhood; in a word, been living in this initial way the perfect life. This achievement is possible to every Christian Scientist, and for his clearer vision of it he gratefully recognizes his indebtedness to Mrs. Eddy.

Faithfulness to this privilege and duty of maintaining a

Digitized by Google

right thought about everything and everybody, may precipitate a problem for some in that it seems to clash with another duty, namely, not to give treatment without the knowledge and consent of the one treated. While the maintenance of a scientific poise and assertion of thought is imperatively enjoined in Christian Science, trespass upon the mental freedom of another is no less imperatively forbidden; but this involves no conflict or contradiction. When we realize and declare the truth of being, in terms of the universal, with a view of maintaining the integrity of our own thought, we do not intrude in any unwarranted sense upon another's personality. In Christian Science treatment the realization and declaration of Truth is focused upon the children or the incapacitated for whom we are held responsible or upon a needy brother who has asked for help. We take up his problem and address ourselves to its solution as though it were our own. The line of discrimination between the two is no less clear than important, and so long as it is respected we need feel no embargo upon the range and activities of right thought.

JOHN B. WILLIS.

THANKFULNESS AND THANKSGIVING.

AT this season of the year the word Thanksgiving is often heard among American people, and the sentiments associated with the name are without doubt many and varied. We have been accustomed, as a people, to express our gratitude for "peace and plenty," to put it briefly, whether we as individuals were always ready to analyze our own deepest feeling and to be sure that we were truly thankful for being in conscious possession of the treasures "reserved in heaven" for us, to quote St. Peter. In Christian Science we learn to be profoundly thankful for the knowledge that no person, place, or circumstance can rob us of that which God has provided for us. If the reverse of this were true, then indeed evil would be more powerful than good, but Christian Science teaches that good is omnipotent and that evil has only the power accorded to it by mortal belief (our own, or that of others), and that its seeming show of "brief authority" is but for a day.

Our revered Leader presents a keen and searching analysis of gratitude in the chapter on "Prayer" with which Science and Health begins. Among other things she says "gratitude is much more than a verbal expression of thanks. Action expresses more gratitude than speech" (p. 3). This leads one to think of the man who went up to the temple to pray, and who thanked God that he was "not as other men," or even as the humble publican who stood near him. We smile at the arrogance and blindness of the Pharisee, as we read the Master's parable, but there would be little excuse for the Christian Scientist who could so yield to the promptings of personal sense, because we are often reminded that we should never attempt to measure our progress by the status of any mortal, high or low, but by the divine demand, "Be ye therefore perfect," and to yield loyal obedience to this calls for unceasing watchfulness on our part, as individuals and as a nation, "lest we forget" what we owe to God, to our country, and to our fellow men.

At the old seaport town of Gloucester, Massachusetts, a bronze tablet on the face of a great rock overlooking the harbor, commemorates a strange event in the early history of the nation. The tablet tells of the founding of the Massachusetts Bay colony in 1623. Then we read: "Here in 1625 Governor Roger Conant by wise diplomacy averted bloodshed between contending factions—one led by Miles Standish of Plymouth, the other by Captain Hewes." It is scarcely possible to think of such an outburst of enmity between men whose aims were so high and whose efforts so self-sacrificing, men who had not forgotten to give thanks to God amid trials such as only heroic natures could endure, thanks for the glorious ideal of civil and religious liberty which had sustained them in founding this great nation. Despite this discord, however, harmony soon prevailed and its foundations were laid broad and deep in the hearts of the people, for which the descendants of those good and great men—all the world indeed—may well give thanks.

These men gave the world many great lessons, and one of the noblest of their descendants, Mary Baker Eddy, says this concerning them: "On shores of solitude, at Plymouth Rock, they planted a nation's heart,—the rights of conscience, imperishable glory" (Pulpit and Press, p. 10). It is ours to guard this sacred heritage, to give thanks for it, not only once a year, but in unceasing watchfulness lest we be tempted to forget either the rights of conscience or its high demands. If faithful in so doing, our thanksgiving will flow around the world, a living stream of goodness and gladness, while peace and prosperity will dwell in our hearts as well as within all our borders.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CURRENT NOTES.

HOUGHTON, MICH.—The Christian Science society has leased large new quarters to meet the needs of its growing attendance, and occupied them for the first time Wednesday evening, Oct. 2. The quarters, which will be known as Christian Science hall, are located in the Carkeek building, 160 Shelden street. This is the location of the society's first home, and a room was occupied there from the time of the organization of the local Scientists in 1905, until the growing numbers compelled a larger room, which was secured in the Leopold building at 92 Shelden street in 1909. This room has been occupied ever since, but the limit of its capacity had been reached. The new Christian Science hall is provided by removing the partition and throwing the smaller rooms into an auditorium that will seat over one hundred people.—*Mining Gazette.*

ST. PAUL, MINN.—Work is being rushed on the excavation and foundation of the new Christian Science edifice, in order that it may be completed before winter sets in. The building, which will be constructed of cream brick, Bedford stone, and terra cotta, is to occupy the half square bounded by Summit and Portland avenues and Grotto street, and calls for an outlay of one hundred thousand dollars. It will be ninety by one hundred and ten feet, and will have two entrances, one on Summit avenue and one on Grotto street. It will stand back sixty feet in the lot, which is one hundred by two hundred and sixty feet. The ample size of the site will make possible a dignified landscape setting. Work will be started on the building proper as soon as the weather permits in the spring.—*Dispatch.*

WASHINGTON, D. C.—The new edifice of First Church of Christ, Scientist, just completed at the southeast corner of Euclid and Champlain streets, at the intersection with Columbia road, is a distinct addition to the church architecture of the city. The building has an area of ninety-seven by one hundred and twelve feet and sets back about thirty feet from the front. The church has for the past eight years been holding services in its edifice at the corner of Fifteenth and R streets Northwest. The congregation has grown to such an extent that overflow meetings have been held at the Wednesday evening services in order to accommodate those who attend. A larger building became a necessity, and work on the new edifice was begun last year and was completed Oct. 5.—*Washington Herald.*

HUTCHINSON, KAN.—The Christian Science tent at the recent state fair held in our city was greatly appreciated by the many who took advantage of the comfort found there and the welcome given them. During the week there were

Digitized by Google

distributed 395 *Monitors*, 581 *Sentinels*, and 82 *Journals*. We also improved the opportunity to give out announcement cards of our lecture. Much commendation was given our local church for such kindly interest in the welfare of the public.—*Correspondence.*

ALBERT LEA, MINN.—We have recently arranged for a committee which systematically handles the distribution of literature all over the city. Boxes containing periodicals have been placed in all the depots, in both telephone offices, and in our hotels. Every week fresh literature is placed on the tables of our dental offices and barber shops. The public library, city hall, and county jail are also supplied. The most beautiful part of this work is that our literature is gladly received. Love has taken the place of hate, prejudice and ridicule have been replaced by a desire to learn something of Christian Science. We also rejoice that our congregations have so grown of late as to overflow our old quarters, and we are at present holding Sunday services in the Idle Hour theater. Rejoicing in the steady growth of our little band, we are each day coming to realize more fully that "a grain of Christian Science does wonders for mortals, so omnipotent is Truth" (Science and Health, p. 449).—*Correspondence.*

JOLIET, ILL.—One day recently I was sitting at my desk in the reading-room, reading a second time the article "Efficiency," in the *Monitor* for Sept. 23. A friend who sat near was also reading. As I came to the two sentences beginning with, "Nothing stands between you and attainment," and ending with, "thus proving what is that good, and acceptable, and perfect will of God," I wanted to read the passage to her, but hesitated to interrupt her. When, however, she closed her book I read the sentences to her, and I saw by the expression of her face that they meant much to her. Before leaving she told me she had come in to read because seemingly she was not well, and that in listening to the words read to her she had been instantly healed. I might add that we two were the only ones in the reading-room at the time, so no one was disturbed by our conversation.—*Correspondence.*

ANN ARBOR, MICH.—The corner-stone of the new building of First Church of Christ, Scientist, of Ann Arbor, was laid Sept. 24. The ceremony was very simple in character, and was witnessed by the immediate officers of the church and members of the board of directors. The new building, which is situated on South Division street, will be completed before the first of the year.—*Times News.*

THE LECTURES.

BOSTON, MASS.

Judge Clifford P. Smith, who delivered a lecture on Christian Science under the auspices of The Mother Church, The First Church of Christ, Scientist, Boston, Mass., in the church edifice, at Falmouth, Norway, and St. Paul streets, was introduced by the first reader of The Mother Church, John C. Lathrop, who said:—

A study of the history and development of the world, and of Christianity in particular, shows that periodical reforms have awakened and advanced the thought of mankind step by step down to the present age, when human thought is found to be prepared for the greatest mental and moral advance in human history. This last progression, represented by Christian Science, is therefore a most orderly and inevitable awakening, and it is rapidly coming to be thus understood by the thinking world.

Christ Jesus said: "I am the door," but it has remained for Christian Science to comprehend and interpret this simple utterance, to unlock and to open this universal entrance to eternal life and heaven's kingdom; and none realize this so well as the countless beneficiaries of Christian Science, who know that their mental and physical liberation has been wrought as the result of their discovery of and entrance into this spiritual door, which to them means more than ever before the way to practical salvation, the way to a present understanding of the divine Principle of life, and of God's healing and saving laws.—*Christian Science Monitor.*

CHRISTCHURCH, NEW ZEALAND.

A lecture on Christian Science was delivered by Bliss Knapp at the Kings theater, Christchurch, New Zealand. The lecturer was briefly introduced by the mayor, Mr. Holland, who said he had no personal knowledge of Christian Science but that he understood its purpose to be the spiritual and moral uplifting of humanity, and any such movement commanded his sympathy. As mayor he took a broad view of his position and placed himself at the disposal of all who asked his services. He had had a short conversation with the lecturer, and he felt in introducing him that the audience would have an interesting and instructive lecture.—*Correspondence.*

FORT WAYNE, IND.

Virgil O. Strickler lectured before a large audience on Christian Science at the Minuet hall. The lecturer was introduced by George A. Townsend, Jr., president of the local church, who said:—

Some six years ago I had the pleasure of introducing a Christian Science lecturer before an audience of about this size at Moline, Ill. At that time I had looked into the subject only enough to think that it required a lengthy explanation as to what the lecturer intended to say, and I gave it. Since then I have come to realize that Christian Science is like a well whose depths have never been sounded, yet whose waters are always available to quench the thirst of those who come to drink, and I therefore am content to leave the subject in the hands of our lecturer.

Correspondence.

REDFIELD, S. DAK.

A lecture on Christian Science was delivered by William R. Rathvon at the Redfield opera house. W. F. Bruell introduced the speaker, saying in part,—

Some of the fundamentals of our government which we highly prize are the freedom of speech and thought and the right to worship God in the manner we desire, without fear of prosecution or persecution. We are not bound down to any state religion. It was this spirit that prompted the Pilgrims to come to America, and it has developed until today these United States of America are recognized as the home of those who desire to worship according to their own conscience with full assurance of protection. We have heard much in the past concerning Christian Science, and much that we have heard concerning this religion and its teachings was doubtless incorrect, to say the least. I am not a communicant of your society, as you doubtless know, but as a seeker after truth I am pleased to be here tonight and listen to one who I know will give an authentic interpretation of this teaching.—*Redfield Press.*

WILLITS, CAL.

A lecture on Christian Science was delivered at Whited's hall, by Frank H. Leonard. The lecturer was introduced by W. P. Turner, second reader of the society, who said in part,—

We are assembled here this evening for the purpose of listening to a lecture on Christian Science, the first to be

Digitized by Google

given in Mendocino county on this all-absorbing subject. During my three years as a student I have found that Christian Science is practical and logical, that it has nothing to do with suggestion, hypnotism, mesmerism, or spiritualism. It is just the Christianity which our great Master taught and demonstrated nineteen hundred years ago. My experience has forced me to the conclusion that wherever Christian Science is honestly and conscientiously lived and practised, it is silently doing a great work of regeneration, not only in the individual but in the whole body politic. It also stands for all that is highest and noblest in life.

Correspondence.

BELOIT, KAN.

Attorney R. M. Anderson, in introducing Prof. Hermann S. Hering, who lectured on Christian Science, said in part,—

It is no secret among lawyers that when they are approached for an opinion, they do not rely upon that information which they may retain in mind, but rather do they surround themselves with many volumes which contain the authorities, the decisions of the courts, and the reasoning of the eminent jurists who preside thereover. True to my instinct, or perhaps rather training, when I was invited to speak a few words this evening I provided myself with a quantity of Christian Science literature, hoping that I might arrive at a sufficient understanding of its theory and practise to speak with some intelligence; but when I read the works which the courtesy of a member of the church had placed at my disposal, I was astounded, I was humiliated, to find that my indifference toward Christian Science had amounted almost to an injustice. There would have been grave danger of its eventually becoming an injustice, for if it had been permitted to continue, it might have grown into a prejudice, and prejudice against any worthy effort in life would certainly be an injustice. I became convinced that I was under deep obligations for this opportunity to be present this evening and listen to the words of wisdom as they fall from the lips of the lecturer whose duty is to instruct us.

I believe I can say without laying myself open to a charge that I seek to cast an aspersion on those who have gone before, that the present generation is much broader in its view-point, more liberal in its toleration, and less confined to dogmas of old than were those who have gone before. We should not take credit to ourselves for this as a virtue, for it is only due to the fact we are merely actors in the evolution of life; and it is our further duty to look about us, and if we find anything in the lives or practises of those who dwell with us which possesses worth or beauty or usefulness, to take such into our own lives, that we may thereby become better and more useful citizens. Personally I am sure that I shall listen with much pleasure, as I am convinced all who are present will likewise do, to the words of the eminent lecturer who is with us tonight.

Correspondence.

READING, MASS.

It was a record attendance that heard the lecture on Christian Science by William D. McCrackan, M.A., in Security hall. The speaker was introduced by Walter S. Parker of the Congregational church, who said in part,—

It gives me very great pleasure to be present here this afternoon. This is the first time that we have publicly had the opportunity to acknowledge the very great kindness and promptness with which the members of the Christian Science church aided us at the time of the fire. The prompt response, and the kindness with which the aid was given, touched our hearts. It also gives me pleasure to be here because in one way we all belong to the great church universal. We are beginning in these later days here, it seems to me, to have a larger and truer conception of the Father, over the old historic idea that God was a person in a far-off country, a monarch on a throne somewhere, whom we individualized or made a person of like ourselves. Of course we now feel entirely different about that. We feel that it was a narrow conception of the great creator.

The words concerning the creator which Dr. Van Dyke is continually using in his books, "God is out of doors," appeal to me. I do not see how we can work in the fields without being conscious of the God of the universe. If there is any creator, He is omnipresent. Then how can He be in some far-off country?—*Reading Chronicle.*

INDIANAPOLIS, IND.

Willis F. Gross delivered a lecture on Christian Science in Murat theater before an audience of about twenty-four hundred people. The lecture was given under the auspices of First Church of Christ, Scientist, and was one of far-reaching interest and influence. St. Clair Schooley, first reader of the church, who introduced the lecturer, spoke as follows:—

The demand for an answer to the query, What is truth—where can I find it? has never been more universal and persistent than it is today. With this demand is a growing conviction that there must be an explanation for the seeming contradictions in the world about us, that our ideals can be realized, our restless longings satisfied. With the physical healing which I experienced in Christian Science came also a complete and satisfactory answer to these demands, a basis for thought and action, an incentive to endeavor, a rule for the solution of every problem. The joyful conviction that what Christian Science has done for one it can do for all mankind, makes it a heartfelt pleasure to introduce to you one who comes authorized to tell you something of its redemptive work.—*Correspondence.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Anderson, Ind.—Grand opera house, 8 p.m., Dec. 3.
Asheville, N. C.—New church building, North French Broad near Haywood street, 8:15 p.m., Dec. 3.
Carey, Ohio.—Snyder's opera house, 8 p.m., Dec. 6.
Cheyenne, Wyo.—Elks hall, 8 p.m., Dec. 3.
Chicago, Ill. (Fourth Church).—Church edifice, Harvard avenue and 67th street, 8 p.m., Nov. 29 and 30.
Hamilton, Mont.—Opera house, 8 p.m., Dec. 6.
Hastings, Neb.—Kerr opera house, 8:30 p.m., Dec. 5.
Hudson Falls, N. Y.—Court house, 8 p.m., Dec. 3.
Kirkwood, Mo.—Church edifice, Washington and Clay avenues, 3:30 p.m., Dec. 1.
Jersey City, N. J.—Orpheum theater, Five Corners, 3 p.m., Dec. 1.
Lima, Ohio.—Faurot opera house, 3 p.m., Nov. 24.
Manchester, England (First Church).—Free Trade hall, 7:30 p.m., Dec. 10.
Minden, Neb.—Shapper's opera house, 7:45 p.m., Dec. 6.
New Orleans, La.—Atheneum, 8 p.m., Nov. 28.
North Adams, Mass.—Richmond theater, 7:45 p.m., Dec. 1.
Ottumwa, Iowa.—Grand opera house, 8 p.m., Dec. 3.
Plymouth, Mass.—Universalist church, 8 p.m., Dec. 5.
Poughkeepsie, N. Y.—Opera house, Market street, 8 p.m., Dec. 1.
Ridgewood, N. J.—Church edifice, 8 p.m., Dec. 2.
Rocky Ford, Col.—Grand opera house, 7:45 p.m., Dec. 1.
Savannah, Ga. (Second Church).—Savannah theater, 4 p.m., Dec. 1.
St. Louis, Mo. (First Church).—Church edifice, Kingshighway and Westminster place, 8 p.m., Dec. 2.
Wheeling, W. Va.—Elks club, 8 p.m., Dec. 6.

TESTIMONIES OF HEALING.

The following testimony is given in grateful recognition of what Christian Science has done and is doing for the writer every day, and in the hope that it may prove a message of hope and encouragement to some one in need of healing. When Christian Science was presented to me, about six years ago, I had given up all hope of ever regaining health and happiness in this world. I had been a constant sufferer for fifteen years with the most severe form of stomach and bowel trouble, and was slowly starving to death, and although a man of large frame, my weight at that time was greatly reduced. I had tried many physicians and almost every school of medicine, only to be told again and again that there was no permanent cure for me, and was finally sent in search of health-giving climates, which brought me to California, only to find that climate had no cure for my many ailments.

About that time my troubles developed into what was called ulceration of the entire digestive system, also later a severe form of kidney trouble, as well as a serious nervous condition, coupled with sleeplessness and despondency. For several years I lived in constant fear of losing my reason, and through the intense suffering with its accompanying frequent use of narcotics, I formed the drug habit without really being aware of it, thereby adding to my burdens instead of lessening them. When Christian Science found me, I had not slept a night for years without the use of drugs, and my condition both physical and mental cannot be described. It appealed to me from the start as a beautiful religion, but I could not believe in its healing power as applying to my own case. After some study I, however, became willing to try it, but the fear was so great that I could not let go of the drugs for some time, and consequently made very little headway; but with the faithful help of a practitioner I was finally enabled to take my stand and throw away all drugs, and from that hour my healing, although very slow, was assured. After something over a year I had not only been healed of the greater troubles, but all the minor ailments (for which I had taken no treatments) had completely left me, proving that Truth makes a new creature, in whom "old things have passed away," and today I rejoice in perfect health.

My wife, who had been almost an invalid for six or seven years, was healed through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and during six years Christian Science has met every need in a family of three children. It has brought health, harmony, and happiness into a home which was filled with sickness and discord. Words can but feebly express our gratitude to our beloved Leader for her labor of love in bringing the truth to this age, and giving to us a practical, every-day religion, applicable at all times and under all circumstances. The least we can do is to endeavor to prove our gratitude by loving obedience to her precepts and admonitions and by loyal and earnest support to the cause of Christian Science.

P. H. SCHRADER, Los Angeles, Cal.

For over twenty-five years I had suffered from an internal trouble, which was said to have been caused by a fall in childhood. Several doctors had done their utmost from time to time to relieve the pain, which was almost incessant; but they all agreed that an operation was necessary. About ten years ago I underwent that operation, with the full assurance of friends and doctors that it would end the suffering. I was told that the operation was successful, but when I began to go about again, I became conscious of another and even worse pain, which became so intense that often I was incapable of walking, and once or twice opiates were resorted to for relief.

Our doctor did what he could for me, and finally urged another operation. A London specialist diagnosed the cause of the pain as a fibrous growth, which would probably increase in size and would eventually have to be removed through an operation. I still possess that written diagnosis! An American physician advised me to try treatment of a certain kind before yielding to the surgeon's knife, which treatment I tried for five or six years, and while it gave me considerable relief, it did not remove the growth, and I could not leave off the treatment for any length of time without a return of the pain.

About eighteen months ago, I found complications arising which brought me great discomfort and fear; and it was then that a friend of many years' standing brought with her from America the knowledge of Christian Science. I was in great pain at the time, but wanted very much to be present and to help at a charitable picnic at the end of that week. At this friend's recommendation, I rang up on the telephone a practitioner whose name we found in *The Christian Science Journal* and asked for help. I explained to this lady what was necessary, and she asked me very few questions. I was a complete stranger to her, but she gave me some loving words of encouragement, and assured me of God's help. The next day, which was Friday, I found that most of the symptoms had disappeared, and all day I was not only free from pain, but felt a happiness and a joy which I had not before experienced. On Saturday I was perfectly well, free from all pain and from all the symptoms which had distressed me so much, and I went to the picnic and enjoyed every moment of that day.

I can honestly testify that I was completely cured of that internal trouble of so many years, in a few hours, for from that day to this I have had perfect health, and drugs and all other material remedies are things of the past, for I have learned of the truth which makes free. This testimony is given with the hope that some one who is suffering as I suffered may read it and learn from it where the only real remedy may be found. I am truly grateful not only for the perfect health I now have, but also for the peace and joy and happiness which this knowledge and understanding of the fulness of divine Love has brought to me. Every day is full of blessings, and of love to which my eyes had been closed.

Words cannot express my deep gratitude to God and His Christ for this proof of the divine love, and my thankfulness to Mrs. Eddy for bringing to us the "pearl of great price," the understanding of Truth, which she discovered and declared for the benefit of all humanity. I know I can best prove my gratitude by keeping God's commandments; by living the life which our Leader has shown us by her example, following closely in our Master's steps, and by keeping the flame of love for my fellow creatures always burning in my heart.—ELIZABETH PIERCE, Liverpool, England.

Having put aside all orthodox beliefs as of no use, as they had failed to bring either health, peace, or comfort, and having read some of the writings of noted agnostics, I accepted their teaching and believed that all of life lay between birth and death, and proceeded to "make the most of it" by drinking, gambling, and leading an immoral life. Without God, without hope, without even honesty—I can now see what a dark dream of evil it all was. Attacks of serious illness and periods of heavy drinking would entirely incapacitate me for days at a time, and leave me more disgusted and discouraged than ever. When finally on the verge of delirium tremens, a friend came to visit in our home, and she told me I could be healed by Christian Science. I had taken great pleasure in deriding religion, and especially Christian Science, because some of the most influential citizens and prominent business men of the town had been healed and were following its teaching. I had been approached by some of them on this very subject, but one and all they were unkindly rebuked.

Digitized by Google

This friend had, however, a copy of Science and Health with her, and I became so interested in reading it that I felt encouraged to continue, for the terrible condition I was in became more burdensome and the only relief I could see was death, a prospect which was far from satisfying. As the truth of God's unchanging love and of man's immortality dawned on my consciousness, the liquor habit gradually left, though the last few days before its final destruction the battle was a fierce one. The craving was such that the usual stimulants could not satisfy it, and the last day I drank a large quantity of vanilla. I prayed for deliverance as I never had prayed before, and my prayer was answered! I could at last walk in the blessed light of Truth, a free man. Profanity and the tobacco habit were the next to go, and here I would say to those who are struggling with this form of evil, Do not try to fight it as a reality, but by growing in grace and in the understanding of God, let it quit you. Finally the physical complaints grew less, until their nothingness was proven. I had worn glasses for about twelve years, and the condition which required their use seemed stubborn, but I asked for help for this, and it was quickly proven that sight is an eternal fact of divine Mind and never can be lost or grow dim; and so the glasses were laid aside.

Words fail to express the good that has come to me through the study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I can only sum it up briefly: It has transformed my home and family; it has lifted us out of sorrow and trouble into joy and peace; it has brought us out of poverty and sickness into the understanding of the unlimited supply of good, and through the application of divine law, health and wholeness have been demonstrated, and I find that Truth meets our every need. It has taught me to see my fellow man in a different light and to deal with him honestly. I am truly grateful to Mrs. Eddy for showing us how to apply the rule of healing as Jesus did. Surely this book has been the "key" that has unlocked for us the treasures of the kingdom and made it possible for us to understand that God's will is done "on earth, as it is in heaven."

In the Preface of Science and Health we read: "To those leaning on the sustaining infinite, today is big with blessings" (p. vii). One of these great blessings is our periodicals. Each day there comes the *Monitor*, every week the *Sentinel*, and each month the *Journal*, bringing the good news; and I have been so helped by the literature that I write this, hoping in turn to help some one who is struggling under a load of belief in sin and sickness. If we cling to the rock of Truth, we shall find it to be the full savior, and Truth does purify, redeem, and save. If we walk in the straight and narrow path which Christ Jesus pointed out, the crown of rejoicing is just ahead.

W. D. LEWIS, Central Point, Ore.

It is with deep gratitude that I give the particulars of my healing through Christian Science. After being married some time, I had a very serious illness, and from that time on I was seemingly dragging out a weary existence. The physician attending me was considered one of the most skilful in the town, and he said that the only hope for me was to have an operation, as I had an internal growth which medicine could not cure. Having made his final examination, he said I had better decide at once to have the operation, and let him know as soon as I became reconciled to it. I was to be taken to the general hospital in the town, where the operation could be performed, but I was in a very weak condition, and felt I could never stand the ordeal.

Just then, at the last moment, a friend in the house where we were rooming asked why I did not try Christian Science, and told me of some cases of which she had known that had been healed through Christian Science. At that time I had scarcely heard of such a system of healing, but she asked me if she might tell a practitioner to call on me. In a few days the Scientist called, told me that all things are possible with God, and that His work is perfect and complete; so I decided that I would try Christian Science. I did so, and in ten days I was up and able to be around and the abnormal growth had disappeared entirely.

About two years after this experience I gave birth to my first child, and the same doctor waited on me. Before leaving he told me that the internal growth for which he had formerly made an examination was no longer in existence. I purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and through the study of its teachings I have been able to overcome many difficulties.

MRS. MARGARET WILEY, Barrie, Ontario, Canada.

I am writing this testimony as a token of my gratitude to God for Christian Science. On Sept. 2, 1907, the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, was lent to me. I read it at night and in the early mornings, often sleeping only a few hours. Some of it I found difficult to understand, but very much was so clear and appealing that I could not help loving this truth and Mrs. Eddy for giving it to the world.

I had been told that I could be healed in Christian Science of a spinal trouble from which I had always suffered, and also of the need to wear glasses, but this I did not believe. When I had been reading this wonderful book for a little less than six weeks I was suddenly attacked by a very bad backache, worse, as it seemed, than I had ever before experienced. This lasted for five days and nights, which seemed very dreadful, as I had always before obtained relief by lying down. I did not tell any one, as there was nothing to be done, different doctors having told me that I must bear it and not expect to be as strong as other people; so I continued to read Science and Health, as by this time I was becoming convinced that it contained the truth which Jesus said would make us free, and on the sixth morning I awoke healed. I have never had a backache since!

In a few weeks I had to begin altering my dresses, as I became straighter, and now I am more than an inch taller. In course of time I left off the glasses which I had worn constantly for fourteen years; indeed, if ever I was a half-hour without them, my eyes would be inflamed, but now I have not used them at all since March, 1910. This healing seemed to be slow, and I have needed help, which has been freely and lovingly given. Although my eyes are now quite strong, there are still days when I need to realize the truth to see clearly.

I would like to say what a very great help the Christian Science literature is at all times, and I am especially grateful for the Lesson-Sermons. Of all the many proofs I have had of the healing power of Truth, it is impossible to write. Every day brings to me fresh evidence of the loving, tender care of our Father-Mother God, as revealed through the study of Christian Science. I am grateful that I am learning to understand better the Bible (which I had always loved), and that I am learning to be patient and to look for the good in others. My life is filled to overflowing with joy and that peace "which passeth all understanding."

VERBENA PRICE, Chickwell, Somerset, England.

In the 28th chapter of Deuteronomy a most beautiful promise is held out to those who shall hearken diligently to the voice of God, and this same promise is repeated again and again all through the Scriptures. Jesus expressed it when he said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." This great and everlasting truth is the greeting in the Preface of "Science and Health with Key to the Scriptures" by our beloved Leader, Mrs. Eddy, where she says, "To those leaning on the sustaining infinite, today is big with blessings."

Digitized by Google

But eighteen months have elapsed since we in our home sought the truth of these promises, and in that time have come glimpses of this kingdom and an ever-growing consciousness of the presence of the sustaining infinite. When Christian Science found us, my wife had just been informed by her medical adviser that an operation was the only hope of a permanent cure for an internal trouble from which she was suffering. We did not doubt but that the operation would be successful, but through fear of the ordeal she readily grasped at Christian Science as an escape from it. In a few weeks this condition had disappeared, and since that time we have used no material remedies of any kind, and all the ailments which have come up to be met have been overcome, but not always without help from a practitioner. Among the physical conditions which have been overcome, were a dislocated knee, sunburn, colds, fevers, toothache, catarrh, and headaches.

I mention the demonstration over these physical conditions, as being merely the outward manifestations of great mental and moral healings, and of these I must make mention. Previous to our acceptance of Christian Science, my wife was conscious of hardly a waking moment free from fear of some sort,—fear that our home would take fire, fear that some accident would befall her, fear that our little girl would be overtaken with evil in some form, sickness or accident or some other ill: in short, always fear. This mental state has been entirely eradicated, and in its place is the peace which comes from the consciousness that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). My own mental condition was almost indescribable. Although brought up in a Christian home, I was at that time steeped in sin, without God, whom I did not want so long as I thought Him responsible for all the want, wo, and suffering which I saw around me. The regeneration in my wife aroused in me a desire to know what had caused it, and although I had previously read Science and Health, I started to read it again, this time in a different frame of mind, and I have found that as I earnestly and constantly try to live what I have learned from this wonderful book, I am becoming a new man, while there has also come to me a degree of the peace that passeth understanding.

Since that time, the tobacco habit of twenty years' standing has gone. I had this habit in its worst form (cigarette smoking from morning until night). The desire for intoxicating liquors (not quite so old as the tobacco habit, but a very close companion) has also gone. The gambling habit and profanity have likewise passed into oblivion, and I am earnestly striving that the evils of self-righteousness, selfishness, temper, criticism, and envy may find no place in my consciousness. I know that through the understanding of God as good, and man in His image and likeness, all evil is overcome. Through this same understanding, lack of money and lack of business opportunity have been overcome, and divine Love has led us, when in search of a new home, so that we are sure the blessings of Truth do follow "them that believe."

To say that we are grateful would be expressing it very mildly, but we can best show our gratitude in works, and in reflecting the peace and joy and love which come from seeking the kingdom of God.

FRANK W. GIBSON, New York, N. Y.

What a wonderful privilege it is to know that God is ever present, all knowing, and all loving, and how tenderly Truth fits us to receive the good which is for us in abundance! Truly it is like the unfolding of the rose, something not to be forced, but as each day brings its share of warmth and sunshine and rain we at last see the perfect flower. I am truly grateful for the many blessings which have come to me through Christian Science. The Bible, Science and Health, and the *Quarterly* are my daily companions, and how beautifully the *Sentinel* assists us in uncovering error, perhaps not recognized before as such! Through this truth, fear, sorrow, the sense of limitation, and all the errors which so easily beset us, are being overcome. That I may express Truth and Love in all things, and let my light shine, is my great desire.—EDITH CLE JOHNSON, Primghar, Iowa.

[Translated from the German.]

In November, 1910, I was taken ill with severe inflammation of the throat, abnormal growths having formed, with high fever attending. My mother and myself had heard a good deal about Christian Science, and as I was unwilling to have medical attendance we applied for help in Christian Science. Treatment was taken up lovingly, and after a fortnight I was freed from all my ailments. For this I am most deeply grateful to God, also to our revered Leader, Mrs. Eddy. The text-book, "Science and Health with Key to the Scriptures," was given me by the kind practitioner as a Christmas present, and I shall strive to know more of God, to learn through the study of the Bible and our text-book how to apply Truth's healing power.

ELFRIEDE GIEHR, Berlin, Germany.

My heart goes out in gratitude to God for the many blessings that have come into my life through the teachings of Christian Science. It has been demonstrated to me for twenty-five years that Christian Science solves all the problems which come to mortals as they journey from sense to Soul. When I first took up its teachings, I thought I had to call a practitioner for every ill, yet I was living where it was not convenient to get help at all times, being in the country, twenty-five miles from a practitioner, with no telephones and no rural delivery, so that I was compelled to drive seven miles for mail; but today I am thankful that it was so, since it forced me, as the apostle admonished, to work out my own salvation.

When my children were sick, I went to work for them in the truth and was surprised at results. My greatest battle was with fear—I thought of what the neighbors would say if one of the children should pass on and I had no doctor. Many times I worked all night over a case. Three of the most trying times were attacks of acute lung trouble. Once, my younger daughter, a granddaughter, and a girl who was working for me were all beautifully healed. So many of my family had passed away with this disease, that I had no desire to experience it. Croup in its most disturbing form yielded to the power of Truth, and not one material remedy did we use. Whooping-cough was healed in less than one week. My daughter had been coughing for a few days when she said that the children at school had whooping-cough. This was in April, and the third night after I began to treat her she coughed incessantly for several hours. I arose, went to her room about twelve o'clock, and remained with her the rest of the night. That was the last of the hard coughing. My aunt, who was visiting me, said it could not have been the ill named above, for that could not have been cured in one week. The other children in the neighborhood coughed through the summer. What a comfort it is to a mother to know she has a divinely provided remedy for every ill that comes to her children!

My three grandchildren, from one to six years, have never tasted medicine. They ask to have Science and Health read to them when they get hurt. One of the children was visiting me, and during the night she had very high fever. She said, "Grandmother, are you going to take me down-town tomorrow?" I said, "Yes, if you are well." She said, "Can't you treat me and take me?" I took her! If we could all become as little children, and only trust! Many beautiful lessons we learn from little ones who have been taught that God is the only healer.

I could never tell of all the healing that has come to me and mine during the past twenty-five years, but best of all is

Digitized by Google

the spiritual uplifting, the desire to live a higher and holier life, to love my brothers more, to be free from fault-finding, to be less selfish, to criticize and condemn less; in short, to analyze my own thought and to find what is unlike God, good, and cast it out. My one desire is to know and do the will of God, since in no other way can we find health and happiness and be worthy of the name Christian Scientist.

MRS. KATE ECTON, Kansas City, Mo.

To express the gratitude I feel for every helpful article in the *Sentinel* and *Journal*, I send in my testimony. It was about seven years ago that we received the first benefit from Christian Science, when my husband was healed of a form of malarial fever. For over a year he had attacks once a month, and they left him in a very weakened condition, so that we were a good deal discouraged. He finally tried Christian Science, was healed at the first treatment, and has never had a return of the illness.

From that time on we had implicit faith in the power of divine Truth to meet every condition, and through the faithful work of a practitioner it did so, but we made no effort to help ourselves until it was demonstrated to me that I must work out my own salvation. Two years ago I was taken suddenly ill, from a premature birth. What was called a septic condition followed, and again the faithful work of the practitioner relieved me of the serious symptoms; but afterward, once and sometimes twice a week, I was taken with very severe pains.

But by this time my interest was such that I was reading the Bible and the Christian Science literature almost constantly, and one day some two months later, I read in a copy of the *Journal* the psalmist's words, "Be still, and know that I am God." I sat still for a moment, and then almost shouted for joy, for I had at last realized what I had been struggling to understand, that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468). I was healed in that moment, and in another week was doing all of my own housework. I have not neglected the study since, and have been rewarded with many beautiful demonstrations. Our boy, six years of age, has never taken medicine in his life.

My gratitude to our heavenly Father-Mother cannot be expressed in words. I am also grateful to our revered Leader, Mrs. Eddy, and to those who have so patiently helped me on my journey.

MRS. WALTER OSBORN, East Oakland, Cal.

I had intended to tell, long ere this, of the blessings Christian Science has brought me. I was healed of appendicitis in about one week's time, although previous to this I had suffered for more than six months and had never been free from bowel trouble. Our family physician had said that I could not be well without an operation, and I was about to go to Minneapolis, Minn., for this purpose (my home then being in Eau Claire, Wis.), when this truth was brought to the notice of my mother. She greatly dreaded the operation for me, and thought it would do no harm to try Christian Science. The results were as above stated, and though it is now over eleven years, I have never had the slightest return of the affliction.

Since that time the power of Truth has been proven to us again and again. Of these experiences I will briefly mention two. Our little girl, now four years old, has known no treatment but Christian Science, and has been a remarkably well child. She was healed in Christian Science of a fracture of the skull in two weeks, and a bad habit of sucking her thumb also vanished before the truth. My endeavor is so to live that I will reflect this light to others, even as the Master bade us. I feel deep gratitude to God, also great thankfulness to Mrs. Eddy for bringing this truth of Christian Science to mankind.

MRS. BERTHA SIGNOR BROWN, Buckeye, Wash.

FROM OUR EXCHANGES.

[*Christian Register.*]

The elder fashion of opposition to the church has become obsolete. Of the bitter antagonisms of the Ingersollian days we hear very little. These serious-minded men are not fighting the church. What is much more significant, they are creating theories and constructive principles of life without reference to the church; and they will not accept as the substitute for the creed any system of institutional activities, any clatter of emotional excitement, any display of mere ritualistic splendor. They will not submit to any intellectual anesthesia, and call its visions "faith." They cannot worship in any temple to which the intellect is denied admittance. But every thoughtful man has his creed. He may discard the name, but he retains the thing. The creed of the architect is in the plan of his building. Into that creed has passed his splendid faith in the stability of those natural laws by virtue of which he constructs his massive structures of stone and metal. One atom of heresy would mean destruction. A creedless architect would be a short-sighted pretender. He might build huts, but not cathedrals. He needs a larger knowledge of the laws of nature; in a word, a better theology.

And so, in creating the greater structure of personal and social life, the wise man knows that he who builds only for today is working by the "rule of thumb," like the sailor who steers only by "dead reckoning." This wise man, as the poet says, "looks before and after." He wants to know the relation of his earnest work to the past and future. He is eager to trace out the laws which will give permanency and dignity to his daily task. He wants to see the plans of the divine architect. As the skilful mariner cannot safely steer without the stars, so the wise master builder finds at last that every law he uses in his daily task is pregnant with divine implications. Every road he takes leads to the portal of that divine science which men call theology.

[*Christian Advocate.*]

The kingdom was not of the earth, but it was to be upon the earth; it was to provide social, industrial, intellectual, spiritual liberty for men who are in bondage. It was to do so by emphasizing and insisting upon the fatherhood of God and the brotherhood of man. It began by recognizing the essential dignity of every human being as created in God's image and by seeking to save that which was lost.

It follows that Jesus held the fundamental law of political order to be the service of each citizen for the benefit of all. This involves the surrender of individual rights in the interest of justice for the community. Wherever the kingdom of God has penetrated, this is the ruling precept of the state. It is no accident that the principles of Christ's teachings are necessarily the principles of all well-balanced governments. A true political economy is grounded in eternal righteousness, of which the kingdom of God is the concrete expression. Organized society cannot exist without the surrender of individual rights to the common good, a fact which those ought to remember who talk bravely of their personal liberty.

[*Continent.*]

The immensity of the sin of the world staggers the church. Common sense says that any one popular evil is so vastly bigger than the church that it would be ludicrous for the church to tackle it. The best possible is for the rescue missions to save here and there one man. While that philosophy prevails, the church will continue mainly to play the rôle of innocent bystander in humanity's tragedies. But suppose common sense were suddenly swept aside by the stupendous conviction—or even illusion, if the cynic will have it so—that every crime done among men is actually the church's fault,—what an upheaval would come! There

Digitized by Google

would be such an inrush of the church into the midst of the world's wickedness as would make the foundations of hell quiver. It is severe, but it is not unjust, to make the church lay its shuddering hand on the scapegoat of the world's sin. Nothing else will make it realize the measure of the atonement it must render to humanity in the name of its own suffering Christ.

[*Watchman.*]

It is not infidels alone who pervert truth; it may be done in a smooth and deceptive way by those who have the truth in keeping. It often appears in the way in which Christian people think, teach, and act when they do not have an honest conscience toward the truth. If all Christians were free from the leaven of the Pharisees, how long would they continue in their differences as to the truth of Christ?

There was also a leaven of the Sadducees which was a proud, cynical skepticism, and a leaven of the Herodians which was worldliness, but that of the Pharisees was an influence that works inside the church and in the heart of a believer. It is a subtle, deceptive disposition of mind to hold the truth in unrighteousness, to be unfaithful to it, to observe its external acts and to lose the spirit of loyalty and obedience. A dry rot can go on in the inner life which destroys loyalty and love to the truth.

[*Advance.*]

We complain of the multitude,—that it is restless, that it chafes under its conditions. We are alarmed at its cry and its strivings. But who ever made this world better until he was restless? Dangerous as the dissatisfied man may be, his heart is the soil for new seed. The prophets of old cried out, and all prophets evermore must cry out against those that are at ease in Zion. We speak of the childishness of the theories of a disturbed populace. But children grow and learn. All great teachers of new doctrines and new reforms have been driven out of synagogues, cathedrals, and stately temples to the seaside, and the hillside, to commons and street corners, to the multitude. This does not mean that churches are to be abandoned, but it does mean that there is a link between Christ and the common people which no preacher, reformer, or philanthropist can drop without breaking the golden chain.

[*Standard.*]

The Christian church must lead in the campaign for righteousness. If Jesus did not teach the necessity for personal goodness, he did not teach anything. To content ourselves with laying stress upon theological statements or subscription to creedal forms is suicidal. The one thing that Jesus demands is a pure heart. Out of personal goodness will issue action by which the world is made better. It is the growing recognition on the part of Christian people of the primacy of goodness that is bringing together men and women of different faiths in united effort to promote the reign of righteousness.

[*Outlook.*]

Every man and woman who submits to the discipline of life, and out of temptation gathers strength, out of sorrow peace, and out of work vigor of purpose, and who submits to the discipline of experience, not to resist, but to cooperate and to grow, is always putting off this mortal and putting on immortality. We all see the external process; what we do not always understand is the internal change. But men are beginning to understand it and to recognize the putting off of the mortal and the putting on of the immortal.

[*Churchman.*]

Christian revelation in its breadth and depth, as it affects the individual and society, is marked by miracle. One of the weaknesses of the modern religious consciousness is to isolate the sphere of the miraculous, to confine it to a period.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Five new pamphlets containing articles originally printed in the Christian Science periodicals are now ready for distribution:—

"Environment and Opportunity," containing five articles as follows: "Greater than Circumstances," "Why Grow Old?" "Limitation," "Problem of the Hickory Tree," "Songs in the Night."

"Birthright and Dominion," containing four articles and two poems as follows: "Inalienable Rights," "Mental Self-Knowledge," "Love's Bounty," "Demand and Supply," "Humility," "Unity."

"The Father's Business," containing five articles as follows: "The Abundance of God," "One Business," "The Closed Hand," "Christian Science in the Business Life," "Truth is Power."

"The Law of Kindness," containing four articles and a poem, entitled as follows: "'Forgive, and ye shall be forgiven,'" "The Habit of Hating," "The Law of Kindness," "'Ye shall be as gods,'" "Two Roses."

"Confidence and Supply," containing the five following articles: "'The Lord thy confidence,'" "Time and Healing," "'What hast thou in the house?'" "Constructive Work," "Giving and Receiving."

Another new pamphlet has just been published containing the lecture of William R. Rathvon, entitled "Christian Science: Its Results."

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass, should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth street, Boston, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book); single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage.

For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy . . .	$ .05	$ .06	$ .07
Twenty-five copies .	1.00	1.15	1.30
Fifty copies	1.80	2.05	2.40
One hundred copies .	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XII indicate the year 1912; XIII, 1913. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

	£	s	d.	Marks	Francs
$1.30 equals	0:	5:	5;	5.50;	6.75

4.25 "	0:	17:	5;	17.95;	22.10

Entered at the Boston, Mass., post-office as second class matter.

ITEMS OF INTEREST.

National.

The United States geological survey has just issued the first sheet of the international map of the world, including Rhode Island and portions of New York, Connecticut, Massachusetts, New Hampshire, Maine, and Nova Scotia. This world map, recently undertaken by agreement with the leading nations, is being prepared on a scale of nearly sixteen miles to the inch. The entire map is to consist of about fifteen hundred sheets, covering all the land areas of the world, each sheet representing four degrees of latitude and six of longitude. It has long been the hope of geographers to have an international map scientifically constructed on a uniform scale, and the work is now well under way. Maps now available, printed on all sorts of scales, in geographies and atlases, where important areas are given the greatest space, lead to misconceptions as to the relative size of different countries.

In a highly important decision under the antitrust and patent laws, the supreme court of the United States sustains the contentions of the department of justice in what is commonly known as the "Bathtub Trust" case. The importance of the decision lies not merely in the fact that the combination is crushed, but in the fact that the decision in the Dick patent case some months ago is modified. The supreme court takes the position that the monopoly of a patentee does not include control of commerce in the unpatented product of the patented article. The court in the decision recognizes the value of the patented tool which is involved, but at the same time holds the patentee cannot fix the price of the unpatented article. The decision is regarded as a strong point won for the government in the United Shoe Machinery Company case and in the motion-picture case.

In the event of future Chinese disturbances the American legation at Peking would not be handicapped in dealing with situations by lack of communication with the Asiatic fleet as it was during the Boxer uprising. Communication from Peking with the outside world has now been assured through the establishment of a radio station at the American legation operated by marines. Successful communication has been established between the legation at Peking and the naval ships at Shanghai, a distance of about six hundred miles, as well as the ships at Chefoo and Tsingtau. The establishment of the new station, which is the only well-equipped one in the Chinese capital, adds materially to the efficiency of the Asiatic fleet.

The American Civic Association, opening its eighth annual convention in Baltimore, Maryland, had its program arranged not only to continue its propaganda against billboards and smoke nuisance, but to further its new purpose to extend a material portion of its endeavors to leading towns in the right direction while they are in process of building themselves into cities.

Proceedings to test the constitutionality of the sections of the recent postal appropriation act, requiring newspapers to give postal authorities access to their circulation records and to publish the names of their stockholders and bondholders, as well as to label paid political articles as advertisements, have been started before the supreme court of the United States.

The largest mail tubes in the world are to be installed between the Grand Central and the Pennsylvania Railroad stations in New York city. The tubes will be at least twenty-four inches in diameter and may reach thirty inches. They will be built to carry mail bags, so that the rehandling of mail will not be necessary.

Ten thousand acres of valuable timber land in the Choctaw Nation, known as the "Lost Sections," have been sold by the government for $316,034. The hardwood on the same land was sold for $210,000.

The equestrian Indian statue, "The Appeal to the Great Spirit," by Dallin, will become a possession of the city of Boston through the completion of a subscription fund of fifteen thousand dollars.

An agreement between the United States and Russia, to take the place of the commercial treaty of 1832, the abrogation of which becomes effective January next, is said to have been reached.

The annual work of assembling and packeting seeds for free congressional distribution has been begun by the department of agriculture. About sixty million packets will be prepared.

International.

Lord Ashby St. Ledgers in addressing a meeting recently on the subject of the taxation of land values said that he was strongly of opinion that the site value of land offered a broader and more equitable basis for rating than the present method of estimating ratable value. Though he was not a single taxer, and he did not admit that socially created value was confined to land alone, his contention was that there was a strong case for turning a large percentage of rates from buildings to land values.

A new trade harbor is in course of erection at Neukoelln, an important district in the south of Berlin where the Spree and several canals conjoin. The trade done at Neukoelln by means of the cheap waterway has made enormous strides of late; so that an extensive harbor has become a necessity. The harbor will, it is expected, be opened next autumn, the work being continued all through the winter. When completed it will have cost over five and a half million marks.

France is engaged in studying various schemes for the further development of her inland waterways. It will be necessary to construct a number of large new canals and deepen and straighten many of the existing ones. Some of the larger schemes would take considerable time, but the immediate and useful results could be gained by utilizing to better advantage those already in existence.

A bill will shortly be proposed by the French government making more stringent the legislation at present in force regarding the advertising of new financial issues. Fresh obligations will be imposed on those responsible for new issues other than French state securities. The purport of the new regulations is to enable subscribers the better to judge of the financial position and solvency of the issuing parties.

It is announced that the minister of finance of Chile has appointed a committee for the purpose of investigating the problems that will confront the country upon the opening of the Panama canal, with especial reference to internal commerce, mail service, communications, and port works.

Among the bills introduced by the Australian government this session is a lengthy one for the appointment of a public trustee, who will also be curator of intestate estates. There are three main divisions in the bill, the public trust office, unclaimed lands, and unclaimed property.

A project was recently submitted by the minority leader in the Brazilian Legislature for subsidized road building in order to open up the interior of the state, by means of giving financial aid to the municipalities for the improvement of local communications.

The Ottoman government after asking for an armistice to consider conditions of peace has rejected the terms offered by the allied Balkan nations. Nazim Pasha, the Turkish commander-in-chief, has been ordered to resume operations.

Industrial and Commercial.

The vice-president of the Denver & Rio Grande Railroad announces the early electrification of the system. The first unit to be electrified will be from Helper, Utah, to Salt Lake City, one hundred and fourteen miles. The second unit will be over Tennessee pass, the great continental divide in Colorado, and will involve the electrification of the line from Salida to Minturn, Col., a distance of eighty-seven miles. The Utah Utilities Company is to furnish power for the Utah lines, and the Central Colorado Power Company will probably furnish the electricity for the Colorado lines. The improvements will aggregate between twenty and twenty-five million dollars, most of which will be expended during 1913 and 1914. Other units will be added from time to time, and eventually the entire system will be operated by electricity generated by the great power in the mountain streams.

In order to reduce the cost of living and so take away much of the reason for dissatisfaction over wages, the Milwaukee Traction Company plans to go extensively into farming, to raise vegetables, poultry, and other supplies, and to sell them to its men at cost prices. Included in the idea is the purpose to give the women and children of the employees opportunity to take part in the farming work if they so desire.

The Pennsylvania Railroad announces that it will shortly have available for use on the lines of its system a total of 2872 solid steel passenger cars, probably more than one half of the all-steel passenger equipment in the United States and representing an expenditure of approximately forty million dollars. These cars have been added to the company's equipment since June, 1906.

A New York syndicate has purchased for six hundred thousand dollars thirty thousand acres of coal rights in Macoupin county, Illinois, and taken options on two hundred and eighty thousand acres additional, paying therefor twenty-four dollars an acre, in Montgomery, Saline, Perry, Madison, and Jefferson counties. The syndicate will sink four mines in the thirty-thousand-acre tract.

It is stated that both the Pennsylvania and the New York Central Lines have plans well under way for the opening of vast coal fields and the building of new roads to handle their output. Fully ten million dollars is to be expended by both systems.

The municipality of Edmonton, Alberta, will expend approximately a million and a half dollars for street railway construction, rolling stock and equipment, and sub-stations the coming year.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

BEING HONEST WITH GOD.

SAMUEL GREENWOOD.

BECAUSE that which we call God cannot be seen with the eye or touched with the hand, and is in no way materially cognizable, mankind as a rule have come to think of Him as altogether without the range of earthly experience. For this reason He does not seem to them to be as real and appreciable as their fellow men with whom they associate; while so-called material law, acknowledged to be the cause of human discord and decay, seems, even to the average Christian, to be more potent and operative than the law of omnipotent Spirit. Because of this inability to relate God to their daily life, men fail to grasp the reality of their own relation to Him, and its responsibility, as clearly as they do, for instance, the relation existing between employer and employee. Hence the idea of honesty with respect to one's obligations to God is seldom held with the significance of the word as used in general conversation, and one frequently finds men who are scrupulously exact in their business dealings, who would scorn the suggestion of dishonesty in a financial sense, careless or indifferent in the matter of being equally exact and honest in meeting their obligations to the recognized divine source of their being.

This may be seen, for example, in the comparatively light value usually placed upon the time set aside for devotional purposes, or for spiritual study and refreshment. Without compunction or protest we allow the call of ease or pleasure, business or society, to rob us in this respect, not realizing that such an attitude on our part is in the nature of robbing God, who is rightfully entitled to all the time necessary for mankind to become acquainted with Him. If we acknowledge the claims of God, we should at least be as honest in the endeavor to meet them as we are to meet the lesser claims growing out of our present environment; yet how often do we prefer to forfeit the desired pleasure or the material gain, rather than lose the opportunity to learn a little more of the divine reality of being? If we could, for a moment, think of God in the light of a personal employer, and that we are in His service as one man may be obligated to another, we would see the dishonesty of using His time for selfish or unprofitable purposes. Considering God's demands to be as binding as those of an earthly master, how can we presume to excuse our remissness on the ground that our worldly interests do not leave us sufficient time to attend to His requirements?

Shall we say, then, that God's demands are less binding upon us because He is divine Principle instead of a finite person? Is He less real, less important, less actually present because we do not hear a voice or see an outlined form? Because God is divine good, Spirit rather than a material presence; because He is infinite Mind instead of a limited sense of being expressed by matter; because He is the source of all real life and intelligence, of all that is worthy and eternal, is He to be less esteemed than the personality of a frail, sinning mortal, less to be relied upon than the deductions and opinions of human belief? Are the incidents of the passing human dream of chief importance, that we should ever allow them to overshadow our interest in the real and eternal? Are material things preeminent in our affections that we should ever place them before the spiritual, while the latter is made to wait upon our time or convenience? Here, as in other things, honesty means consistency, conformity to an accepted standard; it is the essential of truthfulness. It should be obvious that one cannot be honest in his Christian profession, any more than he can be honest in his business profession, without absolute sincerity, and religion must be established upon this basis to benefit fully the individual and the community.

It is well to remember that our attitude and conduct in these matters concern ourselves only, since, as the author of the book of Job points out, it can be nothing to God whether mortals choose to be righteous or not. Neither the supposition that there is a power besides God, nor mankind's obedience to that supposition, affects the fact of God's allness. While it means everything to us what our concept of God is, and whether we are faithful to that concept, what God is He is always. It were impossible for Truth to be affected by the mistakes of mortals. The vital point for us is: Are we, in our own consciousness, honest to our conviction that God is good, that He is Love, and that He is the only power? Do we obey God's laws as scrupulously as we do the laws of our land? and are we as anxious and diligent to increase our knowledge of God as we are to increase our material possessions? If not, are we really honest to our avowed beliefs as Christians? Is it not possible that we may be guilty of omissions in our religious practise, or of a laxity in our spiritual allegiance, such as we would not think of being guilty of in our business or other relations?

The true test of fidelity to divine Principle is not in anything one can say, but in its effect upon character and conduct. If we believe that God is Love, and if our supreme desire is to serve Him, it must mean that divine Love is our God, a more significant and personal way of putting it. When divine Love is our God, our acknowledged origin and being, our only power, love will characterize all our thoughts and actions. To be honest cannot mean less than this, though human sense would fain argue that, even though we would be known as Christian Scientists, we are not required to devote ourselves wholly to that high purpose and ideal. Such an argument is nothing but evil, for it is plain that no one's happiness or prosperity could suffer in any degree through his effort to express love to all.

The Christian's evident duty and privilege, as well as joy, is to be loving and kind and just under all circumstances. Selfish human policy might sometimes suggest an easier way, the opinions of friends may decide that some less Christlike course would be excusable, while our own conscience may be silent as to a lapse from love in certain instances; but infinite Love makes no concessions to human wilfulness or weakness. Nothing human or mortal can lower the standard of perfection. A Christian Science teacher or practitioner, or some trusted friend, may decide that one is justified in such or such a course; but human wisdom cannot make a wrong thing right, nor absolve one from the consequences of taking a wrong position. Unless

Digitized by Google

our course is prompted by love for the neighbor, it does not meet the divine requirement, no matter who may excuse our conduct. Unless we are rendering love for hate as well as love for love, we are not honest to our concept of God as Love, and not Christian Scientists in the true sense.

Honesty, even in human affairs and acording to the human standard, calls for constant uprightness. It is not provided that one can be honest at one time and not at another, and still retain the reputation for honor and integrity. Most of us are willing to serve God at convenient times, but occasional goodness does not meet the human demand, and we certainly cannot expect it to meet the divine. We cannot honestly look to receive the full reward of righteousness if we are true to God only a part of the time, any more than one would expect his employer to overlook occasional thefts, idleness, or indifference to his interests. But it virtually amounts to this if we think we can go on being less than loving, just, and good in all our business, social, family, and church relations, and still pass with God for loyal Christian Scientists, the exponents of the truth that good is infinite. "Insubordination to the law of Love even in the least, or strict obedience thereto," Mrs. Eddy writes, "tests and discriminates between the real and the unreal Scientist" (Miscellaneous Writings, p. 119).

Let us begin to learn that we cannot make our own terms in the working out of our salvation, nor profitably slight this work, but that we must cover every point in that process up to the attainment of conscious perfection. It remains with us to be at least as honest with God as with men, to be as observant of the divine law as of the human, and to value the approval of God as sincerely as we do the smiles of our friends. Divine Principle, Love, must be our guide and government at all times, in all our thoughts, in all our dealings, problems, and relationships, if we are to be faithful servants and merit the Father's "Well done."

"THOU SHALT NOT BEAR FALSE WITNESS."

JANE STANNARD JOHNSON.

STUDENTS of the Bible ever have had before them that commandment designed to emphasize the necessity for truthfulness: "Thou shalt not bear false witness against thy neighbor." Its orthodox interpretation has quite generally been literal, and accepted as merely a command to speak nothing untrue or false about a neighbor or a friend. While this interpretation does partially encompass its meaning, thoughtful consideration of the text in the spiritual illumination afforded by Christian Science reveals a holy purpose, the accomplishment of which in the life of the individual benefits all mankind. It has ceased to be a simple command implying only the responsibility not to speak falsely, and instead the Christian Scientist discerns a positive injunction to mental activity, obedience to which makes necessary a minute daily scrutiny of his every thought. Constantly to "stand porter at the door of thought" (Science and Health, p. 392) becomes an imperative duty.

The premise of "perfect God and perfect man" (Science and Health, p. 259) is essential in the demonstration of Christian Science. To obey the commandment, "Thou shalt not bear false witness," the Christian Scientist realizes that a recognition of the Principle of perfection must be applied in all his thinking, to every person and to every condition, at all times and in all places. Beginning where one must always begin, with his own consciousness, it becomes the duty of the Christian Scientist to bear no false witness against himself. Man being made, as the Scriptures aver, in the image and likeness of God, the devout declaration of this spiritual fact and the earnest endeavor to prove it in his daily living will heal discord of whatever nature in his own experience. A conscientious striving to realize man's oneness with God will also eliminate the tendency to self-condemnation, which always proves a hindrance to the progress of the student.

Enlightened and uplifted in the understanding of Truth, which has come as a result of his individual work, the Christian Scientist logically will realize the equal or greater importance of bearing no "false witness" against his neighbor. In his own family, among his friends and acquaintances, and with his brethren in the church, he finds frequent opportunity to exercise obedience to this command. It remains always his duty and privilege to know man as spiritual and perfect. No matter what seeming form of error may present itself, whether illness or wrong of whatever kind, even if directed unjustly against himself, the Christian Scientist is commanded to bear no false witness. Contrariwise, he must think and speak the truth, declare the spiritual fact of being.

Humanly speaking, "neighbor" in its broader sense means all mankind, so that the Christian Scientist is afforded an unlimited field in which to fulfil the obligation to know only the truth. Wherever he may be, in public places especially, he meets numbers of people who manifest error in the varied forms it assumes; illness, misery, poverty, greed, sorrow, selfishness, injustice, and other beliefs of materiality are evidenced to material sense only too plainly. Under such conditions the Christian Scientist must remember the reality of God's spiritual universe and His perfect children, and the divine compassion of this mental attitude will bless all within the radius of its influence, though individually they remain unaware of the good that is in their midst. Whatever discord may come within his own observation or experience, he is mindful always of his responsibility to bear no false witness. To acknowledge error mentally is to acquiesce in its reality. A thought cannot be neutral. It is either a thought of truth or a thought of error, from divine Mind or from mortal mind. Some thought must always fill the consciousness, and as thoughts present themselves with great rapidity, alert watchfulness is alone adequate to detect and repel the erroneous thought and replace it with an active thought of truth.

Literally, then, faithfulness to the commandment, "Thou shalt not bear false witness," means that the Christian Scientist shall mentally declare the healing truth wherever he may be. Jesus went about healing all mankind. Mrs. Eddy writes: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick" (Science and Health, p. 476). In daily striving to witness only to the truth of being, the Christian Scientist is humbly following in the footsteps of our Master. He is daily healing disease and inharmony, is helping to liberate humanity from bondage to materiality and its sinful conditions, and thus helping to bring nearer that happy day when the harmonious and true sense of being shall take possession of the entire human consciousness.

"ARROGANCE OF LEARNING."

H. E. MC MEEL.

IN speaking to a student of Christian Science about the reluctance of a mutual friend to take up a study of the text-book, "Science and Health with Key to the Scriptures," these words were used: "He retards his own progress through the arrogance of learning." Thinking over this form of opposition to the teachings of Christian Science, the writer is compelled to return thanks that this wonderful truth was first presented to him in such a manner that a study of the text-book was taken up without any prejudice. The lack of scholarly gifts which had previously been deplored has since been a matter for gratitude, for it enabled him to accept Christian Science in all its glorious simplicity.

Later more light was obtained on this point, upon looking at an engraving in a Christian Science reading-room which portrays the incident of Jesus disputing with the rabbis in the temple. The artist has delineated the features of these

Digitized by Google

old savants in varying states of astonishment, unbelief, and no doubt disgust that a mere boy should attempt in his simple manner to question their learned interpretations of Holy Writ. Their lives had been devoted to educating the people by theological methods, and here was a boy attempting to throw their interpretations to the winds! They had not allowed for revealed truth being stronger than doctrine.

Today the same scene is frequently before us. The Scriptures, illumined by our Leader's writings, give to us some idea of what Jesus taught, and help us to understand the Master's sayings, but Christian Science is sometimes denounced by pulpit and by press, for the reason that creeds, dogmas, and years of superstition and fear have dimmed the vision of our teachers of today, and mere theories lead into darkness instead of out into the light.

Every civilized nation spends vast sums of money on educational work, but ofttimes the result is merely unbelief, doubt, and discord, and this will continue until the foundation is changed and spiritual Truth is understood to be the only rock upon which to build. As this is recognized we shall realize in all our surroundings peace and progress,—the eternal reign of harmony,—God understood, and man in His image and likeness. Through the great change in our educational beliefs, material theories having to be discarded, our journey from sense to Soul is frequently attended with much opposition, and all who are realizing some of the help given by Christian Science, can but be grateful to Mrs. Eddy, who has had the courage to stand and overthrow speculative theories with all their arrogance of learning, but without the proof, given in Christian Science, of Truth's power to heal and to save.

THE WAY TO REJOICE.

MARY H. AITKEN.

ONE day, while on my way home, I stopped at a fruit-stand to make a purchase, and I noticed that the woman who waited on me seemed in great distress. On inquiry I found that her little child, two years old, had wandered away and been gone nearly two hours. An alarm had been sent out, but no trace of her had been found. I tried to speak some comforting words to the mother, although I knew inwardly that the only true comfort I could give her was to realize the infinite protection of divine Love. Returning home, I sat down and for a few minutes dwelt "in the secret place of the most High," seeking to know Love's ever-presence and protection. I felt privileged to pray for this little one, in keeping with the instruction given us in "Miscellaneous Writings" (p. 90), where Mrs. Eddy counsels us to obey the golden rule. I was then obliged to go out on another errand, and upon making inquiry if anything had been seen of the lost child, the man of whom I inquired immediately exclaimed, "Why, yes; she has been found, and taken home."

I rejoiced that the poor mother's anxiety and sorrow had been relieved, even as we may rejoice constantly because we have been granted a glimpse of this great truth, and can help others by knowing the truth about God and man. This is what I am sure Christ Jesus meant when, just before he was betrayed, he said to his disciples, "These things have I spoken unto you, that my joy might remain in you, and that your joy might be full." When we realize what Christian Science is, we all have great joy, and although mortal sense has not changed, this fulness of joy and its brightness comes to us so that we look out upon creation from an entirely different view-point.

The word "rejoice" has meant much to me. It has helped me to come out of darkness into light. Mrs. Eddy tells us in Science and Health (p. 14), "Sorrow is turned into joy when the body is controlled by spiritual Life, Truth, and Love." Thus we can go on our way rejoicing, being filled with the consciousness that divine Principle enables us to overcome all sense of fear, doubt, and worry. Even when drinking the cup of earthly wo, Christ Jesus told his disciples of the fulness of joy, for he knew he would prove the nothingness of materiality and establish the fact that Life is God.

If in our progress from sense to Soul, there seems to be a cup for us to drink, we can take it up and drink all of it, for we realize that it is the law of God which enables us to triumph over all evil,—sin, disease, and death. Thus we can say, as did St. Paul to the Philippians, "Rejoice in the Lord alway: and again I say, Rejoice."

SAFETY ON THE SEA.

COL. W. E. FELL.

A ROMANTIC interest and something of a deeper sentiment has ever attached itself to "those who go down to the sea in ships." In certain directions the world has moved swiftly, but probably the conditions which prevail today on board a fishing lugger have altered but little from those which obtained when the disciples of Jesus went "a-fishing." The deep-sea fisherman links thought with the past, and carries us back to the inspiring sea tales of Bible history.

The writer, whose home is on the east coast of England, comes in frequent contact with the brave toilers of the sea, and no one could fail to be struck with the depth of piety that so frequently underlies their rough and sturdy character. Many a time he has traveled on the same train with these peaceful Vikings, proceeding from one little fishing port to another, and listened to the chorus of strong musical voices that rose above the roar of the train until it even seemed a rhythmical accompaniment to the songs of praise and thanksgiving to Him who "is mightier than the noise of many waters, yea, than the mighty waves of the sea." And yet how often do the "mighty waves" claim to overpower and overwhelm these men! On stormy nights, when listening to the roar of the elements, thought has gone forth to these people with longing for that time to come of which Mrs. Eddy has written, when the "mariner will have dominion over the atmosphere and the great deep" (Science and Health, p. 125).

It is all a question of understanding, the knowledge of God and the joy of it, when they shall all know Him, "from the least of them unto the greatest." As in natural science, so in Christian Science we are answered just exactly in proportion to our understanding of the Principle and law that governs the Science. One might point in illustration of the above to the experience of one of the survivors of the Titanic disaster, as he narrates it in the October *Journal*. He says: "I remember saying to myself, 'Now I'll see how much I have learned from Christian Science.'" In other words, it was his to realize that "the Lord on high is mightier than the noise of many waters, yea, than the mighty waves of the sea."

Though blown to the surface by air forced out of the ship, danger still seemed to menace this steadfast Christian, inasmuch as the suction of the sinking vessel might again draw him into its vortex, but in clinging to the truth of being he was placed out of immediate danger by the fall of one of the ship's gigantic funnels. The wave created by it threw the swimmer altogether clear of the ship, and coming upon an upturned boat amid the ice, he with others clung to it, and divine Love, the infinite protector, remained with him, in demonstration of "the life-preserving power of spiritual understanding" (Science and Health, p. 579). The survivors were picked up in the morning, and the man who tells the story ascribes to God his freedom from weakness and fear, and declares that his ability to "be strong and fear not" was due to what he had learned in the study of Christian Science.

Through what he had thus learned about God and man, this Christian Scientist was enabled to be true to Truth in the crucial hour. In a kindred experience St. Paul, who

Digitized by Google

possibly knew more about God, was enabled to find safety for himself and the crew. Jesus, who knew most about God, was able, in an hour of threatening danger, to save himself, the crew, and the vessel, and to still the raging of the tempest. Well may we ponder the wise man's words: "With all thy getting get understanding." The careful study of the Science of Christianity, as revealed to Mrs. Eddy and given by her to the world in the book "Science and Health with Key to the Scriptures," teaches all men, everywhere, who are willing to learn, how to make the all-power of divine Love available to meet our every need; not merely to heal us of sin and sickness, but to be "a very present help in trouble."

Elijah asked Naaman the Syrian, when he came to him to be healed of his leprosy, to do a very simple thing; so simple, indeed, that Naaman in his pride and egotism refused to do it, until better counsels prevailed. Today the same issue awaits the world; it is asked to do a simple thing to set it free from its leprous beliefs of sin, sickness, and the discordant conditions of all sorts which seem to prevail; it is asked to study the Bible and this book that explains the Bible in a way which makes it available to meet our every need. Are we going to turn from it and scornfully reply, "Are not . . . rivers of Damascus," the old and fruitless ways, "better than all the waters of Israel?" Many have availed themselves of Christian Science after every material remedy had failed to bring relief, and these men, women, and children are living witnesses of the power of Spirit and spiritual law to overcome every material disorder and to establish the harmony which is inseparable from the truth.

RESPONSIVENESS.

CLARA A. CURTIS.

IN the practise of Christian Science it has been found that an attitude of obedience and humility is requisite to bring out a response to treatment, and this attitude is equally essential on the part of the practitioner and patient. In order to be obedient, we must first recognize divine authority; to be humble, we must be submissive. The honest, willing student of Christian Science discovers early in his experience that obedience is mental, and to the extent that he implicitly obeys the law of God and complies with its requirements, he gains the healing which is the fulfilment of all the wonderful promises of the Bible.

As we read of the marvelous healing works of the Master, we see clearly that the demands of God, of divine law, prompted the commands given by Jesus. At all times throughout his entire earthly career, Jesus acknowledged the authority of the Father,—"As the Father gave me commandment, even so I do;" and the loving obedience which he manifested enabled him to see man as God sees him, and instantaneously deliver the sick and sinful from the bondage of mortal belief. In every instance the Master required some token of obedience, a response to his requirement, by word or act, in healing the sick and raising the dead. On page 183 of Science and Health Mrs. Eddy says, "Obedience to Truth gives man power and strength," and in the healing of the man sick of the palsy this was proven.

In this case, Jesus' first bidding to the sufferer was, "Be of good cheer." No medicine was prescribed to tone up or strengthen his system, but a complete change of consciousness was demanded. Imagine the discouraged, despairing mentality of the paralytic, filled with darkest foreboding and fear, and how impossible it must have seemed to obey, when the second command was given him to rise and walk. We read that the man obeyed, and surely the open accusations of blasphemy from the Jewish doctors and teachers in the throng must have been stilled at this proof of Truth's power; and all the people marveled and glorified God, when in obedience to that voice of authority the man arose and departed to his house.

In the fourth chapter of John's gospel we read of a certain nobleman, whose son lay at the point of death in the home at Capernaum. Hearing that Jesus was at Cana, sixteen miles away, he went to him there and besought him to return with him and heal his son. After a short conversation, Jesus assured him of his son's restoration, and without further importunity the father believed. Before reaching home, on his return journey, the nobleman was met by his servants, who told him that at the seventh hour of the day before, the fever had disappeared. Then the man remembered that this was the hour when he had unquestioningly accepted Jesus' words of truth. To the little girl who seemed to her grief-stricken parents and friends to have passed away, and to the impotent man afflicted for thirty-eight years, Jesus said, "Rise," that is, Elevate your thought; and to the man with the withered hand, "Stretch forth thy hand;" to Lazarus, "Come forth," and to those standing around the tomb, "Loose him, and let him go,"—Sever the cords of mortal belief which bind him, and give him his freedom. Restoration to health and life followed the obedience of each of these individuals, and possibly brought healing to many observers whose hearts had hitherto been filled with prejudice and unbelief.

Throughout the centuries both before and after Jesus' time, material means have failed to bring salvation from sin and suffering, and the knowledge of mortal man has ever been as naught to save from the ills which oppress mankind, but today, as when Jesus proved his words by his works, results as certainly follow obedience to God's law as they follow the rules of mathematics when correctly applied. In mental darkness, mortals have vainly searched to find out God, until, with ears rightly attuned, one seeker, purer and more earnest than the rest, caught the heavenly message which she afterward named Christian Science, and gave it to the world. This brave, earnest-minded woman, Mrs. Eddy, is everywhere revered and honored by Christian Scientists as their Leader, and through the study of the Bible, as spiritually interpreted in the light of her book "Science and Health with Key to the Scriptures," thousands are learning daily to apply effectively the truth, as Jesus taught us; to obey divine Principle, as did he, and to make truth practical and available in casting out all discord, whether its claims seem colossal or trivial.

By the might of Love, the blessed tidings of this new-old religion are being wafted to every nation; its message floats over land and sea, on printed page and by spoken word, and the angel of His presence has entered human consciousness, there to abide forever. Over and above the turmoil of earth's confusion and above the noise of many waters, sounds the sweet, clear voice of the ever-present Christ, leading and guiding us to higher things, where little by little we are leaving behind us the old man with his sicknesses and sins, and are gaining that sense of Life which Jesus promised us in these words, "If thou wilt enter into life, keep the commandments."

[Written for the *Sentinel*.]

THE MOTHER CHURCH.

FLORIA A. MOCATTA.

SEEN in the twilight of an autumn day,
With golden lights appearing from within,
The pure pale opalescence of its symmetry
Looms like some palace of a poet's dream
Against the firmament.
Externalized in stone by loving thought,
No cold-cut curves nor corners crude appear,
Unique, serene, harmonious it stands—
The Mother Church!
Symbol of Love, of promise and of peace
Throughout all lands.

SELECTED ARTICLES.

[Frederick Dixon in *Worcestershire County Express*, Stonebridge, England.]

In the address of a clergyman, reported in your paper, there is a reference to Christian Science which is so interesting in itself that I am sure you will permit me to say something on the subject. The gentleman said, quite truly, that the Christian Scientists seemed to have gained a glimpse of the truth, while all that natural science would venture to affirm was that it had as yet no knowledge of these powers.

Now, natural science is commonly restricted by natural scientists to speculations and experiments,—confined to what are termed secondary causes or physical facts, primary causes or spiritual facts being held to be in the realm of the unknown. The pagan philosophers held much the same view of science, and in their day made use of the word *miracula* to denote these speculations. These discoveries were not supposed by the pagans to be supernatural, but to them they were *miracula* or wonders. It happened that about this time Jerome had completed his famous Latin translation of the Bible, known as the Vulgate, and in it he had quite accurately rendered the Greek words *dunamis* and *semeion* as *virtus* and *signum*. In his later writings, however, whether because he found these words failed to give the sense he intended or because he found the word employed by the philosophers was more popularly understood, he substituted *miraculum* for *virtus* as well as *signum*. The result in his own time was perhaps harmless enough—men knew exactly what a *miraculum* implied.

Gradually, however, as healing faded out of the daily practise of divine service, divine service itself came no longer to mean the common task of Christian life, but an office of the church; while the miracle, viewed in all the mystery of vanished power, was exalted to a supernatural occurrence. This critic says quite truly that the phrase "mighty works" of Jesus is a translation of the word *dunamis*. He might have added that the word *dunamis* is elsewhere translated "miracle," just as the word *semeion*, constantly translated "miracle," is also frequently translated "sign." The miracle, therefore, was never the supernatural intervention of God, but the divinely natural and powerful object-lesson, or sign, in proof of the teaching of Jesus, which he demanded from all his followers in the words, "He that believeth on me, the works that I do shall he do also."

The miracle, then, is not a violation of law, but a demonstration of law, and to acquire a knowledge of law must be the most scientific pursuit open to men. The natural scientist, confining his pursuit to a mastery of material phenomena, uses as his text-book the works of the leading idealistic and materialistic philosophers of the ages. The Christian Scientist's text-book is the Bible, understood in the light of Mrs. Eddy's wonderful commentary, "Science and Health with Key to the Scriptures." The Bible is the record of the evolution of spiritual idealism, culminating in the gospel of Christ. This gospel contains the greatest scientific declaration in the world, "Ye shall know the truth, and the truth shall make you free," writing of which no less a scholar and churchman than Westcott says: "The freedom of the individual is perfect conformity to the absolute—to that which is. Intellectually, this conformity is knowledge of the truth; morally, obedience to divine law." In plain English, the knowledge of the truth which Jesus taught was knowledge of the absolute, of primary causation and spiritual facts; not acquaintance with merely relative or secondary causes and physical facts. As if, indeed, to make this perfectly clear, there is a phrase in the Bible repeatedly translated "knowledge of God," but which should be translated "exact [or scientific] knowledge of God."

It was just this penetration of spiritual causation which Jesus demonstrated through the miracles that led Mrs. Eddy to describe him, on page 313 of Science and Health, as "the most scientific man that ever trod the globe." One of the things which separates Christian Science so sharply from popular theology is the recognition of this. It is quite true, as the critic says, that students of Christian Science have only "got a glimpse of a small part of the truth," but that glimpse is the multiplication table of spiritual metaphysics, the key to the knowledge of the truth which is to free the world from its materialistic beliefs.

[Willis D. McKinstry in *Independence* (Kan.) *Reporter*.]

A recent issue reports in part a clergyman's sermon at the Coffeyville Chautauqua, in which he makes mention of Christian Science as a religious sign of the times, a warning bell, a danger signal. He is also quoted as saying, among other good things regarding the wrongs of social life, that there is great need of a remedy for such conditions,—that "ignoring vice and sin and suffering does not destroy it." Upon this point we heartily agree with him. These conditions have no quality of God, therefore they cannot be counted among the "very good" things which He created, and He made all that was made.

Yet these evil conditions are not to be ignored or overlooked; they must be recognized and dealt with according to divine justice, for, said Jesus, "every plant, which my heavenly Father hath not planted, shall be rooted up." Upon this subject Mrs. Eddy says in Science and Health (p. 447): "Expose and denounce the claims of evil and disease in all their forms, but realize no reality in them. . . . To put down the claim of sin, you must detect it, remove the mask, point out the illusion, and thus get the victory over sin and so prove its unreality."

Christian Science, rightly understood, is vastly more than a "warning bell," a "danger signal;" its teachings not only point out the pit and the snare, but offer a way of salvation. Christ Jesus, who came that mankind might have life "more abundantly," also recognized these evils, and his remedy for such conditions was one of healing. He healed both the sinning and the sick, and he said, "I am the way." His way was the one true way, therefore as followers of Christ his way must be our way, and we should be willing to accept and strive to understand the rule he gave by which to apply his teachings: "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." Thus it is through a spiritual knowledge, the true education, of God and the Christ, that the ills of humanity are to be dealt with; this is the only remedy.

The teachings of Christian Science impart to mortals the law of spiritual cause and effect, and this knowledge of man's spiritual existence transforms human character by correcting the ignorant belief that there is either profit or pleasure in worldly things, "the lust of the flesh, and the lust of the eyes, and the pride of life." Those therefore who have this spiritual knowledge are willing, as was Paul, "to be absent from the body [material sense], and to be present with the Lord."

[Ezra W. Palmer in *Ivyweild Times*, Colorado Springs, Col.]

In the recent comment on Christian Science the inference was made that Christian Science practitioners may assume to have attained that spiritual sense to which death and sin are no longer realities. This is the goal to which all Christian Scientists are striving to attain, but it can only be reached by immense spiritual growth, and by each one proving for himself the immortality of man as the child of God, and the nothingness of death. Possibly no one on earth today has yet gained this clear spiritual insight, but the works of Jesus, the prophets, and apostles, show that it is within the reach of man here and now.

Every person healed by Christian Science, every sin overcome, every evil passion destroyed, is a result of seeing man as a spiritual, perfect being, and God as infinite Love and His universe perfect and immortal. Each error thus des-

Digitized by Google

troyed, and the truth of being seen in its place, aids to that degree in the destruction of all evil and the bringing to mankind of eternal harmony. With the overcoming of all evil, man then can truly say that death and sin have no more power over him.

The critic assumes that the basis of Christian Science is belief. Belief is mere human opinion. It is usually a deduction from sense evidence, and therefore is of little real value. Religion based on belief can be shaken. Christian Science is based on law, the unchangeable, eternal law of God. Understanding this ever-unfolding law, the Christian Scientist grows in grace, righteousness, and good works. He does not merely believe—he knows; and as a result of this knowing he heals the sick and reforms the sinner, in harmony with Jesus' commands, and proves irrefutably the mighty verities of God's universe.

The mere reiteration to a patient, by a Christian Science practitioner, that his sickness is an illusion, would be of no value to the patient. The proving of this statement by the practitioner, destroying the disease through a knowledge of spiritual law, would of course arrest attention, and when this is accomplished not merely in one instance, but in thousands of cases all over the world, the truth of Christian Science would be acknowledged even by the most skeptical. These are the works Christian Science has been and is doing all over the civilized world during the forty years it has been available.

Christian Science recognizes that oftentimes children, as well as adults, suffer from sins and material laws for which they are not personally responsible; but neither the so-called law of heredity, nor any material law, can alter the fact that sin and suffering are not in accord with the law of God, which destroys them. Christian Science overcomes both the law of heredity and the belief of pain from a burn in the same manner, by knowing that, as a spiritual being, man is not subject to these material ills.

The statement of the critic that we cannot evade sin and death, is of course contrary to the teachings of the Bible; and, were it true, mankind would sink into despair, for existence would be hopeless. But Christian Scientists are proving, with mathematical exactness, that sin and death are not true, and thousands of people rejoice in freedom from fear of these evils, through the understanding which Christian Science has given them. Christian Science makes clear that in the degree that God is rightly understood, the true universe will be revealed to men, and sin, disease, and death will vanish into their native nothingness.

[Editorial in *New York* (N. Y.) *Morning Telegraph.*]

Christian Science really makes the sick well. A thousand cases can be cited in this city in which physicians have given up patients and the healers of Mrs. Eddy's church have restored them to health. The Christian Science faith is that of the optimist—it is optimism of the most exalted kind; for it teaches that the creator will not permit the children of earth to suffer bodily ills. The faith of the Christian Scientists reaches to heights never attained by other denominations.

Doctors for years have been fighting Christian Science. The open warfare of a few years ago, however, is not carried on at present—not so openly. Physicians have discovered that thinking people take an interest in the science of healing; that a sick man does not care what means he uses to secure good health if he can only secure it. Physicians, with their mysteries, their Latin prescriptions, their experiments, their many useless and costly operations, are themselves beginning to realize the strength of Christian Science, and no longer dare scoff at it. Certainly if Christian Science does no good it can do no harm. But it does good.

Christian Science raises the standard of citizenship. It makes people clean; they realize that cleanliness really is next to godliness, and that decency and right living go hand in hand with good health and long life. There are no drunkards among Christian Scientists; they do not bicker and quarrel. They give to every one his due and follow the golden rule.

[William J. Bonnin in *Blackpool* (Eng.) *Gazette-News.*]

In a late issue the writer of the column entitled "A Seasonable Chat" allowed himself to say that the whole truth about Christian Science lies in the fact that people believe just what they wish to believe. So far from being the whole truth about Christian Science, such a statement has no relation to Christian Science teaching or practise whatever. For Christian Science is the Science of truth, as declared and demonstrated by the Founder of Christianity. The knowledge of absolute truth and reality with which it enlightens the human consciousness incidentally brings it to pass, a kind of by-product as it were in this work of illumination, that beliefs hitherto masquerading as knowledge should, on exposure, reveal the characteristics of falsity and imposture; but to think that Christian Science concerns itself primarily with what "people believe" is about as correct as to imagine that an Atlantic liner crosses the ocean for the sake of the wake it leaves behind it.

The only true consciousness is the consciousness of truth. The consciousness that is aware only of a temporal and unreal presentation of things is a consciousness of falsity, a false consciousness. To it everything is material, and God, Spirit, is not admitted into His own universe. To it evil is just as real and just as powerful as good. It has even produced a pessimistic philosophy that has gone so far as to assert that evil is the real, and good but the absence of this real, a nonentity. But the consciousness of the positive nature of good, its unity and omnipresence, is a consciousness of absolute truth, a true consciousness. "I am God, and there is none else," "Do not I fill heaven and earth?" To know this reveals the unreal and counterfeit nature of the evil and discord that begins and ends in the false consciousness, and operates to destroy those material manifestations of evil which are raised up in the form of sin and misery and disease in antagonism to truth. These foes that harass life, the human sense of life that is, for there can be no foe to reach real life, disappear as the human or temporal sense of life gives place to the understanding of true life, which Jesus declared to be knowledge of God and of Christ. The impartation of this knowledge constitutes the life-bringing mission of Christian Science.

[David Anderson in *Melbourne* (Australia) *Herald.*]

I would be glad of the opportunity to review some recent press references to Christian Science which conveyed mistaken views of the subject, inasmuch as it is on just such incorrect representations that many critics base their second-hand opinions. Christian Scientists would not have any sufferer believe that his pain can be assuaged by imagining something concerning it, but that it can be cured by knowing the truth about it. They would not try to persuade any one-legged man that he could hop along with the ease and agility of an unmaimed brother; and Christian Science countenances no such absurd belief. Neither is Christian Science founded on suggestion as affecting body through mind, nor upon suggestion turned upside down. The process which suggests that thoughts of good and evil, health and sickness, may be impressed with equal ease and with corresponding good or evil effects, is not the mental healing of Christian Science. Christian Science emphatically condemns mental suggestion as a belief in the power and ability of one human mind to govern another. It shows the dangers of such belief, and how mankind can be freed from the confusion arising therefrom.

Christian Science teaching is founded on the truths that God, good, is omnipotent, omnipresent, and omniscient

Digitized by Google

Spirit; that man, made in the image and likeness of Spirit, is spiritual; and there is no statement in Christian Science which is not a logical deduction from these Scriptural truths. The case has been instanced of a sufferer from cancer, reported from New York as having been taken to a hospital for operation after six months' Christian Science treatment, and who was told by the surgeons, "If you had come six months ago, we could have saved your life." If the medical treatment of disease were invariably successful, such an assertion might have been justifiable; but as the nature and origin of cancer are still unknown to the medical profession, their treatment of this disease is entirely experimental; and the doctors' assertion, therefore, was altogether without warrant. But information specially cabled with regard to this case showed that the person referred to had been long under medical treatment before having recourse to Christian Science, and under the latter treatment had been healed of several chronic ailments.

[From an editorial in *Dallas* (Tex.) *News*.]

Man gives too much attention to things material at the expense of things spiritual; he thinks material law to the exclusion of spiritual law. Men are too prone to doubt that which they do not cognize with the physical senses. One sometimes hears it said, "I don't believe anything I don't see." The fact is that no man ever saw the cause of anything; he only sees the effect. Still, he believes there is a cause. This being true, it would seem perfectly logical for him to know that God is "the great First Cause," notwithstanding it is said in Holy Writ that "no man hath seen God at any time," for as Paul says, "We look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal." Yet even the "things which are seen" reflect intelligence, from animals to trees and plants. A tree planted near a terrace or ravine will not send its growing roots out of the earth to be killed by heat and lack of moisture. It does not do things that are certain to destroy it. (In this it shows more intelligence than some individuals who eat and drink things which they know will be their destruction.) Why doesn't it? If it did, it would no longer manifest the intelligence that guides it. Two trees grow side by side in the same kind of soil and under similar conditions, one a peach and the other a crabapple; yet they take those elements from the soil which are necessary to the making of the sweet, juicy peach on the one and the sour, acrid crabapple on the other. Each leaves every other element alone. Why and how does it do it? Men see manifestations and demonstrations of the forces of nature—centrifugal, centripetal, gravity, cohesion, adhesion, and so on—and know they cause the physical phenomena which are apparent; but they see only the phenomena, not the forces themselves.

[Editorial in *Quincy* (Ill.) *Herald*.]

One of the most gratifying things that comes to the notice of the average good citizen is the evidence of the increasing interest in the Bible. There are more persons reading that good book just now than ever before in the history of the world. Whether a man be a church-member or a rank outsider, a believer or an agnostic, he will be ready to concede that the people who are reading the Bible are getting better morally and are making better citizens, more honest, more honorable, more just in their dealings with their brother men.

To the careful student of human conditions there appears a greater leaning toward spiritual things. The discovery is being made that the Bible can bring not only deliverance from sin, but physical healing to those who study it carefully, read it not perfunctorily, but thoughtfully, and apply its precepts with honest endeavor to measure their lives by them and eliminate the material things, the carnal lusts and pleasures which are antagonistic to the higher spiritual life. And so we really see a positive and earnest awakening and a real sincere effort to attain to truer, holier, and hence to happier things as learned from the Scriptures. As they study, multitudes are finding joy in a cleaner and more practical application of familiar texts. The seeming conflict which has been waged between the teachings of the Bible and the natural sciences is being removed, as the result of the new and more enlightened understanding of this book.

The Bible is not only the most important book that was ever written, it is the basis of all laws, civil and criminal. All human activities rest upon this foundation-stone. The ten commandments give the most perfect rules for living, and those who apply them are upright and moral. From the New Testament comes the hope of eternal life, the great desire of every human heart. From Genesis to Revelation, all see the growth of spiritual understanding. The culmination is in the wonderful sermon on the mount. To his disciples, Jesus said: "Ye have heard that it hath been said, Thou shalt love thy neighbor, and hate thine enemy. But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you." This is the doctrine that is redeeming the world, and is establishing now the kingdom of heaven among men.

Of course, much of the truth as presented by the Bible was expressed through human consciousness. It is this fact that accounts for many apparent inaccuracies and inconsistencies. But the basic truth always lies under the imperfect language which shows the natural limitations of the human conception. As we read without due thought the earlier scribes, we are oppressed with the conviction that God is often ordering punishment for the disobedient, and that He is therefore the creator of evil and suffering. The prophet Isaiah, with clearer vision, declares, "Your iniquities have separated between you and your God, and your sins have hid his face from you."

So comes to the intelligent reader a clearer light and a fuller understanding of the teachings of the Scriptures. It is not by evangelism and revival excitement and the emotionalism of a large congregation under the spell of some earnest exhorter that the highest spiritual advancement is made. While these methods may be useful and have beneficial results upon some souls that cannot be aroused by less noisy methods, yet it is the quiet, sincere, devoted, and incessant searchers for the Bible truths who are won into a lasting belief in God as all good and in the knowledge that man is His image and likeness, perfect in reflection and possessing the kingdom of heaven in his own consciousness.

And it is not overstating the fact to say that right in Quincy there is a larger number of daily readers of the Bible than ever before. Any one who doubts this can easily have it proven by investigation and inquiry. It is this fact which encourages the belief that, in spite of all the wrongs and vices and evils that seem to overpower us, the world is steadily growing better, and the days of decent living, right thinking, and the golden rule are coming nearer every year.

[Written for the *Sentinel*.]

THANKSGIVING.

AGNES V. SINZ.

TODAY I lift my heart in praise,
A song of thanks to Thee I raise,
For blessings that have crowned the year,
For vict'ry over many a fear.

While climbing up the mountain-side
I know beside me is my guide:
His arms around me—can I fail?
No, one with God must e'er prevail.

So on this glad Thanksgiving day
In all hearts may Christ's love hold sway,
And may this anthem never cease:
"Good will to men, and on earth—Peace."

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

CHRISTMAS AND CHRISTIAN SCIENTISTS.

BECAUSE the observance of Christmas is so general, it is perhaps natural that there should be many inquiries at this season in regard to this holiday and the place it should hold in the thought of Christian Scientists. To answer these inquiries we are republishing three articles by our Leader in the order they previously appeared in the *Sentinel* under the dates Dec. 16, 1905, Jan. 6, 1906, Dec. 7, 1907, respectively. In these articles Mrs. Eddy speaks definitely and authoritatively on this subject, and we are sure her wise counsel will be welcomed at this time by all our readers, whether old or new. Other articles by Mrs. Eddy on the true meaning of Christmas are given in "Miscellaneous Writings," and these, together with those which follow, will richly repay individual study by Christian Scientists.

CHRISTMAS AS IN CHRISTIAN SCIENCE.

CERTAIN occasions, considered collectively, individually, and observed properly, tend to give the activity of man infinite scope; but mere merry-making or needless gift-giving is not that wherein human capacities find the most appropriate and proper exercise. Christmas respects the Christ too much to submerge itself in merely temporary means and ends. It represents the eternal informing Soul recognized only in harmony, in the beauty and bounty of Life everlasting,—the truth that is Life,—the Life that heals and saves mankind. An eternal Christmas would make matter an alien save as phenomenon, and matter would reverentially withdraw itself before Mind. The despotism of material sense, or the flesh, would flee before such reality to make room for substance, and the shadow of frivolity and inaccuracy of material sense would disappear.

Christmas, in Christian Science, stands for the real, the absolute and eternal,—the things of Spirit, not matter. Science is divine: it hath no partnership with human means and ends, no half-way stations, nothing conditional or material belongs to it. Human reason and philosophy may pursue paths devious, the line of liquids, the lure of gold, the doubtful sense that falls short of substance—the things hoped for and evidence unseen.

The basis of Christmas is the Rock, Christ Jesus; its fruits, inspiration and spiritual understanding of joy and rejoicing; not because of tradition, usage, or corporeal pleasures, but because of fundamental and demonstrable truth, the heaven within us. It is love loving its enemies, returning good for evil, that suffereth long and is kind. It elevates medicine to Mind, it casts out evils, heals the sick, raises the dormant faculties, appeals to all conditions, and supplies every need of man. It leaves hygiene, medicine, ethics, and religion to God and His Christ, to that which is the Way, in word and in deed,—the Way, the Truth, and the Life.

Hitherto there is but one Jesus Christ on record. Christ is incorporeal. Neither the you nor the I in the flesh can be or is Christ.

MARY BAKER EDDY.

CHRISTMAS FOR THE CHILDREN.

METHINKS the loving parents and guardians of youth ofttimes query: How shall we cheer the children's Christmas and profit them withal? The wisdom of their elders, who seek wisdom of God, seems to have amply provided for this, according to the custom of the age and to the full supply of juvenile joy. Let it continue thus, with one exception; namely, the children should not be taught to believe that Santa Claus has aught to do with this pastime. A deceit or falsehood is never wise. Too much cannot be done toward guarding and guiding well the germinating and inclining thought of childhood. To mold aright the first impressions of innocence aids in perpetuating purity and unfolding the immortal model, man in His image and likeness. St. Paul wrote, "When I was a child, I spake as a child, I understood as a child, . . . but when I became a man, I put away childish things."

MARY BAKER EDDY.

WHAT CHRISTMAS MEANS TO ME.

To me Christmas involves an open secret, understood by few—or by none—and unutterable except in Christian Science. Christ was not born of the flesh. Christ is the Truth and Life born of God—born of Spirit and not of matter. Jesus, the Galilean prophet, was born of the Virgin Mary's spiritual thoughts of Life and its manifestation.

God creates man perfect and eternal in His own image. Hence man is the image, idea, or likeness of perfection—an ideal which cannot fall from its inherent unity with divine Love, from its spotless purity and original perfection.

Observed by material sense, Christmas commemorates the birth of a human, material, mortal babe—a babe born in a manger amidst the flocks and herds of a Jewish village.

This homely origin of the babe Jesus falls far short of my sense of the eternal Christ, Truth, never born and never dying. I celebrate Christmas with my soul, my spiritual sense, and so commemorate the entrance into human understanding of the Christ conceived of Spirit, of God and not of a woman—as the birth of Truth, the dawn of divine Love breaking upon the gloom of matter and evil with the glory of infinite being.

Human doctrines or hypotheses or vague human philosophy afford little divine effulgence, deific presence or power. Christmas to me is the reminder of God's great gift—His spiritual idea, man and the universe—a gift which so transcends mortal, material, sensual giving that the merriment, mad ambition, rivalry, and ritual of our common Christmas seem a human mockery in mimicry of the real worship in commemoration of Christ's coming.

I love to observe Christmas in quietude, humility, benevolence, charity, letting good will toward man, eloquent silence, prayer and praise express my conception of Truth's appearing.

The splendor of this nativity of Christ reveals infinite meanings and gives manifold blessings. Material gifts and pastimes tend to obliterate the spiritual idea in consciousness, leaving one alone and without His glory.

MARY BAKER EDDY.

READING-ROOM PRIVILEGES.

ALL Christian Science churches are required to have a reading-room where our literature, including the Bible, may be read and studied, or purchased if the reader so desires. The Manual of The Mother Church provides that "two or more churches may unite in having reading-rooms" (Art. XXI, Sect. 1), but this does not lessen the privileges and responsibilities of all the individual members to give their very best support to this department of our church work. All service for the cause of Truth is a divine requirement, and calls for nothing less than our best effort, irrespective of what others may do or fail to do, the whole trend of the Christian Science movement being away from official ministry and toward universal and whole-hearted service of God and humanity. It is the privilege of the humblest member of a Christian Science church, in point of experience and understanding, to give of his best to the cause, and no one can give more than this.

It may be remembered that as each new department of our church work was started, under our Leader's wise direction, mortal mind was ready with predictions of failure for

Digitized by Google

the new enterprise, whether it were the Lesson-Sermons, the reading-rooms, the lectures, or the increasing publications, and occasionally Scientists were unwise enough to echo these croakings and thus miss, until wiser grown, the blessings which ever follow cheerful and ready response to every call of Truth. It should not be forgotten that we only come to understand fully any Christian activity as we participate in it. For instance, one can never understand the law by which Jesus and his disciples healed the sick until he applies his understanding of its divine Principle in the way that the Master commanded when he said, "Heal the sick." In the same way, one cannot clearly understand the mission of the Christian Science reading-room until he begins to work for it in the truest way, by thinking of what it means as a place of refuge for the weary and heavy laden, by supporting it lovingly and by visiting it from time to time.

The supposition that all this can be left to the librarian is a sly little fox which would injure this branch of the Mother Vine and at the same time rob the members of one of their privileges. No one should of course interfere with the workings of the reading-room, or its rules, but members of the church have the privilege of bringing with them on their visits to it the sunshine of Truth and Love, which is a mighty healing agency. How often did our Lord bid some one oppressed by illness, or seemingly in deadly peril, "Be of good cheer," and this too in the presence of his enemies who sought to thwart his every effort for suffering humanity; but this never hindered Jesus' work, and it was, "Be of good cheer" till he could add, "I have overcome the world."

Through our revered Leader's spiritual interpretation of his teachings there are unnumbered thousands who have overcome much of what constitutes the world of mortal sense, and it is one of their privileges to speak of this at the Wednesday evening meetings, thus bringing the Master's message of good cheer to some who have come there trembling between hope and despair; but not all remember that another privilege is to carry it silently, if not audibly, to the reading-room as well. A Scientist once said to a friend, "I passed you yesterday on the street, and you were looking troubled. I hope all is well with you." "What," said the friend, "is it possible that I had forgotten divine Love long enough to look as you say I did! Well, I shall never again go out to darken daylight for any that I meet," and the lesson of that morning was never forgotten. In the twenty-seventh chapter of Acts we read that in the very hour of shipwreck Paul gave thanks to God in the presence of all his companions, and we are told that they were "all of good cheer." We should not forget that we have the great privilege of doing as much for the storm-tossed pilgrims who seek harbor in our churches and reading-rooms, for in this way we shall renewedly fulfil the law of Love.

ANNIE M. KNOTT.

"NEARER, MY GOD, TO THEE."

THE heavens may have seemed brass in many a crucial hour, and yet normal people have never been able to think of God as inaccessible, and Christian Science is blessing all mankind in making His nearness the more apparent and intelligible. It teaches that God is a universal possession, an infinite ever-presence; that the prayer, "Nearer, my God, to Thee," is therefore divinely warranted, and that no failure of its fulfilment can find explanation in a divine partiality or reserve. Receptivity is and must ever be the secret of effective prayer. As Mrs. Eddy has said, "Love is impartial and universal in its adaptation and bestowals" (Science and Health, p. 13), and it is no more thinkable that God should withhold His good from those who are truly willing to receive it than that the sun should withhold its light from its least encircling planet.

We learn, however, in Christian Science that approach to God is possible only by the way of illumined understanding; that false sense rather than lack of desire for good has separated us from Him, and that we must know our way into His presence. If one honors the God whom Christ Jesus revealed as infinite Life, he must regard Him as man's Life, and give up looking to aught else for life. This thought supports Christian Science's reiterated rebuke of the habit of looking to *materia medica* for the betterment and preservation of life. It denies and condemns the equally universal thought that life exists or can exist apart from God. False sense is forever seducing men with its fair insistence that life is in and of matter, and the professed Christian often seeks to excuse the illogic of this belief by declaring that God, Spirit, made the stuff with which he thus companions! Christian metaphysics denies the possibility of the association of Spirit and matter, and this is both the secret and the sanity of the philosophy of Christian Science.

With equal insistence Christian Science leads one to analyze his thought attitude toward God as infinite Truth. A love of truth which is ever ready to part with undemonstrated opinions, by no means characterizes the average Christian; on the contrary, while self-convinced of his loyalty to Truth, he is ever seeking to buttress an educated belief. Light defines the nature of God as love defines His activity, and we know that they who will not give light an open-window welcome are destined to dwell in darkness. This is the perfectly simple and absolutely inexorable philosophy of prayer as understood in Christian Science.

The teaching of Christian Science further enjoins us that if we would draw nigh to God, we must draw nigh to Love. When one thinks of the falsities and failures of human affection, of the evidences of a lack of the spirit of Christian brotherhood in Christian lands, of the ofttimes absence of a practical exhibition of love among Christian workers, of the caste and cant, the selfishness and sensuality which not infrequently bring Christian profession into contempt, he begins to get at the heart of the call of Christian Science that we "love more for every hate" (Poems, p. 4).

"Nearer, my God, to Thee"! Who of us shall dare thus to pray while consenting to envy, jealousy, malice, hatred, or any other un-Christlike thought toward any person! Throughout the Christian world today, the followers of the loving Nazarene are indicted by great bodies of men for their consent to if not indulgence in unendurable wrongs and injustices, and the Christian world is frankly pleading guilty to the charge of gross, age-long unbrotherliness! The requirement of Christian Science is that we be reconciled to Love, to God, in every impulse, every thought, every word, every deed, and that toward every man, every moment of every day; and if we are genuinely honest when we pray, "Nearer, my God, to Thee," then our undissimulating love will not fail to make us known among men as a blessedly "peculiar people."

JOHN B. WILLIS.

AMONG THE CHURCHES.

CURRENT NOTES.

SPRINGFIELD, ILL.—Appreciating the opportunity for distributing our literature to a large number of people during the Illinois state fair, and feeling that other churches in the state might wish to share the expense as well as the benefit of such a movement, letters were sent to thirty-seven churches apprising them of our desires. As the replies were prompt and of such nature as to warrant our going ahead with the project, a location was secured in the grounds for two tents, fourteen feet square, which were erected upon a substantial floor. Tables, chairs, and couches were furnished, as were rugs and other necessities, and from Oct. 4 to 12 headquarters were maintained, with attendants in charge at all hours of the day and night. During this period copies of the *Monitor, Sentinel,* and *Journal* were distributed judiciously, and we found that the literature was readily accepted and in most cases carefully preserved. Our

Digitized by Google

experience this year will serve as a guide for future work, and we shall take care to have on hand a sufficient quantity of literature. The last two days our supplies of literature were practically exhausted. In all there were distributed nearly four thousand pieces, and the number could have been doubled with no effort whatever.

Our church appreciates the spirit which prompted the hearty cooperation of the other branch churches in this field, also their generous donations of money and literature, as well as the privilege which this opportunity afforded of ministering to the "simple seekers for Truth, weary wanderers, athirst in the desert" (Science and Health, p. 570).

Correspondence.

AKRON, OHIO.—Recognizing its growth and consequent need of improved and more spacious housing facilities, First Church of Christ, Scientist, this city, has removed both the reading-room and the meeting-place of its congregation to new quarters. The reading-room is now located on the seventh floor of the new Second National building, S. Main street. The services are held in the German-American Recital hall, W. Exchange and High streets, which presents a marked improvement over its former quarters, both as to environment and capacity, the latter being about one third greater. It has proved to be a beautiful demonstration of the truth of supply, for whereas the moves above chronicled meant more rentals and other added expense, yet the increase in interest and growth is such that the seeming difference is practically eliminated and progress goes steadily on.—*Correspondence.*

MILFORD, UTAH.—At the Christian Science booth at the Beaver county fair, there was some wonderful spiritual work done. Every one was kind and courteous to us, and great respect was shown to all those who assisted. The fair committee asked three of our members who were at the booth to act as judges for awarding the prizes. There were a number who came to ask questions, but none came to argue; everything was peaceful and harmonious. We all feel benefited for the time and labor bestowed, and the results are more than we can realize just now. The number of people who visited the booth was four hundred, and we distributed one hundred and twenty-nine *Monitors*, one hundred and forty *Sentinels*, and twenty-nine *Journals*. A number of copies of Mrs. Eddy's writings were purchased by visitors.—*Correspondence.*

SPRINGFIELD, MASS.—The Christian Science society recently formed to relieve the crowded condition at First Church, held its first Sunday service Oct. 6 with an attendance of about one hundred and forty. In the evening, at First Church, the head usher said that twenty-five more people would have packed that edifice in the morning. The society's first Wednesday evening meeting had an attendance of over two hundred, while First Church reported practically a full church and a splendid meeting. The thought is now very general that the right step was taken. At the first meeting of the joint committee, which includes the full executive boards of both church and society, nothing but the finest spirit of cooperation prevailed.—*Correspondence.*

OAKLAND, CAL.—Second Church of Christ, Scientist, of this city has just closed a deal which has been pending for several weeks for the purchase of the First Methodist Church, South, property at Thirty-fourth and Elm streets. The church building now on the property will be used by the Scientists until such time as they are ready to build an imposing edifice there. Second church formerly occupied the hall at Forty-second and Telegraph avenue, but had to move to larger quarters to accommodate its rapidly growing congregation. Services were held in the building Oct. 6, as the Scientists were given immediate possession.

Oakland Tribune.

THE LECTURES.

SOUTH BEND, IND.

A lecture on Christian Science was delivered in the Oliver opera house by Virgil O. Strickler, before an audience which filled the house to its utmost capacity. In introducing the speaker, Frank A. Clarke, first reader, said in part,—

A great many of you who are here today have experienced in some measure the freedom from sickness and sin which a scientific knowledge of God bestows, and are therefore seeking a better understanding of this divine Principle, the knowledge of which has already produced in your lives so much health and happiness. Others here have seen the evidence of the beneficent influence which this intelligent understanding of God exerts in the lives of their friends and acquaintances, and being convinced of the efficacy of Christian Science as a preventive and a curative agency, are desirous of learning something of its Principle; and doubtless there are some among you who have an erroneous conception of the teachings of this Science and of the method of its application in the treatment of disease and in the solving of the problems that arise in our daily experience. This lecture is for the purpose of correcting the erroneous views that may be entertained concerning Christian Science, and for the enlightenment of all earnest seekers after a knowledge of Truth.—*New Era.*

WINFIELD, KAN.

A fine audience attended the lecture at the Grand opera house by William R. Rathvon of Denver, who spoke on Christian Science. He was introduced by R. M. Williams, who said in part,—

Christian Science is neither more nor less than the science or exact knowledge of the Christ, uttered by the Nazarene and reiterated and demonstrated anew in this age with "signs following." Referring to this exact knowledge, Jesus said, "Ye shall know the truth, and the truth shall make you free," and he put no time limit on it. Besides this, he said on another occasion, "Lo, I am with you alway."

Instead of being intended to supersede the Bible, as some suppose, Science and Health has given added impetus to the study of the Scriptures. By the use of this key the Bible has been found, by hundreds of thousands of sin-sick and body-racked sufferers, to be filled with messages of hope and comfort. It has given a new and vital meaning to the words of the Bible. It has literally given to weary sufferers "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness." Filled with joy unspeakable, they are bearing the message to those in darkness that they have indeed seen for themselves "the Sun of righteousness arise with healing in his wings."—*Free Press.*

GALESBURG, ILL.

The lecture on Christian Science by Francis J. Fluno, M.D., in the Universalist church, was largely attended. J. W. Segrist of this city welcomed the large gathering, and in introducing the speaker, said in part,—

Christian Scientists have been described by an outsider as "that rapidly growing army of earnest men and women who by their daily demeanor appear to have made happiness a business and trouble a lost art;" and they certainly have the right to be optimistic. They believe in one infinite God of goodness, omniscient, omnipotent, and omnipresent, who made all that was made, and who saw all that He had made, "and, behold, it was very good." And so there is nothing about which to be pessimistic, for to know this creator aright is life eternal. Jesus was once asked, "Art

Digitized by Google

thou he that should come, or do we look for another?" To which he gave that unanswerable answer, "The blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up," proving that the great Wayshower and Founder of the Christian religion taught that we should be judged by our works; and upon this proposition Christian Science stands. In the opening statement of our text-book "Science and Health with Key to the Scriptures" by Mrs. Eddy, she says: "To those leaning on the sustaining infinite, today is big with blessings," and after forty years' experience of study and demonstration, thousands upon thousands of men and women in all walks of life are testifying to the truth of that statement.

Jesus the Christ made plain the plan of salvation when he said, "Ye shall know the truth, and the truth shall make you free," and he gave proof of the power of Truth. He fed the multitude, healed the sick, stilled the tempest, and raised the dead. Some one has said, "In order to live it, you must love it; and in order to love it, you must change your view of life by thinking joy instead of sorrow, good instead of evil, health instead of sickness, life instead of death." During the two years that I have been studying Christian Science, I have heard and read a number of attacks and criticisms on this teaching, and in every case it was apparent that the critics failed to understand the Principle of Christian Science. Their premise being wrong, their conclusion was necessarily wrong also. One of the purposes for maintaining the board of lectureship of The First Church of Christ, Scientist, of Boston, Massachusetts, is to correct such erroneous criticisms.—*Republican-Register.*

SAN FRANCISCO, CAL.

At the lecture on Christian Science at the Dreamland rink under the auspices of First Church, Frank H. Leonard was introduced by Mrs. Arthur Fosbery, first reader, who said in part,—

It is recorded that some nineteen hundred years ago Jesus of Nazareth entered the synagogue on the Sabbath day, and read from the book of the prophet Esaias the following words: "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the brokenhearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord." And when he had closed the book, Jesus declared to the listening multitude, "This day is this scripture fulfilled in your ears."

In these few words read by the Master is epitomized the mission of Christ, Truth, today,—Christian Science, the Holy Comforter, the "Spirit of truth" which Christ Jesus at the close of his ministry promised he would send to the world to redeem the sinful and to heal the sick and sorrow-stricken. That this promise has been fulfilled in the advent of Christian Science we behold on every side; for, as Mrs. Eddy has said, "Truth's immortal idea is sweeping down the centuries, gathering beneath its wings the sick and sinning" (Science and Health, p. 55). We are assembled here today to hear of this wonderful Science of being.

Correspondence.

BUFFALO, N. Y.

Prof. Hermann S. Hering delivered a lecture in Convention hall, to a large and attentive audience. The lecturer was introduced by James F. Foster, the first reader, who said in part,—

I have thought at times that it was rather remarkable, when Mrs. Eddy made that wonderful discovery which raised her from a bed of sickness, and at the same time confirmed to her the glorious promises of the Bible, that she should not have retired into some sort of seclusion and lived in peace with her glorious realization of Truth. The same may be said with reference to the thousands of people since, who have been healed by and as a result of having taken up the systematic study of the Science which she discovered and taught. They might have escaped much of misunderstanding had they taken their blessing away by themselves and enjoyed it in silence. It is natural, however, when people have something over which they rejoice very much, that they should tell their friends about it, and this fact may be a sufficient excuse for inviting ours to come here this evening, for to Christian Scientists the truth of Christian Science is the dearest thing in life.

Jesus said, referring to his followers, "I am come that they might have life, and that they might have it more abundantly." The abundant life, the happy life, possessing and enjoying all that is good, such is the privilege of the Christian, the follower of the Christ. Jesus also said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." And there were those in the early days who did live so close to God, as revealed to them by the Master, that they were able to do the works which he declared that those who believed on him should do. Christian Science is again teaching his followers how to live so close to God that the "signs following" which were promised are seen, again bearing evidence of Immanuel,—"God with us."—*Correspondence.*

FRANKLIN, PA.

William D. McCrackan, M.A., gave a lecture on Christian Science at the Armory to an appreciative audience numbering about three hundred people. He was introduced by Edward Ray Inman, chairman of the board of trustees of First Church of Christ, Scientist, of Franklin, who said:—

At the beginning of the late political campaign, much was said about this and that party leader sounding the key-note of his party propaganda. It would thus appear to be in keeping with the usages of the season to sound at the outset of this lecture the key-note of Christian Science. As it appeals to me, that key-note is "Alleluiah, for the Lord God omnipotent reigneth;" and swelling out from this key-note are the grandest, sweetest harmonies that ear hath ever heard. Its "music is the gladness of the world;" its song is the song of "good tidings of great joy;" its light is that of the bright and beauteous star which led the wise men of old o'er the Judean hills to the cradle of "the Prince of Peace;" and ever and anon, throughout this wondrous symphony, the listening ear can hear the sweet refrain, "Peace I leave with you, my peace I give unto you: not as the world giveth, give I unto you. Let not your heart be troubled, neither let it be afraid," for, "Lo, I am with you alway, even unto the end of the world."—*Correspondence.*

MT. VERNON, N. Y.

There was a large and interested audience at the Westchester theater to hear the Rev. William P. McKenzie speak on Christian Science. Mayor Fiske presided, and introduced the speaker in part as follows:—

What I like about Christian Scientists, aside from their thorough devotion to the things which they believe to be best for the kingdom of heaven upon earth, is their consistent looking for the good. Christian Scientists practise optimism every day of the year and every hour of the day. That is the spirit we need most in our civic life. Optimism is founded on faith in men and faith in human progress. I attended a meeting lately where one speaker declared: "We can never make any real progress in civic affairs till the people have learned to have faith in the men they choose for office." That is a fact; we need more faith in the future of humanity.—*Daily Argus.*

SANDUSKY, OHIO.

Virgil O. Strickler, at his lecture on Christian Science at Carnegie hall, was introduced by John F. Hertlein, who said in part:—

We have met here this night to listen to a lecture on Christian Science. It is well, and altogether fitting and proper, to meet occasionally and listen to an exposition of doctrines and come in contact with ideas, new perhaps to some of us and different from our own; and this is especially true when it comes to religious doctrines and ideas. Then, too, I observe that a full, complete, and thorough discussion of all matters and things affecting the people brings about a better feeling in the community, and incidentally tends to conserve our liberties. The absolute freedom of thought and the expression thereof, as guaranteed by American institutions, has ever added to the splendor and the glory of this mighty nation.

As for myself, somehow or other, consciously or unconsciously, I have always adhered to the notion that any religion whose tenets taught men to look up and not down, forward and not backward, into the future and not upon the past, that dispelled hatred and gloom from the hearts of men and in their stead brought a message of good and taught the brotherhood of man, so that we may look into the future with an unfaltering trust and upon the past with the firm conviction that we did the best we could, that this life has not been lived in vain, and that we are leaving this world better and nobler than we found it,—such a religion, no matter what its name, appeals to me, meets my approval, has my endorsement; in a word, it is good enough for me.

Correspondence.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship:

Alliance, Ohio.—Columbia opera house, 8:15 p.m., Dec. 5.
Beatrice, Neb.—Church edifice, 800 Ella street, 8 p.m., Dec. 13.
Billings, Mont.—Babcock theater, Dec. 10.
Bozeman, Mont.—Bozeman opera house, 8 p.m., Dec. 9.
Brunswick, Maine.—Pythian hall, 8 p.m., Dec. 7.
Butte, Mont.—Auditorium, 2:30 p.m., Dec. 8.
Concord, N. H.—Church edifice, North State and School streets, 8 p.m., Dec. 10.
Geneseo, Ill.—Mystic Workers' hall, 8:15 p.m., Dec. 10.
Kearney, Neb.—Opera house, 8 p.m., Dec. 10.
Lakewood, Ohio.—Gordon Square theater, Detroit avenue and West 65th street, Cleveland, 3 p.m., Dec. 8.
Maquoketa, Iowa.—Rice's opera house, 8 p.m., Dec. 12.
New York, N. Y. (Third Church).—Church edifice, 35 E. 125th street, 8 p.m., Dec. 6.
Philadelphia, Pa. (First Church).—Church edifice, Walnut street, west of 40th, 8 p.m., Dec. 7; Garrick theater, Chestnut and Juniper streets, 3:30 p.m., Dec. 8.
Portland, Ore. (Second Church).—Masonic temple, West Park and Yamhill streets, 8 p.m., Dec. 12; First Church edifice, 19th and Everett streets, 8 p.m., Dec. 13.
Pueblo, Col.—Empress theater, 4th street between Main and Santa Fe, 8 p.m., Dec. 13.
Rock Island, Ill.—Illinois theater, 8 p.m., Dec. 12.
Roxbury, Mass.—Whiton hall, Center street, Dorchester, 8 p.m., Dec. 9; Fauntleroy hall, Wenonah street, Roxbury, 8 p.m., Dec. 13.
Seattle, Wash. (First Church).—Moore theater, 2:30 p.m., Dec. 8.
Taunton, Mass.—Odd Fellows hall, 4 p.m., Dec. 8.
Trenton, Mo.—Hubbell theater, 8:30 p.m., Dec. 9.
Wabash, Ind.—Eagles theater, 3 p.m., Dec. 8.
Washington, D. C.—Columbia theater, 3:30 p.m., Dec. 8; church edifice, Columbia road and Euclid street, 8 p.m., Dec. 9.
Wilmington, Del.—Du Pont auditorium, 8:30 p.m., Dec. 6.

TESTIMONIES OF HEALING.

After many physical healings, and the moral and spiritual uplift which Christian Science has given me, I feel that it is time to relate these experiences for the benefit of others who may be suffering in a similar way. When I came to Boston, I had been suffering from severe attacks of hemorrhage from the throat. I had been treated under *materia medica* about three years, but had constantly grown worse. During all my first year here the attacks continued to grow more and more severe, and occasionally there would be a paralysis of some limb at a time when it was most necessary for me to be active. Because of my poor health my business ability degenerated until it was practically gone. Human knowledge was taxed to its utmost to help me; but it could not, and only made me and the circumstances which surrounded me more trying. The hemorrhages continued to grow worse, the paralysis became more and more pronounced, and under the terrible mental strain resulting therefrom I grew weaker and weaker.

Finally, after I had been in Boston nearly a year, I decided to try Christian Science, as everything else I had previously tried had failed me. I communicated with a friend from my home city, whom I knew to have been healed, and was directed how to start. I went to a practitioner immediately and began to take treatment. I soon realized in some measure the omnipotence and omnipresence of God, and was mentally at peace. After the first treatment, the hemorrhages were stopped for all time, never to return, and then the paralytic symptoms quickly vanished. I next experienced perfect health, such as I had never known before, and began to progress rapidly in my work, which I had practically been forced to leave on account of my physical disabilities. During my illness, and before I took up Christian Science, I had been troubled and worried by examinations which I had to take in connection with my business. I had been before the state board of examiners and failed, but after I had Christian Science treatment I went before the state board of appeal, tried the examination again, and passed. My failure the first time was due to my poor mental and physical condition, and my success the second time was because all my mental and physical disabilities had been entirely removed by Christian Science treatment.

Later on I was required to take a United States examination for the civil service. According to the usual procedure, I was examined by a physician, who pronounced me normal physically, except in sight. He said, however, that my vitality was so low he could not advise me to take the examination, unless I received some kind of treatment before the day set for me to be examined. I asked what kind he thought would be best for me, and he replied that none of the remedies which he had could benefit me. He then asked me if I was under any form of treatment. I told him I was taking Christian Science treatment, and he said, "I would advise you to continue this treatment until your examination, as the government recognizes the healing influence of Christian Science treatment in some cases where *materia medica* fails."

I continued the treatment, sent in my application for examination, on which was stated, "Has had nervous exhaustion, but claims to have been healed by Christian Science treatment." Upon receiving this information, a card was sent me from Washington giving me permission to take the examination. I took it and passed, through the help I had received from Christian Science. Thus the fact that I had been healed by Christian Science was recognized by the authorities, for I understand they give no one permission to take the examination who is ill and needs treatment.

My healing has been complete and permanent, and I now enjoy perfect health; but more than for my physical healing, I am especially thankful to God, also grateful to our revered

Digitized by Google

Leader, for the spiritual uplift and moral rebuilding of my character and surroundings. I know from experience the absolute truth of the statement in our text-book (p. 494), "Divine Love always has met and always will meet every human need."—OTTO E. CURTIS, Boston, Mass.

In Science and Health (p. 4) we read that "the longing to be better and holier" leads to our awakening in God's likeness. This was my experience, and it led me to Christian Science. Some ten years ago I attended a Wednesday evening meeting at Helena, Mont., when I was so hungry for the truth that every testimony spoken was freely accepted, and I left the meeting healed both mentally and physically.

My second healing was during a regular Sunday service at First Church of Christ, Scientist, in this city, some six years ago. On the day and night previous I was quite sick, and on Sunday morning felt even worse, but my one thought was that my first healing had occurred during a service, and I felt sure that I would again be healed. I remember listening to every word of the Lesson-Sermon as given out by the readers, and when "the scientific statement of being" (Science and Health, p. 468) was read I could hardly stand upon my feet, though when the service was over I started to walk to my home, some four blocks distant, and when nearly home realized that I was very hungry. Not until then had it dawned upon me that I was healed. I am truly thankful for Christian Science.—ROSE J. SEAL, Salt Lake City, Utah.

It is with the deepest gratitude to God for the many blessings which Christian Science has brought to me and my family, that I give this testimony. It is several years since I first heard of Christian Science, and at that time I was suffering from varicose veins, which had been pronounced incurable by two of Chicago's ablest surgeons. For fifteen years I wore rubber stockings from the knee down, and was finally advised by surgeons that an operation was absolutely necessary, but they were doubtful of a permanent cure.

It was at this time that loving friends and my dear wife urged me to give Christian Science a trial. I did so, and I am happy to say that in a short time I discarded the rubber stockings and was permanently healed. I continued, however, to take treatment some little time, as I wished to ascertain what had really healed me, and I can truthfully say that I owe my life to Christian Science. I was born and raised in the Jewish faith, and was always taught to believe in God, but as a Christian Scientist I am daily gaining a better understanding of Him. Christian Science is opening up to me that most beautiful of all books, the Bible, which heretofore seemed closed to me.

The physical healing has really meant to me the least of my blessings. The greatest has been the spiritual awakening, the mental and moral regeneration, also the knowledge of God and of man's relation to Him. I am deeply grateful for the privilege of having my two children attend the Christian Science Sunday school, and my heart overflows with love to God and gratitude to Mrs. Eddy for this glorious truth that frees all mankind.

EMANUEL WEIL, Chicago, Ill.

My heart is filled with gratitude for all the blessings that have come to us through the understanding of Christian Science, and for all the good it is doing for the world and suffering humanity. It is nearly five years since we first heard of it, and my chief thought and desire at that time was to use it for my husband and myself, but never for the children, as the fear of not having a doctor and medicine for the children was very great. We had a visit from a doctor at least once a week, but through the awakening which we received in reading and applying the teachings of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, we were able to prove that God is the "great Physician," and I am thankful to say that from that day to this we have had no other help than Christian Science for ourselves or the children.

Among the discordant conditions of which our children have been healed are fever, chronic stomach trouble, continual coughs and colds, and many other ills. My husband and I have also had many impressive healings. One of the many blessings which have come to me is the overcoming of fear, but the spiritual awakening which has taught me, and is daily making it clearer to me, to love my neighbor as myself, is far beyond everything else. It gives me joy, peace, and harmony without measure, and I can truthfully say with the psalmist, "My cup runneth over."

My love and thanks go out to God; and my gratitude to dear Mrs. Eddy can only be expressed by my works. My daily prayer is to have more of that Mind in me "which was also in Christ Jesus."—MRS. AGNES WEIL, Chicago, Ill.

Before I heard of Christian Science I was subject to attacks of deafness. At one time I was quite deaf in one ear for several months, and though I was apparently cured by medical treatment, the deafness returned later on and lasted for nearly two years. At this time I had heard of Christian Science, and had received many proofs of its healing power. I therefore tried to apply what I understood, but though other troubles yielded, the deafness seemed most stubborn. I suffered great discomfort, and it may seem strange that it never occurred to me to ask for help in Christian Science to overcome the difficulty. I think one reason may have been that I felt I ought to do this work myself, because I found that just so far as I gave up my own will and tried to be obedient to the voice of Truth, my hearing improved; but there was one point on which I was rebellious, and while that thought was cherished the deafness remained. As I began to assimilate the lessons of Christian Science and to be more obedient to the demands of Principle, I suffered less and less, and gradually my thought became clearer.

One day a friend spoke to me about the healing of deafness, as if it were difficult to overcome, and I told her that I was deaf in one ear. She said quickly, "No, you are not; at least, I have never noticed it." A gleam of hope came to me as she spoke, and I seemed suddenly to awake to the fact that I was free from the bondage in which I had been. When I was alone I put my watch to my ear, but I could not hear a sound. This did not, however, discourage me at all, for I knew that the long struggle to be obedient to the demands of Principle had not been in vain, and I worked more persistently than ever to realize that there is only one Mind and that this Mind is all-hearing, until, though my ear still seemed to be deaf, I was no longer troubled with being unable to hear all I needed to.

Gradually the seeming deafness in my ear disappeared, and now I no longer remember which ear it was that troubled me. The healing took place during the years 1893-95, and no one knew much about it except myself; but to me the mental steps taken in this healing are as definite and clear as any journey taken in the flesh. I had had attacks of deafness for many years from time to time, but during the two years previous to my healing one ear was quite deaf, and the conflict between the material sense and the spiritual sense was incessant. I was still deaf in one ear for some time after hearing returned to the other, and I often experienced the truth of what Mrs. Eddy says in Science and Health, about the "impressions from Truth" being "as distinct as sound" (p. 214).

During those two years the continual effort to realize the presence of God brought with it wonderful experiences which fully recompensed for all the mental struggles I had had in trying to prove the truth of God's allness. It is my daily prayer that I may prove my gratitude to God for having been shown that the way to gain deliverance from mental slavery is by keeping close to the path again made

plain by our Leader. In "Rudimental Divine Science" (p. 17) Mrs. Eddy says: "The ways of Christianity have not changed. Meekness, selflessness, and love are the paths of His testimony and the footsteps of His flock." I shall be glad to answer any inquiries that may be made.

Miss CATHARINE VERRALL, Brighton, Sussex, England.

A parable of frequent mention in Christian Science is that of the sower. How little we realize where the seed is dropped, and often the soils are of like conditions with those of the Master's parable. Five years ago, on the eve of departure for the West, seeking to regain health from a nervous breakdown, while down-town attending to some last preparations, a Scientist, with a plea for pardon for intrusion in my affairs, brought me the message of the healing to be found in Christian Science. In spite of the apology, the approach was resented, but it had been made in such a tender manner that my resentment was concealed.

I went my way heedless of the advice, and after arriving at the Colorado ranch discovered through correspondence that some of my dearest friends either were Scientists or interested in this new teaching. Six weeks later, upon my return to official life, I looked into the lives of these Christian Science friends, and found they reflected peace, health, and contentment. On every hand love greeted me, and joy was manifested that I was interested. My interest was, however, only apathetic, but whenever I attended any religious service it was at the Christian Science church; still this attendance was seldom, and I read none of the literature, "Science and Health with Key to the Scriptures" by Mrs. Eddy being then unknown to me. But the little "seed" had been dropped, and with friendship its cultivator the days of sunshine were many.

Then one day, four years later, after some months of illness with constant medical attention, change of climate, and entire giving up of official life, the little seed pushed its way through the cold soil of indifference and burst forth into fruitage. During the four days of Christian Science treatment I found the way to Love. Immediately my work was resumed, and I have not since absented myself from it and am working harder and more intelligently than ever before, with perfect health. The healing was of stomach trouble, with all its attendant miseries—sleeplessness, heart and intestinal difficulties, loss of flesh, and a bad cough. My work is now more strenuous than it ever has been, but I have gained continuously, even during the hot weather.

My gratitude for the truth and for every loving thought that I now realize was bestowed on me all these past years is unbounded, and I am a constant and appreciative reader of all the Christian Science periodicals. The reading-room is a great blessing, and my heart goes out to our dear Leader, who brought again the healing truth to mankind. My thankfulness to God can only be shown by the fulfilling of an earnest desire to live each minute so that thoughts and deeds will show others what God really means to me.

MARY LUELLA MERCER, Indianapolis, Ind.

It is with a thankful heart that I tell of some of the benefits received from Christian Science. It was about fifteen years ago that a lady brought it to my notice, and I can say that I seem to reckon my life from that time. I got a copy of Science and Health, and read it almost night and day. I have had many good demonstrations of its truth, and though there are still some discords which I have not been able to overcome, I do not doubt that I shall, if I continue to rely on the word of God.

Hoping to help some one else, I will tell of the healing of my son, fifteen years old. In a fall from a tree he dislocated his shoulder and injured the bone very badly. I took him to a doctor to have it set, and after calling in another doctor, they worked over the boy for an hour. The arm was set three times, but it would not stay in place. They then told me they had never seen a case like it, and that the boy would never use his arm again. I told them to put it in a cast and that I would take care of him. I then called on a Christian Science practitioner for help. The boy suffered very little, and in three weeks we took his arm out of the sling and he went back to school. The arm has never troubled him in the least since. The doctor told me that he did not understand it; that he never saw a worse break, and yet it amounted to nothing.

Words cannot express my thankfulness to God for Christian Science and what it has done for me and mine. Only by living the truth it teaches can we prove our gratitude to her who has shown us the way.

MRS. FANNIE COSTAR, Hawarden, Iowa.
